SEVENTY-FIFTH CONGRESS, SECOND SESSION

Federal Spending and Its Relation to the Balancing of the Federal Budget

EXTENSION OF REMARKS

OF

HON. ROBERT L. DOUGHTON

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, November 15, 1937

ADDRESS BY HON. HENRY MORGENTHAU, SECRETARY OF THE TREASURY, BEFORE THE ACADEMY OF POLITICAL SCIENCE, AT NEW YORK CITY, ON NOVEMBER 10, 1937

Mr. DOUGHTON. Mr. Speaker, under the leave to extend my remarks in the RECORD I include the following address of the Secretary of the Treasury delivered before the Academy of Political Science, at the Hotel Astor, New York City, Wednesday evening, November 10, 1937:

I welcome the opportunity to discuss before the members and guests of the Academy of Political Science the subject of Federal spending and its relation to the balancing of the Federal Budget.

Nineteen years ago tomorrow we signed the armistice ending the World War. That war was enormously costly in human values, and it was enormously costly in material values. In the 2 years between the middle of 1917 and the middle of 1919 the Federal Government sustained a net deficit of $22,000,000,000.

During the past 4 years this country has been engaged in another war. This time our enemy was a great economic disaster. In this war we fought with jobs and with dollars to save farmers from losing their farms; to save home owners from losing their homes; to give not only bread but work to the unemployed; to increase the security of jobs, property values, and business profits; and to bring order out of chaos in our economic system.

This war, like that other war, required a many-sided campaign under intelligent and courageous leadership—a leadership that was magnificently supplied by President Roosevelt.

Finally, this war, like that other war, required a large spending program. This program, plus the special needs arising out of the great drought and the prepayment of the soldiers' bonus, necessitated net outlays during the 4 years ended June 30, 1937, of some $14,000,000,000 in excess of our receipts.

Of course, it is easily possible to criticize some of the detailed uses of the relief funds. Let us concede that there was some waste. In any expenditure program of such magnitude this is inevitable. But, contrasted with the human and material values at stake, such wastes as may have occurred shrink into insignificance.

We deliberately used an unbalanced Federal Budget during the past 4 years to meet a great emergency. That policy has succeeded. The emergency that we faced in 1933 no longer exists.

I am fully aware that many of our problems remain unsolved. I am aware that there still remains a considerable volume of unemployment; that the speculative markets have recently been under severe pressure; and that our business indexes have recently shown a declining tendency. I am further aware that some persons contend that another great spending program is desirable to ward off the risk of another business depression.

I claim no prophetic insight into the future. But, after giving serious and careful consideration to all of these and other factors, I have reached the firm conviction that the domestic problems which face us today are essentially different from those which faced us 4 years ago. Many measures are required for their solution. One of these measures, but only one, in the present juncture is a determined movement toward a balanced Budget.

Early in 1933, after 3 years of progressive deterioration, our whole economic mechanism was demoralized. Under these conditions there was no agency outside of the Federal Government with the resources and the courage to bring about a business revival.

Today the situation is greatly changed. We are now nearing the end of one of the most active years in the business history of this country. On the whole, this high level of activity has been of a healthy character—not of the character that usually marks an unhealthy boom and precedes a serious depression. The present situation is not characterized by the existence of huge inventories, high interest rates, overextended credit positions, or great surpluses of housing and capital equipment. We have not reached the stage of full employment of our productive resources. On the contrary, from all these standpoints, conditions are favorable for a continued increase in the level of business activity.

This stands in contrast to the unhealthy excesses of 1929. It stands in even sharper contrast to the banking collapse, the bread lines, the bankruptcies, and the general demoralization of 1933.

Despite the substantial increase in the public debt during the past 4 years, the credit of the Federal Government has remained absolutely unimpaired. Not once during even the darkest days of the depression did the Treasury experience the slightest difficulty in borrowing all the funds that were required. Moreover, the rates of interest on our borrowings have been lower, for comparable securities, than at any other time in the history of the country.

But the underlying conditions that made deliberate deficit spending the wisest kind of policy during the depression have been altered during the progress of recovery. Thus, when we borrowed during the depression to finance our deficit spending, a large part of the funds was obtained through an expansion of bank credit. To this extent our spending did not absorb capital funds that might otherwise have gone into private industry, nor did it absorb by taxation funds that might otherwise have gone into private consumption. Even to the extent that our bonds and notes were purchased by nonbanking investors, the effect was largely to put to work capital funds that would otherwise have remained idle.

Our industrial recovery of the last year, however, has created large new demands for private capital. Our commercial banks have been again utilizing their credit resources for the financing of private industry. During the present calendar year the insured commercial banks of the country have substantially reduced their holdings of Government securities in order to meet actual and prospective demands for commercial credit. The obligations that they sold, plus an amount equal to the securities newly marketed by the Treasury, were purchased by investors. Any deficit spending under conditions of active demand for private capital would have to be financed in large part by capital funds that would otherwise be available for business purposes.

The basic need today is to foster the full application of the driving force of private capital. We want to see capital go into the productive channels of private industry. We want to see private business expand. We believe that much of the remaining unemployment will disappear as private capital funds are increasingly employed in productive enterprises. We believe that one of the most important ways of achieving these ends at this time is to continue progress toward a balance of the Federal Budget.

I turn now to the immediate practical aspects of Budget balancing for the coming fiscal year. What are the controlling figures?

Our total receipts for this year were estimated in the President's Budget summation of October 19 at about $6,650,000,000, and our total net expenditures at about $7,345,000,000, leaving an estimated net deficit of $600,095,000.

To attain an ordinary balancing of the Budget next year—that is, a balance after full provision for accruing liabilities for old-age benefit payments, but exclusive of debt retirement—it would be necessary to accomplish a net improvement of about $700,000,000 in our budgetary position as last estimated. To be prudent, we should not count on an increase in revenues next year from the existing tax structure. Nor should we impose additional taxation. Instead we should plan to bring next year's expenditures within this year's income.

But where can cuts totaling $700,000,000 be made? After a careful study of the whole problem, I have come to the following conclusion: On the one hand, while everything possible is being and

will be done to keep a tight rein on the regular operating expenses of the Federal Government, including the national defense and interest on the public debt, I do not believe that we can find large savings in this field. Further, our expenditures under the Social Security Act will increase next year.

On the other hand, by focusing attention on the several classes of expenditures that have been mainly responsible for our past deficits—namely, public highways, public works, unemployment relief, and agriculture—it is apparent that great savings can be made.

Let me give you an idea of the possibilities for savings in these fields.

First, take the item of highway expenditures. Prior to the depression the Federal grants to the States for public highway construction generally ran under $100,000,000 annually. This year the total Federal outlays for highways, inclusive of emergency expenditures, are estimated at $253,000,000; and, in addition, the existing highway programs call for new appropriations totaling more than $400,000,000 for the next 2 years. I believe it is now time to return to the average annual level of highway expenditures that existed prior to the depression, especially because during the past few years many other millions of dollars have been spent for highways out of relief appropriations.

Second, there is the field of public works, other than highways, on which we are spending $573,000,000 this year. This is a greater sum than the total that was spent for this purpose during the entire 5-year period between 1926 and 1930, inclusive. Next year, despite the fact that there will be available from appropriations and allocations already made for this purpose more than $600,000,000, I believe that we can and should move definitely toward a lower level of public-works outlays.

Third, I sincerely hope that employment conditions will make possible a further substantial reduction in our outlays for unemployment relief and the C. C. C. camps. During the present fiscal year, by reason of more active private business, these expenditures are already being reduced by more than seven hundred and fifty millions below last year's.

I turn next to our expenditures on behalf of agriculture. The total of this year's expenditures, exclusive of public highways, for the regular activities of the Department, the soil-conservation program, rural electrification, resettlement, commodity loans, and lower interest rates for Federal land-bank borrowers, exceeds $900,000,000. Despite the magnitude of this sum, you are all aware that possible further measures involving large additional expenditures are now being discussed.

I am strongly in favor of a long-range program to maintain the independence and the purchasing power of the farmer. Such a program must take into consideration the farmer's opportunities in the foreign markets as well as in those at home, and no agricultural program can long endure which makes excessive demands upon the Federal Treasury or is unfair to consumers. The farmer himself does not want subsidies but rather such fair prices and such balanced production of crops as will make subsidies unnecessary for his decent economic status.

Balancing the Budget is as much in the interest of farmers as in the interest of other parts of our population, and it requires the cooperation of the farmer as well as of other sections of the public.

Only with the solid backing of the public can we hope to achieve economies totaling seven hundred millions in the four fields that I have cited.

There may be some persons who would counsel a more drastic reduction of expenditures or a program of far heavier taxation in order to make certain a more substantial reduction in the public debt in the next fiscal year. There are serious objections to either of these courses.

I have already indicated that I believe it undesirable to increase taxation. There are equally compelling reasons why we should not reduce expenditures too suddenly and too drastically. I strongly favor a vigorous program for the progressive reduction of Federal expenditures to the minimum demanded by the Government's responsibilities.

Obviously, however, one reaches a point in reducing Government expenditures at which no further reductions can be made, unless it is decided to cripple many essential governmental activities—in other words, unless it is decided to make drastic changes in national policy. For example, it would mean consideration of such things as weakening our national defense and slowing up or abandoning flood control, soil-erosion prevention, and relief for the aged and the unemployed. Such a course, I believe, would not have the approval of either the American people or their elected Representatives in Congress.

Moreover, it would clearly be disastrous to many of the needy unemployed and disruptive to many sections of private industry if we were to cut Government expenditures in the coming fiscal year by much more than the amount I have indicated.

We are definitely in a transition period between unbalanced and balanced Federal Budgets, but I firmly believe that there is just as much danger to our economy as a whole in moving too rapidly in this direction as there would be in not moving at all.

Relatively few persons realize the striking fact that the net improvement this year in the budgetary position of the Federal Government as estimated will amount to more than $2,000,000,000. In other words, the net deficit this year is estimated at less than seven hundred millions as compared with more than two billion seven hundred millions last year.

This net improvement of more than $2,000,000,000 in a single year provides the best answer to those who, in most cases ignorant of the true facts, have publicly despaired of our ability to balance the Federal Budget.

True, much of this year's anticipated budgetary improvement comes from increased revenue, but we are supplementing this by also seeking reductions in expenditures.

In addition to these considerations I should like to point out that, as a result of the Social Security Act and related State laws, it is estimated that the Federal Government next year will receive more than $1,000,000,000 net for investment in Government securities for the unemployment trust fund and the old-age reserve account. Although this investment will not change the total amount of the public debt it will with a balanced Budget result in the transfer to these reserve accounts of more than a billion dollars of Government obligations now held by private investors.

Even during the decade of the twenties, when the Treasury was receiving large payments of interest and principal on war debts, and from the sale of surplus war materials, the maximum reduction made in any single year in the public debt held by private investors was about one billion three hundred millions. The rate at which it is safe to reduce the public debt in private hands depends upon the rate at which private funds flow into investment channels. It is unsafe to go too fast.

* * * * * * *

Although we are not contemplating any increase in the total tax burden, the character of our tax structure is being given earnest consideration.

The Federal tax system affects everyone in the country. We in the Treasury in studying tax problems have two objectives always before us: First, that the tax burden shall be distributed as fairly as possible, and, second, that the collection of taxes shall be as little burdensome to the taxpayer as possible.

It is with these aims that, by direction of the President, we have been reviewing the whole tax structure in the last few months and are just now in the process of presenting to a committee of Congress the information we have collected. The study has not been directed toward raising additional revenue. Instead, we have sought to determine whether there are inequalities and injustices in the distribution of the tax burden and whether there are some taxes whose cost of collection and whose burdensome effect outweigh the revenue gain. In addition, we want to simplify collection and make the taxpayer's record keeping less difficult.

We realize that our tax laws are too complicated; we want to make them less so. We realize that there are inequities; we want to eliminate as many of them as we can.

In making this study we have invited the assistance and the advice of groups of taxpayers and of individuals. We want to hear the taxpayer's side of the story. We want all the facts we can get, and we have obtained both facts and opinions.

Our tax revenues come largely from individual earnings and business profits. We do not wish to impose levies which tend to dry up the sources of tax revenue. The laws should be so written and administered that the taxpayer can continue to make a reasonable profit with a minimum of interference from his own Federal Government, provided that the taxpayer cooperates with his Government in carrying out the purpose and the spirit of the tax laws. Of course, tax policy cannot properly be determined from exceptional cases. We must look at the whole picture. We base our decisions on extensive information and upon analysis of actual tax records.

The amount of our income-tax revenue is only about half our total internal revenue. Less than 3,000,000 people out of our total population pay individual Federal income taxes. We would be applying the principle of capacity to pay more justly if we were to reduce the number of consumer taxes and at the same time to increase the number of income-tax payers. Taxpayers who are squarely confronted with their own tax burdens are bound to be keenly alive to the way the money is being spent by their Government.

The Budget now nearing completion is predicated on a definite estimate of receipts based on the existing tax structure. It is a cardinal point of our policy that the tax system, as revised, must not yield a smaller return for 1939 than the present system would yield.

Let me repeat, we want to adjust inequalities and remedy defects in the tax laws. In doing this we have sought the help of the taxpayer and have given him a sympathetic hearing. If we find that the operation of any particular tax is unfair, we stand ready to say so publicly.

My object this evening has been to present, as clearly and as frankly as I know how, a comprehensive picture of the Federal expenditures and the budgetary outlook. I have tried to make plain the underlying economic reasons, as well as the humanitarian ones, for the past deficits; and I have tried to bring out clearly the considerations that now demand further definite steps toward a balanced Federal Budget. I have shown why, in my opinion, this balance should be sought by a reduction in expenditures without an increase in the total of the tax burden. But I have also shown

that there is a limit to reductions, and that balancing of budgets needs the help of industry to keep up total tax receipts unless we are again to resort to deficit financing.

The principal aims of our budgetary policy have been—and I hope will continue to be—to promote a high level and healthy character of business activity, a maximum volume of employment at good wages in private industry, a reasonable return to capital and enterprise, fair treatement for our agricultural population, and adequate revenues to meet the services now demanded of the Federal Government.

The attainment of these ends rests very greatly on private initiative and on the cooperation of private enterprise. This is a necessary supplement to any efforts which the Government can put forth. This administration is going to do everything possible to promote a continuation of recovery and to balance the Budget through cutting expenditures. But I wish to emphasize that in no event will this administration allow anyone to starve, nor will it abandon its broad purpose to protect the weak, to give human security, and to seek a wider distribution of our national income. We are confident that, with the full cooperation of the business world, our present difficulties will be overcome; and that the aims that I have set forth above, which are properly those of private business as well as those of the National Government, will be achieved.

Flood Compact or Power Compact

EXTENSION OF REMARKS

OF

HON. WILLIAM J. FITZGERALD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, November 15, 1937

RADIO ADDRESS BY HON. HERMAN P. KOPPLEMANN, OF CONNECTICUT, ON NOVEMBER 7, 1937

Mr. FITZGERALD. Mr. Speaker, last week at Hartford my colleague, Mr. KOPPLEMANN, delivered an address entitled "Flood Compact or Power Compact." It is an outstanding statement of the real situation confronting the fight we are making for the people of Connecticut and New England. I believe his statement should be read by all Members of Congress, and ask unanimous consent to have it inserted in the RECORD, as follows:

During the few weeks I have been home, the question was asked, Why did not Congress ratify the flood-control compact?

Because, my friends, while the compact is, to be sure, a flood-control compact, it is also a power compact. The law never intended it should be a power compact. That is why it was rejected by the Federal Power Commission and by the administration in Washington.

The people of Connecticut have obtained their information on the flood-control compact largely from the newspapers. The press of this State approves the compact and denounces those of us who oppose it. The press has emphasized the arguments in support of the compact; it has played up the statements of gentlemen who approve it; it has played down the equally important arguments in opposition to this flood and power compact.

The crux of the opposition to the compact lies in the insertion of provisions giving the States control over the possible generation of electrical power at the dams and reservoirs to be constructed, contrary to the Flood Control Act of 1936, and in violation of the provisions of the Power Act of 1920. If permitted this would establish a dangerous precedent.

If the four States of New Hampshire, Vermont, Massachusetts, and Connecticut had adhered to the law and had kept within the limits of the congressional authorization which permitted these States to draw a compact for flood-control purposes only, today the reservoirs, dikes, and dams would be under construction and the people of New England protected against the devastation of a flood such as we had last year.

The question of flood control has been an important one since the disastrous floods of 1927, which that year included Vermont among its victims. A survey was made of New England. The floods of 1936 brought things to a head, and Congress determined that once and for all time, the progress of science would be utilized for flood prevention measures.

Construction of reservoirs to stem the floodwaters of the Connecticut and Merrimack Rivers and their tributaries were proposed.

Originally it was suggested that the Federal Government take over the entire job of constructing the reservoirs. But during the course of debate, that original plan was amended so that as far as the Connecticut and the Merrimack Rivers were concerned, the cost would be borne in the following proportion: In round figures, ten million dollars representing the cost of construction, by the Federal Government; three and one-half million dollars, representing the cost of land and damages, by the four States.

The Flood Control Act of 1936 called for the construction of dams and reservoirs for the sole immediate purpose of flood control, to protect life and property, and for nothing else.

But, instead of limiting the compact to flood-control purposes, the compact commissioners of the New England States drafted provisions governing the generation of power. Although these provisions are phrased in such a way that ostensibly the consent of the Federal Government would be required before any power generation project by the States or by private utility interests could be undertaken, actually the four New England States could hold up power development by the Federal Government for a period of 999 years; and the Government is the people, make no mistake about that.

Naturally neither the Congress nor the President could agree to anything so flagrantly out of line with either existing law or the intent of Congress, as it is expressed in the Flood Control Act of 1936.

You may ask, why do I object to a delegation of this power control to the States? Because in these four States the generation of power is in the hands of privately controlled electric power interests.

Now, the various compact commissions are constituted of well-meaning, public-spirited men. But, as sometimes happens, there are those who use sorrow visited upon others by floods or other disasters as an opportunity to attempt so-called jokers, which they hope will be overlooked because of the great need for a remedy. Thus, in spite of the well-meaning members of the commission, there was permitted the writing of provisions into the compact which were out of line with the purposes for which the compact was authorized.

Under those provisions the States cannot develop a power project without the Government's consent, and the Government has no right to initiate one without the States' agreement. You can readily see that a fine deadlock could ensue under those conditions and progress definitely stopped.

The Flood Control Act of 1936 is a simple document. It states the purpose simply and the requirements simply. Why it was found necessary to go outside the provisions and the purpose of this law and draw a document which is essentially a power compact is beyond my comprehension, unless my question answers itself, and advantage was being taken of a tragic situation for the furtherance of power by the private utility interests in these States. Without question the framers of the compact exceeded the authority granted in the Flood Control Act of 1936.

I am purposely taking the time to give these details of the history of the flood compact because there seems to be so much confusion in the minds of Connecticut men and women.

I cannot help blaming this confusion to a great extent on the newspapers, because, as I said before, they have not dealt fairly with this question in presenting both sides to the public. One gentleman, for instance, told me that he thought the compact ought to go through as it is at present written. I asked him why. He said because the newspapers approve it. I asked him, "What do the newspapers say?" He replied, "I didn't read the whole story, but I can tell from the headlines they think the compact is all right."

That is the trouble. Many people are forming their opinions on national and local issues, not by what the newspaper stories tell them, but from the impressions left by the headlines.

Well, if we were to accept everything we read in the newspapers, including their so-called polls, President Roosevelt would have been defeated last November, and so would the rest of us. But somehow, thanks mostly to the radio, the people were able to determine the facts for themselves and the truth prevailed.

On March 15 of this year the Hartford Courant reported that the flood pact was completed, and further stated that—and I quote, "Until the draft is finally approved by the flood-control conferees, its provisions will not be made public." About a month later a photostatic copy of the compact as it was presented to the Connecticut State Legislature was sent to me. From my layman's knowledge of the law, I sensed that not only would the compact exceed the authority granted in the Flood Control Act of 1936, but that in addition it violated the Power Act of 1920. I presented the matter to a Government attorney, who substantiated my fears. I then called the compact to the attention of the Chairman of the Federal Power Commission. Before his report was received, two of our flood commissioners came to Washington to discuss the flood-control compact with the Connecticut congressional delegation.

On April 24 the Hartford Courant, in a special story from its Washington correspondent in his report of that conference, stated that it was a happy affair until I brought up the question of power in the compact and warned those present that the compact exceeded the authority granted the New England States in the Flood Control Act of 1936. The Courant report stated that I expressed the belief that the proviso in the compact authorizing the States to use the flood reservoirs for power dams contravened existing law giving the Federal Government control over navigable streams. It reported my fear that the Federal Power Commission would recommend against congressional ratification of the compact.

On May 1 the Courant correspondent in his regular column reported that Representative RANKIN, of Mississippi, had served notice that he would oppose ratification of the compact because of its

power provisions. But even earlier than that, on March 27, the Courant correspondent advised that the New England flood compact must be returned to Congress for ratification, the engineers of the War Department said—and I quote, "It exceeds conditions laid down in the 1936 act." Now, let me explain that, had the compact been drawn in accordance with the provisions of the flood-control law, it would have required no further approval by Congress.

Yet, despite these warnings, the compact was later approved by the Connecticut Legislature on June 26, and the bond issue to pay for Connecticut's participation in the program was also approved.

As I told you, I sent the compact to the Chairman of the Federal Power Commission for an opinion. His memorandum was so important that the Courant correspondent devoted his entire column on June 27 to a recital of the objections of the Power Commission to this compact—objections which in their essence are identical with those I have mentioned and will mention as I proceed with this talk.

In spite of the fact that the compact had already been passed by the Connecticut Legislature, the Courant correspondent voiced his opinion that the Power Commission's report to me apparently consigned the flood compact to the graveyard, because, as the attorney of the Power Commission stated, the compact "would reverse the established Federal policy on hydroelectric development and would contravene the Federal Power Act, giving control over hydroelectric developments to the Power Commission." One of the provisions of the compact gives away for 999 years the people's rights over power production. As the attorney of the Power Commission stated to me—and I quote again—"A thousand years is a long time in the history of any race. Conceivably Congress might find some better method of handling the problem within this long period of time. The compact would leave Congress powerless to inaugurate such different method without the consent of all the contracting States."

Very carefully there was inserted in the compact a provision that it would endure for a period of 999 years. What safeguards they tried!

I make these points to have it clearly understood that last April I cited the very objections which subsequently were voiced by the Federal Power Commission and pointed out by the President. Repeated warnings were given that the compact was not satisfactory. Despite these warnings the legislatures of the four States gave their approval to the compact, and on July 6 the commissioners representing the four States put their signatures to the document.

The President is opposed to this compact. As Governor of the State of New York, he received illuminating utility education. He not only knew his own State but he was well acquainted with the St. Lawrence River project. Since becoming President he has received a world of knowledge through the many power and flood-control projects all over the Nation. In my opinion, he is the best-equipped individual in America on the subject. When I went to him on this matter, in language so plain that it was the more forceful for its plainness, he told me he was against this compact. And he supported my objections in writing.

When the resolution to ratify the compact was presented to the Congress, some New England Senators insisted upon putting it through, declaring that they would leave the responsibility of a possible delay in flood-control measures to rest upon the White House. An effort was made to get the compact through the Senate, and it failed.

Let me recall my own part in this flood-control program. I have repeatedly gone on record to the effect that, in my opinion, the most effective and the shortest method of accomplishing flood control for New England would be for the Federal Government to undertake and pay for the entire project.

I voted for the bill authorizing the compact because I did not want to have this important matter of flood prevention held up, hoping that the States would be able to get together. Well, as a matter of fact, the States did not get together for a compact written in accordance with the Flood Control Act of 1936. The document they presented was a doubtful one because it had to be returned for congressional ratification, something that would not have been necessary had the law been complied with.

Local papers deplore my opposition to the compact. They give the impression that because of the paltry benefits which may accrue to private utility interests I am standing in the way of flood control.

There is no man to whom I will give way in my earnest desire for speedy relief from these devastating floods. No man more than myself wants these reservoirs, dams, and dikes built without delay, and they can be built without delay if these four New England States will agree to remove the power provisions of the compact.

Frank R. McNinch is the Chairman of the Federal Power Commission. He was appointed by President Hoover in 1931 as a member of that Commission. As recently as Monday, August 16 of this year, before a committee of Congress, he gave his opinion on this pact, and here it is: "I would regard it also as an alteration by Congress of the policy laid down in the Federal Power Act of 1920, which was the culmination and result of a long-continued fight between private power interests and the Federal Government," said Mr. McNinch. "That fight," he stated—and I quote—"came to fruition in 1920 by the passage of the Federal Power Act, under which act the Federal Government exercises jurisdiction over the construction of dams or projects for the development of power on any navigable waters or any tributaries thereof." Listen further to Mr. McNinch—and I quote again: "If I understand the compact correctly, though that may not have been intended, it is nevertheless, in my judgment, the inescapable result that if the title is vested in the States and if the States are to be permitted to develop the power projects and dispose of the power they develop, the Federal Government will no longer in those four States be in a position that it now is under the Federal Power Act to give preferential consideration to the rights of States, public bodies, or public districts or municipalities."

"The Federal Power Act," said Mr. McNinch, "now requires that be done in the case of every navigable stream or tributary thereof." No stronger objection to the compact have I heard from anyone. In the opinion of this high authority, if the compact as drawn by the four States were to be adopted by the Congress today, these rights would pass from the people back into the hands of the private electric interests, the law of 1920 would be repealed, and we would be back again to those dark ages when vested private interests, contrary to the public good, would again be riding in the saddle.

When the Flood Control Act of 1936 was before the United States Senate committee, the question of electrical energy that might be produced from these contemplated reservoirs was raised. I was present. Senator COPELAND, of New York, chairman of the committee, replied emphatically: "This is a flood-control bill, and the question of power cannot enter into it."

My interest in flood control did not start with the disasters of 1936. As a boy I lived on the East Side in Hartford and experienced every year the backing up of the river through the sewers into the streets, filling the cellars of homes with disease-infested waters. A boyhood chum was drowned in one of those floods. Years later, when a member of the city council, I advocated and saw put through an intercepting sewer which in a large measure protected Hartford against the underflow waters of these floods. That was a fight. That intercepting sewer was opposed by people who lived far removed from the flooded East Side district. As an alderman I was publicly reprimanded by Mayor Henney for my activity, and the Hartford Courant in those days played up the rebuke I received. But the intercepting sewer was finally built.

I have been advised to stop looking for the hand of the utilities in this compact. I have been told that the utilities had no hand in this compact. Why, then, are the utilities so anxious that this compact go through?

New Hampshire had on the flood-compact commission a Mr. Robert Upton. I have it on reliable authority that the official records of the Public Service Commission of New Hampshire show that for the past 4 years Mr. Upton has appeared as attorney for the New Hampshire Gas & Electric Co., the Derry Electric Co., and the Lamprey Co. subsidiaries of the Associated Gas & Electric Co. As far as the records reveal, he still represents these companies. Also, he has appeared as counsel for the White Mountain Power Co. and its successor, the Dewing interests. Moreover, Mr. Upton is special counsel to the present administration in New Hampshire in utility and allied matters.

In answer to a letter of mine, Mr. Fran't Comerford, well known in Massachusetts because of his active interest on behalf of power companies in that State, indicated to my satisfaction that he wants this compact approved by Congress. Mr. Samuel Ferguson, chairman of the board of the Hartford Electric Light Co., has likewise indicated his approval.

At the recent founders' day dinner of the Young Men's Christian Association here in Hartford, George S. Hawley, president of the Bridgeport Gas & Light Co., used that occasion to attack the administration and those of us who oppose this utility compact drawn up under the guise of flood control.

This power question affects all of us one way or the other. The future of New England, industrially and economically, is bound up in cheaper power rates.

Connecticut and Massachusetts are going to pay Vermont and New Hampshire well for any land and damages incidental to the construction of these flood-control projects. Under the Casey bill introduced recently a flood-control compact drawn in accordance with the law goes into effect when two or more States agree to it. This measure is coming up in the next session of Congress. If Connecticut and Massachusetts really want flood control, we can have it under the Casey bill.

The Flood Control Act of 1936 states that floods are a national menace. I cannot understand why Vermont and New Hampshire refuse to cooperate in effecting a proper flood-control program for their own good as well as the good of their neighbors. I cannot understand why they are insisting on rights they do not have under the law, ignoring entirely how responsible they are for the safety of the rest of New England. Therefore I cannot help but feel that there is more in their stubbornness than meets the eye.

Those holding out for the compact are pleading that the suffering people want and need flood control. They urge us to disregard these power provisions and pay attention only to the immediate need of flood control.

They remind me of the suffering sponsors of the Liberty League, who pleaded with us, "Don't tax the shirt off the workingman's

back," and at the same time they themselves were tearing the shirts off the backs of the poor.

The compact advocates are now crying out for States' rights. My friends, I am for States' rights, but I also am for the people's rights. States' rights properly interpreted mean people's rights. But in this fight States' rights mean private utility rights as against the people's rights.

This week I return to Washington. Our fight for real flood-control protection, our fight for lower power and light rates is going to continue. In carrying on my part I believe that I am following out the wishes of those who sent me to Congress.

The President's Message and a Bill Introduced Today

EXTENSION OF REMARKS

OF

HON. BERTRAND H. SNELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, November 15, 1937

Mr. SNELL. Mr. Speaker, the President's message is a great disappointment. It reveals clearly that there has been no change in the fundamental policies and attitude of the New Deal toward business, thrift, and investment. The will-o'-the-wisp of Government-managed economy still stands as the core of the President's empty eloquence. Mr. Roosevelt's vision of the Government managing everything is here reaffirmed and enlarged.

New threats against American business, big and little, are implicit in the President's declaration, "If private enterprise does not respond, Government must take up the slack. What we can do covers so wide a field and so many subjects that it is not feasible to include them all in this message."

That is a formal threat of national dictatorship.

The universal demand for immediate relief from tax policies which have paralyzed enterprise with uncertainty and fear is dismissed with mere devices of concealment and evasion.

Since the President finds it impossible to make a specific recommendation on this urgent national need, I have today introduced for the consideration of Congress a bill calling for the repeal of both the undistributed profits tax and the capital-stock tax as embodied in the Revenue Act of 1936.

Moreover, the White House message repeats the reckless doctrine that the Federal Budget must be balanced by greater revenues rather than by curtailed squandering. Specifically on this point the President says he can accept no revision of the tax laws "which involves a reduction in the aggregate revenues."

The message does not protect the Government credit. On the contrary, it portends more spending and thereby forecasts a continuing trend toward ultimate inflation.

The message does not encourage free enterprise but urges more bureaucratic centralization in Washington.

The message does not outline sound policies of conservation but predicts vast new regional experiments of unmeasured cost and untested social value.

Having induced an unnecessary business recession by unsound policies, the President now calls upon shackled private enterprise to rescue the administration.

Business can restore prosperity, and will do so if and when it is freed from the harassing impediments of Roosevelt policies.

I have today introduced the following bill:

A bill to repeal section 14, title I, subtitle B, "Surtax on undistributed profits," and section 401, title II, "Capital-stock tax," of the Revenue Act of 1936

***Be it enacted, etc.*, That section 14, title I, subtitle B, "Surtax on undistributed profits," and section 401, title II, "Capital-stock tax," of the Revenue Act of 1936, be, and the same are hereby, repealed.**

The National Guard

EXTENSION OF REMARKS

OF

HON. J. BUELL SNYDER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, November 15, 1937

ADDRESS OF HON. J. BUELL SNYDER, OF PENNSYLVANIA, DELIVERED BEFORE THE ANNUAL CONVENTION OF THE NATIONAL GUARD ASSOCIATION AT MONTGOMERY, ALA., ON OCTOBER 29, 1937:

Mr. SNYDER of Pennsylvania. Mr. Speaker, under permission to extend my remarks I include an address delivered by me before the annual convention of the National Guard Association at Montgomery, Ala., on October 29, 1937:

I feel signally honored to have this opportunity to meet and talk to such a large representation of men upon whom the Nation so largely depends for the maintenance of its institutions and of government itself.

The wisdom of our forefathers finds no better exemplification than in our National Guard. As at present constituted, you are a heritage of their foresight in decreeing against a large professional army.

The primary interest of you men is civil. Your paramount wish is for a happy, contented, prosperous nation, which only is attainable and lasting through the avoidance of the widespread disruption consequent upon war.

National happiness, contentment, and prosperity are the fruits of uninterrupted national tranquility. They are blessings which flow from peace, and it is to secure their flowage that the National Guard exists, because you stand as our major bulwark, not alone collectively but individually, by the very nature of your individual callings, against those influences, those factors, which lead to unrest and armed conflict both within and without national confines.

Our forefathers envisioned this psychology of a militia, which down to this good hour has been not peace at any price, but peace with honor, peace unless there be a threat, a challenge to our institutions, to our unity, to our principles of government, to all that yonder banner exemplifies.

Then and then only would America strike.

Then and then only would you men of the National Guard wish to strike—be eager to strike.

God forbid that it may again become necessary.

The best insurance that it will not is a proper measure of preparedness, and by that I do not mean the blueprint kind.

You men who know intimately the horrors of war, many by actual experience, and stanch disciples of the doctrine that a strong defense is the best bulwark of peace, you will find me supporting you in that view.

If preparedness will keep you out of war, if preparedness will keep you at your fireside with your loved ones, if preparedness spells continued peace for our America—and I know of no surer guarantor—then I pledge you that to the extent that I may contribute to that end in my present position, with your cooperation and support, we shall steadily and progressively build toward a proper measure of preparedness.

Of course, you gentlemen know, as well as I, that this cannot be done in a day, a month, or a year. Much time and money will be needed. As you all know, we have been buying or spending our way out of the worst depression in history. It has cost huge sums of money—borrowed money, which must be repaid. Preparedness has been the gainer, probably not as much as we all might wish, but in a very substantial way, because our leadership saw the wisdom of aiding and abetting industry of every kind and description, which meant, of course, larger than normal peacetime outlays going into the shipyards and into the factories and arsenals of the country, Government owned and private.

There can be no question that we have progressed more rapidly than under normal conditions. But, despite our gains, much remains to be done.

I need not relate to this assemblage our deficiencies. You are no doubt better versed with them than I. We all should much prefer that none existed right now, not because we feel that war is imminent but because if there were no deficiencies war would be less imminent if our preparedness doctrine be sound.

There is not a man here who does not entertain the view that we cannot long continue to have Federal expenditures exceed Federal income, but I am sure I have your unanimous approval of the position I took at the last session, when blanket cuts were being vociferously advocated in all the regular annual appropriation bills,

namely, that if expenditures were not to be permitted to run apace with the amounts appropriated, resort should be had to selective retrenchment; that the defense appropriations should be spared to the utmost.

I had been permitted to look behind the scenes and I knew that more than a negligible amount had been appropriated which might be withheld from expenditure without impairment to the military arm.

There is no question in my mind that the only course for us to pursue is to go forward with the programs which have been quite definitely shaped by the War Department. Despite all of the unrest abroad, I should be disposed at this time to deprecate any urge not emanating from the President himself to proceed other than in a consistently progressive way.

I say that because I have supreme confidence in the will and determination and ability of the Chief Executive to keep us out of war.

President Roosevelt has said that he hates war. He hates it just as bitterly as you and I do, and with your help and mine and the help of our peace-loving neighbors, I have faith that he will so guide the ship of state that we shall continue at peace—only and unless the alternative shall be thoroughly repulsive to those principles sacred to every patriotic, red-blooded American.

It is my firm conviction also that we may depend upon the President, despite financial stringency, to advocate that national-defense preparation goes forward on a scale consistent with his intimate knowledge of those influences which bear upon the measure of such preparation we should have. I say let him chart the course. If and when he should advocate acceleration, he will find a ready and responsive Congress and a national spirit wholly sympathetic.

You are about to adjourn another of your annual conventions—a very successful one, I have been told. I shall hear more about it, I suppose, after you and I have learned the dictum given to Colonel Chaffee by the Bureau of the Budget as to your 1939 estimates.

I know you are as happy to have Colonel Chaffee here as I am to have him accompany me. The colonel flew with me up into my district earlier in the month and made the principal address to an assemblage composed largely of National Guard and Reserve officers. He discoursed in a most interesting and illuminating way upon the essentialness to success of a balanced military team. Copies of his talk are available, I believe. Each of you would be enriched by reading it.

I thank you for inviting me to your meeting. I have enjoyed my visit with you. I want each of you to know and feel that you will always find a welcome in my office at Washington. I hope you will come to see me. I want your friendship and I want your help and support in this job of mine. Working together closely, I am sure we can and will accomplish much.

I could not conclude without congratulating you upon your selection of a new president. The men you have chosen for that responsible office, including the retiring president, General Waller, and his predecessors, add emphasis to your wisdom and sound judgment. General Leach is an old friend. His wide knowledge and genial personality presage a most effective year.

The members of my committee and those connected with the Chief of Staff's office in Washington depend on one man more than any other to keep a balance in the financing of the Army and all its auxiliaries, such as the National Guard. As I said before, and say now, he knows more about the general set-up of the Army than any other one man. He is with us today. The genial, efficient, and hard-working clerk of our committee, John Pugh, of Washington, D. C.

I should be remiss also if I did not speak of Gen. Milton Reckord. The Guard and the Nation owe him a debt of gratitude. His work in Washington for many years in behalf of the National Guard justly merits the highest commendation and praise.

I thank you.

A Suggestion for 1938

EXTENSION OF REMARKS

OF

HON. WALTER G. ANDREWS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, November 15, 1937

Mr. ANDREWS. Mr. Speaker, after 7 years as a Member of the Congress under both Presidents Hoover and Roosevelt, I am struck again at the opening of the special session by the fact that we are still heavily burdened with unemployment and at the moment in another business recession under which conditions we are once more flooded with suggestions of what ought to be done.

This special session was called by the President presumably to bring immediate action upon two very important and controversial measures. I refer to the wage and hour bill and a new farm measure. But we find ourselves back here on the floor today exactly where we were when we left here a little over 2 months ago. Neither of the two measures advocated by the President are ready for consideration and it would appear that some time will elapse before they are brought up for action. Even with the 4-to-1 majority enjoyed by the Democratic Party there is no agreement, and, if anything, there is substantial disagreement among members of the committees concerned with the development of these measures. All of which can lead to only one of two conclusions—that the call for the special session was made blindly without consulting the wishes of the majority leadership or that the call should not have been made in the first place. Forgetting these conclusions, however, it must be apparent to most of us that with the marked business recession in most all fields we stand on the brink of losing all of the economic gains of the New Deal insofar as definitely coping with the everlasting unemployment situation is concerned. In other words, after priming the pump by spending billions for this and that, we may easily find ourselves right back in the cycle where we started.

There is some basis, however, from my point of view for encouragement today. This comes in the first place even from the President himself, according to press reports, of his willingness to at least listen to the suggestion that it may be advisable to help industry, or to put it another way, relieve industry so that it may be in a position to see what it can do to absorb the unemployment. Beyond this there have been statements by Secretary Morgenthau and others close to the administration supporting this point of view, and I take great pleasure in reading to the House a statement in the press of November 12 by our distinguished chairman of the Rules Committee, the gentleman from New York, Mr. O'CONNOR. Complaining that no one in the country gives a thought to 5,000,000 private employers, Mr. O'CONNOR told reporters:

> We are picking on them, abusing them, and snooping on them. Yet the only place anybody can get a job is from a private employer.
>
> The employers won't do anything while living under the fear of the Government, with taxes, snooping, and so on, to harass them.
>
> If the Ways and Means Committee came in with a tax bill changing the capital gains and corporate surplus taxes, the reaction would be tremendous. The psychological effect would be immediate.
>
> I'm going to do all that I can to build up that idea.

The undistributed corporation profits tax is strangling smaller manufacturing concerns in the country, and these many thousands of smaller companies are really the backbone of employment and purchasing power. This tax will result in preventing these smaller concerns from weathering any serious business depression.

The last depression caused the impairment of surpluses and working capital. If not allowed to restore safe surpluses to tide over periods of loss, if not allowed to pay off bank loans or exempt capital investment in necessary replacement of worn-out and obsolete equipment and repairs, the answer is only too plain—they will be forced out of business.

I speak feelingly, because companies of which I know are in that position and I have reason to know that their case is typical of a very large percentage of the manufacturers throughout the country.

We are in another depression at this moment. Whether it will be of short or long duration, no one knows.

All of which brings me to the point of these few remarks with the following suggestions: Readjust the corporate-surplus tax or, better, repeal it entirely; readjust the capital gain and loss clause or, better, repeal it entirely; repeal the nuisance taxes.

This, of course, immediately brings up the question of Government income and the loss to the Government in the repeal of these taxes, all having to do with balancing the Budget. In this connection I am reliably informed that considerable consideration has been given, and is now being given, by tax experts attached to the Ways and Means Committee and others in the Treasury to a proposal for an alternative plan

which would be known as a gross profits tax. A careful analysis made by a nationally known accounting house of the income to the United States for the year 1936 had this alternative tax plan been in operation indicates that it would have produced over two billion in revenues to the Government for that year.

I hope the members of the Ways and Means Committee will give immediate consideration to the basic facts and underlying theories behind this alternative proposal known to them. Some of its members, I know, are partially informed on its proposals, and, as I have stated, your tax experts are very well informed. My suggestion then boils down to the repeal of the three taxes mentioned and the substitution of an alternate plan known to Ways and Means and Treasury experts.

Business by now should have learned its lesson, as well as the Government. Make 1938 a trial year for industry. Put industry on trial for one full year under this program and you will see results.

I am hopeful that the results of the present unemployment census soon to be completed will be accurate and the present indications are that this census is going to be well done. With this we will have some real information on which to base appropriations for relief. All of this can be taken care of under a plan such as I have outlined. Between now and Christmas put these changes in our tax structure into effect for 1938. Put it up to industry. Next to the employee out of work, no one has borne the brunt of the last 7 years more than the average head of the average small business. There is not 1 in 10 persons on W. P. A., P. W. A., or any sort of relief who would not rather have a real job of his or her own. I do not mean to say that this program will solve all our difficulties, but it will go a long way and, if adopted, I am sure, another census taken at the end of next year will justify this course.

Insurance Against War

EXTENSION OF REMARKS

OF

HON. THOMAS G. BURCH

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, November 15, 1937

ADDRESS OF THE HONORABLE LOUIS JOHNSON, THE ASSISTANT SECRETARY OF WAR, TO THE CONVENTION OF THE AMERICAN LEGION, DEPARTMENT OF VIRGINIA, AT DANVILLE, VA., ON AUGUST 25, 1937

Mr. BURCH. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include the following address of the Honorable Louis Johnson, the Assistant Secretary of War, at the Convention of the American Legion, Department of Virginia, in my congressional district, in the city of Danville, on August 25, 1937:

Fellow Legionnaires, we of West Virginia are proud to share with you of our mother State a common heritage of principles and ideals. Many of us are closely bound to you in ties of blood. I humbly offer my own case as an example. I was born and brought up in Roanoke. I graduated from the University of Virginia. My parents and my brothers still live in the Old Dominion State.

Between our two States Nature has set up thick forests and steep ridges. In other parts of the world these might have become fortified frontiers. Not so with us. Between our peoples there stand no barriers, physical or spiritual.

We are linked with you in our culture and our economy. We made mutual sacrifices in France. We fought side by side as members of the same Eightieth Division in the Meuse-Argonne offensive. It seems quite natural, therefore, that we should get together occasionally, talk over our common problems, and consider some of the questions that affect not only the well-being of our two States but also the welfare of our whole Nation.

About 4 years ago it was my privilege, as your national commander, to be your official guest. I then had the opportunity to see what valuable services you, my comrades of the American Legion, were performing in the interests of your communities and in the welfare of our country.

You had just passed through a trying period of economic adversity. Many of you had been hurt; some quite badly. Even now, perhaps, not all of you have recovered. With the same fighting spirit that many of you, yourselves veterans of the Twenty-ninth Division, displayed in the capture of the enemy positions east of the Meuse, and with the same dogged determination that others of you, members of the Eightieth Division, showed in pushing through the heavy swamps and shell-torn roads of Buzancy, you dug in, practiced and preached the principles of Americanism, fortified your positions against subversive influences, and moved forward for the counterattack.

May I add that in the successful campaign of education against subversive influences, led by the national Americanism commission of the American Legion, it was a citizen of this city of Danville who played a conspicuous role. I refer to my good friend and fellow legionnaire, your own neighbor, Hugh T. Williams.

The battle against the depression, thank God, has been won. You Legionnaires of Virginia, marching alongside your comrades from other States of the Union, may take just pride in the role you played in that great crisis. For the second time in your generation you heard the call of country and faithfully answered.

Today we are reaping the harvest of the seeds of recovery planted with your help and cooperation. Gone are the worries of yesterday. The wounds of battle are healing. Our ideals, our principles, and our form of government have been secured and strengthened. Confidence is increasing. Prosperity is returning. Well may we boast that nowhere else in the world today are men and women more secure in their property, more protected in their lives, and more happy in their outlook toward the future than in the United States.

As I flew over Pittsylvania County this morning and looked down upon the peaceful hills and valleys below, my mind traveled back to world news. Violence, pillage, and destruction pervade Asia. Brother is pitted against brother in Europe. Throughout the world forces of evil are trying to push civilization to an Armageddon.

Again I looked down below. Now we were flying over the city of Danville. Mills, office buildings, dwellings, schools, parks, all of them seemed to look up toward me and raise their heads in pride of progress and achievement in the works of peace, comfort, and pleasure. In the distance pastoral scenes and row upon row of green tobacco fields, topped and spread to maturity, beckoned me to the security and tranquillity of the community below.

It seemed fantastic to think of war in the midst of these peaceful surroundings. Yet no more so, perhaps, than it was 25 years ago to think that you and I and many of our friends would sail across the Atlantic to offer our lives in battle for the security of our country.

We who have seen war at close range and have felt the last warm breath of our dear departed comrades in the muck and chaos of battle, we are the last to look with favor upon any national policy of aggression.

On the other hand, we who have lived through the horrors of war's holocaust owe it to ourselves, to our wives, to our children, and to our institutions, to do all in our power to insure our lives and our property against the possibilities of a bloody struggle that would disturb the tranquillity and the happiness of Danville and the thousands of other peaceful communities in Virginia, West Virginia, and our sister States.

In the midst of disturbances, however, with fires already burning here and there, and with world-wide conflagration threatening, we cannot afford to sit idly by. We must strengthen our insurance against the possibility of even a singe.

Most of you undoubtedly carry insurance policies against death, against personal injury, against property damage, against fire, and perhaps against storm. Many of you may pass through life unscathed and never collect on your premiums. Yet your sound business sense pleads with you to keep on paying to protect yourself against the havoc of dreaded disaster.

I want to talk to you today about another type of insurance, whose premiums you, as taxpayers, pay and whose dividends you, as citizens, collect. I want to talk to you about your Army, your insurance against war, and urge you to keep up your premiums and perhaps slightly to increase them.

You pay comparatively little for what you get on your policy. Your premium for all land, air, and sea forces is about $5 per capita. In Germany you would pay $8; in Japan, $13; in Italy, $14; in Great Britain, $15; in France, $23; and in Russia, $33; and, what is worse, you undoubtedly would be less able to afford the expenditure.

We compete with no foreign powers in the race for armament nor in the lust for conquest. We ask that we be allowed to work out our own destiny in our own way without any outside interference.

Today the weak in the world apparently invite aggression from without and disorder and chaos from within. But "when the strong man fully armed," to quote from Luke, "guardeth his own court, his goods are in peace."

I want to tell you how strong and well armed your Army appears to be today and what it is doing to keep your goods in peace.

Note well that when I speak of the Army I refer to it as "your" Army or "our" Army. It is not a conscripted force called to the colors against its will. It is not a mercenary horde bent on spoil and splendor. It is a body of American citizens recruited from your farms and your factories, from your schools and your homes, who have chosen as their life's work service in the professional armed forces of our country.

Perhaps I can best illustrate their character by pointing out the career of Danville's outstanding World War soldier, a peace and wartime Regular, who has devoted his life to the Army and whose heroism in France has been rewarded with a Distinguished Service Cross.

His name is Lawrence M. Lumpkin. He left his home in Danville to join the Army almost 30 years ago. At that time Harry Wooding, your beloved perennial mayor, had served but 22 of his successive 52 years as the head of your municipal government. The Army was very small—smaller than it is even now. The automobile was in its infancy. Horses and mules provided the principal means of transportation. Lumpkin chose the career of an Army muleteer.

In the cactus fields of Texas, in the jungle swamps of Panama, in the shell-torn fields of France, he and his pack train of heavily laden mules have become conspicuous.

At Exermont, on the morning of October 4, 1918, at the opening of the second phase of the Meuse-Argonne offensive, the attack of the First Division met with stubborn resistance. Infantry lines were halted. Communications with the artillery broke down. A call was sent for telephone wire. Trucks were bogged down. Wheel horses faltered in their traces. Upon Sergeant Lumpkin then fell the duty to load a pack train of 10 mules with telephone wire and to rush them to the firing line.

There was no time to reconnoiter. Lumpkin loaded his mules with the heavy reels of wire and threw several diamond hitches. He formed the animals into a narrow column of single files and started out. The shortest route led over high, open ground. Almost immediately the enemy spotted the pack train. It opened fire. One mule let out a pitiful bray and toppled, then another, and another. Five of his ten mules were killed.

Undaunted, Lumpkin continued. He moved out at a full gallop, brought his train up to the artillery position, unloaded his packs, and delivered the badly needed telephone wire. Then he turned around, made a second trip, and brought up the rest of the valuable cargo.

For this act of gallantry Lumpkin received the Distinguished Service Cross. He wears eight stars on his World War service badge for four major and four minor operations on the western front. Since the armistice he has continued in the service. Today he is a staff sergeant in the Second Field Artillery at Fort Clayton, Canal Zone, in charge of a pack train in the mountain artillery—still loyal to his faithful mules.

In all of our wars we have been guilty of serious mistakes. Of those made during the World War, no one is more familiar than you. We are honest enough to confess them and courageous enough to do our utmost to prevent their repetition, if an emergency ever again arises.

Men may spring to arms over night, but what of their rations, their equipment, their arms, and their ammunition? Many of these necessary items cannot be bought in the open market. Days, weeks, perhaps months, may pass before factories can be established or changed into military arsenals or depots. Meanwhile, perhaps, time and tide will not wait.

To perfect our machinery to avert such a possible disaster it is axiomatic that we must be prepared. Today preparedness means something more than having a small, efficient Regular Army ready for battle. The wars of today no longer are fought alone by professional soldiers. They are struggles of whole nations, groups of nations, and even civilizations. Preparedness means keeping America awake, its money and resources available, and its whole manpower willing and ready to exercise the duties and responsibilities of American citizenship.

To this end the officers and the enlisted men of the Army are keeping physically fit and mentally alert to serve their country in peace and war. In our garrisons at home and in our possessions overseas they are planning, studying, and experimenting. The battlefields of Europe and Asia today are proving grounds for weapons, training, and equipment. The Army schools and the General and division staffs follow these struggles with professional interest, ever on the alert, in the light of these experiences, to improve our methods, our tactics, and our training.

The Army instructs and encourages the growth and efficiency of the National Guard. It teaches and develops the R. O. T. C. units at our schools and colleges. It trains and leads the Organized Reserves. It fosters and nurtures the C. M. T. C. It studies and develops war plans for the mobilization of industry that, in an emergency, may be called upon to convert plowshares into swords.

All these functions it performs with but about 12,000 officers and 165,000 enlisted men. No first-rate power, and very few smaller ones, rank as low in military strength. Portugal and Greece each has a force greater than our combined Regular Army, Navy, National Guard, Officers' Reserve Corps, and all other Reserve units. In an emergency even peace-loving Sweden is ready to put in the field almost 900,000 men, while our available strength for immediate use is less than 500,000.

In 1920, after a thorough study of the whole problem of preparedness, Congress decided that 18,000 officers and 280,000 enlisted men are needed for the Regular Army properly to carry out its duties. Since then our responsibilities have not been decreased and the state of the world has grown even more harried. Yet our forces are far below this desired strength. Our minimum needs today are 14,000 officers and 165,000 enlisted men.

With your help and cooperation, I trust that Congress will soon appropriate sufficient funds to bring our Army up to its necessary strength. Even with these additions, however, we will still rank in the size of our standing army below all first-rate powers. Therefore I feel confident that there is no danger these increases will head the United States toward militarism.

Although the duties and responsibilities of military preparedness weigh heavily on the Army, its officers and enlisted men, working together with civilian employees, are performing invaluable service of a nonmilitary character for the welfare of our country. To give you a complete picture of the activities of the War Department on rivers and harbors, inland waterways, the Panama Canal, the Bureau of Insular Affairs—to name but a few of the most important—would take hours.

Perhaps I can best illustrate the work of the War Department by pointing out to you its principal achievements of the last few years.

The outstanding accomplishment of the War Department in the President's recovery program probably was in connection with the Civilian Conservation Corps. Called upon without previous notice to mobilize, equip, house, pay, and clothe 300,000 unemployed young civilians, a force greater than was mustered into the military service during the entire war with Spain, the Army went about its work quietly and efficiently.

During the first 4 years that the Civilian Conservation Corps has been in existence the Army has enrolled approximately 1,869,000 men, constructed approximately 2,000 work camps, paid the enrollees and handled their allotments, and purchased and inspected their needed supplies and equipment.

In the last 4 years, the Army has added another chapter to its brilliant history as a relief agency in times of national emergency. Early this year, the Ohio River Valley was inundated by the greatest flood in our history. The valley of the lower Mississippi similarly was threatened. Hundreds of thousands of people became homeless. Property damage amounted to millions. While the floodwaters were still rising, the Army moved to the rescue and cooperated with other branches of the Government and with the great relief agencies. The enlisted men, officers, and employees of the War Department sped ahead of the raging waters to save life, to feed, to clothe, and to relieve the unfortunates, and to aid in the restoration of order among these stricken communities.

Army engineers directed 150,000 workers along the lower Mississippi, strengthened levees, guarded against breaks and diverted mounting torrents to available floodways. Army doctors established emergency hospitals and directed the prevention of disease. Army aviators dropped needed medicines and serums to isolated communities. Army radiomen helped to establish communications for them with the outside world. Following this great emergency, the facilities of the War Department, so far as possible, were permitted to help in the speedy restoration of the stricken areas.

There are further instances of the useful work of the Army in the last 4 years in the development of aviation, aerial photography, aviation medicine, and in the cooperation with the Department of Agriculture on weather forecasting.

Perhaps I have given you enough instances of the service of your Army in military and nonmilitary fields to give you a better comprehension of the scope of its services.

You may well be proud of your Army. It belongs to you. Prepared for emergency in peace and war, it is your insurance for the safety of your lives, the happiness of your homes, and the integrity of your institutions.

Fellow Legionnaires, vigilance for the safety of our country is our sacred duty. We who fought to save it must be ever ready to preserve it. To each of you, I therefore commend as a motto toward your country, the famous edict of the Roman Senate, which it imposed upon its leaders in time of distress:

"See ye that the republic receive no harm!"

Corporate Undistributed Profits Tax

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, November 15, 1937

RADIO COLLOQUY BETWEEN HON. EMANUEL CELLER, OF NEW YORK, AND HON. WILLIAM M. CITRON, OF CONNECTICUT

Mr. CELLER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following colloquy over station WJZ and the blue network of the National Broadcasting Co. on Wednesday, November 10, 1937:

Mr. CELLER. There is a quaint oriental query: "Which is the happier man, he with nine millions of money or he with nine daughters?" The answer is: "The man with nine daughters, because he wants no more." So it is with taxes. Nobody wants them. Nevertheless, we must have them in order to defray the expenses of the Government. However, our taxes heretofore have

Governor Langer, of North Dakota, Joins Forces Supporting Ludlow Resolution for Referendum on Participation in Foreign Wars—His Telegram One of Thousands of Similar Messages

EXTENSION OF REMARKS
OF
HON. LOUIS LUDLOW
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, November 15, 1937

Mr. LUDLOW. Mr. Speaker, with both the occident and the orient aflame with war there is a widespread determination among the American people that our sons shall not be sent away to die in foreign slaughter pens in the settlement of quarrels of alien origin.

Alarm over the imminent peril that confronts our Nation, which every well-informed observer knows is real and not imaginary, has given rise to a tremendous sentiment in favor of House Joint Resolution No. 199, the resolution I have introduced to give the people of America the right to vote on participation in foreign wars. Under that resolution the question of sending our fine young men away into the shambles in foreign lands would have to be submitted to the people, to be decided in a national referendum, the women having equal voting rights with the men.

Members of the House of Representatives who have not already done so are requested to sign discharge petition No. 11, now at the Speaker's desk, in order to assist in bringing House Joint Resolution No. 199 before the House for debate and a vote as soon as possible.

I have just received a telegram from William Langer, Governor of the State of North Dakota, which is typical of the viewpoint expressed in thousands of letters and telegrams that have come to my office. Governor Langer wires as follows:

> You have my earnest and unqualified support and endorsement of the national war referendum plan which you advocate. Your proposal is imperative to this Nation's well-being and one of the most important steps ever taken to guarantee America's security and economic stabilization. I hope the people grasp at once the wisdom, foresight, and vital need of this measure to maintain peace. Let us fight to improve our social and economic condition rather than assist in conquest of other nations and their attending difficulties. Let me know how I can help.

The Bronx Kills and the Harlem River Development in the City of New York

EXTENSION OF REMARKS
OF
HON. EDWARD W. CURLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, November 15, 1937

Mr. CURLEY. Mr. Speaker, on January 26, 1937, I introduced the Curley bill, H. R. 3674, which provided for an examination and survey of Bronx Kills and Harlem River with a view to providing an adequate channel to connect the East River with the Hudson River in the city of New York, State of New York. Under the provisions of the Curley bill the Secretary of War was authorized and directed to cause an examination and survey of the aforesaid waterway, to provide for an adequate channel to permit transportation of commerce between the East River and the Hudson River in the city of New York, State of New York, and the Secretary of War was authorized and directed to submit recommendations and estimates for said improvements. The bill was referred to the Committee on Rivers and Harbors, which made a favorable report on same. That report was approved by Congress in the first session, 1937, Seventy-fifth Congress.

A GREAT OPPORTUNITY FOR DEVELOPMENT OF HARLEM RIVER VALLEY

Since the early days of the twentieth century, Members of Congress endeavored to enlist the cooperation of the Federal Government in this meritorious public improvement. The local authorities, for more than a generation, have pointed out the relative importance of this project, to any intelligent regional plan for major development, essential to the rapid growth of the need for natural waterways, to accommodate ever-increasing commerce on the Harlem River between the East River and the Hudson River in New York City. For years civic organizations have recommended the deepening of this stream, so that boats could sail or pass from the Harlem River to the East River without passing through Hell Gate. In its present condition the Bronx Kills is a treacherous unnavigable stretch of shallow water at low tide because of the dangerous rocks that reach above water and are visible to the naked eye. It passes directly beneath that great engineering achievement now in full operation through aid of Federal funds—the Triborough Bridge. The New York, New Haven & Hartford Railroad yards are adjacent to this eyesore to decency, and in these days of advanced engineering plans it does not fit in with its magnificent environment now in process of completion.

THE BOARD OF ENGINEERS FOR RIVERS AND HARBORS FAVORED PROJECT

Pursuant to the provisions of the River and Harbor Act of June 13, 1902, it directed a preliminary examination of the Harlem or Bronx Kills, which was made and reported by Colonel Mansfield on July 28, 1902, whose report was reviewed by the Board of Engineers for Rivers and Harbors, and their report, dated November 11, 1903, concludes with the words:

> In view of the great present and prospective benefits that would result it is advisable to undertake the improvement of the Harlem Kills to a depth of 18 feet at mean low water, at a cost of $1,899,430.

The aforesaid report was submitted 34 years ago yet no action has ever been taken.

COLONEL RALSTON PREDICTED BRONX KILLS WOULD BE GREAT WATERWAY

Many years ago, when the War Department engineers made an adverse report on the deepening of the Bronx Kills, it was deemed by some skeptics it was not nor could it be made available for river traffic. But listen to what Col. R. R. Ralston, under whose jurisdiction the Bronx Kills remained at that time, said:

> The Bronx Kills may yet be a great waterway of advantage. At present very little traffic goes through the Harlem River to Hell Gate and then up the East River. The boats that do so would find the trip through the kills a short cut by about 2 hours, if it were navigable.

At that time Col. R. R. Ralston, in his report to the Secretary of War, submitted his idea of "a plan to improve the Bronx Kills," and that was by the installation of a double lock to prevent the water from flowing into the Harlem River from the East River the Bronx Kills would be deepened.

> Without the lock the pressure of water would be so strong if the stream was deepened—

He declared—

> that many boats would be washed ashore. This current is due to the fact that the level of the East River is about 2 feet higher than that of the Harlem River. Future changes in the kills depend upon the improvement of the Harlem Ship Canal, which includes the reconstruction of Highbridge and the elimination of the sharp curves at Spuyten Duyvil. When this work is finished, larger boats will be able to use the waterway and it is possible that sufficient river traffic will develop to warrant the expenditure of several millions of dollars to improve Bronx Kills. In 1925 there were 452,377 tons of cargo that came down the Harlem River carried up the Bronx River, while during the same year Westchester Creek carried 181,883 tons that came from boats using the Harlem River.

The Regional Plan Association, Inc., of the city of New York, gave a great deal of time and study to the future development of the Harlem River Valley. In an Information Bulletin No. 5, issued November 16, 1931, it said:

> A great opportunity: No part of our conception of future possibilities in the New York region is of such striking interest from the point of view of the opportunities presented as the proposals for the Harlem River Valley. Existing conditions along the Harlem

River Valley indicate that now is the time to plan improvements and to obtain control over new developments. Much has to be done to lay the foundations in the valley for the great future it may have if the citizens of New York will it.

Under the caption, "The Waterway and Its Bridges," it said:

The projected channel depth in the Harlem River is 15 feet. The river is narrow and quite crooked. It is crossed by 11 drawbridges and 2 fixed bridges. The primary use of this waterway would seem to be as a connection for barge canal traffic passing between the Hudson River and the East River, for railroad-car floats using the railroad stations in the southerly part and entering the East River, and for bringing of materials (building) to the adjacent parts of Manhattan and Bronx. An analysis of waterway traffic through the Harlem in 1922 showed that the number of vessels passing through the seven highway drawbridges varied from 76,262 at the Willis Avenue Bridge to 16,304 at the Broadway Bridge.

It was the opinion the traffic would be greatly increased if the present existing low-level bridges were scrapped for more modern and higher type.

In the contemplated development of the Harlem River Valley it is necessary to open up the Bronx Kills to river traffic. The channel must be adequate to give shipping from the State barge canals to points on Long Island a shorter and more direct route. Now or never is the time to do it. The proposition meets with the approval of Borough President James J. Lyons and every civic organization in our community. A public hearing on the Curley bill will be held in the city of New York in the near future by the Board of Engineers of the War Department. All those who are interested in this important proposed public improvement are invited to attend the hearing.

When Agriculture Prospers the Nation Will Prosper

EXTENSION OF REMARKS

OF

HON. HARRY B. COFFEE

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, November 15, 1937

RADIO ADDRESS OF HON. HARRY B. COFFEE, OF NEBRASKA, ON OCTOBER 30, 1937

Mr. COFFEE of Nebraska. Mr. Speaker, under leave to extend my remarks in the RECORD I include my radio address over the National Broadcasting System on the National Farm and Home Hour, October 30, 1937:

As a cattleman, I am glad to speak through the courtesy of the American National Live Stock Association on this National Farm and Home Hour about the biggest business in the United States—the business of agriculture—and the importance of the livestock industry in the field of agriculture.

There is no business in this country to compare with agriculture in volume, value, or number of people employed. According to the United States Department of Agriculture the estimated farm population on January 1, 1937, was 31,729,000, the total value of all farm land and buildings was $32,858,000,000, and the value of the livestock was over $3,000,000,000.

The livestock industry is the backbone of agriculture. It is by far the most important phase of agriculture. To get a clearer picture of the importance of the livestock industry to the Nation let me point out that in 1935 the gross farm income was approximately $8,000,000,000, of which livestock and livestock products accounted for 4½ billion dollars, and all farm crops, including forest products, totalled 3½ billion dollars. In other words, approximately 57 percent of the national farm income was derived from the sale of livestock and livestock products. In my own State of Nebraska livestock and livestock products account for about 70 percent of our farm income, and in the western range States this percentage runs into much higher figures.

Livestock is produced in every State in the Union. It is one of the leading industries in most of the States. According to the 1933 figures of the United States Department of Commerce, listing the 10 first manufacturing industries in the United States, meat packing ranks first, followed in order by petroleum refining, steel-works and roller-mills products, with motor vehicles in fourth position.

In the 17 Western States the livestock industry is of greater relative importance than it is in the Nation as a whole. In many of these western counties sheep and cattle furnish the main source of tax revenue that maintains the county governments.

To give you the relative importance of the principal farm commodities in gross income for 1935 I quote from the 1937 agricultural statistics, which are the latest published, as follows:

1. Milk	$1,680,000,000
2. Cattle and calves	920,000,000
3. Hogs	868,000,000
4. Chickens and eggs	871,000,000
5. Cotton lint and seed	698,000,000
6. Wheat	367,000,000
7. Truck crops	304,000,000
8. Corn	239,000,000

Of course, about 90 percent of the corn is marketed through livestock and as a consequence the average farmer is more interested in the price of cattle and hogs than he is in the price of corn itself.

Due to the severe drought last year, with the resultant loss of over 1,000,000,000 bushels of corn, there has been a shortage of fat cattle and hogs, which has resulted in abnormally high prices being paid for the small number of highly finished cattle that were on the market. Less than 5 percent of the cattle reaching the terminal markets were able to earn the higher prices that have helped to build up consumers' resistance to all beef. While early fall prices this year permitted the western cattle producer for the first time in 7 years to get a parity price for his feeder cattle, it should be noted that there never has been such a wide spread between the price of well-finished steers and the price of feeders. The western range producer has had only 2 years in the last 7 when he has obtained a price above cost of production for his cattle. In fact, since 1920 he has had only 7 years of profit.

The uncertainties of the future fat cattle market have made the Corn Belt feeder hesitant in buying feeder cattle, which reacts to the detriment of the western producer. Aside from the price to be paid for feeders, the western range producer, the Corn Belt farmer, and the dairy farmer all have a common economic interest in maintaining a stabilized price for livestock and livestock products. They have a common interest in protecting the domestic market against foreign competition.

Abnormally high prices bring consumer resistance and curtailed consumption which in the long run are to the disadvantage of the consumer as well as of the producer. The livestock industry wants to maintain a fair price level for its products; to eliminate the periodic high and low prices that have been so disastrous to the industry.

Parenthetically, it might be of interest to you to know that the Federal Trade Commission's inquiry showed that in 1935 the producer got only 40 cents of the consumer's dollar spent for beef; 42 cents went to the wholesale and retail distributor; to the packer went 13 cents; and to the transportation companies, 5 cents. The producer is interested in reducing to a minimum this price spread between the producer and the consumer.

The American National Live Stock Association, which ably represents the range cattlemen and State organizations of cattlemen west of the Missouri River, has opposed, and I think rightly, any processing tax on cattle which would either be added to the consumer's costs or deducted from the producer's price, thereby further increasing the spread between producer and consumer. In my capacity as a member of the Committee on Agriculture in the National House of Representatives I have opposed every proposal for a processing tax on cattle. Any tax on a perishable food commodity, such as livestock products, would tend to curtail consumption if passed on to the consumer. If it is not passed on to the consumer, it is taken off the producer in order to move the commodity into consumptive channels at a price the consumer will pay. Any obstacle or burden placed on livestock products tends to divert the consumer to competitive commodities.

It is desirable to encourage the consumer to purchase meat and dairy products in order to market advantageously our normal corn crop of approximately two and one-half billion bushels.

When the profits of the farm and ranch are increased, that increased purchasing power in the agricultural sections is immediately reflected in increased industrial activity and increased pay rolls. It is important to note the close parallel between farm income and factory pay rolls. When livestock and other farm commodities were selling a few years ago at less than half of the cost of production and hundreds of thousands of farmers and stockmen were going bankrupt, this lack of purchasing power was also reflected in the closing down of factories and in a consequent army of unemployed. The people of this country have learned that it is impossible for any one group or section of the country to prosper long at the expense of another group or section. Because of its primary importance, when agriculture prospers, labor and industry prosper. When agriculture suffers a loss of purchasing power, it is felt immediately throughout the Nation for the reason that, while 25 percent of the population live on the farms, a much larger proportion of the population depends either directly or indirectly on agriculture for a livelihood. Likewise, agriculture is vitally interested in the welfare of industry and labor because, when the factories are busy and labor is employed, the consumer has purchasing power to enable him to pay a fair price for the products of the farm and ranch.

When the importance of agriculture in our national economy is fully appreciated by the consumer, I am sure he will realize that in paying a fair price for agricultural products he is in turn safeguarding his own job as well as protecting a living wage for the industrial worker. Therefore, when you buy your bacon, lamb, beef, and butter, remember that the livestock industry provides

57 percent of the national farm income and furnishes the means for the producer to purchase industrial products.

It is in the interest of the general welfare of this Nation not only to maintain a fair standard of living for the wage earner but to maintain a fair price level for agricultural products. Since the World War, agriculture has not received its fair share of the national income. The value of farm lands and buildings in 1935 was $2,000,000,000 less than the value of farm lands and buildings in 1910. The farm population in 1935 was 200,000 less than the farm population in 1910. During those 25 years between 1910 and 1935, while the Nation's population grew nearly 40 percent and the national land area included in farms rose from 46 to 55 percent, the population on the farms actually declined. Although during the depression many families went back to the land in an effort to raise their own subsistence, the exodus from the farm continued from 1930 to 1935 to such an extent that 984,000 more people left the farm than went to it. More than 236 farms of every thousand were foreclosed during this period. From 1850 to 1920 farm land steadily advanced in price, but since 1920 the average price per acre has declined from $69 to $31.

How to maintain a fair balance of income for agriculture, labor, and industry challenges the Nation today. The maladjustment of income among the various economic groups helped to precipitate the depression which has cost the Government and the people of this country many billions of dollars. It is unfair to expect the wheat farmer, the cotton planter, or the livestock producer to sell his products at the world price and to pay a protected price for everything he buys. The high tariffs provided for industrial products and the lack of equal benefits for most agricultural products have tended to industrialize the United States at the expense of agriculture. Since 1922 the trend has been toward increased exports of industrial products and increased importation of foodstuffs. In fact, since 1924 we have been importing more foodstuffs each year than we have been exporting.

In my judgment, it is necessary to maintain a dual price level for agricultural products having an exportable surplus. It is the exportable surplus that determines the domestic price. If we have a hundred million bushels of wheat more than can be consumed in this country, the price level drops down to the world price level so that the exportable surplus can move out of this country into export trade. This is a typical example of the tail wagging the dog. Every American farmer knows the tariff of 42 cents per bushel on wheat is of no benefit when he has an exportable surplus.

I feel the Federal Government should provide the legislative machinery that will make it possible for the farmer to obtain an American price for that portion of his commodity domestically consumed and a lower world price for the portion sold on the world markets. If available Federal funds are not sufficient to maintain a dual price level on these exportable surplus commodities, then a means should be provided where an equalization fee could be charged to carry out the operation. This would entail no Federal subsidy, but would give agriculture the benefits of a dual price system at relatively small cost.

I was instrumental 2 years ago in securing for the benefit of agriculture a legislative provision referred to as section 32 of the Agricultural Adjustment Act, which sets aside 30 percent of all customs receipts of this country—approximately $100,000,000 annually—for the use of the Secretary of Agriculture to remove price-depressing surpluses. This section should be perfected so that it will be used for the purposes intended in maintaining stabilized prices. Under the provisions of this section the purchases may be diverted to relief channels, industrial uses, or may be exported. If judiciously handled, this $100,000,000 fund, with a clearer mandate from Congress, could go a long way toward financing a dual price system for agricultural commodities when price-depressing surpluses occur. The soil-conservation program is designed as a voluntary aid to farmers to hold crop production in balance and to maintain soil fertility, but it cannot prevent disastrous price slumps.

For instance, should we in a year or two get back on an export basis for pork and lard, what legislation have we to maintain a domestic price level? A demoralized pork price would affect beef, lamb, chickens, and all other competing foods; not only that, but corn and feed prices would be adversely affected. The price of hogs and fat cattle will finally determine what the feeder can pay for corn. If the feeder knew today that he would be able to get a good price for his fat cattle, lambs, and hogs, there would be no such pressure to lower the price of corn or feeder cattle in the West as has recently occurred. If a small surplus of lard and pork occurs, it should not be permitted to demoralize the domestic price. When pork products decline in value it affects the price of all livestock and poultry products, as well as corn, cottonseed, and other competing stock feed.

Because of its importance in our agricultural economy, any measure designed to aid agriculture must give primary consideration to the livestock industry. We must provide means of maintaining a fair price level in this country for the finished products of the farm and ranch. We must either expand our foreign markets and protect the American market against the competitive foreign imports or restrict production. We need to import millions of dollars of noncompetitive foreign goods annually, and there are many foreign countries that would buy our surplus commodities at a competitive price. We cannot afford to tear our wage scales down and reduce our standard of living to compete in world markets against their cheap labor with our products from the farm and factory. We can and should compete with that portion of products for which we have no need in this country. Many industries use this method today to dispose of their surpluses. Give agriculture the same opportunity. The Federal Government is the only means through which the millions of farmers in this country can operate such a system. Do this for the farmer by protecting the domestic market with an adequate tariff or quota and by means of a dual price system facilitate the removal of the exportable surplus.

Instead of relying entirely on control of production, the Federal Government can well afford to set up legislative machinery that will enable the farmers of this country to maintain parity prices on that portion of the commodity domestically consumed. It can provide for diversion to relief channels, industrial uses, and world markets of the exportable surpluses at the world price. This will make it possible to regain and retain the foreign markets for these surpluses when they are produced and at the same time prevent the surplus from demoralizing the domestic price level. Controlling the acreage does not control production. The weather man is a determining factor in that.

Furthermore, when production is curtailed, employment is curtailed in the producing, processing, transportation, and distribution of the product.

While there is no one panacea that can solve the agricultural problem, there are other provisions which, if enacted, would, I am sure, materially help the situation. The Government should provide laboratories to assist in developing new industrial uses for surplus agricultural commodities. Congress should enact legislation authorizing the Secretary of Agriculture to file applications with the Interstate Commerce Commission for the adjustment of freight rates on agricultural commodities. Industries are able to employ freight-rate experts to protect their interests. Farmers are not organized and generally are without the means of employing counsel to represent them in the adjustment of freight rates.

Congress should correct the inequalities of the 1930 Tariff Act and give agricultural commodities equal protection to that accorded industrial products.

There can be no justification for compulsory control of production on certain agricultural commodities so long as enormous quantities of competing foreign products are allowed to come into this country. We must protect the domestic market for the American farmer.

Agriculture should not be asked to make any future concessions in reciprocal trade agreements. Trade agreements should be made in which certain industries should make concessions that would open up foreign markets for our normal surpluses of wheat, pork, lard, and cotton.

The Argentine Sanitary Pact that has been slumbering in the Senate Foreign Relations Committee for the last 3 years should be put to sleep permanently. Any attempt to lift the embargo on importations of meat from any country having hoof and mouth disease among their livestock should be defeated. The United States is one of the few livestock countries of the world that is free of this disease. Importations of chilled or fresh meat from any country having this disease would be a threat to the entire industry. The Government spent millions of dollars in eradicating the last outbreak in this country. F. E. Mollin, secretary of the American National Live Stock Association, at Denver, has written an exceptionally good brief on this subject in opposition to the ratification of the Argentine Sanitary Pact, which I commend for your consideration. Ratification of this pact by the Senate would be a serious blow to the livestock industry.

There is a domestic market for all the beef produced in this country. Chief worries to the livestock industry are competing imports and a possible future surplus of pork products for which there are at present only limited foreign markets. Pork is the chief competitor of beef and as a consequence the cattlemen are very much interested in maintaining a fair price level for all meats. The price of pork affects the price of beef. Canned hams are coming into this country, principally from Poland, at the rate of more than a million pounds per week. This is the equivalent of the hams from over 60,000 hogs per week. These hams have been selling at wholesale in New York City for about 40 cents per pound. The tariff is only 3¼ cents per pound—too low to preserve the domestic market for the American corn and hog producer. At the last session I introduced a bill which would curb these importations and I hope this bill will receive early action by the Congress. There can be no justification for controlling the production of corn so long as these meat imports are allowed to come into this country in such volume. If corn acreage is drastically reduced some other crop will be planted in its place which may handicap the producers of other commodities. Give the American farmer a chance to supply the American market and he will adjust his acreage to fill the requirements. This will help relieve the pressure on those commodities with price-depressing surpluses. It will help stop the exodus from the farms and relieve the congestion of unemployment in the cities.

Our Committee on Agriculture is faced with a difficult task in its efforts to help certain agricultural producers who are in need of legislative aid without infringing upon the rights of others. Equality under the law is the inherent right of all American citizens. We cannot justify sectional or group benefits at the expense of others. The producers of all surplus commodities should be provided an opportunity to maintain a fair price level for the portion of their product consumed in this country and an opportunity to sell their exportable surplus at the world price on the same plan on which many industrial concerns now operate. They must be given the benefits of our protective tariff system if that system is to accord equal benefits to all American producers. When agriculture prospers, the Nation will prosper.

The Undistributed-Profits Tax Should Be Modified to Lessen the Burden on Small Business and Industry

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, November 15, 1937

LETTER FROM HON. JENNINGS RANDOLPH, OF WEST VIRGINIA

Mr. RANDOLPH. Mr. Speaker, in connection with the new tax program which will come before Congress for consideration, I have addressed a letter to Hon. FRED M. VINSON, chairman of the House subcommittee of the Ways and Means Committee, now considering the preparation of a national tax structure. This communication follows:

ELKINS, W. VA., *October 27, 1937.*

Hon. FRED M. VINSON, M. C.,
Washington, D. C.

MY DEAR FRED: I am addressing this letter to you in your capacity as chairman of the House subcommittee of the Ways and Means Committee now considering the preparation of a new national tax structure.

It is my firm feeling that—

(1) The undistributed-profits tax should be modified to lessen the burden on small business and industry.

(2) The tax on capital gains should be revised.

It is especially with the first that I shall deal in this letter.

At the time the undistributed profits tax legislation was passed I reluctantly joined in support of the measure because I felt that its good points outweighed its doubtful ones, in that it would force big corporations to pay out their earnings as dividends to investing stockholders and thus place money in circulation. I believed then that it would aid in preventing the piling up of unwarranted corporation surpluses, thus bringing about a stabilization of business, which would broaden the base of prosperity.

The purposes of the measure were proper, and no doubt dividends have been paid in some instances where otherwise no action would have been taken if the law had not been in operation. I have now come to the conclusion that there must be a modification of the law so that no penalization of business initiative and thrift will be continued.

Throughout my district there are many industrial enterprises the majority of which are small. We must not weaken such businesses, because in doing so we drain their reserves as to cripple expansion or fail to retain sufficient funds for the lean years. Certainly we must help the industry which shows a profit one year to use a part of that profit to bolster earnings in a bad year.

I am fearful that the present tax has worked not so much against the larger corporations, who over a long period of time have stored up huge reservoirs of surpluses, but against smaller and developing corporations who have been hindered in their growth.

Amendments to the law calling for the tax of profits only above a sound and reasonable reserve, with provisions made for factory expansion and plant construction, and corporations that are in debt, would seem to be vitally needed.

I trust that in the painstaking consideration of new tax legislation that you and your colleagues will bring before the Congress a tax program which will eliminate any apparent inequalities and other uncertainties which beset the taxpayer at this time. Encouragement should be given to prudent and honest business endeavor.

With assurance of highest esteem and kindest personal regards, I am,

Very sincerely yours,

JENNINGS RANDOLPH.

Balancing the Budget

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, November 15, 1937

Mr. LAMBERTSON. Mr. Speaker, with millions of other Americans, I rejoice in the declarations of the President and his aides that they will embark upon a course of retrenchment and economy that the financial structure of the Nation may be preserved and at long last the Budget balanced.

No nation can possibly evade insolvency when its spending is at the ratio of 2 to 1 to the current income. No nation can stave off insolvency, balance its budget, or create values either by legislative action or by Executive order. Therefore, I hail these recent announcements of the President and Secretary Morgenthau as the beginning of a new era of restored confidence and increased business activity, all, of course, dependent on the actual execution of the plans for economy.

In a statement summarizing revised estimates on the 1938 Federal Budget, the President reveals that on September 30, 1937, the Public Works Administration had on its books undisbursed commitments for loans and grants aggregating $530,000,000. Many of these commitments undoubtedly are for projects which it would be possible to eliminate or postpone for an indefinite period. The President has signified his determination that all commitments which for one reason or another are canceled shall be wiped off the books and that the money saved shall be impounded and returned to the Treasury.

Besides these commitments which may be abandoned, there are certain other projects which may be halted by Executive order with great savings to the Nation. There is one project in particular which should be wiped off the books forthwith and the money returned to the Treasury.

Gentlemen, I refer to the proposed $30,000,000 second Thomas Jefferson Memorial in St. Louis, for which there is a Public Works Administration allotment of $3,300,000. In addition there is a W. P. A. allocation of $3,450,000 to this project, and the citizens of St. Louis have been victimized by a fake bond issue to the extent of another $2,250,000, so that there is presently available for this useless project the sum of $9,000,000, all of which can be saved by prompt Executive action.

Mr. Speaker, most of the Members of Congress know the uselessness and absurdity of this $30,000,000 project in St. Louis. All of you should know that Congress has never officially sanctioned the project with an appropriation.

To summarize the projected memorial briefly, I again charge "it was conceived to deceive and reeks with fraud, corruption, and graft." This memorial project in St. Louis had been touted by its promoters as a $30,000,000 enterprise in which the Federal Government was committed to plunge $22,500,000 as a work-relief measure that would provide employment for 5,000 persons for a period of 3 years. This nefarious scheme has been thoroughly debunked from beginning to end, and finally stands revealed as a gigantic real-estate-unloading scheme, which, if ever consummated, will feather the nests of the St. Louis promoters at the expense of the Nation's taxpayers. This is the kind of game the Federal Government can ill afford to play, for it is not worthy of the candle.

Long before the memorial project had been debunked by a courageous press aided by a group of determined St. Louis citizens, certain of the sponsors were powerful enough to get the ear of the President, and he was betrayed and deceived into declaring 37 blocks of commercial and industrial properties lying along the Mississippi River in downtown St. Louis an historic site within the meaning of the Historic Sites Act of August 21, 1935, and as a face-saving measure the President on December 21, 1935, allocated the sums of $6,750,000 to the project, provided it should be matched by $2,250,000 in cash by the city of St. Louis. The story of how the city's $2,250,000 was raised through the sale of bonds issued as the result of an election permeated with fraud and corruption constitutes one of the most sordid chapters in American civic annals. Even the sale of these obligations of a first-rate American city, with credit the highest, was accompanied by circumstances which are not above suspicion. In the 2 years and 4 months which have elapsed since the notorious days of 1935, when the promoters were busily deceiving the people, much water has gone over the dam, but the mills of fortune have refused to grind. An unkind fate has intervened to thwart

the promoters at every turn. They have collected and spent huge sums of money. They have sat silent and complacent as men have been publicly indicted for frauds in connection with their bond-issue election. They have raised no voice in protest when fraud was revealed in every single ward of the city of St. Louis in which the bond issue was given a favorable endorsement on the face of the returns. They have given silent comfort to the debauchers and despoilers of the ballot in St. Louis. Besides, they today carry on a campaign of publicity designed to divert attention from facts of the situation as they really are and to create public sentiment for an enterprise to say the least is more destructive than constructive.

Mr. Speaker, there are many ramifications to this St. Louis memorial promotion, but, above all things, I will briefly mention that there is every possibility the whole allocation of funds to the project constitutes an unconstitutional act by the President. This will eventually be decided by the courts.

Meanwhile there has come a time for action. The time has arrived for the President to wipe out this blot upon the magic carpet of America. The time has come to retrench and save by recalling the Executive order of December 21, 1935, to the end that "the great mass of the people be restored to confidence in their justice, their security, and their self-respect" as envisioned by our Constitution.

Mr. Speaker, to proceed further with this St. Louis memorial project will be an indication that all of the promises of the New Deal for retrenchment and economy lie buried with the civic virtue of a modern city on the banks of the mighty Mississippi.

The President's Message

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, November 15, 1937

Mr. SABATH. Mr. Speaker, ladies and gentlemen of the House, I am certain that every honest and sincere American citizen will be pleased with the constructive recommendations embodied in the message of President Roosevelt to Congress.

Criticism can come only from those governed solely by political motives, those whose burning desire for a return to power make them blind to the welfare of the Nation, or from the professional gamblers and speculators who seek through a duplication of the 1929 crash to again enrich themselves from the misery of the millions.

I have faith in the American people, in the American system, and in American institutions. My confidence and whole-hearted belief in democratic processes has dictated my loyalty to the Democratic Party. I believe, as President Roosevelt believes, that the American businessman has the interest of the country at heart; that the success of the American businessman is the country's success. Likewise I believe, as I am sure he believes, that the greatest danger to our economic well-being is the professional speculator and gambler.

Never in the history of our country, or of any country, has such progress been made as we have seen in the 4 years from June 1933 to June 1937. It is a progress based on sane progressive plans and policies under the leadership of a humane and fearless President.

During these years millions have been reemployed at higher wages and under better conditions. Banks, many of which faced bankruptcy, were not only reopened, but the savings of depositors were made safe. Interest rates to States and municipalities, and for commercial purposes, were reduced. Thousands of factories closed for years have been reopened; others working at 20 percent or 25 percent capacity and many verging on bankruptcy have been stimulated and directly aided and losses turned to profits. Current dividends have not only been paid, but in many instances back dividends were made up. Too numerous to mention are the instances of industries whose production and profits have climbed above the peak days of 1928 and 1929.

There can be no denying that great strides have been made toward normalcy under President Roosevelt; yet we hear among us still the voice of reaction raised in criticism. The old order has given way to the march of progress, but those who crave the return of lost power will continue their attacks.

Up to August last practically every business and industry, with the exception of United States Steel, had more business on its books than even in the boom days of 1928 and 1929. Even United States Steel a few days ago for the first time in years resumed dividend payments on its common stock. But the gamblers and professional speculators, driven to cover by the Roosevelt administration, only awaited their opportunity to again fare forth and shear the lambs.

With world unrest and the Japanese penetration of China as a screen, and in utter disregard of consequences to the Nation, they have thrown the stock market into a decline by unloading stocks which they acquired during the Hoover debacle at 5 cents on the dollar. It may be that the ones who suffered most were those who gave their attention to the ticker rather than to their own business affairs, but repercussions were felt in every line. Out of all this has come the pending investigation of short selling, and I know that when the practices of the speculators and gamblers responsible for the stock-market break are revealed there will be action taken to prevent a repetition.

In the minds of many businessmen it is true that there are doubts with regard to some of the President's policies. I have talked to many of these businessmen in Chicago and found some few who have allowed the propaganda of the power seekers to influence their thinking. Some of them felt that the wage and hour bill would hurt them. Yet when it was put on the simple basis that it will not affect those who believe in paying a decent wage and doing away with unfair competition, they had no complaint with it.

Others argued that the Government is spending too much money for relief and for assistance to the farmer. Unfortunately profiteers have increased the cost of living, but the fact that farmers have been receiving much higher prices for their products has brought about increased purchasing power generally, which aided not only the farmer but labor and industry as well.

Some well-meaning and honest men are being misled by the propaganda of reactionaries, but in all fairness I ask those men to hearken back to other days, when the entire country pleaded with President Roosevelt to call a special session and to take over the leadership of business. He had to do it to save the country from complete demoralization. Then business asked but one thing, that they be kept from losing money or going bankrupt. Now, there are those who would have them forget about those days; those who seek to discredit the President by painting him as the opponent of business. Again I repeat that this administration is not against business. It is against the professional speculator and gambler, as well as the politician, whose only thought is personal power or self-aggrandizement.

Today in Washington there are a number of mayors here to urge that Federal aid be continued. They are naturally disturbed by rumors which have reached them, but they have only to look back a few years and make a comparison with other days to be reassured. I can recall only too well how 4 years ago I brought about a conference of mayors here in Washington. They despaired of feeding their hungry, of providing shelter and jobs. To them and to the country I will say that this administration did not fail them at that time nor will it fail them now. We should encourage their conference to the extent of at least receiving their suggestions, as I am sure that they have the interest of the country at heart and will cooperate with the President in his program.

Legislation of the Special Session of Congress

EXTENSION OF REMARKS

OF

HON. W. D. McFARLANE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, November 15, 1937

RADIO ADDRESS BY HON. W. D. McFARLANE, OF TEXAS, ON NOVEMBER 7, 1937

Mr. McFARLANE. Mr. Speaker, under permission given me, I desire to insert in the RECORD a copy of the radio address delivered by me at Dallas, Tex., Sunday evening, November 7:

Good evening, friends of the radio audience. I appreciate the invitation from WFAA and WBAP to use their broadcasting facilities in bringing you my thoughts regarding legislation of the special session of Congress.

REASONS FOR SPECIAL SESSION

The President, in his recent radio fireside chat, in calling the special session for November 15, said: "I do this in order to give the Congress an opportunity to consider important legislation before the regular session in January and to enable the Congress to avoid a lengthy session next year, extending through the summer." In clarifying his reason for calling the special session and the immediate work to be accomplished, he said: "The people of the United States were checked in their efforts to prevent future piling up of huge agricultural surpluses and the tumbling prices which inevitably follow them. They were checked in their efforts to secure reasonable minimum wages and maximum hours and the end of child labor. And because they were checked, many groups in many parts of the country still have less purchasing power and a lower standard of living than the Nation as a whole can permanently allow.

Americans realize these facts. That is why they ask government not to stop governing, simply because prosperity has come back a long way. They do not look on government as an interloper in their affairs. On the contrary, they regard it as the most effective form of organized self-help."

FAVOR RIGID CROP CONTROL

Since the adjournment of the last session of Congress 2½ months ago, in order to learn the views of my constituents, I began a tour of the 15 counties in my district, which has carried me into almost every town within the district, where I have met and spoken to more than 43 different groups of farmers, totaling more than 10,000 farmers, their wives, and children. At the close of each of these meetings I have asked all those who favor rigid crop-control legislation to be enacted by the next Congress to stand, and the sentiment expressed by the farmers as well as all present at these meetings has been almost unanimous, as only 12 persons out of more than 10,000 folks attending these meetings have voted against rigid crop-control legislation.

VOLUNTARY CROP CONTROL WON'T WORK

I find the farmers are thoroughly familiar with the chaotic conditions of the old laissez faire policy of the three previous administrations which forced them to produce more crops and to receive less for them than ever before. They well remember those conditions of 1931, 1932, and 1933, which caused them to overproduce more than a year's surplus of all agriculture products, and because of this overproduction (or underconsumption) the farmer received less for his products than ever before within the memory of our oldest citizens. I find the farmers fully realize the cause of our seventeen and one-half million bale crop of cotton and other agricultural surpluses was and is due primarily to the failure of the voluntary soil-conservation and domestic-allotment program of the past 2 years to function; that the farmers' greed for gain, which is no different from anyone else's greed for gain, caused a great number of the large landowners to fail and refuse to cooperate—which failure and refusal under favorable crop conditions destroyed the cooperative efforts of all others.

CAN'T UNDERSTAND SUPREME COURT ATTITUDE

I find the farmers were in the main well satisfied with the Agricultural Adjustment Act and the results obtained by it. They cannot understand why the Supreme Court should nullify this and other important pieces of legislation which have done so much for orderly control and marketing of their crops at a reasonable profit, and at the same time the Court has rendered so many unfair and unreasonable opinions favoring the different privileged groups at the expense of the great masses of our people.

SUPREME COURT SAYS CONTROL FOR PRIVILEGED GROUPS—NO CONTROL FOR AGRICULTURE OR LABOR

For example, the farmer and laborer are unable to understand why the Supreme Court will nullify legislation for their benefit, which legislation permits them to control their products and services and orderly market them and prohibit child labor, when the Supreme Court over a long period of time has permitted the different privileged groups to control their products and orderly market them and at the same time have allowed them to exploit child labor and has permitted sweatshop conditions to exist.

TAX EXEMPTIONS FOR THE CLASSES

Then, too, it is hard to understand the mind of the Supreme Court, whose decisions hold that the salaries of themselves and all Federal judges is not subject to income-tax payment nor any reduction, in spite of the sixteenth amendment, which provides, "The Congress shall have the power to lay and collect taxes on income from whatever source derived." And yet we find the Supreme Court through their decisions have continued to broaden the exemptions of the different privileged groups, exempting hundreds of millions of dollars from income-tax payment, which, of course, means that the rest of the people not so privileged by the Court must pay that much more additional taxes in order to take care of the running expenses of the Government. Let me refer to some of the Supreme Court's many decisions exempting the different privileged groups:

The Court held that stock dividends of corporations were not subject to income tax, losing over a billion dollars in revenue to the Government.

That all State, county, and municipal employees shall not pay any income tax, losing over $200,000,000 a year in revenue to the Government.

That the interest from State, county, and other local subdivisions of tax-exempt securities are not subject to income tax, thus losing over $200,000,000 annually in revenue, and many other such decisions too numerous to mention.

STATES' RIGHTS MYTH

And as to States' rights, you will find almost numberless decisions nullifying State rights and State statutes. Last year the Supreme Court in the case of the *Great Northern Railways* v. *United States* held that the local assessment of property tax cannot be made valid without the impossibility of being declared invalid by the Supreme Court.

FEDERAL REGULATION NULLIFIED

It is well known that the Supreme Court has nullified the effective enforcement of almost all Federal regulating bodies and commissions. These decisions include the nullification of our antitrust laws and of the powers of our Interstate Commerce Commission, Federal Trade Commission, Federal Power Commission, and so forth. Yet they do not hesitate without any specific constitutional power to go into the unlimited rate-making field to guarantee all the utilities, as shown by their decisions, an income of 7½ percent net not upon the actual investment of money in the corporation but upon their watered stock, their written-up, inflated values, their so-called goodwill, lawyers' fees, lobbying activities, advertising, and all these things that help them to perpetuate their complete monopoly which through the years has permitted them to keep the people from enacting any legislation, State or National, that will in any way reasonably regulate their rates based upon the actual amount of money the utilities have invested in them.

FARMERS AND LABORERS UNDERSTAND

I find the farmers and laborers generally now better understand the attitude of the Supreme Court that says that agriculture is a matter that must be handled by the different States, and that the Federal Government has no power to regulate this great industry, and that wages and hours and working conditions of men and children are matters that neither the Federal Government nor the State government has any power to regulate. Especially can they understand how the Supreme Court through their decisions has been favoring the privileged group at the expense of the rest of the people through the years.

The farmers know that the Supreme Court is thoroughly responsible for their present plight in the overproduction of cotton and grains because of their nullification of the Agricultural Adjustment Act. They well know how this act reduced the 13,000,000-bale carry-over of cotton and the other large surpluses of other commodities of 1932, and through compulsory crop control permitted orderly production which raised the price of cotton and all other basic farm commodities from 1933 to 1936 from two to five times the amount they were selling for in 1932.

COMPULSORY CROP CONTROL NECESSARY

The farmers fully realize that if they are ever to receive parity for their crops they must have rigid crop-control legislation, and an amendment to our loan and marketing acts to care for temporary surpluses when low prices threaten. They realize that base acreage must be set according to production records, and that the large subsidy payments now going to the large tractor farmers must be limited and more exemption given to the tenants and small farmers with a progressive bale or unit tax to be applied to surpluses to regulate the production of tractor and large-scale corporation farming.

A sufficient tariff should be placed on all basic agriculture commodities so as to guarantee the American market to the American farmer. Then with improved commodity loans on surpluses the Government can and should assist the farmers to prohibit ruinous prices during the marketing season.

By reducing the subsidy checks to the large farmer and raising the exemptions to the small farmer with the added bale or unit graduated tax on large scale production should raise sufficient

revenue so as to permit the orderly growth and marketing of all farm products.

WAGE AND HOUR LEGISLATION NECESSARY

It is just as important to enact legislation that will give the laborer a living price for his services as it is to enact rigid crop-control legislation to give the farmer a living price for his products. Without this stabilized buying power of these two large groups, the Nation will again be thrown into another depression which we are now striving to overcome.

ELIMINATE TAX LOOPHOLES

It is important that the next Congress, as soon as possible, eliminate the existing loopholes in our income-tax laws. Then if we could get the Mellon regime, now in charge of revenue enforcement, ousted from the Revenue Department, we should be able to better administer our revenue laws in the future, with justice to all and special privileges to none. It is well known according to Government records that at the present time due to existing loopholes and Supreme Court decisions more revenue is escaping taxation annually than is being paid into the Government.

MUST HAVE CHEAPER UTILITY RATES

It is important that the Supreme Court pass upon the administration's power program, and let it be known whether or not they will permit the people of the Nation to enjoy cheap electricity, and whether or not they expect in the future as in the past to allow the utilities to continue to dictate the rate policy for the Nation and collect many billions of dollars annually more than is a fair price for services rendered by these different utilities. The people fully realize now more than ever before how on these high utility rates including light, gas, telephone, telegraph, freight, and so forth, they are all added to the cost of doing business and are passed on from the manufacturer to the wholesaler, to the retailer, to the consumer, and these enormous overcharges of these different utilities, amounting annually to over $1,000,000,000 for electricity, and similar amounts for the other utilities, based upon volumes of business done does not permit this tremendous burden placed upon the shoulders of the farmer and laborer, the ultimate consumer, to be shifted from them to someone else; because they cannot control the price of their products or of their services they are thus forced to pay all these unreasonable charges.

WE MUST HAVE PEACE

While we always desire to offer our services in arbitration to all nations to aid in composing differences, I am in hearty accord with the President and all our people, that we will not become embroiled in any war or wars of other nations.

EQUAL RIGHTS TO ALL, SPECIAL PRIVILEGES TO NONE

Our great leader in the White House, recognising these inequalities, as shown by his splendid record of service, has had the courage to carry on and demand equal rights and opportunities for all, and special privileges to none. It seems that the 3½ years he lay on his bed of affliction have steeled him for the great task before him, that would have long ago weakened the average man.

His record of service rendered shows that he has a burning desire to seek, yes to fight for the rights of the greater number of our people to the end that these unreasonably high utility rates be lifted from their shoulders, that the tax loopholes in our revenue laws be eliminated so that the wealth of the Nation will be required to pay its just portion of taxes and that our standards of living be raised in keeping with our natural resources to where the great masses of our people can receive a living price for their products and a living wage for their services and will thus be able to enjoy some of the better things of life.

One Hundred and Fiftieth Anniversary of the Signing of the Constitution

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, November 16, 1937

ADDRESS OF THE PRESIDENT DELIVERED IN THE SYLVAN THEATER, WASHINGTON, ON THE ONE HUNDRED AND FIFTIETH ANNIVERSARY OF THE SIGNING OF THE CONSTITUTION OF THE UNITED STATES

Mr. BARKLEY. Mr. President, on the one hundred and fiftieth anniversary of the signing of the Constitution, President Roosevelt delivered an address which I believe should be preserved in the CONGRESSIONAL RECORD. I ask unanimous consent that it be inserted in the Appendix.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow Americans, tonight, 150 years ago, 38 weary delegates to a Convention in Philadelphia signed the Constitution. Four handwritten sheets of parchment were enough to state the terms on which 13 independent weak little republics agreed to try to survive together as one strong nation.

A third of the original delegates had given up and gone home. The moral force of Washington and Franklin had kept the rest together. Those remained who cared the most; and caring most, dared most.

The world of 1787 provided a perfect opportunity for the organization of a new form of government thousands of miles removed from influences hostile to it. How we then governed ourselves did not greatly concern Europe. And what occurred in Europe did not immediately affect us.

Today the picture is different.

Now what we do has enormous immediate effect not only among the nations of Europe but also among those of the Americas and the Far East, and what in any part of the world they do as surely and quickly affects us.

In such an atmosphere our generation has watched democracies replace monarchies which had failed their people and dictatorships displace democracies which had failed to function. And of late we have heard a clear challenge to the democratic idea of representative government.

We do not deny that the methods of the challengers—whether they be called "communistic" or "dictatorial" or "military"—have obtained for many who live under them material things they did not obtain under democracies which they had failed to make function. Unemployment has been lessened—even though the cause is a mad manufacturing of armaments. Order prevails—even though maintained by fear, at the expense of liberty and individual rights.

So their leaders laugh at all constitutions, predict the copying of their own methods, and prophesy the early end of democracy throughout the world.

Both that attitude and that prediction are denied by those of us who still believe in democracy—that is, by the overwhelming majority of the nations of the world and by the overwhelming majority of the people of the world.

And the denial is based on two reasons eternally right.

The first reason is that modern men and women will not tamely commit to one man or one group the permanent conduct of their government. Eventually they will insist not only on the right to choose who shall govern them but also upon the periodic reconsideration of that choice by the free exercise of the ballot.

And the second reason is that the state of world affairs brought about by those new forms of government threatens civilization. Armaments and deficits pile up together. Trade barriers multiply, and merchant ships are threatened on the high seas. Fear spreads throughout the world—fear of aggression, fear of invasion, fear of revolution, fear of death.

The people of America are rightly determined to keep that growing menace from our shores.

The known and measurable danger of becoming involved in war we face confidently. As to that, your Government knows your mind, and you know your Government's mind.

But it takes even more foresight, intelligence, and patience to meet the subtle attack which spreading dictatorship makes upon the morale of a democracy.

In our generation a new idea has come to dominate thought about government—the idea that the resources of the Nation can be made to produce a far higher standard of living for the masses if only government is intelligent and energetic in giving the right direction to economic life.

That idea—or more properly that ideal—is wholly justified by the facts. It cannot be thrust aside by those who want to go back to the conditions of 10 years ago or even preserve the conditions of today. It puts all forms of government to proof.

That ideal makes understandable the demands of labor for shorter hours and higher wages, the demands of farmers for a more stable income, the demands of the great majority of businessmen for relief from disruptive trade practices, the demands of all for the end of that kind of license, often mistermed "liberty", which permits a handful of the population to take far more than their tolerable share from the rest of the people.

And as other forms of government in other lands parade their pseudoscience of economic organization, even some of our own people may wonder whether democracy can match dictatorship in giving this generation the things they want from government.

We have those who really fear the majority rule of democracy, who want old forms of economic and social control to remain in a few hands. They say in their hearts: "If constitutional democracy continues to threaten our control, why should we be against a plutocratic dictatorship which would perpetuate our control?"

And we have those who are in too much of a hurry, who are impatient at the processes of constitutional democracies, who want Utopia overnight and are not sure that some vague form of proletarian dictatorship is not the quickest road to it.

Both types are equally dangerous. One represents cold-blooded resolve to hold power. We have engaged in a definite, and so far successful, contest against that. The other represents a reckless resolve to seize power. Equally we are against that.

And the overwhelming majority of the American people fully understand and completely approve that course as the course of the present Government of the United States.

To hold to that course our constitutional democratic form of government must meet the insistence of the great mass of our people that economic and social security and the standard of American living be raised from what they are to levels which the people know our resources justify.

Only by succeeding in that can we insure against internal doubt as to the worthwhileness of our democracy and dissipate the illusion that the necessary price of efficiency is dictatorship with its attendant spirit of aggression.

That is why I have been saying for months that there is a crisis in American affairs which demands action now—a crisis particularly dangerous because its external and internal difficulties reenforce each other.

Purposely I paint a broad picture. For only if the problem is seen in perspective can we see its solution in perspective.

I am not a pessimist. I believe that democratic government in this country can do all the things which common-sense people, seeing that picture as a whole, have the right to expect. I believe that these things can be done under the Constitution, without the surrender of a single one of the civil and religious liberties it was intended to safeguard.

And I am determined that under the Constitution these things shall be done.

The men who wrote the Constitution were the men who fought the Revolution. They had watched a weak emergency government almost lose the war, and continue economic distress among 13 little republics—at peace but without effective national government.

So when these men planned a new government, they drew the kind of agreement which men make when they really want to work together under it for a very long time.

For the youngest of nations they drew what is today the oldest written instrument under which men have continuously lived together as a nation.

The Constitution of the United States was a layman's document, not a lawyer's contract. That cannot be stressed too often. Madison, most responsible for it, was not a lawyer—nor was Washington or Franklin, whose sense of the give-and-take of life had kept the Convention together.

This great laymen's document was a charter of general principles—completely different from the "whereases" and the "parties of the first part," and the fine print which lawyers put into leases and insurance policies and installment agreements.

When the framers were dealing with what they rightly considered eternal verities, unchangeable by time and circumstance, they used specific language. In no uncertain terms, for instance, they forbade titles of nobility, the suspension of habeas corpus, and the withdrawal of money from the Treasury except after appropriation by law. With almost equal definiteness they detailed the Bill of Rights.

But when they considered the fundamental powers of the new national government they used generality, implication, and statement of mere objectives as intentional phrases which flexible statesmanship of the future, within the Constitution, could adapt to time and circumstance. For instance, the framers used broad and general language capable of meeting evolution and change when they referred to commerce between the States, the taxing power, and the general welfare.

Even the Supreme Court was treated with that purposeful lack of specification. Contrary to the belief of many Americans, the Constitution says nothing about any power of the Court to declare legislation unconstitutional; nor does it mention the number of judges for the Court. Again and again the Convention voted down proposals to give Justices of the Court a veto over legislation. Clearly a majority of the Delegates believed that the relation of the Court to the Congress and the Executive, like the other subjects treated in general terms, would work itself out by evolution and change over the years.

But for 150 years we have had an unending struggle between those who would preserve this original broad concept of the Constitution as a layman's instrument of government and those who would shrivel the Constitution into a lawyer's contract.

Those of us who really believe in the enduring wisdom of the Constitution hold no rancor against those who professionally or politically talk and think in purely legalistic phrases. We cannot seriously be alarmed when they cry "unconstitutional" at every effort to better the condition of our people.

Such cries have always been with us—and, ultimately, they have always been overruled.

Lawyers distinguished in 1787 insisted that the Constitution itself was unconstitutional under the Articles of Confederation. But the ratifying conventions overruled them.

Lawyers distinguished in their day warned Washington and Hamilton that the protective tariff was unconstitutional—warned Jefferson that the Louisiana Purchase was unconstitutional—warned Monroe that to open up roads across the Alleghanies was unconstitutional. But the Executive and the Congress overruled them.

Lawyers distinguished in their day persuaded a divided Supreme Court that the Congress had no power to govern slavery in the Territories, that the long-standing Missouri Compromise was unconstitutional. But a War between the States overruled them.

Lawyers distinguished in their day persuaded the odd man on the Supreme Court that the methods of financing the Civil War were unconstitutional. But a new odd man overruled them.

That great senatorial constitutional authority of his day, Senator Evarts, issued a solemn warning that the proposed Interstate Commerce Act and the Federal regulation of railway rates which the farmers demanded would be unconstitutional. But both the Senate and the Supreme Court overruled him.

Less than 2 years ago 58 of the highest-priced lawyers in the land gave the Nation (without cost to the Nation) a solemn and formal opinion that the Wagner Labor Relations Act was unconstitutional. And in a few months first a national election and later the Supreme Court overruled them.

For 20 years the odd man on the Supreme Court refused to admit that State minimum-wage laws for women were constitutional. A few months ago, after my message to the Congress on the rejuvenation of the judiciary, the odd man admitted that the Court had been wrong for all those 20 years and overruled himself.

In this constant struggle the lawyers of no political party—mine or any other—have had a consistent or unblemished record. But the lay rank and file of political parties has had a consistent record.

Unlike some lawyers, they have respected as sacred all branches of their Government. They have seen nothing more sacred about one branch than about either of the others. They have considered as most sacred the concrete welfare of the generation of the day. And with laymen's common sense of what government is for, they have demanded that all three branches be efficient; that all three be interdependent as well as independent; and that all three work together to meet the living generation's expectations of government.

That lay rank and file can take cheer from the historic fact that every effort to construe the Constitution as a lawyer's contract rather than a layman's charter has ultimately failed. Whenever legalistic interpretation has clashed with contemporary sense on great questions of broad national policy, ultimately the people and the Congress have had their way.

But that word "ultimately" covers a terrible cost.

It cost a civil war to gain recognition of the constitutional power of the Congress to legislate for the Territories.

It cost 20 years of taxation on those least able to pay to recognize the constitutional power of the Congress to levy taxes on those most able to pay.

It cost 20 years of exploitation of women's labor to recognize the constitutional power of the States to pass minimum-wage laws for their protection.

It has cost 20 years already—and no one knows how many more are to come—to obtain a constitutional interpretation that will let the Nation regulate the shipment in national commerce of goods sweated from the labor of little children.

We know it takes time to adjust government to the needs of society. But modern history proves that reforms too long delayed or denied have jeopardized peace, undermined democracy and swept away civil and religious liberties.

Yes, time more than ever before is vital in statesmanship and in government—in all three branches of it.

We will no longer be permitted to sacrifice each generation in turn while the law catches up with life.

We can no longer afford the luxury of 20-year lags.

You will find no justification in any of the language of the Constitution for delay in the reforms which the mass of the American people now demand.

Yet nearly every attempt to meet those demands for social and economic betterment has been jeopardized or actually forbidden by those who have sought to read into the Constitution language which the framers refused to write into the Constitution.

No one cherishes more deeply than I the civil and religious liberties achieved by so much blood and anguish through the many centuries of Anglo-American history. But the Constitution guarantees liberty, not license masquerading as liberty.

Let me put the real situation in the simplest terms. The present Government of the United States has never taken away and never will take away any liberty from any minority, unless it be a minority which so abuses its liberty as to do positive and definite harm to its neighbors constituting the majority. But the Government of the United States refuses to forget that the Bill of Rights was put into the Constitution not only to protect minorities against intolerance of majorities, but to protect majorities against the enthronement of minorities.

Nothing would so surely destroy the substance of what the Bill of Rights protects than its perversion to prevent social progress. The surest protection of the individual and of minorities is that fundamental tolerance and feeling for fair play which the Bill of Rights assumes. But tolerance and fair play would disappear here as it has in some other lands if the great mass of people were denied confidence in their justice, their security, and their self-respect. Desperate people in other lands surrendered their liberties when freedom came merely to mean humiliation and starvation. The crisis of 1933 should make us understand that.

On this solemn anniversary I ask that the American people rejoice in the wisdom of their Constitution.

I ask that they guarantee the effectiveness of each of its parts by living by the Constitution as a whole.

I ask that they have faith in its ultimate capacity to work out the problems of democracy, but that they justify that faith by making it work now rather than 20 years from now.

I ask that they give their fealty to the Constitution itself and not to its misinterpreters.

I ask that they exalt the glorious simplicity of its purposes rather than a century of complicated legalism.

I ask that majorities and minorities subordinate intolerance and power alike to the common good of all.

For us the Constitution is a common bond, without bitterness, for those who see America as Lincoln saw it, "The last, best hope of earth."

So we revere it—not because it is old but because it is ever new—not in the worship of its past alone but in the faith of the living who keep it young, now and in the years to come.

International Peace

EXTENSION OF REMARKS

OF

HON. WILLIAM H. KING

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, November 16, 1937

ADDRESS OF THE PRESIDENT AT THE CEREMONIES MARKING THE DEDICATION OF THE OUTERLINK BRIDGE OVER THE MOUTH OF THE CHICAGO RIVER, CHICAGO, ILL., OCTOBER 5, 1937

Mr. KING. Mr. President, recently the President of the United States delivered an admirable address upon important questions at Chicago, Ill. I ask unanimous consent that the address may be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am glad to come once again to Chicago and especially to have the opportunity of taking part in the dedication of this important project of civic betterment.

On my trip across the continent and back I have been shown many evidences of the result of common sense cooperation between municipalities and the Federal Government, and I have been greeted by tens of thousands of Americans who have told me in every look and word that their material and spiritual well-being has made great strides forward in the past few years.

And yet, as I have seen with my own eyes, the prosperous farms, the thriving factories and the busy railroads—as I have seen the happiness and security and peace which covers our wide land, almost inevitably I have been compelled to contrast our peace with very different scenes being enacted in other parts of the world.

It is because the people of the United States under modern conditions must, for the sake of their own future, give thought to the rest of the world, that I, as the responsible executive head of the Nation, have chosen this great inland city and this gala occasion to speak to you on a subject of definite national importance.

The political situation in the world, which of late has been growing progressively worse, is such as to cause grave concern and anxiety to all the peoples and nations who wish to live in peace and amity with their neighbors.

Some 15 years ago the hopes of mankind for a continuing era of international peace were raised to great heights when more than 60 nations solemnly pledged themselves not to resort to arms in furtherance of their national aims and policies. The high aspirations expressed in the Briand-Kellogg Peace Pact and the hopes for peace thus raised have of late given way to a haunting fear of calamity. The present reign of terror and international lawlessness began a few years ago.

It began through unjustified interference in the internal affairs of other nations or the invasion of alien territory in violation of treaties, and has now reached a stage where the very foundations of civilization are seriously threatened. The landmarks and traditions which have marked the progress of civilization toward a condition of law, order, and justice are being wiped away.

Without a declaration of war and without warning or justification of any kind, civilians, including women and children, are being ruthlessly murdered with bombs from the air. In times of so-called peace ships are being attacked and sunk by submarines without cause or notice. Nations are fomenting and taking sides in civil warfare in nations that have never done them any harm. Nations claiming freedom for themselves deny it to others.

Innocent peoples and nations are being cruelly sacrificed to a greed for power and supremacy which is devoid of all sense of justice and humane consideration.

To paraphrase a recent author "perhaps we foresee a time when men, exultant in the technique of homicide, will rage so hotly over the world that every precious thing will be in danger, every book and picture and harmony, every treasure garnered through two milleniums, the small, the delicate, the defenseless—all will be lost or wrecked or utterly destroyed."

If those things come to pass in other parts of the world, let no one imagine that America will escape, that it may expect mercy, that this Western Hemisphere will not be attacked and that it will continue tranquilly and peacefully to carry on the ethics and the arts of civilization.

If those days come "there will be no safety by arms, no help from authority, no answer in science. The storm will rage till every flower of culture is trampled and all human beings are leveled in a vast chaos."

If those days are not to come to pass—if we are to have a world in which we can breathe freely and live in amity without fear—the peace-loving nations must make a concerted effort to uphold laws and principles on which alone peace can rest secure.

The peace-loving nations must make a concerted effort in opposition to those violations of treaties and those ignorings of humane instincts which today are creating a state of international anarchy and instability from which there is no escape through mere isolation or neutrality.

Those who cherish their freedom and recognize and respect the equal right of their neighbors to be free and live in peace, must work together for the triumph of law and moral principles in order that peace, justice, and confidence may prevail in the world. There must be a return to a belief in the pledged word, in the value of a signed treaty. There must be recognition of the fact that national morality is as vital as private morality.

A bishop wrote me the other day: "It seems to me that something greatly needs to be said in behalf of ordinary humanity against the present practice of carrying the horrors of war to helpless civilians, especially women and children. It may be that such a protest might be regarded by many, who claim to be realists, as futile, but may it not be that the heart of mankind is so filled with horror at the present needless suffering that that force could be mobilized in sufficient volume to lessen such cruelty in the days ahead. Even though it may take 20 years, which God forbid, for civilization to make effective its corporate protest against this barbarism, surely strong voices may hasten the day."

There is a solidarity and interdependence about the modern world, both technically and morally, which makes it impossible for any nation completely to isolate itself from economic and political upheavals in the rest of the world, especially when such upheavals appear to be spreading, and not declining. There can be no stability or peace either within nations or between nations except under laws and moral standards adhered to by all. International anarchy destroys every foundation for peace. It jeopardizes either the immediate or the future security of every nation, large or small. It is, therefore, a matter of vital interest and concern to the people of the United States that the sanctity of international treaties and the maintenance of international morality be restored.

The overwhelming majority of the peoples and Nations of the world today want to live in peace. They seek the removal of barriers against trade. They want to exert themselves in industry, in agriculture, and in business, that they may increase their wealth through the production of wealth-producing goods rather than striving to produce military planes and bombs and machine guns and cannon for the destruction of human lives and useful property.

In those nations of the world which seem to be piling armament on armament for purposes of aggression, and those other nations which fear acts of aggression against them and their security, a very high proportion of their national income is being spent directly for armaments. It runs from 30 to as high as 50 percent.

The proportion that we in the United States spend is far less—11 or 12 percent.

How happy we are that the circumstances of the moment permit us to put our money into bridges and boulevards, dams and reforestation, the conservation of our soil and many other kinds of useful works rather than into huge standing armies and vast supplies of implements of war.

I am compelled and you are compelled, nevertheless, to look ahead. The peace, the freedom, and the security of 90 percent of the population of the world is being jeopardized by the remaining 10 percent who are threatening a break-down of all international order and law. Surely the 90 percent who want to live in peace under law and in accordance with moral standards that have received almost universal acceptance through the centuries, can and must find some way to make their will prevail.

The situation is definitely of universal concern. The questions involved relate not merely to violations of specific provisions of particular treaties; they are questions of war and of peace, of international law and especially of principles of humanity. It is true that they involve definite violations of agreements, and especially of the Covenant of the League of Nations, the Briand-Kellogg Pact, and the Nine Power Treaty. But they also involve problems of world economy, world security, and world humanity.

It is true that the moral consciousness of the world must recognize the importance of removing injustices and well-founded grievances; but at the same time it must be aroused to the cardinal necessity of honoring sanctity of treaties, of respecting the rights and liberties of others and of putting an end to acts of international aggression.

It seems to be unfortunately true that the epidemic of world lawlessness is spreading.

When an epidemic of physical disease starts to spread, the community approves and joins in a quarantine of the patients in order to protect the health of the community against the spread of the disease.

It is my determination to pursue a policy of peace and to adopt every practicable measure to avoid involvement in war. It ought

to be inconceivable that in this modern era, and in the face of experience, any nation could be so foolish and ruthless as to run the risk of plunging the whole world into war by invading and violating, in contravention of solemn treaties, the territory of other nations that have done them no real harm and which are too weak to protect themselves adequately. Yet the peace of the world and the welfare and security of every nation is today being threatened by that very thing.

No nation which refuses to exercise forebearance and to respect the freedom and rights of others can long remain strong and retain the confidence and respect of other nations. No nation ever loses its dignity or good standing by conciliating its differences, and by exercising great patience with, and consideration for, the rights of other nations.

War is a contagion, whether it be declared or undeclared. It can engulf States and peoples remote from the original scene of hostilities. We are determined to keep out of war, yet we cannot insure ourselves against the disastrous effects of war and the dangers of involvement. We are adopting such measures as will minimize our risk of involvement, but we cannot have complete protection in a world of disorder in which confidence and security have broken down.

If civilization is to survive, the principles of the Prince of Peace must be restored. Shattered trust between nations must be revived.

Most important of all, the will for peace on the part of peace-loving nations must express itself to the end that nations that may be tempted to violate their agreements and the rights of others will desist from such a cause. There must be positive endeavors to preserve peace.

America hates war. America hopes for peace. Therefore, America actively engages in the search for peace.

Prevention of and Punishment for Lynching

EXTENSION OF REMARKS

OF

HON. WILLIAM E. BORAH

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Tuesday, November 16, 1937

SPEECH OF HON. WILLIAM E. BORAH, OF IDAHO, IN THE SENATE OF THE UNITED STATES WEDNESDAY, AUGUST 11, 1937 (LEGISLATIVE DAY OF MONDAY, AUGUST 9, 1937)

Mr. BORAH. Mr. President, near the end of the last session of the Senate I made a speech on the antilynching bill, but in the rush of the closing hours of the session, and through fault of my own, I suppose, that speech was omitted from the RECORD. I ask that I may now have it inserted in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

Mr. BORAH. Mr. President, I understand that the question before the Senate is the motion to take up what is called the antilynching bill.

The VICE PRESIDENT. The Senator from New York [Mr. WAGNER] has moved to take up a bill which the clerk has read by title and which the Chair understands is known as the antilynching bill.

Mr. BORAH. I am interested in the bill at this time as a constitutional question. From that viewpoint I think it is as important as any question we have had before us in recent days.

It is certain that, if this measure can be passed and sustained, many of the matters we have been discussing for months and months relative to the dual system of our government have been in vain, and anything we may consider in the future based upon the theory that we have a dual system of government will be equally in vain. If the Federal Government may go into a State and take charge of an individual or a group of individuals who have committed a crime wholly within the State and bring them under its jurisdiction, the last vestige of local authority has disappeared.

Mr. WAGNER. Mr. President, will the Senator yield?

The VICE PRESIDENT. Does the Senator from Idaho yield to the Senator from New York?

Mr. BORAH. I yield.

Mr. WAGNER. The bill provides only for the prosecution of officials who may be guilty of the offenses set out in the bill. They may be prosecuted. A so-called mob is to be prosecuted by the State under State law.

Mr. BORAH. I am familiar with the terms of the bill, Mr. President. That is stating the other phase of the question I have just stated.

Mr. WAGNER. Mr. President, will the Senator yield for another question?

Mr. BORAH. I yield to any question the Senator wishes to ask.

Mr. WAGNER. In connection with the prior legislation, the Senator raised the question of constitutionality. As the bill now reads it deals only with the officials, and the members of a mob are subject to prosecution by the State authorities.

Mr. BORAH. What the Senator from New York proposes to do by his bill is to subject to the Federal jurisdiction the officers and officials of the respective States with reference to the enforcement of the criminal laws of the States.

Mr. WAGNER. As the agents of the States and on the theory that they have not afforded the equal protection of the laws. The courts have upheld that principle.

Mr. BORAH. As I understand the bill, Mr. President, it proposes to place State and local officials under the jurisdiction of the Federal Government in order to force them to prevent lynching. The justification for this measure, both in the language of the bill and in the contentions of its sponsors, is that in so doing the Federal Government is exercizing the power granted to it by the fourteenth amendment to the Constitution—that of forcing the States to secure to their citizens the equal protection of the laws. I think that is a fair statement of the bill.

As I understand, the authority for the bill is based solely upon the fourteenth amendment. I will ask the Senator from New York if there is any other provision of the Constitution which he thinks is applicable to the constitutional question relative to this bill.

Mr. WAGNER. I believe the proposed legislation to be justified under the fourteenth amendment.

Mr. MINTON. Mr. President, will the Senator from Idaho yield?

Mr. BORAH. I yield.

Mr. MINTON. Would not the proposed legislation be justified under another part of the fourteenth amendment on the ground that what is dealt with by the bill might be the denial of due process, which is also a part of the fourteenth amendment?

Mr. BORAH. I was speaking of the fourteenth amendment in its entirety. I assume that whatever justification there may be for the bill from a constitutional standpoint is based in some form or other upon the fourteenth amendment.

Mr. President, the fourteenth amendment declares, first, that—

> All persons born or naturalized in the United States and subject to the jurisdiction thereof are citizens of the United States and of the State wherein they reside.

Secondly, it declares that—

> No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States.

Third, it declares that no State shall—

> deprive any person of life, liberty, or property without due process of law.

Fourth, it declares that no State shall—

> Deny to any person within its jurisdiction the equal protection of the laws.

Everyone familiar with the history of the fourteenth amendment understands perfectly well that when it was proposed to give the Federal Government jurisdiction over the activities of the citizens within a State the North opposed it as earnestly as did the other portions of the country; and it was specifically intended, and thought to be specifically provided, that the fourteenth amendment should

deal solely with the action of the States as States; that it was not being undertaken, through the fourteenth amendment, to extend Federal jurisdiction to the internal activities or the internal doings of the States through their citizenship; but that if the State, through its organization, undertook to deny citizens their liberty, or to refuse them equality of treatment under the law, then the Federal Government could deal with the subject. But the fourteenth amendment dealt and deals only with State action.

That which called the fourteenth amendment into existence was the supposition at the time that some of the States were passing laws which were unfriendly to the colored race; and the amendment was designed to prevent the States, as States, from doing that thing.

I read from Guthrie on the fourteenth amendment:

While the application of the fourteenth amendment is universal and protects the individual from an arbitrary exercise of power by State authority, whether it be the legislature, the executive, or the judicial branch of State government, it must be borne in mind that the Federal courts cannot supervise or interfere with the internal affairs of a State unless some constitutional right has been invaded by State authorities. The wrongful actions of individuals, unsupported by such an authority, are not to be redressed under this amendment. They constitute merely private wrongs or crimes of the individual. The denial of the constitutional right must rest upon some State law or State authority for its excuse or perpetuation if the fourteenth amendment is to furnish any remedy.

Mr. Collins says regarding the fourteenth amendment:

The first section of the amendment is a prohibitory measure, and the prohibitions therein expressed operate against the States only. They bear no relationship to the acts of private persons within the State.

* * * * * * *

So far as the fourteenth amendment is concerned, the Federal Government would be powerless to prevent armed mobs of whites from driving Negroes out from a State or otherwise threatening or intimidating them in their attempt to exercise the privileges of citizenship.

Mr. Brannon says this on the fourteenth amendment:

The amendment applies only to State governmental action. Its first section does not operate upon the Federal Government but on that of the States it does; nor does it have any reference to action or conduct of individual to individual. That it is a restraint upon State action is very obvious from its words, they being words of explicit prohibition. * * * It is only the State that is prohibited, not individual action. It does not touch individual action. * * * It is hardly necessary to say again that the amendment does not touch the case of the individual or mob murder, as it deals not with acts of individuals but only with action by the State through its constituted authorities. Such murders by individuals or mobs are to be dealt with only by the States.

The Supreme Court, in the Civil Rights case, to which the able Senator from Indiana called attention some weeks ago, said:

It is State action of a particular character that is prohibited. Individual invasion of individual rights is not the subject matter of the amendment. It has a deeper and broader scope. It nullifies and makes void all State legislation and State action of every kind which impairs privileges and immunities of citizens of the United States or which injures them in life, liberty, or property without due process of law or which denies to any of them the equal protection of the law. * * * This is the legislative power conferred upon Congress and this is the whole of it. It does not invest Congress with power to legislate upon subjects which are within the domain of State legislation; but to provide modes of relief against State legislation or State action of the kind referred to. It does not authorize Congress to create a code of municipal laws for the regulation of private rights. * * *

Until some State law has been passed or some State action through its officers, or agents, has been taken, adverse to the rights of citizens sought to be protected by the fourteenth amendment, no legislation of the United States under said amendment nor any proceeding under such legislation can be called into activity; for the prohibitions of the amendment are against State laws and acts done under State authority. * * *

The wrongful act of an individual unsupported by any such authority is simply a private wrong or a crime of that individual; an invasion of the rights of the injured party, it is true, whether they affect his person, property, or his reputation; but if not sanctioned in some way by the State or not done under State authority, his rights remain in full force and may presumably be vindicated by a resort to the laws of the State for redress.

In the case of the United States against Harris, section 5519 of the Revised Statutes was under consideration. This statute provides in general that if two or more persons conspire or go in disguise upon the highway, and so forth, for the purpose of depriving either directly or indirectly any person, or class of persons, of the equal protection of the law, and so forth, they shall be punished by fine and imprisonment. The Supreme Court held this statute was void; that it was beyond the authority of Congress to legislate relative to individual crimes unless those crimes were associated with an express power under the Constitution. Speaking of the fourteenth amendment, the Court said:

It is a guaranty of protection against the acts of the State government itself. It is a guaranty against the exertion of arbitrary and tyrannical power on the part of the government and the legislature of the State, not a guaranty against the commission of individual offenses; and the power of Congress, whether express or implied, to legislate for the enforcement of such a guaranty does not extend to the passage of laws for the suppression of crimes within the State.

Mr. LEWIS. Mr. President, will the Senator from Idaho permit me to ask him a question?

Mr. BORAH. Certainly.

Mr. LEWIS. First, I would have the Senator understand that I would agree to any arrangement which would permit the bills indicated by the able leader to take their place for passage, and then the bill now being discussed; but, since this measure has been brought up, I ask my able friend from Idaho, as a lawyer, his viewpoint of the opinion of the Supreme Court of the United States touching the abstract question, where Mr. Justice White, in the Telegraph case, in Two Hundred and Twenty-seventh United States Reports, specifically decided against the distinction as to the application of the fourteenth amendment in accordance with what the able Senator has just now alluded to, a line of demarcation between State action and individual action. If I am not mistaken, the Supreme Court decided, through Mr. Justice White, that, while it was addressed to State action, it was also to be addressed to the acts of any individual and the conduct of any individual within the State. Am I wrong about that?

Mr. BORAH. I do not now recall the decision. Will not the Senator state more explicitly just what the Court decided?

Mr. LEWIS. May I read a memorandum which will probably refresh the Senator's memory?

Mr. BORAH. Certainly.

Mr. LEWIS. I refer to the case of *Home Telephone & Telegraph Co.* v. *Los Angeles* (227 U. S.). I refer particularly to where Mr. Justice White, speaking for the Court, said, on page 286:

The provisions of the (fourteenth) amendment as conclusively fixed by previous decisions are generic in their terms, are addressed, of course, to the States, but also to every person, whether natural or judicial, who is the repository of State power.

Does my able friend think there is a conflict between the last ruling he has just read and this decision?

Mr. BORAH. There is no conflict, in my judgment. Where it can be said that the State is acting, whether it is acting through the legislature or whether it is an unauthorized act by a State through some individual officer, of course the fourteenth amendment would apply. Where the action can be attached to the authority of the State, undoubtedly the fourteenth amendment would apply.

Mr. MINTON. Mr. President, what would the Senator say about inaction of State authorities, where it was their duty to act?

Mr. BORAH. For instance, if an officer of a State fails to do his duty, and fails to do his duty at the connivance of the State, undoubtedly it would be responsible; but if the State laws require an officer to do certain things, for instance, require him to protect parties in his custody, and he fails to do it, and thereby violates the laws of the State, how can it be said he is acting under the authority of the State?

Mr. MINTON. Mr. President, if he is an officer of the State, having the duty of seeing that the laws of his State are enforced, and he stands by and does nothing about the violation of the laws of his State, which inaction results in

injury to some person, may it not be construed that the State fails to act?

Mr. BORAH. I do not think so. So far as I know, in all the States there are ample laws for the purpose of protecting individuals against mob violence. If an officer fails to execute the laws of the State, how can it be said that he is acting under the authority of the State?

Mr. MINTON. Let me call the Senator's attention to the neglect on the part of officers of the State in the Scottsboro cases, which have recently been before the Supreme Court. In the case of Norris, I think it was, the only neglect stated was that there were in the county Negroes eligible for jury service, both as to the grand and the petit juries, but that over a great period of years, with this eligibility existing within the county, no Negro had ever been called to serve upon either a petit or a grand jury. Yet the Supreme Court held that by that mere neglect on the part of the State officers to call Negroes, the State had denied due process of law to the Negroes on trial in the Scottsboro case.

Mr. BORAH. Mr. President, I am familiar with the Scottsboro case.

Mr. MINTON. The Court went even further than that in what it held concerning the failure of the judge to provide counsel under the existing circumstances. When that portion of the opinion is read, one may think the opinion of the Supreme Court is rather far-fetched. The Supreme Court said that the defendants did not receive the kind of consideration of their constitutional right to have counsel that they should have had, and therefore that the lower court neglected to accord the defendants due process of law, and therefore it was a violation of their constitutional rights.

Mr. BORAH. Of course, the fourteenth amendment provides that no one shall be deprived of his life, liberty, or property without due process of law. That is, if the State enacts laws or if the State in any way provides a course of action which deprives or may deprive a person of life, liberty, or property, then the fourteenth amendment applies. But if any officer acts in violation of the laws of the State, the fourteenth amendment does not apply.

Mr. CONNALLY. Mr. President, I think the Senator will find on examination of the cases to which the Senator from Indiana refers that an affirmative showing of discrimination was made in them.

Mr. MINTON. No, Mr. President; there was not.

Mr. CONNALLY. I know that in many cases such a showing was made. I have not read the cases the Senator from Indiana has cited, but I know that in many cases to which I have had occasion to refer when practicing law a showing was made that the jury commissioners had for a long period of years excluded Negroes from jury lists. In those cases the courts held that discrimination had been shown.

Mr. MINTON. In the Norris case there was no discrimination, but over a long period of years no Negro had been called, and the Court said that was systematic or arbitrary exclusion; but there was no evidence that the jury commissioners had deliberately discriminated against the Negroes. They just did not call them.

Mr. BORAH. The Court was satisfied, of course, that the commissioners were acting in disobedience of the law.

Mr. MINTON. It could not be said that the commissioners were doing a positive, active thing in denying Negroes the right to sit on juries; and there was no evidence of that kind. The only thing that appeared was that Negroes had been eligible for years, and had never been called. That is all the record shows. The Court said that was a denial of due process, and that by that neglect on the part of State officers they had denied due process of law.

In the Norris case there was no evidence at all that there had been discrimination in the selection of the grand jury, but it was shown that there had been failure to call Negroes in the selection of the grand jury and in the selection of the petit jury. The only thing that appeared was that there was not a Negro on the grand jury, there was not a Negro on the petit jury, and that for years before that time there had not been. That is all that appeared in the case.

Mr. GEORGE. Mr. President, I think a very close examination of the rulings of the Court in the Scottsboro cases will reveal that they proceeded more particularly upon the denial of equal protection under the law, and held that when an officer of the law is given authority to do a particular thing in furtherance of due process, or in order to make effective due process of law, if he arbitrarily refuses to do that thing it is a denial of equal protection and, of course, is a denial of due process.

The cases go back in their reasoning to the old case of Yick Wo, a case decided a great many years ago. The Supreme Court in the Scottsboro cases undoubtedly went upon the theory that since there were numerous Negroes within the county who were qualified as jurors, and since none of them had ever been put in the box, that necessarily was evidence of an arbitrary abuse or exercise of power vested in a State official; and it goes, as I said, in its essential principles to a denial of equal protection of the law.

Mr. MINTON. Mr. President, under that statement of facts it could not have been anything more than a neglect on the part of a State officer to give Negroes a chance to serve on the jury, which they had not had for years.

Mr. GEORGE. Mr. President, if I may be pardoned, I think it can be said to amount to very much more. If the jury commissioners of the county are charged with the affirmative duty of putting a certain number of intelligent and upright citizens in the jury box, and habitually and constantly and over a long period of time no intelligent or upright person of a certain race, or of a certain creed, or of a certain faith, is found in the jury box, that on its face is evidence at least of failure to discharge an affirmative or positive duty placed upon the officer of the law in selecting qualified jurors.

Mr. BORAH. Mr. President, I desire to interrupt long enough to say that if all this is true, then all that the court decided was that under those circumstances the defendant had not had a fair trial in the light of the principles of due process of law. That is all the Court decided. The decision had no relationship, in my judgment, to the question of Federal legislation touching the subject matter covered in this bill.

Mr. GEORGE. None whatever. The Court said that the State had not given a fair trial under its laws, as guaranteed by the Constitution of the United States.

Mr. MINTON. If by that kind of neglect the State has denied due process of law to these negroes, then if its officers stand aside and let a negro be burned at the stake in the presence of the officers of the law, does not the Senator think the State in an even greater degree denies him due process of law, and that under the fifth section of the fourteenth amendment the Congress of the United States has authority to enact legislation for the enforcement of the fourteenth amendment? That is to say, if the State neglects to do something it should do, or does something it is prohibited from doing, the Federal Government has the right to step in and exercise its power to say that the State shall stay within the limitations of the fourteenth amendment.

Mr. BORAH. Let us take a crime not connected with mob action. Let us say an offense is committed against the laws of the State of Indiana, and the officers fail to do their duty in anticipating or arresting the criminals, and the officers fail to bring them to justice under the laws of the State of Indiana: May the Federal Government, on the theory that the State of Indiana is not capable through its officers of executing the law, take charge of the action, on the ground that the officers of the State of Indiana had neglected to perform their duty?

Mr. MINTON. No; but if there is a course of conduct on the part of police officers toward certain crimes in the State of Indiana which shows negligence on their part, and if certain crimes have a recurrence almost habitually in the State of Indiana, and if it can be shown that the recurrence of these crimes comes time after time in the State of Indiana, and that the authorities in Indiana just wink at them and let them happen, then I think the Federal Government may

step in and punish the officers of the State of Indiana who simply wink at the enforcement of the law.

Mr. BORAH. It seems to me the Senator is now discussing the weight of evidence, what would be necessary to be shown to prove that the officer had neglected his duty?

Mr. MINTON. It will always be necessary to have some showing or evidence that there was a neglect of duty.

Mr. BORAH. Yes; but the question of the jurisdiction of the officer of the State government does not rest on the question of the weight of evidence as to the particular transaction.

Mr. MINTON. No; but it rests upon the facts, and it may depend upon the weight of the evidence.

Mr. BORAH. Let us see what the bill says. We are far away from the subject covered by the bill. It says:

SEC. 2. Any assemblage of three or more persons which shall exercise or attempt to exercise by physical violence and without authority of law any power of correction or punishment over any citizen or citizens or other person or persons in the custody of any peace officer or suspected of, charged with, or convicted of the commission of any offense, with the purpose or consequence of preventing the apprehension or trial or punishment by law of such citizen or citizens, person or persons, shall constitute a "mob" within the meaning of this act.

That would embrace every machine-gun action in the large cities like Chicago and New York, where a few men group themselves together for the purpose of violating the law, or taking charge of and rescuing parties from the officers, hiding and concealing the parties. They would all come under the provisions of the bill, would they not?

Mr. MINTON. They would come under the definition of lynching, and that has to be connected up with the further fact that the State officer in relation thereto neglected his duty.

Mr. BORAH. We shall come to neglect of duty in a moment.

Mr. CONNALLY. Mr. President, will the Senator yield?

Mr. BORAH. I yield.

Mr. CONNALLY. I think the authors of the measure anticipated what the Senator suggested and very carefully limited the bill by exempting gangster murders and labor wars.

Mr. BORAH. I should think they would.

Mr. CONNALLY. They are exempted, as shown upon page 7, where it is provided:

That lynching shall not be deemed to include violence occurring between members of groups of lawbreakers such as are commonly designated as gangsters or racketeers, nor violence occurring during the course of picketing or boycotting or any incident in connection with any labor dispute as that term is defined and used in the act of March 23, 1932.

It was anticipated that the general language would include those crimes by organized gangs and organized mobs, but the authors of the bill had the foresight to include a clause taking special, tender care of the two groups.

Mr. BORAH. It would seem so. Let us read that provision:

That lynching shall not be deemed to include violence occurring between members of groups of lawbreakers such as are commonly designated as gangsters or racketeers, nor violence occurring during the course of picketing.

I can understand why the latter should be excepted. It is a different nature of crime entirely; but why exempt the gangsters and racketeers and persons who own machine guns and have regular organizations in the underworld, with presidents and vice presidents and other officers whose business it is to rescue every man connected with their organization and take him out from under the control of the law?

Mr. MINTON. The bill leaves him right where the Senator wants to leave him. The racketeer groups, as between themselves when they are racketeering, would not have the law apply to them. If they are fighting among themselves or between themselves, there is no protection at all that can extend to either side of that fight.

Mr. BORAH. I understand; but why the exception by those who drew the bill?

Mr. MINTON. Because we do not want to extend the protection of the antilynching law to those engaged in gang warfare, to either one side or the other.

Mr. BORAH. I see that the gangster and the racketeer are more delicately dealt with than the three men who may undertake to organize a mob.

Mr. MINTON. Not at all. Both sides of the gang warfare are beyond the pale of the provisions of the bill. There is no attempt to give the benefits of the proposed law to either side engaged in gang warfare.

Mr. BORAH. But we have a community and a few people who are affected by the gangsters on both sides. I supposed we were protecting the public rather than the gangsters.

Mr. MINTON. The public would not be in on the lynching. None of the public would be lynched, and none of them would be within the definition of lynching unless on one side or the other of the gangster warfare.

Mr. BORAH. Why was it necessary to write it in the bill? Why was it necessary to incorporate in a bill based, as the able Senator from New York [Mr. WAGNER] said, upon the principle of law and order, of decent and orderly government, a provision to except from its operations the racketeer and the gangster?

Mr. MINTON. As I understand the bill, its purpose is to bring relief to the victim of the lynching as lynching is defined in the bill. We do not want to bring the benefits of the bill to either side of the gangs which are engaged in gangster warfare.

Mr. BORAH. That is manifest.

Mr. MINTON. It is not an attempt to protect gangsters at all.

Mr. BORAH. I do not see its object, then.

Mr. MINTON. It is not the desire to give gangsters the benefit of any action of Congress, to protect them in any way, shape, or form. It is only to provide that the proposed law shall apply where people have been denied the benefit of some law. This, of course, excludes gangsters altogether.

Mr. BARKLEY. Mr. President, will the Senator yield?

Mr. BORAH. I yield.

Mr. BARKLEY. This provision would not apply where there was warfare or an encounter between gangsters and public officers. It is simply proposed to sanction one gang exterminating another, so it would not come under the term of "lynching."

Mr. BORAH. I apprehend that the victims of the gangster sometimes feel that they have been lynched.

Mr. BARKLEY. They may have been.

Mr. BORAH. They would not come under the provisions of the bill because they would be racketeers and gangsters. They might be lynched. Gangsters do lynch other gangsters; but they would not come under the terms of the bill, as I understand.

Mr. CONNALLY. Mr. President, will the Senator yield?

Mr. BORAH. I yield.

Mr. CONNALLY. They would come under the bill by its general terms. If three or more men should lynch anybody, they would be subject to the law; but if they could prove they were gangsters, they would be exempt. That is what the bill provides. In other words, if a group of three otherwise law-abiding persons should lynch someone, under the terms of the bill they would be subject to the law; but if upon the trial they could prove that they were gangsters, they would be exempt.

Mr. BARKLEY. In that case the burden of proof would be on the Government to prove that they were not gangsters.

Mr. CONNALLY. I do not think so. That would be a defense. A man might be guilty of lynching, but, being a gangster, the law would protect him.

Mr. BORAH. All the mobs would have to do would be to attach to the activities of mobbing some of the activities of gangsters also, and if they were both mobsters and gangsters I suppose there would be some difficulty in determining to which jurisdiction they belonged.

Section 3 of the bill provides:

SEC. 3. Whenever a lynching of any person or persons shall occur, any officer or employee of a State or any governmental subdivision thereof who shall have been charged with the duty or shall have possessed the authority as such officer or employee to protect such person or persons from lynching and shall have willfully neglected, refused, or failed to make all diligent efforts to protect such person or persons from lynching and any officer or employee of a State or governmental subdivision thereof who shall have had custody of the person or persons lynched and shall have willfully neglected, refused, or failed to make all diligent efforts to protect such person or persons from lynching, and any officer or employee of a State or governmental subdivision thereof who, having the duty as such officer or employee, shall willfully neglect, refuse, or fail to make all diligent efforts to apprehend, keep in custody, or prosecute the members or any member of the lynching mob, shall be guilty of a felony and upon conviction thereof shall be punished by a fine not exceeding $5,000 or by imprisonment not exceeding 5 years, or by both such fine and imprisonment.

What is proposed by this bill is to make the Federal Government the sole judge of the performance of duty by every State officer. Is not that a fair statement? Every officer of a State where lynching takes place may be subjected to trial under another sovereignty; and the question of the discharge of his duty, of whether he had obeyed the law of his State or whether he had performed the duties belonging to his office, is to be determined by the Federal Government.

If a State officer may be subjected to trial under Federal law for failure to perform his duty in this respect, under what theory may not a State officer also be subjected to trial in a Federal court for failure to perform his duty in other respects with reference to the public interest or with reference to the enforcement of the criminal law?

In other words, if we should pass this bill, and it should be sustained, we should have established the principle and the precedent of enabling the Federal Government to supervise the conduct of every State officer with reference to the execution of the criminal laws of his State, and whether or not he has performed his duties as prescribed by the laws of the State; and there is no reason, unless it is impolitic, why the authority of the Federal Government should be limited to the punishment of the men who deal with mob violence and not include those who deal with other kinds of violence with reference to the rights of the citizen.

Mr. MINTON. Mr. President, will the Senator yield?

Mr. BORAH. I yield.

Mr. MINTON. Does the Senator think the Federal Government might step in and pass a law to punish State officers who would participate with a mob in mobbing and lynching a man, when it was their duty under the law to protect him?

Mr. BORAH. No; I do not think they could. I do not think that could be done, any more than we could say to the sheriff of New York County, or the county in which the city of New York is situated, "Gangstering has been going on here for years. The public has suffered. You have failed to do your duty. We will try you, and punish you, for failing to do your duty to the State of New York."

Mr. MINTON. The Senator says he does not believe the Federal Government could step in and punish an officer who would participate in lynching or mobbing anybody.

Mr. BORAH. He would be committing a personal crime.

Mr. MINTON. And the Federal Government could not come in under the fourteenth amendment and protect anyone who received that kind of treatment at the hands of a law-enforcing officer?

Mr. BORAH. That is my contention.

Mr. MINTON. But the Senator knows that the Supreme Court has said, and the Senator agreed with me awhile ago when I cited the Scottsboro case, that if the officers of a State discriminate, or participate in excluding a Negro, for instance, from jury service, they have denied the defendant due process of law; but, according to the Senator, if they participate in lynching a man, they have not hurt him at all.

Mr. BORAH. In one instance the officer is proceeding under the authority of the State. He is proceeding under the laws of the State. Instead of executing them, however, he has violated the laws of the State. He is performing the duty of an officer in violation of the laws of the State. In the other instance he has broken away from the laws of the State. The State has no control over him. He is a criminal, and subject to punishment the same as any individual on the street.

The reason why the thing could be done in one instance and not in the other is because in one instance the State has designated what the officer shall do, and he fails to do what the State has designated that he shall do; but in the other instance the State has not designated that he shall join a mob. The State has said that he shall not join a mob. The State has laws to punish him for joining a mob. The State has laws to dismiss him from his office for joining a mob. I say, therefore, that the Federal Government may not come in and try a criminal for the violation of State laws that he has violated in disregard of the dictation of the State.

Mr. MINTON. Suppose the State officer does not join the mob, but merely stands by and does not protect the person who is mobbed. He does not do his duty by the person who is being attacked by the mob.

Mr. BORAH. I gave that illustration. Suppose that the officers of Chicago or of New York do not do their duty with reference to enforcing the law as the public thinks they should; that the public is not sufficiently protected; that a man cannot walk down the street without being seized by racketeers: Does the Senator say that the Federal Government may pass a law which shall subject those officers to trial by the Federal Government? I say "no." I say that the people of those States, under our dual system of government, makes those men responsible to them, and the men are responsible to them. It might just as well be said that a State might pass laws to try Federal officers who fail to do their duty.

Mr. LEWIS. Mr. President——

Mr. BORAH. I yield to the Senator from Illinois.

Mr. LEWIS. I beg the Senator to understand that I am greatly interested in what I feel to be the extension of Federal power and Federal authority over local government. I must concur that in the Harris case, and in one or two others of an earlier time, the position taken by the Senator is much justified; but I beg him to pause and think whether it is not true that the extension of the Federal power, whether he and I like it or do not like it, has been indicated to us by the Supreme Court of the United States in just the reverse of the position for which the able Senator contends, and which I should like to have been the principle. Will the Senator let me read him a brief passage from the Supreme Court of the United States on the very phase of the subject which he himself just this second has presented?

I take the liberty of calling attention to the fact that the proposition is laid down by the Supreme Court of the United States in almost the exact words that the able Senator has uttered here. Says the Chief Justice—then Mr. Chief Justice White, who, as we know, was from Louisiana, and not altogether without natural prejudices governed by geography—in the case of *Homes Telephone & Telegraph Co.* v. *Los Angeles* (227 U. S. 278, at p. 287):

As previously stated, the proposition relied upon presupposes that the terms of the fourteenth amendment reach only acts done by State officers which are within the scope of the power conferred by the State. The proposition, hence, applies to the prohibitions of the amendment, the law of principal and agent governing contracts between individuals, and consequently assumes that no act done by an officer of a State is within the reach of the amendment—

Meaning the fourteenth amendment—

unless such act can be held to be the act of the State by the application of such law of agency. In other words, the proposition is that the amendment deals only with the acts of State officers within the strict scope of the public powers possessed by them, and does not include an abuse of power by an officer as the result of a wrong done in excess of the power delegated. Here

again the settled construction of the amendment is that it presupposes the possibility of an abuse by a State officer or representative of the powers possessed and deals with such a contingency. It provides, therefore, for a case where one who is in possession of State power uses that power to the doing of the wrongs which the amendment forbids even, although the consummation of the wrong may not be within the powers possessed if the commission of the wrong itself is rendered possible or is efficiently aided by the State authority lodged in the wrongdoer. That is to say, the theory of the amendment is that where an officer or other representative of a State in the exercise of the authority with which he is clothed misuses the power possessed to do a wrong forbidden by the amendment inquiry concerning whether the State has authorized the wrong is irrelevant and the Federal judicial power is competent to afford redress for the wrong by dealing with the officer and the result of his exertion of power.

Does not my able friend find that the direct reverse of what he and I have been contending for years?

Mr. BORAH. Will the Senator permit me to take the decision?

Mr. LEWIS. Certainly.

Mr. BORAH. I think that during the night perhaps I can determine what Justice White meant by what he said.

Mr. LEWIS. I myself do not like the decision, but I must obey it and follow what the law is declared to be. I desired to bring to the Senator's attention both the viewpoints.

Mr. BORAH. Mr. President, I cannot discuss this decision very intelligently now, perhaps, but I notice that it is a matter of litigation in a civil suit, the Home Telephone & Telegraph Co. versus the City of Los Angeles, and the syllabi read:

One, whose rights protected by a provision of the Federal Constitution which is identical with a provision of the State constitution are invaded by State officers claiming to act under a State statute, is not debarred from seeking relief in the Federal court under the Federal Constitution until after the State court has declared that the acts were authorized by the statute.

A State officer was acting and claiming to act under the specific authority of the State, and that was the question which was involved. I read further from the syllabi:

The provisions of the fourteenth amendment are generic in terms and are addressed not only to the States but to every person, whether natural or judicial, who is the repository of State power.

Which I do not deny.

The reach of the fourteenth amendment is coextensive with any exercise by a State of power in whatever form exerted.

Under the fourteenth amendment the Federal judicial power can redress the wrong done by a State officer misusing the authority of the State with which he is clothed; under such circumstances inquiry whether the State has authorized the wrong is irrelevant.

Chief Justice White said in his opinion:

The appellant, a California corporation furnishing telephone service in the city of Los Angeles, sued the city and certain of its officials to prevent the putting into effect of a city ordinance establishing telephone rates for the year commencing July 1, 1911.

It was alleged that by the Constitution and laws of the State the city was given a right to fix telephone rates and had passed the assailed ordinance in the exercise of the general authority thus conferred. It was charged that the rates fixed were so unreasonably low that their enforcement would bring about confiscation of the property, and hence the ordinance was repugnant to the due process clause of the fourteenth amendment.

Here was an instance in which the city passed an ordinance fixing the rates of a telephone company, and the telephone company went into court and contended that the rates were so low as to result in the confiscation of its property. Therefore, the court invoked a well-established principle, that property cannot be taken without due process of law, and it happened within the State, and they applied the fourteenth amendment instead of the fifth amendment.

Mr. CONNALLY. Mr. President, the act was not done by the officer as an individual, but was done by him as a State officer, in the assertion of State power.

Mr. BORAH. Let us read further from the bill. First, there is section 3, which covers the question of neglect by officers in the performance of their duty. That is to be tried in the Federal court. I now read from the bill:

SEC. 4. Whenever a lynching of any person or persons shall occur, and information on oath is submitted to the Attorney General of the United States that any officer or employee of a State or any governmental subdivision thereof who shall have been charged with the duty or shall have possessed the authority as such officer or employee to protect such person or persons from lynching, or who shall have had custody of the person or persons lynched, has willfully neglected, refused, or failed to make all diligent efforts to protect such person or persons from lynching or that any officer or employee of a State or governmental subdivision thereof, in violation of his duty as such officer or employee, has willfully neglected, refused, or failed to make all diligent efforts to apprehend, keep in custody, or prosecute the members or any member of the lynching mob, the Attorney General of the United States shall cause an investigation to be made to determine whether there has been any violation of this act.

SEC. 5. (1) Every governmental subdivision of a State to which the State shall have delegated functions of police shall be responsible for any lynching occurring within its territorial jurisdiction—

Every city, every county shall be held responsible for any lynching that takes place within its jurisdiction. If I misread it, I should be glad to be corrected.

Mr. WAGNER. Read on.

Mr. BORAH. I will read on. That is what I am going to do this evening—

Every such governmental subdivision shall also be responsible for any lynching occurring outside of its territorial jurisdiction, whether within or without the same State, which follows upon the seizure and abduction of the victim or victims within its territorial jurisdiction.

Every such governmental subdivision, county or city, "shall be responsible for any lynching occurring outside of its territorial jurisdiction, whether within or without the same State, which follows upon the seizure and abduction of the victim or victims within its territorial jurisdiction."

This is an attempt to make all the people of a county, all the people of a city, responsible in damages for the action of three or four men in lynching some particular individual.

Mr. WAGNER. Will not the Senator read on?

Mr. BORAH. Yes; I will read on.

Any such governmental subdivision which shall fail to prevent any such lynching or any such seizure and abduction followed by lynching shall be liable to each person injured, or to his or her next of kin if such injury results in death, for a sum not less than $2,000 and not more than $10,000 as monetary compensation for such injury or death: *Provided, however,* That the governmental subdivision may prove by a preponderance of evidence as an affirmative defense that the officers thereof charged with the duty of preserving the peace, and citizens thereof when called upon by any such officer, used all diligence and all powers vested in them for the protection of the person lynched: *And provided further,* That the satisfaction of judgment against one governmental subdivision responsible for a lynching shall bar further proceedings against any other governmental subdivision which may also be responsible for that lynching.

As I understand that, if a lynching takes place in the county of Ada, the entire county, in the first instance, is held responsible for any damages which may arise by reason of the lynching. That is the first proposition. In the second place, they are held responsible for any damage which may occur in the next county, or outside of the State, by reason of the seizure within that county.

There may be but one defense to that charge—not that the people of the county are a law-abiding people, utterly opposed to any such criminal action, utterly opposed to the action of the officers—but the only defense is that they be permitted to try to prove that the officer discharged his duty. That is the only defense provided for here.

I do not believe such a provision would stand. I would say that it would certainly be a strange proposition if one sovereignty could enter the jurisdiction of another sovereignty and undertake to impose damages upon the subdivision of that second sovereignty.

I read from the bill:

(2) Liability arising under this section may be enforced and the compensation herein provided for may be recovered in a civil action in the United States district court for the judicial district of which the defendant governmental subdivision is a part. Such action shall be brought and prosecuted by the Attorney General of the United States or his duly authorized representative in the name of the United States for the use of the real party in interest, or, if the claimant or claimants shall so elect, by counsel employed by the claimant or claimants, but in any event without prepayment of costs.

How would anyone enforce that kind of a law? Suppose a judgment were obtained against a county, and suppose the county commissioners should refuse to levy a tax to pay for

it, would they also be subjected to trial? Would the Federal authorities take charge of the entire organization of the county?

Mr. MINTON. Mr. President, will the Senator yield?

Mr. BORAH. I yield.

Mr. MINTON. Why not bring a mandamus suit against them and compel them to do their duty?

Mr. BORAH. Mr. President, a mandamus suit to compel officers to levy a tax has not always been sustained, by any means; and here is an effort of the Federal Government to establish a liability upon the subdivision of the State government. There must be a certainty about the tax, and the justice of the tax, before a mandamus suit will follow. But when it comes to asking one sovereign——

Mr. MINTON. But in the mandamus suit the question could not be raised as to the validity of the tax because that would be a collateral attack.

Mr. BORAH. Certainly that question could be raised.

Mr. MINTON. In the mandamus suit?

Mr. BORAH. In the mandamus suit the question certainly could be raised as to the legality of the tax, and the Court would raise it of its own motion if there were any question about it, because a mandamus is a most extraordinary writ and never issues when the Court has any doubt about the righteousness of its issuance.

Mr. MINTON. A tax is levied to settle a judgment. If the tax is invalid, it is because the judgment is invalid; is it not?

Mr. BORAH. Not necessarily; but that is likely to be the main issue.

Mr. MINTON. That certainly seems to me to be the case. If the tax is invalid, it is because the judgment is invalid. If you bring a mandamus suit, you certainly could not raise in that mandamus suit the question of the validity of the tax, as that would be a collateral attack upon the judgment.

Mr. BORAH. Who would bring the mandamus suit?

Mr. MINTON. The person who had the judgment.

Mr. BORAH. The individual, or the Government of the United States?

Mr. MINTON. No; the individual in whose favor the judgment was rendered.

Mr. BORAH. Then after that the Federal Government would step out?

Mr. MINTON. The Federal Government would not then have any place in the picture, because the individual would have recovered his damages under the statute.

Mr. BORAH. I have wondered since I began to read this bill when the Federal Government would depart, and I suppose that would be the time.

I continue to read from the bill:

> If the amount of any such judgment shall not be paid upon demand, payment thereof may be enforced by any process available under the State law for the enforcement of any other money judgment against such a governmental subdivision.

Would the State officers be anxious to enforce that judgment after they had been tried and found guilty of willfully neglecting to do their duty?

Mr. McKELLAR. Mr. President, suppose the State officers refused to enforce the writ of mandamus. Where would the citizen be then? He would be just where he started, it seems to me; and I have no doubt that the State officers would refuse to enforce the writ.

Mr. BORAH. I continue to read:

> Any officer of such governmental subdivision or any other person who shall disobey or fail to comply with any lawful order or decree of the court for the enforcement of the judgment shall be guilty of contempt of that court and punished accordingly. The cause of action accruing hereunder to a person injured by lynching shall not abate with the subsequent death of that person before final judgment but shall survive to his or her next of kin.

I desire to say to the Senators from New York that that provision will have to come out of the bill or it will be very long debated. I shall never consent, so long as I have the physical power to prevent it, that the Federal Government shall be authorized to bring suit against a county or a city of the State, and whose people may be perfectly innocent of any connection whatever with the crime, and punish them for the individual action of three or four persons. It is a perfect outrage to contemplate projecting the Federal Government into the domestic affairs of the State, into the county affairs of the State, into the city affairs of the State, in order to accomplish the ends of this bill.

Opening of Federal Reserve Building

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, November 16, 1937

ADDRESS OF THE PRESIDENT, DELIVERED ON THE OCCASION OF THE OFFICIAL OPENING OF THE FEDERAL RESERVE BUILDING, OCTOBER 20, 1937

Mr. WAGNER. Mr. President, I offer for the CONGRESSIONAL RECORD the speech delivered by the President of the United States on the occasion of the official opening of the Federal Reserve Building on October 20, 1937. I ask unanimous consent to have it inserted in the RECORD.

In this address the President pays a splendid and fitting tribute to the distinguished senior Senator from Virginia [Mr. GLASS], who richly deserves the praise accorded him. We all hold him in the highest esteem, and he is worthy of the greatest commendation.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, ladies, and gentlemen, you have come here this afternoon for something more than a mere formality. This structure is worthy to rank among the foremost of the Capital's architectural achievements, and you and I have gathered here to pay tribute to the beauty and dignity of line and form wrought by those who conceived and executed this building.

But we are conscious of a larger meaning in this brief ceremony—of the role that the Federal Reserve plays in the broad purpose which this Government must serve. That purpose is to gain for all of our people the greatest attainable measure of economic well-being, the largest degree of economic security and stability.

To advance the country toward this goal is the real mission of the Federal Reserve System. It cannot be attained by that System alone, but neither can it be reached without the proper functioning of our monetary and credit machinery. That machinery must be steadily perfected and coordinated with all other instruments of government to promote the most productive utilization of our human and material resources. Only in that way can we hope to achieve and maintain an enduring prosperity, free from the disastrous extremes of booms and depressions. Only in that way can our economic system and our democratic institutions endure.

Nearly a quarter of a century has passed since the Federal Reserve System was established. Its creation, out of the Nation's banking experience from the beginning of the Republic, was due to the statesmanship of President Wilson, and to the courageous leadership in the Congress for which the senior Senator from Virginia, CARTER GLASS, will always deserve the Nation's gratitude.

It is fitting that President Wilson's portrait in bronze should have the place of honor in the main entrance to this building. And it is appropriate that the words inscribed under it should be taken from his first inaugural address. Let me quote them:

"We shall deal with our economic system as it is and as it may be modified, not as it might be if we had a clean sheet of paper to write upon; and step by step we shall make it what it should be."

Those penetrating words admirably apply to our banking system, which must be constantly alert to changing conditions in order that it may be prepared to adapt itself to the growing and changing needs of our people in their daily life and work.

The Federal Reserve System, as it was originally established, was adapted to the pre-war world and brought about a great improvement in the money system. Steps were taken in 1917 to adapt it to the urgent necessities of a war-ridden world. In mobilizing the country's gold reserves and in facilitating the Government's vast financing operations, the Reserve System performed a vital role in the winning of the war.

It is clear now, in retrospect, that if further changes to meet post-war conditions had been made in our banking system in the 1920's, it would have been in a far better position to moderate the forces that brought about the great depression. But from the end of the war until we were in the midst of economic collapse a decade later, no changes were made in the banking structure to make it function more effectively in the public interest.

Since that time the Nation has done much to improve its banking system. It must continue step by step to make the banking system what it should be. We must not complacently suppose that we have achieved perfection. We have provided for the insurance of deposits for the benefit of the great mass of small depositors. By the Banking and Security Exchange Acts of 1933, 1934, and 1935, the Federal Reserve System was given increased power to improve banking conditions and to aid the Government in combatting practices which were evil in their results. Those powers have been concentrated to a greater degree than before in a single public body, so that they can be used promptly and effectively in accordance with the changing needs of the country. 1937 is not 1913; nor do we want to turn the hands of the clock back.

The Federal Reserve System, tested by nearly a quarter of a century of operation, is a public institution capable of adaptation to future as it has been to past needs and conditions. It is a piece of machinery vital to the Nation's steady progress toward the goal of a sounder banking system capable of contributing its full share to lasting economic progress and well-being.

The Board of Governors, whose building we are dedicating today, was reconstituted by the Banking Act of 1935. To this public body Congress has entrusted broad powers which enable it to affect the volume and the cost of money, thus exerting a powerful influence upon the expansion and contraction in the flow of money through the channels of agriculture, trade, and industry. In this way much can be done toward the maintenance of more stable employment. Much can be done to aid in achieving greater stability of the true value of the dollar.

By their nature these important powers are of public concern and the responsibility for their exercise is properly vested in a public body. Much as they may contribute to the country's progress, monetary powers possess no peculiar magic. They are not omnipotent. To be effective in performing their function, they must be closely coordinated with the other major powers and policies of Government which influence the country's economic life.

The Federal Reserve System as it exists today is better adapted than ever before to play its part in common with the other instrumentalities of government in the attainment of that increasing well-being for all of our people, which is the fundamental objective of all government.

I dedicate this building to progress toward the ideal of an America in which every worker will be able to provide his family at all times with an ever-rising standard of comfort.

Addresses by the President at Cleveland and Toledo, Ohio, October 5, 1937

EXTENSION OF REMARKS

OF

HON. ROBERT J. BULKLEY

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, November 16, 1937

RADIO ADDRESS OF THE PRESIDENT, MADE FROM THE PRESIDENTIAL SPECIAL TRAIN AT CLEVELAND, OHIO, AND REMARKS AT TOLEDO, OHIO, ON OCTOBER 5, 1937

Mr. BULKLEY. Mr. President, I ask permission to have inserted in the RECORD a radio address delivered by the President from the Presidential special train at Cleveland, Ohio, under the auspices of the New York Herald Tribune Forum of Current Events. Also, I ask permission to have inserted in the RECORD the President's extemporaneous remarks at Toledo, Ohio.

There being no objection, the address and extemporaneous remarks were ordered to be printed in the RECORD, as follows:

RADIO ADDRESS OF THE PRESIDENT AT CLEVELAND, OHIO

To you who are attending this Forum on Current Events, I again extend my good wishes and my congratulations on its success.

I am speaking from the railroad train in Cleveland on my way home after a 2-weeks' trip to the coast and back, and it is, therefore, natural, perhaps, that my thoughts at this moment run to travel.

I do not want to detract in any way from the value of a forum when I say that no human being can possibly get a complete picture or a rounded conception of any national problem without traveling through the country and talking with people in every walk of life in every section of the Nation.

The professor and student in a university, the newspaper editor and the reporter, the man in public life and his local constituent, can and do learn greatly by much reading, much study, and much discussion, especially if the reading, the study, and the discussion cover all sides of any given question. But the result of it all is almost inevitably tinged with provincialism or narrowness if it is not supplemented by "field work." By "field work" I mean not merely personal observation of the actual practice involving the immediate problem in the home town but also observation in a field which covers the entire Nation.

I knew a man once who, after graduation from college with a bachelor of arts degree, kept right on by taking a degree in science, a degree in law, a degree in medicine, and several graduate degrees in other subjects. When I knew him he was 45 years old and had been at college for more than a quarter of a century. He was a walking encyclopedia but had never been outside of his home town, and he was about the most bigoted, narrow-minded, unsophisticated, and generally impossible person I have ever met.

It is unfortunately true that in respect to public affairs and national problems, the excellently educated man and woman form the least worth-while opinions, for the simple reason that they have enough education to make them think that they know it all, whereas actually their point of view is based on associations with others who in their geographical outlook are about 1 inch wide.

That is why, in the utmost good humor, I hope that in the days to come our educated and thoughtful citizens will make some special efforts to know their own country better.

A distinguished editor of the Tribune once suggested that young men should go west. I would amend this by suggesting that men and women, old and young, should go not only to the west of Horace Greeley, but all the way to the coast—should go south and north and east.

And in their travels, may I repeat a suggestion which I once gave to a young man in New York who thought he knew it all. I said, "Take a second-hand car, put on a flannel shirt, drive out to the coast by the northern route and come back by the southern route. Don't stop anywhere where you have to pay more than $2 for your room and bath. Don't talk to your banking friends or your chamber of commerce friends, but specialize on the gasoline-station man, the small-restaurant keeper and farmers you meet by the wayside, and your fellow automobile travelers."

The forum is a grand institution. We ought to have more of them, but they ought to be supplemented by an intensive drive to get people to know their own country better. It is a grand country and we can all be proud of it.

INFORMAL, EXTEMPORANEOUS REMARKS OF THE PRESIDENT, TOLEDO, OHIO

I have had a wonderful trip all the way out to the coast and back, and I wish you could have all been with me.

I am glad to have a chance to stop in Ohio. When I was out in the State of Washington I heard a very interesting story that tells its own lesson.

The man who was building that great Grand Coulee Dam, which is about 500 feet high and the largest dam that man has ever built in all the ages, told me that a certain prominent citizen of Ohio had come out there and had said, "What good is it going to do Ohio to spend $50,000,000 in Washington?"

So the man who was building the dam said, "I will tell you what I will do. I will bet you a hat that on any part of this project that you pick I can show you some material that has been manufactured in Ohio."

I think that is a pretty good lesson for us all, to show the national unity of the country and how the success of one part of the country affects the success of every other part.

As you know, that is one of our objectives, to have a rounded prosperity, not only in the industrial centers but out in the farming areas and down in the South. That is one way that we, as a Nation, can go ahead.

We have started on the road, and I think we are getting there. It is good to see you.

Address by the President at Boise, Idaho

EXTENSION OF REMARKS

OF

HON. JAMES P. POPE

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Tuesday, November 16, 1937

INFORMAL, EXTEMPORANEOUS REMARKS OF THE PRESIDENT AT BOISE, IDAHO, SEPTEMBER 27, 1937

Mr. POPE. Mr. President, recently the President of the United States, during a visit to Boise, Idaho, made an address dealing with the problems of the day, and I ask that his remarks be inserted in the CONGRESSIONAL RECORD.

There being no objection, the addess was ordered to be printed in the RECORD, as follows:

Governor Clark—and I am going to say what Senator BORAH said—"Friends, and neighbors," I shall never forget this morning.

When I look back on today's visit to Boise I shall think chiefly of two things: First, your beautiful tree-lined streets; and, secondly, your children.

And I take it, being a Roosevelt, that you are following the Roosevelt creed, and that the population is no going to die out.

You know, there is something about children and trees that makes me think of permanency—the future. It is not by any means the sole task of the Presidency to think about the present. One of the chief obligations of the Presidency is to think about the future. We have been, in our 150 years of constitutional existence, a wasteful nation, a nation that has wasted its natural resources and, very often, wasted its human resources.

One reason why a President of the United States ought to travel throughout the country and become familiar with every State is that he has a great obligation to think about the days when he is no longer President, to think about the next generation and the generation after that.

That is one reason why I am particularly glad on this trip to see a part of Idaho which I have never seen before. I had traveled through the eastern part of the State and the northern part of the State, and now I am seeing something new, something that makes me very proud of this part of the country.

And in these travels I am not just thinking of the—what shall I call them?—the more or less petty problems of the day, the quarrels, the disputes of the moment. I am trying to think about the bigger objectives of American life, to think about planning. Planning is not much of a word, but there isn't any better one.

I am trying to think about how we are going to make a better America for those children that I passed this morning. I am trying to think about the conservation of our water resources; to think about the better distribution of and a greater prosperity for agriculture; to think about the saving of our timber; to think about a better coordination of our industrial activities, of a better distribution of control over these industrial activities—that sounds like Senator BORAH—and to think, incidentally, of the influence that the United States can have on the rest of the world in behalf of peace—and that sounds like Senator POPE and Senator BORAH, too.

I wish I could physically take the time to spend more days and more weeks going around the country. There was an old mythological character by the name of Antaeus, who was supposed, every time his foot touched the ground, to redouble his strength. When I go about the country after long weeks and months tied up in Washington, which, incidentally, is one of the narrowest places in the world, I feel that I regain strength by just meeting the American people.

So, my friends, I am grateful to you for giving me this wonderful reception today in the capital of this State. I am grateful to you for coming and saying "howdy" to me, just like the plain folks we, all of us, are.

Some day, having made your acquaintance once, I want to come back and renew it. I have had a wonderful morning.

Addresses by President on Western Trip

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, November 16, 1937

ADDRESSES OF THE PRESIDENT AT ST. PAUL, MINN., FARGO, N. DAK., GRAND FORKS, N. DAK., BONNEVILLE DAM AND TIMBERLINE LODGE, OREG.

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD divers and sundry speeches made by the President on his recent trip through the West.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS OF THE PRESIDENT AT ST. PAUL, MINN., OCTOBER 4, 1937

I am glad to return to St. Paul after an absence of less than a year. I appreciate the welcome to this State given me by my old friend, Governor Benson.

I cannot come to Minnesota, however, without thinking of another old friend, who has passed on, Floyd Olson, whose memory as a great liberal leader will always be with us.

This morning in Grand Forks I spoke of the pressing need for national legislation to preserve soil fertility and safeguard farmers' income. For 3 years the Agricultural Adjustment Act was a great cornerstone in the new and permanent structure that we Americans are trying to rear on the ruins of the old. That cornerstone was destroyed by the verdict of the Supreme Court. It has been partly, but only partly, replaced by the Soil Conservation Act. The national farm act, which I hope the Congress will pass, will, I am confident, preserve and strengthen the present soil-conservation program, and at the same time give us provision against the piling up of unmanageable surpluses and provide for storage of reserve food supplies in an ever-normal granary.

It must be repeated over and over again that such a policy is intended not only to maintain farmers' prices by holding down huge surpluses which destroy those prices, but also to assure adequate supplies of food to the consuming public in the event of severe and widespread drought. Farmers and processors alike realize, I am sure, that there must be a wholly adequate supply of food for the Nation at reasonable prices. There must never be a shortage of food—nor must the price of food rise so greatly that the consuming public cannot afford to eat.

On my trip to the Pacific coast and back I have found overwhelming evidence in favor of that twin piece of legislation which, like the crop bill, is intended to replace a cornerstone which was knocked out by the Supreme Court. The wage and hour legislation proposed for the benefit of those industrial workers who are processing products that will move in interstate commerce, is, of course, not intended to restore all of the National Industrial Recovery Act. But it is intended to restore certain fair standards for the workers of the Nation. It is intended to prevent overlong hours of labor. It is intended to establish a reasonable minimum wage, and it is intended to end child labor in every State in the Union.

As in the case of farm legislation, a wage and hour and child-labor law will undoubtedly accomplish two great purposes first, an increase in employment, and, secondly, an increase in the total of the Nation's income.

As a result of both of these the actual cost of relief for the unemployed should decrease, and existing taxes—not higher taxes—should make the financial problem of local and State and Federal Governments more easy.

It is axiomatic that no part of the country can truly prosper if its standards of living and its standards of pay are far below those of all the other parts of the country. Therefore I am looking for substantial support for wage and hour legislation from every part of the country—North, East, West, and South.

A prominent manufacturer told me the other day that because of the expansion of his business he is looking for a new site for a new factory. He said that he and his directors had definitely decided against locating in any of the communities which had held out as an attraction low wages and unrestricted hours of work. He is locating his new plant in a community which pays high wages, works the men and women 40 hours a week, gives them Saturdays and Sundays off, and maintains a high standard of living.

The more I study the subject the more I become convinced that it does not pay any community or any region in the long run to maintain low wage or low living standards. Throughout the Nation we are working toward fairly uniform standards of pay and work in every section and in every community. And the only exception to this will give some effect to a small differential based on an actual lower or an actual higher cost of living in some communities or sections as compared with the average of the country.

This greater uniformity is being encouraged every day by the amazing progress that has been made in transportation during the last few years. People are traveling more and getting to know their neighbors one hundred or five hundred or a thousand miles away for the first time.

The interchange of goods between different parts of the country is also making amazing strides. In this part of the Nation the new channel from the Twin Cities to St. Louis is a good illustration of what I mean. You have long known by interest in its development. Last year I had planned a trip by boat from St. Paul and Minneapolis to New Orleans. Next year I hope to make it.

You, the people of Minnesota, have proved in the past that you favor progress and continued progress in government. You are not wild-eyed radicals. You believe in a constitutional democracy, as I do. You understand me when I speak in national terms. You believe with me that the businessman will most greatly prosper if the workers and the farmers prosper.

We have worked toward a common goal in the past and our cooperation is by no means at an end.

INFORMAL, EXTEMPORANEOUS REMARKS OF THE PRESIDENT, FARGO, N. DAK., OCTOBER 4, 1937

Governor Langer, my friends of Fargo, I am glad to come back here again, and I wish I could stay here longer. I am glad to note that North Dakota is so much better off this year than it was last year.

I want to tell you what I have said on several occasions on this trip, that I greatly wish that all of the calamity howlers and narrow-minded stay-at-homes could have gone across the continent with me.

You know, it is natural for people to be fearful of or antagonistic to things and places that they have never seen. I know a good many people who consider themselves national authorities on this subject or that who have never been west of the Mississippi, and some who have never been west of the Hudson.

Yes; it pays to travel. We get a much bigger perspective and a lot of knowledge.

I remember a story that President Wilson told about North Dakota. He and his family, when he was president of Princeton, were spending the summer in England, and one Sunday morning

they went to church. The rector of the church got up and said, "The Bishop of North Dakota will preach today. We are to have the pleasure of having a sermon from the Bishop of North Dakota, and, by way of explanation, let me tell you that North Dakota is one of His Majesty's colonies."

I heard another story the other day in a letter from the American Ambassador in Mexico City, Josephus Daniels. One day he got a letter from a friend of his in Chicago, who wrote, "I am contemplating a business trip to Mexico City. Do you think it would be safe for me to come and bring my wife and daughter with me?" A few hours later a Mexican friend of his came to the Embassy and said, "Mr. Ambassador, I would like to go to the Chicago Exposition. Do you think it would be safe for me to take my wife and family to Chicago?"

The Ambassador told the gentleman from Chicago and the gentleman from Mexico that both trips would be eminently safe, so they went and they had a wonderful time.

I believe that if more of us could get around the country—and this year travel has increased enormously—the more national we will be in our point of view. That is why these trips that I take every year in the United States have been of very, very great help to me in running the job of President. Although some people have suggested that I ought to "coast"—ought to stay in the White House and just sit home by the fire and have a good time in the next 3 years—I am not going to take their advice.

So I hope I will have the pleasure of seeing you good people in North Dakota once more in the next 3 years.

ADDRESS OF THE PRESIDENT AT GRAND FORKS, N. DAK., OCTOBER 4, 1937

I regret that the necessities of the schedule brought me through the greater part of North Dakota by dark. Last night, however, I saw a portion of the drought area of eastern Montana—a situation akin to yours in the western part of this State. We can at least be thankful that the rains and the crops in this valley, and, indeed, in the eastern part of both Dakotas and most of Minnesota, have been far more plentiful than last year.

On this intensely interesting trip I have had another view of that northern and western part of the United States which is so greatly dependent for its prosperity on agriculture and its sister—forestry. I am more than ever convinced of the importance of continuing our national policy of working toward a better economy by stabilizing and improving the life of the average family.

I received the other day a letter from one of the only two living former members of the Supreme Court of the United States.

I have not asked his permission, but I am certain that he will not mind my reading to you three sentences from his letter, because they express so beautifully the thoughts of so many of us. He says:

"In this season of grave reflection it gives me greatest comfort and happiness to realize that politically and socially through all my long life my earnest sympathies have gone out and my earnest efforts have been exercised for the great numbers of my neighbors who were living in intolerable conditions while a few of us under discriminating laws of our own making were enjoying much more than a fair share of the bounties of Nature and governments.

"The confidence that this has been and is unnecessary and socially unwise, and can and should be corrected in large measure by rational and social legislation, is at bottom the reason, my dear Mr. President, why I see eye to eye with you in your effort to accomplish in 8 years what should have been in process of accomplishment through the last 40 or 50 years.

"My conviction is definite that the most difficult charges for our political adversaries to answer at the bar of history will be their opposition to the adoption of civilization's only process for peaceably settling disputes between nations, and their callous indifference and opposition to civilization's other demand that our neighbors be given at least a modest share in the comforts of life."

And he goes on to speak of what we are doing by introducing into our national life and legislation something at least of the influence of the Golden Rule—the inauguration of a trend toward better things which very certainly can never be halted or turned back. And finally he pays me the finest compliment any man could have in his lifetime. He says, "Of course, you have fallen into some errors—that is human, but you have put a new face upon the social and political life of our country."

If ever I get to be 80 years old, like Mr. Justice John H. Clarke, I hope that I will have the same spirit that still seeks better things for my neighbors.

In seeking the betterment of our farm population, no matter what part of the country they live in, no matter whether they raise cotton or corn or wheat or beets or potatoes or rice, the experience we have today teaches us that if we would avoid the poverty of the past, we must strive today—not tomorrow—toward two objectives.

The first is called "better land use"—using the land in such a way that we do not destroy it or harm it for future generations, and in such a way that it will bring to us the best year-in and year-out return as a reward for our labors. This we are doing at least in part today by educating the users of land, by putting back into grass or trees land which should not be under the plow, by bringing water to dry soil which has immense possibilities for profitable use, and by helping farm families to resettle on good land. The money we are spending on these objectives is already coming back as increased national income and will be repaid, in the long run, many times over.

The other objective is the control, with the approval of what I believe is the overwhelming sentiment of the farmers themselves, of what is known as crop surplus.

Any one crop, wheat or cotton or corn, for example, is like any widely used manufactured commodity like bricks or automobiles or shoes. If, for instance, every shoe factory in the United States were to run on a three-shift basis, turning out shoes day and night for 2 or 3 years, we would have such a surplus of shoes in the United States that that surplus would have to be sold to the public, in order to get rid of it, at far less than the actual cost of manufacturing the shoes.

The same thing holds good of wheat or cotton or corn. We should remember, incidentally, that the prosperity of the wheat growers helps the prosperity of the cotton growers, because you in the Northwest have more money to buy more articles made out of cotton, and the prosperity of the cotton growers helps the growers of wheat, for the Cotton Belt is enabled to buy and eat more bread.

If an enormous surplus of wheat piles up in the hands of buyers and speculators, you know from past experience how the price of wheat will drop almost out of sight the following year. Neither you nor I want to repeat the experiences of 1932.

Therefore, I believe that it is essential to our national economy that we have something to say about the control of the major crop surpluses. The Supreme Court has ruled, in a divided opinion, that the Government cannot make a contract with a farmer by which acreage is fixed either downward or upward. I have never subscribed to the constitutional theory that agriculture is a purely local matter and that it has, therefore, no national scope.

Perhaps it will be held constitutional for the Government to say to a farmer, "If you do thus and so, the Government will do thus and so." As a matter of common sense, I cannot see very much practical difference between the two methods. In the one case, the farmer voluntarily enters into a contract; in the other case, he voluntarily does something with the knowledge that the Government on its part will do something. One is a contract; the other is a promise. The result is the same.

I feel certain that a majority in both Houses of the Congress will heed the wish of most of the farmers of the Nation in enacting crop surplus-control legislation. And it is my thought that legislation toward that end ought to be passed at the earliest possible moment.

Because this legislation was not passed at the last session, it is too late for it to have any bearing on the winter wheat which is now in the ground. Many farmers do fall plowing against next spring's seeding, and in some parts of the Nation crops, such as cotton, are actually planted in late February and early March.

Even after a bill is passed and becomes law on the signature of the President, it takes a month or two before it is humanly possible to set up the machinery in all parts of the country to carry out the provisions of the new law. If, therefore, new legislation is to affect the 1938 crops, haste seems to be important from every angle.

I am happy to come back to North Dakota, and I hope that the coming year will bring you still further along the road to prosperity.

ADDRESS OF THE PRESIDENT AT BONNEVILLE DAM, OREG., SEPTEMBER 28, 1937

Today I have a feeling of real satisfaction in witnessing the completion of another great national project, and of pleasure in the fact that in its inception, 4 years ago, I had some part. My interest in the whole of the valley of the great Columbia River goes back to 1920 when I first studied its mighty possibilities. Again, in 1932, I visited Oregon and Washington and Idaho and took occasion in Portland to express views which have since, through the action of the Congress, become a recorded part of American national policy.

Almost exactly 3 years ago, I inspected the early construction stages of this dam at Bonneville.

The more we study the water resources of the Nation, the more we accept the fact that their use is a matter of national concern, and that in our plans for their use our line of thinking must include great regions as well as narrower localities.

If, for example, we had known as much and acted as effectively 20 and 30 and 40 years ago as we do today in the development of the use of land in that great semiarid strip in the center of the country which runs from the Canadian border to Texas, we could have prevented in great part the abandonment of thousands and thousands of farms in portions of 10 States and thus prevented the migration of thousands of destitute families from those areas into the States of Washington and Oregon and California. We would have done this by avoiding the plowing up of vast areas which should have been kept in grazing range and by stricter regulations to prevent overgrazing. At the same time we would have checked soil erosion, stopped the denudation to our forests and controlled disastrous fires.

Some of my friends who talk glibly of the right of any individual to do anything he wants with any of his property take the point of view that it is not the concern of Federal or State or local government to interfere with what they miscall "the liberty of the individual." With them I do not agree and never have agreed because, unlike them, I am thinking of the future of the United States. My conception of liberty does not permit an individual citizen or group of citizens to commit acts of depredation against Nature in such a way as to harm their neighbors, and especially to harm the future generations of Americans.

If many years ago we had had the necessary knowledge and especially the necessary willingness on the part of the Federal Government to act on it, we would have saved a sum which, in the

last few years, has cost the taxpayers of the Nation at least $2,000,000,000.

Coming back to the watershed of the Columbia River, which covers the greater part of the States of Oregon, Washington, Idaho, and a part of Montana, it is increasingly important that we think of that region as a unit, and especially in terms of the whole population of that area as it is today and as we expect it will be fifty and even a hundred years from now.

I appreciate and I understand fully the desire of some who live close to some of the great sources of power in this watershed to seek the advantages which come from geographical proximity.

More than 8 years ago, when I became Governor of the State of New York, we developed plans for the harnessing of the St. Lawrence River and the production of a vast amount of cheap power. The good people who lived within a few miles of the proposed dam were enthused by the prospect of building up a huge manufacturing center close to the source of the power—another Pittsburgh—a vast city of whirling machinery. It was a natural dream, but wiser counsels prevailed and the government of the State laid down a policy based on the distribution of the proposed power to as wide an area as the science of the transmission would permit.

We felt that the Governor and the legislature of the State owed it to the people in the smaller communities for hundreds of miles around to give them the benefit of cheap electricity in their homes and their farms and their shops. And while the St. Lawrence project is still on paper, I have no doubt of its ultimate development, and of the application of the policy of the widest possible use when the electric current starts to flow.

That is why in developing electricity from this Bonneville Dam, from the Grand Coulee Dam, and from other dams to be built on the Columbia and its tributaries, the policy of the widest use ought to prevail. The transmission of electricity is making such scientific strides today that we can well visualize a date, not far distant, when every community in this great area will be wholly electrified.

It is because I am thinking of the Nation and the region 50 years from now that I venture the further prophesy that as time passes we will do everything in our power to encourage the building up of the smaller communities of the United States. Today many people are beginning to realize that there is inherent weakness in cities which become too large and inherent strength in a wider geographical distribution of population.

An overlarge city inevitably meets problems caused by oversize. Real-estate values and rents become too high; the time consumed in going from one's home to one's work and back again becomes excessive; congestion of streets and other transportation problems arise; truck gardens disappear because the back yard is too small; the cost of living of the average family rises far too high.

There is doubtless a reasonable balance in all of this, and it is a balance which ought to be given more and more study. No one would suggest, for example, that the great cities of Portland, and Tacoma, and Seattle, and Spokane should stop their growth, but it is a fact that they could grow unhealthily at the expense of all the smaller communities of which they form logical centers. Their healthiest growth actually depends on a simultaneous healthy growth of every smaller community within a radius of hundreds of miles.

Your situation in the Northwest is in this respect no different from the situation in the other great regions of the Nation. That is why it has been proposed in the Congress that regional planning boards be set up for the purpose of coordinating the planning for the future in seven or eight natural geographical regions.

You will have read here, as elsewhere, many misleading and utterly untrue statements in some papers and by some politicians that this proposed legislation would set up all-powerful authorities which would destroy State lines, take away local government, and make what people call a totalitarian or authoritarian or some other kind of a dangerous national centralized control. Most people realize that the exact opposite is the truth—that regional commissions will be far more closely in touch with the needs of all the localities and all the people in their respective regions than a system of plans which originates in the Capital of the Nation. By decentralizing as I have proposed the Chief Executive, the various Government departments, and the Congress itself will be able to get from each region a carefully worked-out plan each year—a plan based on future needs, a plan which will seek primarily to help all the people of the region without unduly favoring any one locality or discriminating against any other.

In other words, the responsibility of the Federal Government for the welfare of its citizens will not come from the top in the form of unplanned, hit or miss appropriations of money, but will progress to the National Capital from the ground up—from the communities and counties and States which lie within each of the logical geographical areas.

Another great advantage will be served by this of planning from the bottom up. Under our laws the President submits to the Congress an annual Budget—a Budget which, by the way, we expect to have definitely balanced by the next fiscal year. In this Budget we know how much can properly be expended for the development of our natural resources, the protection of our soil, the construction of our highways and buildings, the maintenance of our harbors and channels and all the other elements which fall under the general heading of public works. By regional planning it will be vastly easier for the executive branch and the Congress to determine how the appropriations for the following year shall be fitted most fairly and equitably into the total amount which our national pocketbook allows us safely to spend.

To you who live thousands of miles away in other parts of the United States, I want to give two or three simple facts. This Bonneville Dam on the Columbia River, 42 miles east of Portland, with Oregon on the south side of the river and Washington on the north, is one of the major power and navigation projects undertaken since 1933. It is 170 feet high and 1,250 feet long. It has been built by the Corps of Engineers of the War Department, and when fully completed, with part of its power installations, will cost $51,000,000. Its locks will enable shipping to use this great waterway much further inland than at present, and give an outlet to the enormously valuable agricultural and mineral products of Oregon and Washington and Idaho. Its generators ultimately will produce 580,000 horse power of electricity.

Truly, in the construction of this dam we have had our eyes on the future of the Nation. Its cost will be returned to the people of the United States many times over in the improvement of navigation and transportation, the cheapening of electric power, and the distribution of this power to hundreds of small communities within a great radius.

As I look upon Bonneville Dam today, I cannot help the thought that instead of spending, as some nations do, half their national income in piling up armaments and more armaments for purposes of war, we in America are wiser in using our wealth on projects like this which will give us more wealth, better living, and greater happiness for our children.

ADDRESS OF THE PRESIDENT AT TIMBERLINE LODGE, OREG., SEPTEMBER 28, 1937

In the past few days I have inspected many great governmental activities—parks and soil protection sponsored by the Works Progress Administration; buildings erected with the assistance of the Public Works Administration; our oldest and best known national park under the jurisdiction of the National Park Service; great irrigation areas fathered by the Reclamation Service; and a few hours ago a huge navigation and power dam built by the Army engineers.

Now I find myself in one of our many national forests, here on the slopes of Mount Hood.

The people of the United States are singularly fortunate in having such great areas of the outdoors in the permanent possession of the people themselves—permanently available for many different forms of use.

In the total of this acreage the national forests already play an important part in our economy, and as the years go by their usefulness is bound to expand.

We think of them, perhaps, as having the primary function of saving our timber resources, but they do far more than that; much of the timber in them is cut and sold under scientific methods and replaced on the system of rotation by new stands of many types of useful trees. Our national forests, in addition, provide forage for livestock and game; they husband our water at its source; they mitigate floods and prevent the erosion of our soil. Last, but not least, our national forests will provide constantly increasing opportunity for recreational use. This Timberline Lodge marks a venture made possible by Emergency Relief work, in order that we may test the workability of recreational facilities installed by the Government itself and operated under its complete control.

Here, to Mount Hood, will come thousands of visitors in the coming years. Looking toward eastern Oregon with its great livestock-raising areas, they will visualize the relation between the cattle ranches and the summer ranges in our forests. Looking westward and northward toward Portland and the Columbia River, with their great lumber and other wood-using industries, they will understand the part which national-forest timber will play in the support of this important element of northwestern prosperity.

Those who will follow us to Timberline Lodge on their holidays and vacations will represent the enjoyment of new opportunities for play in every season of the year. Among them will be many from the uttermost parts of our Nation, travelers from the Middle West and the East and the South—Americans who are fulfilling a very desirable objective of citizenship—getting to know their country better.

Addresses Delivered by the President at Havre and Fort Peck, Mont.

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, November 16, 1937

ADDRESSES BY THE PRESIDENT AT HAVRE AND FORT PECK, MONT., OCTOBER 3, 1937

Mr. MURRAY. Mr. President, during President Roosevelt's recent trip to the West he made a few extemporaneous

remarks at Havre and at Fort Peck, Mont., which were recorded, and which I ask permission to have inserted in the CONGRESSIONAL RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

INFORMAL, EXTEMPORANEOUS REMARKS OF THE PRESIDENT AT HAVRE, MONT.

Good morning.

I am glad to be back in Montana after an absence of 1 week.

I am particularly interested in seeing this part of the country, because I have got to plan ahead and you have got to plan ahead and the Congress has got to plan ahead for the use of more water.

I was talking last night with JIM MURRAY about that problem of water and we agreed that in a drought area like eastern Montana probably the time has come—and that applies to big sections of other States as well—the time has come to use our W. P. A. work, not in building any more armories or school stadiums or streets but to put it into the building of dams.

This morning I smiled all the way through breakfast because I happened to see an editorial, not in a paper here but in a Great Falls paper, that talked about "balancing the budget of our resources." That is something that is well worth thinking about. It said that because we have made money in wasting and eroding large human resources and piled up nominal wealth in securities and bank balances, we have lost sight of the fact that the natural resources of our land—our permanent capital—are being converted into those nominal evidences of wealth at a faster rate than our real wealth is being replaced.

That is well worth thinking about. That is the unbalanced budget that is most serious and it is to balance that budget that the great program of conservation and useful public works is being carried out. The success of that form of budget balancing is just as important to the future of America as that of the Treasury, important as that may be.

As a matter of fact, the Treasury is all right and we are balancing that Budget—you needn't worry—but, in addition to it, we are going to use every effort to balance the budget of our human and our natural resources.

I have had a very wonderful trip. I have seen a lot and I have learned a lot. I wish a whole lot of other people from back East and from Washington, D. C., could take trips like this.

I am going on down to Fort Peck to see the largest earth dam in the world. Yesterday I saw the largest concrete dam in the world. All of them are intended to do just what I have been talking about—to give people a better chance—and I believe that is what the American people want and are going to get.

It has been good to see you all this morning. I wish I could stop off longer and see this country. I have been here before, you know. I wish I could go up to Glacier. I wish I could drive in an automobile, because I can see more that way than from the rear platform of a train.

I hope to come back and see you again soon.

INFORMAL, EXTEMPORANEOUS REMARKS OF THE PRESIDENT AT FORT PECK, MONT.

Governor Ayers and, I can almost say, my old friends of Fort Peck, because some of you were here 3 years ago—3 years have come and gone, and I see a great change. When I was here before there was just the beginning of a dam, and now it is about three-quarters finished.

I have been thrilled by it not only because it is four times bigger than any other earth-filled dam in the whole world but because of what it is going to do for the people of Montana and the whole Missouri Basin.

It is another illustration of what we have been doing in the past 3 or 4 years. During that time we have given useful work to millions of unemployed citizens; we have brought water to dry places, we have increased and cheapened the use of electricity, and we have completed literally thousands of projects of immediate usefulness in every county and every State of the Union.

But, most important of all, the Nation as a whole has understood the long-range purpose of our policies. The Nation has understood that we are building for future generations of our children and grandchildren, and that in the greater part of what we have done, the money spent is an investment which will come back a thousandfold in the coming years.

I wish that lots of people could have taken this trip with me out to the coast and back. I wish in particular that a certain type of citizen could have taken it—the "doubting Thomases."

Not long ago a very important businessman of New York City came to see me to talk about the one thing that lay nearest to his heart, the balancing of the Budget. Well, I told him I thought it was pretty important and that we were going to get it balanced next year. Then I asked him if he had ever read the Budget. He said, "No." I asked him how much he would save in the coming year if he could, and he said, "Oh, two or three billions of dollars." And then came my question which always stumps people of his kind. I said, "Just where would you cut expenses?" He hemmed and hawed, and he hemmed and hawed some more, and he couldn't tell me where he would save money, although he was saying to the Nation, through the newspaper he owned, that it was perfectly simple to do it.

Well, I pressed him on it, and finally he said this: "Why, you could save half the cost of relief by putting every family onto the dole. Every family that is out of a job or starving, put them on a dole the whole year round. Most important of all, you can stop building, right away, these silly public works like Fort Peck and the Grand Coulee and Bonneville Dams. Stop all this flood-control business. Stop all this irrigation business."

When I suggested to him that his program would bring terrific hardship on several million families of Americans, he finally told me what his real philosophy of life was. He said, "All this business of helping people is ruining the country. Look at my taxes. I have to pay half of all my income in Federal and State and local taxes."

And I happened to know what that gentleman's income was—$400,000 a year. And that "poor" man thought that he was going to the poorhouse because, after paying his taxes, he only had $200,000 a year left.

Well, they are not all like him. Most of the attacks being made on American policies come from people who do not know the United States, come from people who have never been out through the great West, come from people who do not understand the problem, for example, of the drought area. They are people who do not understand the obligation that the government of the locality and of the State and of the Nation has to try to do everything they possibly can to make possible a decent living for the citizens within their borders.

Yes, they are the kind of people who do not understand when JIM MURRAY and JIM O'CONNOR come into my office week after week and make perfect nuisances of themselves and say to me, "Mr. President, we have got to have power developed at the Fort Peck Dam." They are the kind of people that say, "Why, there is all the power in the world up there; why add any more to it?"

They are the kind of people who cannot understand the interest—my interest, JIM MURRAY'S interest, JIM O'CONNOR'S interest, JERRY O'CONNELL'S interest—in the development of the Yellowstone, of the Milk, of the Gallatin, of the Big Horn, and of a lot of other rivers right in this State.

One thing I have always specialized in ever since I started collecting postage stamps at the age of 10 years is geography, and especially the geography of the United States. I think I realize, as all of you good people do, that we can do many things and we are going to do many things for the preservation of our water out through the dry areas of the country and in taking people off land where they cannot possibly live and give them a chance to farm on good land.

That is the kind of policy your Government should have and must follow. I believe that the people, not only of Montana but of every other State in the Union, are appreciative of the fact that we know where we are going and intend to go there.

Address by the President at Spokane, Wash.

EXTENSION OF REMARKS

OF

HON. LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, November 16, 1937

INFORMAL, EXTEMPORANEOUS REMARKS OF THE PRESIDENT, SPOKANE, WASH., OCTOBER 2, 1937

Mr. SCHWELLENBACH. Mr. President, on October 2, 1937, the President of the United States made a brief, extemporaneous address at Spokane, Wash., which I ask permission to have printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

My friends, I am sold on the State of Washington. I have had a wonderful few days, and I wish very much that I could spend weeks instead of days seeing more of the State because I am certain about the future of the Northwest. I am very certain of the contribution it is going to make to our Nation in the days to come, not only in the building up of population but in the building up of the right kind of population, the right kind of people, by using the resources of this great region for the benefit of mankind.

Today I have seen the largest structure that any human beings, so far as history records, have ever undertaken, the Grand Coulee Dam. I am thrilled by it, as all of you are.

I want to leave with you just one suggestion:

There are parts of this Nation that are not as favored as the Northwest. Mistakes have been made. They have cut off their timber. Their land is played out, or they plowed up prairie land which is now blowing away. I am thinking about those people as well as you people. You have got room for them here in the Northwest where they can make homes, where they can live happily and prosperously.

I am asking your cooperation in helping your fellow Americans, who are less favored than you are, to make a new start in life. I know what your response, what your hospitality, is going to be.

Although I leave the State very soon, I am not leaving for good by any means because, as you know, part of my family lives in this State.

I am going to come back again in the next 3 years and take a "look-see" once more.

In the meantime, remember that you are in my thoughts, that we people in Washington—I mean Washington, D. C.—though it is a long way off, are remembering the Northwest, remembering its great possibilities, remembering, incidentally, the fine representatives in the House and in the Senate, that you have sent to us.

And so this is au revoir, it is not good-bye. I will be back to see you soon.

The Function of the Bench and Bar

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Tuesday, November 16, 1937

ADDRESS BY HON. DENNIS CHAVEZ, OF NEW MEXICO, BEFORE THE NEW MEXICO STATE BAR ASSOCIATION, OCTOBER 8, 1937

Mr. HATCH. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by my colleague the junior Senator from New Mexico [Mr. CHAVEZ] before the New Mexico State Bar Association at Santa Fe, N. Mex., on October 8, 1937.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

As a member of the New Mexico Bar, I feel no hesitancy in speaking before its members among whom I was not so long ago an active practitioner. And without fear of being supercritical of the faults as well as the virtues of this group of which I am still a member, frankly discuss our merits and demerits.

The profession of law, it has been said, is a jealous mistress. Be this as it may, our conjugal virtue should not lead us to the mistake of so idealizing our chosen profession to the point where we are blinded as to its shortcomings and failures.

Recent expressions of the American Bar Association, the parent organization of such bodies as this, composed of representatives of the bar of every State in the Union, it would appear, indicate an unwillingness to listen to any discussion on the part of the people or of Government functionaries, of the part the bench and bar play in our daily lives. As lawyers we are prone to idolize and too ready to defend any criticism of either lawyers or judges, courts, statutes, or constitutions, dicta or precedent. The law of "stare decisis" and "res adjudicata" is so firmly imbedded in our legal thought that we with difficulty realize that in this rapidly changing world, just as we discarded the ox cart for the sulkey, then changed to a model T and are now dissatisfied unless we are driving a Packard eight, that the "Rule in Shelley's Case" no longer fits our modern life.

The machine age with its consequent capitalistic development and concentration of wealth; the concentration of population in large centers; displacement of workers with machines; the closing of our last frontiers and the changing of the West from a pioneer section to intensively populated centers—all these changes of the past half century have brought with them basic changes in our economic, social, and political life and thought. Theories of Government generally accepted today, half a century ago would have been considered revolutionary and almost treasonable.

To solve present-day problems with our face toward the past only, with our only guide and theory and philosophy of life and of government of those who lived in another age, is to act with short judgment. I do not say we should disregard the lessons of the past, the wisdom of the ages to which we are heirs. But this is certain, if we would safely guide the Ship of State through these new and dangerous passages, we must be cognizant of the shoals and reefs which these modern upheavals have cast in hitherto unblocked channels which dangers were unknown to the ancient mariner.

The point I desire to make is this: As our economic life changes, the rules under which that life is to be lived must change. Lawyers as a whole, it seems to me, are the last to recognize these truths that they must break loose from that ultraconservative view that the law is a definite, unmovable pillar of righteousness, whose rules of procedure, whose constitution, codes, and precedents are a beacon light which for all time, unchanged and untampered with, shall always point the way to life, liberty, and happiness.

No one has more reverence for established law and for our Constitution than I. To my mind, however, our Constitution is not solely a written instrument, the original of which reposes in the Hall of Archives in Washington. It is more than that. It is the unwritten thought, engraven in the hearts of every free-born American, which God forbid ever be erased, that the will of the people is sovereign and that their desire expressed in accord with the will of the majority shall be the law by which we live.

When we view millions of poorly fed, poorly housed American citizens clamoring for work which is unavailable—this in the midst of a land of wealth, where there is plenty for all were there a proper distribution of those gifts with which God has endowed this wonderfully bountiful country of ours—without posing as a proponent of a division of the wealth—it is reasonable to say that new problems of life must be met with new rules governing those lives. And here is where the bench and bar, in my opinion, must learn their lesson. They, too, must join the march in this rapidly changing life we are living.

All of these observations lead directly to this: That it is apparent that when our economic structure has reached the point where it does not solve the present problem of our economic life, as it was apparent a few years ago, of necessity the sovereign power of the Nation must project itself into the conduct of our affairs if we would have preserved for us a government for the people. And by this I mean a government under which every individual has the opportunity not only to enjoy life and liberty but also happiness which necessarily includes a roof to cover him and food for his family. Yet, from the bench and from the bar throughout the country in times when thousands upon thousands were out of work, and their families hungry, we heard the loudest protests of the Government going into business; of the Government employing men; of the unconstitutionality of laws which sought to regulate hours of labor, distribution of commodities, price of commodities, old-age security and likewise.

Have we solved the problem? No; but we have gone a long ways. It would be truer to say we will never solve the problem. It will be a constantly changing picture. This can be said. We have passed the first milestone. We did when under the guidance of a leader who subscribed to the philosophy that justice is the first concern of mankind; that human rights and human needs are paramount to legal traditions; that the rights of all are paramount to the needs of a few; that it is the function of government to insure for every citizen the right to live, and the right to work, and the right to a living wage.

We have broken away from the fetters of the past. We see a new horizon ahead. In our journey toward that horizon the importance of the bench and the bar cannot be overestimated. It has been truly said that the more government projects itself into the affairs of men, the bench and bar become not only the arbiters but the last bulwark of the citizens. It is true today as when spoken by Aristotle centuries ago that "Justice is the first concern of mankind." It is the function of the bench and the bar to insure this justice. Justice we often think of only in connection with the administration of criminal law. It goes further. It includes the right of opportunity for every free-born American to enjoy in proportion to his industry and his efforts the right to live and raise his family free from the specter of want and hunger.

I have no fear for the future. We have grown powerful and prospered under our form of government. So far as our Constitution is concerned, it is our fundamental law. We have changed it 21 times to suit changing conditions. We may change it 21 times more. Some day we may replace it with a more adequate one. With due reverence to those who laid the foundations of our Government, they were in no wise either infallible or all-knowing. Wise men in their day, just and able, they gave us what we have today. Our function is not to cling to what they left as they left it but to carry on with the same patriotic spirit, with the same love for justice and freedom, jealous ever that no part of that heritage of freedom they left us shall ever be lost.

I thank you.

Address by the President at Marshalltown, Iowa

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Tuesday, November 16, 1937

INFORMAL, EXTEMPORANEOUS REMARKS OF THE PRESIDENT, MARSHALLTOWN, IOWA, SEPTEMBER 23, 1937

Mr. GILLETTE. Mr. President, the President of the United States honored the State of Iowa recently on his

western trip by making a short address at the city of Marshalltown, Iowa, on September 23, 1937. I ask unanimous consent that his remarks may be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am glad to come back to Iowa after an absence of nearly a year. As you know, this is not a campaign trip, but it is merely doing what I think every President ought to do, and that is once a year to try to see something of the country at first-hand.

I believe that on this trip so far things are a good deal better than they were in 1936.

At this particular moment I have to be very careful of what I say, because upon the front platform of this car they are making a record on a disc. And, also, the newspapermen in the club car, who are connected with this back platform by this instrument [indicating microphone], are taking everything down, trying to get a real story that will appear in the headlines. So I have got to disappoint them once more.

As a matter of fact, I know a lot of you good people here are interested in one of the objectives of Government—the stability of crop prices. It is one of the big things that we have let slide this year, and we know what happens to the country when corn and cotton and wheat and other major crops fluctuate up and down the scale and people haven't got any idea when they plant their crops what they are going to get for them when they reap them.

That is something, I believe, that modern civilization must solve and can solve; and I am not speaking in a party spirit, as you know. I think the time has come when the Government can devise ways and means which will stabilize prices that farmers get for what they grow. And I believe, too, that that can be done without bankrupting the Government.

On this trip I am talking to many people about methods to be used in obtaining those ends. You know a lot of people mix up objectives with methods, and sometimes, when they don't like the objectives, they say "Oh, yes; we do like the objectives, but we don't like the methods proposed by this particular fellow." Well, I am not in love with any particular methods, but I am in love with the particular objectives which the people are after and I am after.

That is why tomorrow, when I will be in the beet-sugar area and cattle area, I will be trying to get at first-hand what the people are thinking about, and trying to get at first-hand the methods to be used in gaining the objectives, because I am certain that we are together as to what those objectives are.

I said I was not going to make a speech, but I seem to have made one.

I suppose that in the last 25 years I have seen a good deal more of the United States than almost anybody in public life except Jim Farley. I am keen to see more of it, and I propose to keep on traveling.

Many thanks.

Administration and Its Judicial Control

EXTENSION OF REMARKS

OF

HON. TOM CONNALLY

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, November 16, 1937

ADDRESS DELIVERED BY HON. M. M. LOGAN, OF KENTUCKY, BEFORE AMERICAN BAR ASSOCIATION AT KANSAS CITY, MO., SEPTEMBER 28, 1937

Mr. CONNALLY. Mr. President, on September 28 last the junior Senator from Kentucky [Mr. LOGAN] delivered a very able and interesting address before the American Bar Association at Kansas City, Mo., on the subject of administration and its judicial control. I ask that the address may be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

While I esteem it an honor and a distinction to be invited to address this body of lawyers, I am not unmindful of the difficulties which confront any man who talks to a group of lawyers.

They are all that they claim to be; that is, the most important citizens in any community; but the lawyer has always had one difficulty, and it is hard for him to overcome it, if it is possible at all. He opposes change, perhaps in the belief that if there should be change pertaining to any subject in which he is interested, the law that he knows, or at least a part of it, would be repealed and he would be forced to learn new procedure, new interpretations, and, perhaps, new ideas, which might float in upon him either by his own desires or against his wishes.

I have an old friend in Kentucky who is a circuit judge, and, of course, he holds court in the different counties which make up his district. In Kentucky, a circuit judge is one of the most important men in the State. This particular judge drives over his district in a 1922-model Ford car. He is laughed at by his associates and jeered at by the boys and girls. His appearance on the streets and highways endangers the safety of others, but none of these things is sufficient to induce him to buy a new car. He has the money, he is not stingy, he likes to spend his money lavishly, but he says that if he should get a new car he would not understand the improvements that have been added to it, which would necessitate his learning about new gadgets and, consequently, he takes a chance on injuring himself or his neighbor.

Some lawyers are that way. Perhaps none who are here, but I know some who are against all progress; and perhaps it is well to have some of that kind, because it is true that the lawyer is important not only in professional and business life, but the great statesmen of the Nation have been drawn from among the lawyers. One needs but to scan the roster of the Members of the United States Senate to be convinced that the liberal-minded men, those who are searching for new ways to serve the people, Senators such as the late Senator Couzens, the late Senator Cutting, Senators Norris, Borah, Wagner, to mention only a few of the older ones, are outstanding in their profession. There are very few reactionary lawyers in the United States Senate, and I am persuaded that perhaps there is no great number in the country at large, if they take the time to master the questions confronting the Nation.

Now, one of the most important questions that confront us today, and one that intimately concerns the whole people as well as the lawyers of the country, is the question of public administration. And arising out of public administration and a concomitant to it is the question of administrative adjudication. In the not distant future there is going to be a reorganization of administrative agencies along the line of greater efficiency, coordination of functions, and administrative economy.

Perhaps the most difficult problem to be encountered in such a reorganization, and certainly the one which most intimately concerns the lawyer, is the problem of administrative adjudication, or judicial control. This is a problem for practical lawyers and should be seriously met. The bar cannot afford to sit on the side lines, nursing individual or group prejudices, content with the old model, while political scientists work out the problem along the line of pure theory.

Perhaps we can better appreciate the problem if we first examine our administrative system as it is.

In the days following the formation of the Union, when industry was small and largely rural, when transportation was confined to the waterways and the overland trail, and travel to the saddle and the stagecoach, the demands upon government were comparatively few, and the problems of administration correspondingly simple.

Today the country has expanded into a vast empire. Rural communities have become large industrial centers. Great metropolitan areas have replaced the small towns. Concrete highways have replaced the overland trails. Railroads afford rapid transportation and, with automobiles and airplanes, have replaced the saddle and stagecoach. The local grocery has become a chain store and the proprietor, a clerk. The small industrial enterprise has been merged with the large corporation, and a majority of the population has become vassals in an industrial feudalism.

Moreover, modern machinery has replaced the workers and a large portion of the people have become permanently unemployed.

The genius of a great commercial people, in the greatest commercial age the world has ever known, has developed methods of production to the point of saturation but has failed to provide economic hospitalization for the social casualties resulting from these methods. Every machine invented, every important method of production and distribution, every improvement in transportation and travel have been potential causes for some form of social regulation that has or may become a problem for government.

In the light of expanded Government activity old definitions of what things are of Government concern have been revised. General welfare has loomed large in the new definitions, and Government responsibility has taken on a new meaning. Today society has become tremendously complex; the problems of government have become legion and their solution increasingly difficult. In this situation Government has sought and found new methods and new agencies of administration to efficiently handle its increased business.

Administrative agencies in Government may be defined to include all of those agencies through which the public business of the state is transacted. They derive their authority from the Constitution, from the statute laws, and from rules, regulations, and orders formulated in pursuance to and by the sanction of the legislative will. The development of such agencies in our Government has until recently been unitary, without any real coordinating control. Congress, having the power, created new agencies for the work in hand, often without regard to the fact that some other agency was engaged in related activities. Thus the administrative branch of the Government developed, as it were, by accretion in the form of new agencies charged with new activities and endowed with new powers. Naturally this form of growth resulted in much duplication and overlapping of activities, but it also resulted in the building up of a very definite system of administrative law within the constitutional limits as set by judicial approval.

In the study of administrative organization in the United States it is well to remember that our Federal administrative system was not copied from Europe, although during the latter period of the Revolution there was a strong tendency to compliment France in numerous ways, ranging all the way from French fashions to offi-

cial terminology; nor is it due to long-range planning by the constitutional fathers. American administration is distinctively American, due in its creation to the same experiences and resourcefulness that created and has perpetuated the American Government. It has been a continuous evolution—often experimental, sometimes rapid in its development, sometimes slow, and again moving forward with a tremendous impetus—from the days of colonial independence to the adoption of the Constitution, and from 1789 to 1937 it has been characterized by an ingenuity and resourcefulness distinctly American.

The history of administrative organization has therefore been one of change, both as to the method of organization and the functions of the executive departments.

During that critical period in American history from Lexington, 1775, to Philadelphia, 1789, when the Thirteen Colonies were engaged in the struggle for independence from Great Britain and in the formation of the Union, the executive power was exercised by the Continental Congress. The exercise by Congress of the administrative functions resulted in such confusion that it soon became apparent that these functions should be delegated.

At first these delegations were made to its own members, but the cumulation of onerous duties with the consequent delay and failure soon forced the delegation of administration, at least to some extent, to persons outside of Congress. This laid the foundation for administrative improvement, which continued after the war, and the committees employed by Congress to administer its resolutions came to have some degree of permanency. The system was improved under the Articles of Confederation and some degree of separation of administrative functions was obtained. Here, however, it stopped and, until the Constitution was adopted, Congress continued to give attention to administrative details. This exercise by Congress of administrative detail caused Jefferson, in a letter to Carrington, to advocate a separation of executive and legislative powers in the new Government, but the main defect in the system, as Hamilton so aptly put it, was "in confounding legislative and executive functions in a single body." On account of their experience under British rule the Colonies were reluctant to centralize power in one person, and Congress delegated to boards, committees, and advisory bodies the business of administration. It was soon found that the exercise of administrative authority by special committees was impractical, and that a centralization of authority and control was necessary. Thus we find at the end of the period of the Confederation a trend toward a single-executive authority in administration responsible to the Congress. This was probably due to Alexander Hamilton more than any other one man, although at the end of this period it is said to have met with the approval of a majority of the statesmen of the time and had proved more efficient than either committee or board control.

DEVELOPMENT AND TREND

For approximately 100 years after the adoption of the Constitution public administration in the Federal scheme was concerned largely with governmental activities, such as the State,[1] War,[1] Navy,[2] and Treasury Departments.[3] The Post Office[4] and Interior Departments[4] and the Agriculture Department,[5] which was organized at the end of this period, represent large and important activities impressed with a social character, as is the Department of Commerce, established in 1903, as the Department of Commerce and Labor, and the Department of Labor, established in 1913.

The First Congress of 1789 included in the Judiciary Act of that year a provision for an Attorney General of the United States, whose duties were to prosecute and conduct all suits in the Supreme Court in which the United States was concerned, and to give his opinion upon questions of law when required by the President or the heads of the departments. When Cabinet meetings were inaugurated by Washington in 1791 the Attorney General regularly met with the Cabinet, although he was not placed at the head of an executive department until 1870, when the Department of Justice was organized. Thus was inaugurated a centralized control over the administration of legal affairs.

This centralized control is not, however, complete, and the legal work of various departments and independent administrative establishments is by no means all under the supervision and direction of the Attorney General. Much of the supervision over departmental legal matters is merely nominal. For example, the Treasury Department has its own legal organization under the General Counsel, while the prosecution of appeals before the circuit courts and the Supreme Court is by the Department of Justice. The office of the Judge Advocate General of the War Department is not subject to the supervision of the Attorney General.

The administrative organization of the Department since 1870 has been characterized by the extension of its activities into fields not contemplated when the office of the Attorney General was first created. Among these are included the supervision of penal institutions, supervision of pardons, commission to codify criminal laws, Bureau of Insular and Territorial Affairs, Bureau of Investigation (1907), and the Bureau of Criminal Identification. Special assistants to the Attorney General are in charge of its various bureaus and also serve as solicitors to the other departments of the executive branch. The organization is along the line of administrative functions and centralized control.

In 1824 Chief Justice Marshall, in the famous case of *Gibbon v. Ogden*, stated that commerce was traffic and intercourse, commercial intercourse in all its branches, including navigation, and could be regulated by Congress under the power conferred by the Constitution, excepting where it was entirely intrastate. In describing the power, the Chief Justice said it is the power to regulate, the power to prescribe the rule by which commerce shall be governed.

Subsequent decisions of the Court have steadily expanded the concept of commerce and have extended, with congressional legislation, the Federal control to such things as transportation, communication, bridges, foods and drugs, agriculture, lotteries, unfair competition in business, prison-made goods, alcoholic beverages, fuel, labor relations, securities, and business in general.

The first important regulatory legislation was the Interstate Commerce Act of 1887, under which one of the most outstanding administrative agencies in the Federal system was set up—the Interstate Commerce Commission. Within the 50 years since the establishment of the I. C. C. there has been developed in our administrative system, either within the executive departments or as independent agencies outside of the departments, nearly 100 agencies or tribunals exercising judicial or quasi-judicial functions in adjudicating disputes that arise in the administration of government.

Administrative agencies created to regulate and control the economic resources of the country have increased tremendously in recent years. Among these activities is the regulation of waterpower. At first this was applied to the regulation of dams on navigable streams in 1906. Then came the Federal Waterways Commission in 1917, followed by the Federal Water Power Act of 1920, which provides for a control through a system of licensing. In 1924 the Inland Waterways Corporation was created, and in 1933 the Tennessee Valley Authority was established as a new and gigantic experiment in this field.

So in the field of finance, labor, agriculture, research, banking, reconstruction, housing, insurance, public works, rural electrification, farm and commodity credit, social security, foreign trade, and conservation relief regulatory bodies have been developed, usually as boards, commissions, or administrators, charged with special administrative activities. As the process of administration has developed, administrative adjudication of disputes has become an integral part of the functioning of these regulatory authorities, either directly because they are established to settle particular types of disputes or, as is generally the case, because adjudication results from their operations.

Formerly administrative concepts have been very largely restricted in jurisdiction to disputes which arise between administrative agences and private persons. It may be noted that this field is being broadened to include disputes between two or more private persons. This may seem to shock our concept of public administration, until we consider that the reason for the enlargement of jurisdiction lies in the fact that a created administrative authority is especially charged with the exercise of this function because its exercise by an administrative authority is thought more fitting than if exercised by the courts. For example, arbitration authorities such as labor boards decide disputes between employer and employees, or the Interstate Commerce Commission decides disputes between shipper and carrier.

The development of our administrative system has been accomplished with little regard for the doctrine of the separation of powers strictly construed. This has been due in part to the manner in which it has been developed and in part to the fact that administration is government in action and must function continuously and in detail. We therefore find the executive departments and most of the special agencies and tribunals exercising in some degree all the powers of government.

The doctrine of the separation of powers came to us from the French political philosophy of Montesquieu and has effected the development of administrative adjudication quite differently in the two countries. In France there has been developed a system of administrative courts that have jurisdiction over all cases arising out of administration. These courts are entirely distinct from the law courts. The result has been the development of a body administrative public law, termed "droit administratif." In the United States, on the other hand, the separation of powers has resulted in giving the control of administration to the law courts, with the result that administrative law has developed along the lines of private rather than public law.

The question of how far a precise separation of powers is either possible or desirable in practice is becoming increasingly complex. In the regulatory field and in many of what may be termed the proprietary functions of government such as revenue and contracts where the action is between the citizen and the state it is of the greatest importance that the officers charged with the rule-making power do not sit as final judges in the controversy arising under the rules which they have established. But the administrative authorities must be left free to make administrative determinations in the first instance in order that government may function. Certainly we cannot settle the question on a purely theoretical basis, and any disposition of it must take into account the fact that the separation of powers is a basic concept, the practical application of which must take into account conditions which are constantly changing; it must meet the demands of

[3] Established 1789—Postmaster General became a member of President's Cabinet in 1829—became executive department in 1872.
[4] 1849.
[5] Department of Agriculture created in 1862—administered by Commissioner of Agriculture until 1889, when it became an executive department.

government as a living institution. This idea has characterized the growth of our American concept of administration from the narrow view of the framers of the Constitution to the present sphere of administrative action.

In the primitive state we find all the powers of government exercised by one person or by a group of persons. Gradually as the state developed and the problems of government increased these powers have been delegated to the king's council, or the king's court, or the king's officers. At first commingled, their separation was an evolution due to practical necessity.

The mingling of administrative and judicial powers in a single authority arose quite naturally in the development of government and gave no particular concern unless used as a means of oppression. The average man is not interested in where the power reposes unless and until its exercise interferes with his liberties or it is called to his attention by flagrant abuses. Separation of powers, in the early history of the English law was largely the result of natural evolution under existing social conditions. "In some cases an officer who was primarily an administrator would, in the course of time, gradually acquire judicial duties, as in the case of the sheriff; in others it was the judge who turned administrator, as in the case of the justice of the peace." As the social order became more complex and population increased and gravitated to civic and industrial centers, necessity led to the establishment of new administrative officers who took over some of the administrative powers and duties formerly held by the judicial officers, and new judicial officers took over judicial powers formerly held by administrative officers.

Quasi powers have come to assume a large place in our administrative terminology. This has, in some measure, been the result of the unitary development of our administrative agencies without any definite general provision for administrative control. That such agencies may be so planned and controlled as to retain all of the effective powers that they now possess within the spirit of the separation of powers seems evidence if we examine the reasons which underlie the separation of powers in government.

Perhaps the most potent of these reasons in the mind of the framers of the Constitution was to prevent the concentration of power in the hands of a single person. It concerned the political organization of the Government and not the administrative organization.

We must concede that there is an interrelation of these powers and that they may be so distributed as to minimize any abuse of power by one agency or individual. It is only where individuals or agencies charged with an administrative duty, exercise in relation and in addition thereto a legislative or judicial function without any check or proper restraint by the legislative or judicial branches of government that any real danger from abuse of power through interrelation arises. In most cases such powers, although they may be technically termed sublegislative or judicial, are largely administrative in character and might be separated or apportioned as to function with a decided resulting improvement. A very striking example of such confusion of powers and the results accomplished by their separation is found in the Treasury Department where, in 1924, the quasi-judicial functions of the Bureau of Internal Revenue were eliminated and Congress established the United States Board of Tax Appeals with purely judicial powers, to review the administrative determinations of the Bureau. This was a distinct forward step in administrative procedure, thoroughly in harmony with the doctrine of the separation of powers. The doctrine of the separation of powers is rooted in the notion of individual liberty and the protection of private property, and it is of interest to note that the first great expansion of administrative regulatory agencies was due to this same notion of the protection of the individual and of private property from the encroachment of powerful or organized interests, and in the establishment and development of these agencies the end desired was considered of more importance than a strict adherence to the separation of powers. In administrative organization it is well to keep in mind the necessity for efficient and economic functioning, and we must not lose sight of the fact that constitutional disposition of powers is not in its first analysis an administrative question. Such problems can only be solved through departmental organization, which considers a blending of powers to secure the maximum protection of individual rights.

Procedure in the ordinary processes of administration is informal. No particular rules are ordinarily formulated or published. In the case of independent tribunals, boards, and commissions there has been developed very elaborate rules which are published. In most cases the statute creating the tribunal gives it the power to formulate its own rules of procedure. These rules are very much alike in the different regulatory authorities. There are, however, enough differences in the substance and methods of procedure to cause great confusion among lawyers who find it exceedingly difficult to practice before several different tribunals where they must not only know in general what the procedure is but must familiarize themselves with the details in each tribunal in order to properly conduct a case and protect the interest of clients. On the whole the procedure is fairly adequate and complete. No general standards have been developed either by law, regulation, or practice, and there is some tendency toward rigidity. There is no general Federal bar admission which would enable attorneys to practice before all of the Federal departments and special tribunals. Attorneys are required to be admitted to practice before particular departments or tribunals and may be disbarred from one while continuing to practice before others.

Since most of the authorities within Government departments are responsible to the head of the department, an appeal lies from their decisions to the head of the department. In many cases their opinion is merely advisory. Their acts, although of a judicial nature, are administrative in character, and their decisions are self-executing; that is, they require no further act to make them valid and may be enforced by such means as the refusal of a license or a certificate of convenience or necessity, refusal of the entry of goods, seizure and destruction of goods, the assessment and collection of taxes, or the imposition of penalties. It is only when there is an objection to the action taken that it does not take effect immediately. These authorities may not be said to exercise any judicial control over administration, but rather exercise in general a part of the administrative process in settling disputes that arise in the functioning of government. For example, there are about 30 authorities within the Department of Agriculture which pass upon appeals from such things as grades, standards, inspection. They are not controlling the inspection or grades, but are merely giving a new and more expert examination of the products.

In most instances there is an administrative review of the acts of regulatory authorities, and a judicial review is provided for in almost all cases. Just how far this review extends varies greatly, and it is always necessary to go to judicial decisions to determine its extent.

In the regulation of business by the Federal Trade Commission, the courts have exercised a far-reaching control, particularly by the doctrine that what is an unfair method of competition is not a question of fact but of law, while in the case of transportation or communication they have exercised very little control. The control over administration generally, and more especially regulatory authorities, is in the ordinary courts. In particular cases such special tribunals as the Board of Tax Appeals, the Court of Claims, the Customs Court, and the Court of Customs and Patent Appeals, exercise a large control of administration within their limited jurisdiction, and are building up a body of somewhat uniform administrative law. In the final analysis, however, the 10 circuit courts of appeals and the United States Court of Appeals for the District of Columbia hear and finally determine most of the cases involving appeals from administrative action. Review by the Supreme Court is by writ of certiorari in most cases and is so discretionary that only a very small proportion of the cases ever reach that body.

If you happen to be in the courtroom on a day when the Supreme Court is handing down its decisions, you will find a surprisingly large number of cases there decided have to do with questions arising out of administrative public law. If you will examine a volume of the Federal Court Reports, you will be impressed with the large proportion of cases reported involving questions of administration. If you carry your investigation a little further and examine the reports of such administrative tribunals as the Interstate Commerce Commission, the United States Board of Tax Appeals, or the Customs Court, the Court of Customs and Patent Appeals, and the Court of Claims, you will appreciate that only a small fraction of the questions arising in the administration of Government ever find their way into the appellate courts, and you can form some notion of the nature and extent of the judicial control of administration, and the tremendous amount of time required of the courts for the consideration of administrative questions.

Administrative law as developed by our Federal courts is based upon common-law concepts which emphasize individual property rights and duties rather than upon public law concepts and duties. The result is an increasing trend toward technical construction which does not come to grips with the realities of the present-day economic situation. In recent times our philosophy of government has been undergoing many changes, and the notion of individual concern is being subordinated to the notion of general concern; individual welfare is being submerged into the welfare of the group.

The State is an ideal concept of society organized for the promotion of social intercourse and the protection of the welfare of the members of the group. It has no physical existence and must exercise its functions through individuals. These individuals represent the State and act for it in the administration of government.

In order that government may function smoothly and economically, its agents must be organized along the line of greatest efficiency, and so coordinated that every department will function in its own sphere and in its relation to other departments so as to give the maximum service with a minimum cost. For the cost of government must be paid by the people, and this burden should be made as light as possible. Certainly it should not be increased by inefficient administration. Nor should adjudication of controversies arising out of administrative action be so expensive as to deny to the average citizen a determination of his rights.

It is to administrative law that the individual must have recourse when his rights are violated. Just so far as administrative organization delimits the sphere of action of the administration, it indicates what are the rights of the individual which the administration must respect, and in order to prevent the Government from violating them, offers to the individual remedies for the violation of his rights.

Any reorganization of our administrative system should have in mind, economy in administration, coordination of activities; along the line of efficiency, simplification, uniformity of procedure before

the administrative tribunals, and judicial control of administration by administrative courts and tribunals in order to build up an administrative jurisprudence adequate to cope with modern social and business conditions in the spirit of public law. This result could best be accomplished by the establishment of an administrative court of appeals to review the decisions of the lower administrative tribunals with a final review by the Supreme Court in cases involving constitutional questions.

Reciprocal Trade Agreements and Agriculture

EXTENSION OF REMARKS

OF

HON. WILLIAM E. BORAH

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Tuesday, November 16, 1937

ARTICLE BY HON. ARTHUR CAPPER, OF KANSAS

Mr. BORAH. Mr. President, I ask unanimous consent to have printed in the RECORD an article published in the Saturday Evening Post of November 13, 1937, written by the senior Senator from Kansas [Mr. CAPPER] on one of the phases of the farm question, which will soon be considered.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Saturday Evening Post of November 13, 1937]

GOOD OLD NEIGHBOR SAM

(By Senator ARTHUR CAPPER)

The idea of being a good neighbor, internationally, appeals to me because I believe in peace and despise war. I am sold on the theory that there is a place in this world for the practice of cooperation among individuals and among nations. I believe it is possible for folks to get along together if they are so minded and if all of them are willing to play ball.

But in a long life I have learned that cooperation is a two-sided affair that requires mutual concessions to achieve mutual benefits. I also have learned that if you allow good-neighbor impulses to lead you into sentimentality and the granting of too generous concessions to your neighbor without insisting that he be equally liberal and considerate in his treatment of you, you destroy the very basis on which neighborliness and friendship can long exist. When your neighbor figures you as an easy mark or a sentimentalist, he is tempted to take advantage of you and chisel for himself at your expense. One can be kind and generous and friendly and expect that friendship to be permanent only if one insists that others act similarly.

As it is with individuals, so it is with nations. A good-neighbor policy among nations will fail if one is more generous than the others and makes concessions that are not returned in kind. The man or nation that insists on being treated fairly and squarely has the respect of his fellows. The one that does more than his share and permits the other fellow to evade his rightful obligations soon loses the respect of his neighbors and becomes the victim of his own lack of realistic intelligence.

AN EASYGOING UNCLE

In principle I am fully in sympathy with the good-neighbor policy as enunciated by Secretary of State Cordell Hull. The United States should be a good neighbor to other nations. But in being a good neighbor it should be realistic and not sentimental; it should be generous, but should demand generosity in return; it should be considerate but should expect consideration. The United States, in its promotion of amiability among nations, must not always be the one who buys the candy or stands the treat, else it will become, as I fear it already has become, the world's easy mark. I heartily commend Secretary Hull for the efforts he has put forth in behalf of world peace up to now, except for his reciprocal trade-agreement policy. He has charted a course that is intelligent and farsighted and wholesome—one this Nation should persist in following.

I am convinced, after 2 years' observation and experience, that in following the good-neighbor policy in negotiating reciprocal trade agreements the United States has been too anxious to show its neighborliness and too generous in demonstrating it either to merit or retain the wholesome respect of other nations, which is so vitally necessary if a true good-neighbor policy is to persist and bear fruit in peace.

Under the generalization of the unconditional most-favored-nation clause in our tariff treaties, we are making tariff concessions to upwards of 70 nations without being in the position either to demand or expect reciprocity in concessions on their part.

They benefit automatically, and without the slightest obligation to return the favor, from any concession in the matter of tariff reductions or lowering of quotas that the United States makes to any other nation. In other words, they get something for nothing; they are not asked to do their duty in being a good neighbor, but to be the beneficiary of our generosity without obligation. We buy the candy. They eat it. But they do not buy any candy for us to eat. Permanent neighborliness cannot persist on that basis, nor should it.

I feel that this generalization of the most-favored-nation clause is a fundamental fault in the tariff policy of our State Department, weakening our position and defeating the very high purpose which actuates Secretary Hull. It is my conviction that each trade agreement should involve the two signatories and no more. It should be an agreement regarding mutual concessions, beneficial to both, and not one-sided. The United States should get as much as it gives. Sentiment should be excluded. Unless both nations profit from it, the agreement is of dubious value. In pursuit of peace and world amiability the United States cannot afford to weaken itself to strengthen others, else we run the risk of minimizing our influence toward the goal we seek.

A separate trade agreement should be negotiated with each nation, if it is willing, and the terms should be equitable as between all, in proportion to the concessions mutually made. All nations should get the same terms, provided they are willing to give the same terms. If they are not willing to do that, they should not expect special generosity on the part of the United States.

Although trade agreements that have been negotiated have promoted reciprocity as between signatories to some extent, they have not maintained the principle of reciprocity so far as concerns 70 nonsignatory nations which benefit equally under the terms of the most-favored-nation clause. And because of that gift to the 70 or more nations who have not signed agreements with us, without mutual return, the United States, in many instances, no longer is in a position to offer concessions to them in return for equally beneficial treatment by them in world trade.

I am committed, and have been for many years, to the doctrine of true reciprocity in foreign trade. The tariff policy of the United States, prior to the initiation of the reciprocal-trade-agreement plan, has been based on true, or let me say actual, reciprocity for many years. It has worked well. It would be working well today, had it been given opportunity, such as was urged upon the administration repeatedly by those who took a realistic view of our foreign-trade problem and who knew just how tough was the situation we were up against.

If ever there was a time when the United States should have been a Yankee trader, and swapped favor for favor, it was during recent years, when our exports sank to the lowest level in our history. Our job was to use every legitimate means in our power to aid our agriculture and our industry in selling their surpluses abroad and to be hard-boiled in our insistence that "if we buy of you, you must buy of us; if we lower our tariff, you must lower yours; if we buy your coffee, or your vegetable oils, or your manganese, or your wood pulp, then you must buy our cotton, our wheat, our pork." That, to my mind, is reciprocity. Letting into this country, through lowering the tariff, the same agricultural products we can produce doesn't strike me as being reciprocity. I consider it stupid and destructive. Yet we have done it, and farmers have been the victims.

THE CONCERN OF ALL

Because I have seen serious harm resulting to large groups of our nationals, particularly farmers, and because I fear the harm will be still more serious in the future, I am impelled to protest against a continuation of our present reciprocal trade agreement policy and to seek to awaken the public to a full realization of what is happening and the dangers to them in permitting the policy to be pursued.

I am not approaching this question from a partisan point of view. In my opinion, it is not a partisan matter. It is the concern of all the people, whether they be Democrats or Republicans or members of any other political party. Farmers are concerned; laborers are concerned; so are industry and the Government itself.

The only approach that should be made to a discussion of this question is a careful consideration of the facts and an evaluation of them to the end that the interests of the citizens of the United States be carefully conserved, while, at the same time, we do our best to treat the rest of the world fairly and squarely.

I contend that through the operation of the reciprocal trade agreements American agriculture is being sold down the river; that we have opened our rich domestic market to foreign nations for the sale of agricultural products which we can produce and the production of which, in recent years, we have been curtailing by Government persuasion, making it possible for foreign nations, with cheap land and cheaper labor, to send the same products to compete with our farmers in the United States market.

The net result of reciprocal trade agreements and the generalization of the most-favored-nation clause has been not to increase greatly our exports of surplus agricultural products such as cotton, grains, and livestock products, but to increase our exports of certain manufactured products which enjoy a highly protected position in our domestic market. Not all of our manufacturers are so benefited; some have been injured, just as agriculture has been harmed by our too generous admittance to this country of the products of cheap foreign labor. American workers have lost their jobs on this account, and if it continues more of them will lose their jobs. Perhaps as a whole industry has fared little better than our agriculture.

FAVORING THE FOREIGNER

Because reciprocal trade agreements permit many competitive agricultural products to enter this country at lower tariff rates, they have created potential threats to the maintenance in our domestic market of a level of prices for farm products that will yield farmers at least cost of production and a fair profit for that portion of their production consumed at home. Because the American market has been opened to agricultural production from foreign countries, especially those products competitive with our own production, development and extension of agricultural production in foreign countries has undoubtedly been encouraged. And at the same time that this is happening the policy of the United States has been to restrict production of crops and livestock in this country. You cannot blame the foreigner for taking advantage of a situation that favors him at our expense. He is not and never has been his brother's keeper. The rich American market is the envy of every other nation on earth. They covet the opportunity to get into it even to the extent that some of them are willing to subsidize their exports to do it.

Neither our industry nor our agriculture can afford to let this happen. And, as I will show later, it is not necessary for us to open our domestic market extensively to foreign goods that compete seriously with our own production, either in industry or agriculture, in order to enable foreign nations to build up in this country large credit balances with which, if they so desire, they can buy our crops and our merchandise. Those credits can be obtained from other sources, and they have been so obtained, to the tune of billions of dollars. But the record shows that those credits have not been used to buy the crops and goods we have for sale, but rather they have been diverted to the purchase of our stocks and bonds and the purchase of raw materials and manufactured products in other countries which were better Yankee traders than the United States has proved to be. The credits are actual. Surely, by being realistic about it all, instead of sentimental, we could have bargained with our foreign neighbors and persuaded them to use some of these credits to buy our cotton and our other surplus crops and commodities. They do it with others. They can be induced to trade thus with us.

In the United States Department of Commerce a large staff is maintained to collect statistics in respect to our foreign trade and to keep a record of what is taking place. That record is startling to those of us who have a deep interest in agriculture and its well-being.

I don't like to think of a restricted agriculture in the United States. It isn't my idea of what is good for the farming industry. I prefer an expanding agriculture, or at least the maintenance of a high level of production, so that our farmers, and especially boys and girls on the farms, will have a better opportunity. Restriction of production is the antithesis of my hope. In recent years it has been justified, perhaps, by world conditions that became a mess and by adoption of tariff policies by other countries that were inimical to the United States and were a potent factor in the piling up of our surpluses.

The surplus emergency is largely over, except for cotton, and our restrictive policy on cotton has encouraged other countries to expand their production to the extent that the South may have permanently lost part of its world market, although we have had millions of bales of cotton in warehouses for several years which could have been sold on a competitive basis or bartered.

I do not believe restriction of agricultural products should be carried to the extent that we are forced to import crops and products which we can produce efficiently.

No one will question the ability of the United States farmer to produce butter, meat and meat products, corn, or wheat. They are lines in which we excel. What do the reports of the Department of Commerce show with respect to these products?

FIGURES TELL THE STORY

In 1936, for instance, the United States imported 152,459,000 pounds of meat products, as compared with 65,362,000 pounds in 1934. Imports were nearly as large in 1935, being 115,059,000 pounds.

Butter is another example. In 1934 we imported 1,253,000 pounds. In 1935 this jumped to 22,675,000, and in 1936 it amounted to 9,874,000 pounds.

In 1936 the United States imported 399,000 head of cattle, and in 1935 365,000 head, as compared with 59,000 head in 1934.

We imported 2,959,000 bushels of corn in 1934, but our imports increased to 43,242,000 bushels in 1935 and amounted to 31,471,000 bushels in 1936.

Now let us see what has been happening this year. Statistics on imports are available only for the first 6 months of 1937. During this period we imported 96,556,000 pounds of meat products, as compared with 80,229,000 during the first 6 months of 1936. In this period we imported 9,592,000 pounds of butter, almost as much as we took during the whole of 1936. Our imports of cattle in the 6 months' period of 1937 totaled 308,840 head, while in all of 1936 we imported 399,000 head.

In the first 6 months of 1937 we imported 52,165,000 bushels of corn, as compared with 5,662,000 in the same period of 1936, and 31,471,000 for all of 1936.

That shows clearly the highly unfavorable position agriculture currently occupies.

Let us look at our foreign-trade practices as a whole, including industrial as well as agricultural products.

From July 1934 to July 1935 our total exports were $2,085,092,000. From July 1935 to July 1936 our total exports were $2,374,159,000, or an increase of $289,067,000.

During those same periods our agricultural exports were $668,713,000 and $766,304,000, respectively, showing an increase of $97,591,000.

Now, look at imports. From July 1934 to July 1935 our imports totaled $1,789,153,000. During the following fiscal year they were $2,206,788,000, an increase of $417,635,000.

During the same periods our agricultural imports were respectively: $933,844,000 and $1,139,949,000, showing an increase of $206,105,000.

Agricultural exports increased $97,591,000 while agricultural imports increased $206,105,000, a balance of $108,514,000, obviously unfavorable to agriculture.

In 1934–35, from July to July, industry's exports were $1,416,379,000, and the year following they were $1,607,855,000, an increase of $191,476,000. All other imports in 1934–35 were $855,309,000 and in 1935–36 they were $1,066,839,000, an increase of $211,530,000.

While agricultural exports increased during this time by $97,591,000 all other exports increased $191,476,000.

Now, it is peculiarly enlightening that for a gain of $97,591,000 in agricultural exports we increased agricultural imports by $206,105,000, and for an increase in all other exports of $191,476,000 we increased all other imports $211,530,000.

If one can figure any advantage either to farmers or industry from that situation, which reciprocal trade agreements and their benefits to nations with whom we have not negotiated have helped bring about, then he must not have studied arithmetic in the same schools most of us attended. One would have to have a new deal in mathematics, in my opinion, to reach such a conclusion. I am old-fashioned enough to prefer grammar-school arithmetic in doing my figuring. But I will say this: If one could figure any advantage out of what has happened for either American agriculture or industry, it would be in favor of American industry. My conviction, however, is the advantage has gone to the agriculture and industry of foreign lands.

HOW THE TREATIES WORK

Before getting away from statistics, let us see what is happening to our trade with two of the countries with which we have negotiated reciprocal trade agreements.

In 1935, January–November inclusive, our exports to Canada totaled $301,434,000 and under the reciprocal trade agreement our exports have been increased in 1936 to $351,381,000. Our imports from Canada in 1935, same period, were $259,551,000, and they increased in 1936 to $336,802,000.

In 1935, January–November inclusive, our exports to Belgium were $52,121,000, and they decreased to $51,546,000 in 1936, while our imports from Belgium increased from $35,865,000 to $52,292,000 in 1936.

Now, our total exports in 1935 to all nations totaled $2,059,400,000 and in 1936 they amounted to $2,223,500,000. Our imports in 1935 from all nations totaled $1,860,500,000, but increased during 1936 to $2,174,500,000.

In other words, while our exports to all nations increased about 8 percent, our imports from all nations increased 16.9 percent.

Our experience under a reciprocal trade agreement with Sweden is enlightening. It went into effect August 5, 1935. From August 1, 1934, to December 31, 1934, we imported from Sweden goods valued at $16,290,540, and exported goods valued at $15,618,813.

From August 1, 1935, to December 31, 1935, we imported from Sweden goods valued at $21,774,691, and we exported to Sweden goods valued at $18,134,641. Imports increased $5,484,151, and exports increased $2,515,828.

ULTRANATIONALISM DOMINATES

It is important to American farmers to know that in the reciprocal trade agreements negotiated up to the end of 1936 there were included 88 reductions in tariffs on agricultural products and provisions granted to signatories and automatically extended under the generalization of the most-favored-nation clause to 70 other nations which made no concessions in return.

The greatest obstacle in the way of any expansion of the foreign trade of the United States is without doubt the practice on the part of foreign nations of instituting quotas on imports of goods, the erection of trade barriers, and the utilization of discriminatory practices against the importation of goods of other nations. The world pretty largely has gone nationalistic. Practically every country has been attempting in every way possible to increase its production of agricultural products. Many nations are paying exceedingly high subsidies in order to encourage production of wheat and other grain. These quotas and trade barriers interfere with the normal movement of international trade.

One of the arguments originally presented in favor of the institution of reciprocal trade agreements was that such agreements would tend to break down these barriers. Wherever an agreement has been negotiated, I feel that it has, to a considerable extent, lowered these barriers to trade so far as the particular country with which it was negotiated is concerned. But certainly it has had no effect whatsoever on lowering the barriers in the seventy-odd other countries to which its terms were applied under the most-favored-nation clause.

What has happened to our foreign trade with two countries with which we have no trade agreements? England is one of them.

During the first 11 months of 1936 our exports to England increased 2 percent over the same period in 1935. On the other hand, there was an increase of 24 percent in our imports.

We have no reciprocal trade agreement with Norway. In 1936 our exports to Norway increased 14 percent, but our imports increased 31 percent.

What do foreigners think of this? I quote from an editorial in the London Economist: "It is fully possible that Great Britain has already gained more from the concessions made by the United States and her treaties with other nations than could be obtained in a direct Anglo-American treaty." In my opinion, the Englishmen are right. You can see that in their own estimation they feel they have benefited very materially as a result of our adherence to the policy of generalizing the most-favored-nation clause.

On the other hand, the situation might have been radically different if we had said to England and Norway and some 70 other countries: "Gentlemen, we should like to increase our trade with you. We are in a position to grant you certain concessions. We shall be glad to do so if at the same time you will make concessions to us. We can both profit from such a trade. We are not interested, however, unless this arrangement can be to our mutual advantage."

It is my opinion that if we had taken this attitude we would have been in a position to do some profitable swapping that would have redounded to the benefit of our foreign trade and that would have been beneficial now and in the future to our agriculture.

The United States does not have to buy agricultural products, particularly those of a competitive nature, or vast amounts of manufactured goods made by cheap labor, from foreign nations to enable them to obtain credits in this country with which our products could be purchased. Dollar exchange can be and is being obtained in this country by foreign nations in other ways, but because we haven't been very realistic in our foreign policy, this dollar exchange is not being utilized to the extent it would have been under a different and more persuasive policy. I think the most-favored-nation clause is pretty much to blame also.

THE CASE OF FOREIGN CREDITS

Dollar exchange, obtained by foreign nations by selling their products in the American market and through other means that I will explain later, is only in part used for the purchase of American farm and manufactured products for export, the larger portion being employed for the repatriation of depreciated bonds of foreign origin, for the purchase of American securities, and for the establishment of large dollar credits in this country which are good for the purchase of commodities anywhere in the world.

Secretary of Agriculture Henry A. Wallace, in 1934, foresaw what might happen and what has happened as a result of our efforts to increase importations of foreign goods so that other nations might be enabled to purchase our products, including agricultural products. In his annual report for 1934, Secretary Wallace stated "That the foreign-trade program would involve the risk of producing results other than those expected. The purchasing power which foreigners can obtain in the United States market, were they permitted to sell their goods here, might be left on deposit or invested in American securities." How well he could see ahead to what has occurred and how prophetically he spoke.

Our importation of foreign goods, particularly agricultural products, has been heavily increased since the reciprocal trade agreements have been in effect, resulting in a definite increase in the purchasing power of foreign nations in the United States market. At the same time our exports, though enjoying some increase, have not grown so rapidly as our imports. This is particularly true of exports of farm products.

But the purchasing power of foreign nations in the American market is not fixed or limited by the amount of our importation of their commodities or manufactured goods. Many other items enter into it. For several years we have been heavy purchasers of gold, until, on September 22 last, we had $12,693,000,000 of the metal. Likewise we have been buyers of silver, of which we have acquired large quantities. For these we have paid in credits to foreigners which could have been used for the purchase of American products for export.

In addition, our nationals have expended many millions in overseas travel, in remittances to relatives abroad; large sums have been paid to foreigners in the form of interest on bonds held by them and dividends on stocks of American corporations which they own. All these yield credits which could have been employed in the purchase of American products for export. Our gold imports alone during 1934 and 1935 amounted to $2,872,931,000, and of silver $421,904,000, and since then have been high.

A balance sheet drawn from official figures by George N. Peek, then special adviser to the President on foreign trade, shows that in 1934 net credits obtained in this country, after all transactions were balanced, amounted to $970,000,000. In 1935 a similar balance sheet shows that foreigners had a net balance to their credit of $1,929,000,000.

According to George N. Peek, our exports in 1935 increased but 5 percent in quantity. It is evident, therefore, that this huge credit of nearly $2,000,000,000 was not used to buy large quantities of farm and manufactured products for export. It is known, however, that vast amounts of it were used in the purchase of foreign bonds in this country at depreciated prices; for the purchase of stocks and bonds of American corporations and for the establishment of dollar credits which could be employed in the purchase of commodities anywhere in the world.

WANTED—A YANKEE TRADER

Just because we buy their goods or their gold, and give them purchasing power in the American market, it does not follow, and it has not followed, that foreign nations will buy our products for export on their own initiative and without persuasion. Our trade agreements help them to get their goods into our market; in a few instances they offer inducements for the signatory nations to buy some of our exports, if they wish, but more than 70 other nations get the same concessions and are under not the slightest obligation to reciprocate. Under our trade-agreement policy we do not insist that if we buy from them they must buy from us. We have in no sense acted as Yankee traders.

The National Industrial Conference Board reports that the United States does not have to import more goods than it exports to enable foreigners to pay their debts to this country. Invisible imports make available to foreigners each year dollar exchange vastly in excess of the amount required to pay for the American export surplus. This surplus, in the period from 1922 to 1934, totaled $7,803,000,000. In the same period, two invisible imports—tourist expenditures and immigrant remittances—provided foreigners with $10,610,000,000 of dollar exchange. During the same period, while our merchandise exports exceeded our merchandise imports by $7,803,000,000, our total imports of goods and services, all of which provided foreigners with dollar exchange, to be used for the purchase of American goods or for other purposes, as they saw fit, amounted to $95,827,000,000.

This study lends no support to the theory that American agricultural exports would be materially increased by lowering the American tariff and thus increasing imports and foreign purchasing power. The board further stated that if foreign purchasing power were to be increased by means of larger American imports, foreigners might use their additional purchasing power to buy things in the United States or elsewhere. If they should buy in the United States, their choice of goods would be determined by their own needs and desires, and not by the needs of American agriculture. America's farmers, in any event, would probably benefit but little, the board states, as the great bulk of America's exports consists of industrial goods, not agricultural products.

WHEN "GOOD NEIGHBORS" LOSE

Julius Klein, former Assistant Secretary of Commerce, says: "A dubious angle to the Hull agreements is the fact that the biggest beneficiaries of our tariff reductions are, in several cases, not the country with which the given agreement was made. The law was drawn to 'generalize' the tariff cut to extend it to all foreign shippers of any nationality (except Germans and Australians). In other words, we are making outright gifts to these other countries, which are not in the given trade agreement, without getting anything whatever in return from them. This is certainly carrying the 'good neighbor' idea to the height of benevolent philanthropy. We make an agreement with Switzerland to cut our duty on cotton cloth, and behold, the chief beneficiary is Japan. Similarly, we let our Brazilian friends have a reduction in our tariff on their manganese because of favors which they are extending to us, and it develops that we have really done a big favor to Soviet Russia, which is much the largest foreign shipper of manganese to us—all without any commitment in either of these cases in our favor on the part of Japan or Russia. We concede to Belgium a lower rate on cement and iron bands, but the chief beneficiaries are other countries from whom we are obtaining no corresponding compensations."

There are three other objections I have to reciprocal trade agreements as now being administered. Under the law they can be made operative without the consent of the Senate. I am in favor of an amendment that would require ratification by the Senate of each of these reciprocal trade agreements before they become effective. It is intended by the Constitution that the Senate should pass upon treaties, and, in effect, these trade agreements are treaties. Nearly all the 16 nations with which the State Department has negotiated these agreements require ratification by their parliaments before the trade agreement becomes effective. The Canadians, for instance, are too intelligent to allow a trade agreement to become effective until their parliament ratifies it. Surely we ought to exercise the same care in protecting the rights of our own citizens.

The second objection is that reciprocal trade agreements for the most part have been negotiated in secret, and open hearings have not been held on the actual terms of the various agreements. Before final decision with respect to them is reached, I think citizens should have opportunity to protest against any of the terms in a reciprocal trade agreement they consider harmful or unfair. Such an opportunity would be given if these agreements were subject to ratification by the Senate.

My final objection is that reciprocal trade agreements tend still further to concentrate authority in the hands of the Executive or the hands of a strong central government, and thereby swing away from the principles of democratic and representative government, which, in my opinion, is highly dangerous and, so far as tariff action is concerned, quite unnecessary.

The Reciprocal Trade Agreement Act represents an undue delegation of legislative authority. The power of the executive branch to incorporate the most-favored-nation clause in these agreements should be abrogated. The provisions of these agreements should be restricted to apply only to articles which are the growth, production, or manufacture of the foreign country with which the agreement is entered into.

WHAT THE FARMER KNOWS

William R. Castle, former Under Secretary of State, in an article in the Women's National Political Review, writes, pertinently, thus:

"There are excellent arguments in favor both of the general most-favored-nation principle and the reciprocal principle in trade. Both ideas are good in themselves, but are antagonistic to each other—one might almost say mutually exclusive. Curiously enough, the present administration has tried to combine them. The result of

this almost impossible combination is that when trade treaties are under negotiation, the United States has nothing real to offer to the nation with which we are supposedly bargaining, since every concession made to that nation is equally a concession to every other nation.

"There is no doubt that the trade agreements have been injurious to American agriculture, especially considering the drought, as the immense increase in the imports of certain foodstuffs which can equally well be produced here proves. In other words, you cannot successfully plan international trade in advance, any more than you can chart domestic economy. You can remove unnatural and unfair barriers.

"These trade agreements are undemocratic because they are essentially revenue measures and Congress has renounced its authority. They are one more link in the chain of events leading to centralized executive authority. Until very recently, they have been unfair to our own citizens, because those affected by them have not been given proper hearing. They have been unfair to labor because they have thrown many men out of work and would inevitably lower American standards of living if their most ardent supporters had their way. Steady and persistent opposition and criticism of their faults has forced the Department of State to correct a large part of these faults but has not yet induced the administration to submit the agreements for approval to the two Houses of Congress."

Finally I wish to emphasize the fact that the harmfulness of the Hull tariff program which unquestionably tends strongly to free trade in which he believes to American agriculture is widely recognized by the farmers themselves. The National Grange is opposed to the reciprocal trade agreement policy as now administered. So are the National Cooperative Milk Producers' Federation the National Cooperative Council the National Dairy Union, the American National Livestock Association, and the Farmers' Educational and Cooperative Union of America, among others.

The farmers aren't being fooled by reciprocal-trade agreements. They know they are getting the worst of it.

Expenditures of the Federal Government

EXTENSION OF REMARKS

OF

HON. CARTER GLASS

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, November 16, 1937

SPEECH BY HON. HARRY F. BYRD, OF VIRGINIA, DELIVERED BEFORE THE ACADEMY OF POLITICAL SCIENCE AT NEW YORK CITY, WEDNESDAY, NOVEMBER 10

Mr. GLASS. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by my colleague the junior Senator from Virginia [Mr. BYRD] before the Academy of Political Science in New York City, Wednesday, November 10, 1937, on the subject of Expenditures of the Federal Government.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

You have invited me to speak on the expenditures of the Federal Government, a subject that has interested me more than ever before because of my investigation as chairman of the Senate Select Committee to Investigate Federal Agencies for Purposes of Government Reorganization. It is a big subject because the Federal Government has spent in 7 years the incredible sum of $47,000,000,000; and it is a vital subject because the prosperity of each American citizen depends on the preservation of the credit of the Nation. We have added twenty-two billions to the public debt, and we are still adding day by day and hour by hour, and it is inevitable that the national credit will be impaired unless we retrench.

In the limited time assigned me it is difficult to cover the vast and complicated problem; hence, for the sake of brevity, I shall eliminate most of the fractions and speak in billions, as the Government spends in billions.

Anyone in Washington today who discusses public finance in terms of less than a billion is regarded as a piker. Yet to spend a billion of dollars in a year requires the disbursement of about $2,000 every minute of every day and night, including Sundays.

Today at Washington a public man is a liberal in proportion to how liberal he is with other people's money. Those of us in the Senate and House of Representatives who speak from time to time against gigantic waste and extravagance that have exceeded any expenditure in the world's history are berated as tories and reactionaries; as hard men, completely indifferent to human suffering. Yet not a man in Congress today who has spoken and voted for economy and efficiency would hesitate to vote the sums necessary to protect any American against hunger and cold, and I believe would support sound and logical expenditures, within the ability of the people to pay, to improve the conditions of those who do not now enjoy a decent standard of living.

It is easier to spend than to save. It is easier for a public official to respond to the pressure and propaganda of organized minorities than to attempt to merit the approbation of the inarticulate citizens who favor economy but do not take the trouble to express themselves either by voice or ballot. When the protection of public money against extravagant expenditure ceases to be a virtue and a Representative is mainly judged and rewarded by the magnitude of the appropriations he obtains for his district or State, economy and efficiency—most difficult at the best—become that much harder to accomplish.

Public spending grows by what it feeds on. The independent struggle of the individual to make a living for himself often weakens before the temptation to go on Government relief. Of course, there are thousands of cases for which public relief is necessary, but it is certain that money from the Government in different forms, and I include in this observation the businessman who seeks to borrow Government money at lower interest rates than he could obtain it elsewhere, establishes a powerful paid army to fight any retrenchment that may stop or reduce the payment to them of money collected from the taxpayers. Once Federal employees believe they have a vested right to their jobs, once new departments and bureaus are established and allotted public funds and extended public privileges, including the free use of the mails for propaganda to prevent the loss of their jobs, once emergency spending is continued beyond the emergency, the stream of expenditures becomes an overwhelming flood which only heroic measures can keep from engulfing the Nation.

I am only a businessman. I do not believe in destructive economy, as my public record will prove. I favor adequate support for the functions of Government. I readily agree that the activities of Government must expand in times of emergency and that in normal times the aid of the Government can properly and wisely be used to improve the condition of all the people. But I do say that a mandate for progress and welfare without a mandate for solvency is a mandate impossible of fulfillment and most likely a mandate for disaster.

A program to spend billions in the effort to increase social justice is limited, within reason, by the ability of the Nation to pay and still maintain our system of Government. It is quite true that human values may be conserved and promoted by better health, better housing, and better living, and that these are much more important than property values; yet, social security built upon debt is a house built upon the sands. True liberalism requires the Government to keep its resources unimpaired, to prevent distress and to cooperate with the localities in providing for the poor in emergencies, because it is the poor who suffer the most when business is bad and unemployment increases. Other emergencies will come and we must not exhaust our resources to the extent that we cannot meet the responsibilities of the next one.

In speaking tonight I will talk very frankly of the serious significance of huge Government spending. I speak as a friendly critic. I am a member of the political party, many of whose leaders actually claim credit for the expenditures of the last 4 years. The Republican Party likewise cannot deny its share of responsibility. Five billions of our present debt was created under Mr. Hoover; and a majority of Republicans in the Senate and the House voted for most of the appropriations that made possible our present spending program and created the new indebtedness of the last 4 years. It is only fair also to recall that many businessmen and other citizens urged spending as a panacea for the depression. The slogan, "Prime the pump and spend ourselves back to prosperity," became exceedingly popular and the Congress was urged to enact bigger and greater appropriations.

I shall not consume time in generalities and in the exposition of accepted economic principles. We know that the Budget must be balanced soon or disaster must inevitably come. We know that excessive taxation is a barrier to future progress and destructive of present prosperity. But there is yet time to save this perilous situation. The credit of the Government is still sound, but will not remain sound if we continue to spend on the present extravagant and enormous basis.

I am not an alarmist. I am conscious of the great financial resources of America. However, in 6 years the increases in the Federal debt have been more than four times the total and complete wealth of my own State of Virginia—a wealth that Virginians have been accumulating by frugality and industry for more than 300 years. Virginia is an average State in wealth and population, so that our new debt represents the total value of all the property of every character owned by citizens of four sovereign States of average wealth and population. We cannot safely dissipate so much of our resources.

This enormous debt today becomes more disturbing as we face the prospect of new debts caused by continuing deficits. The time has come to begin to retire this debt created in the emergency of the depression, as we did after the World War; yet spending is not being reduced and the Federal income is dwindling.

President Roosevelt admirably and eloquently expressed the supreme importance of maintaining sound fiscal policies when he said on October 19, 1932: "We all know," said the President, "that our own family credit depends in large part on the stability

of the credit of the United States. The credit of the family depends chiefly on whether that family is living within its income, and so it is with the Nation. If in some crisis," continued Mr. Roosevelt, "it lives beyond its income for a year or two, it can usually borrow temporarily on reasonable terms. But if, like a spendthrift, it throws discretion to the winds, is willing to make no sacrifice at all in spending, extends its taxation to the limit of the people's power to pay, and continues to pile up deficits, it is on the road to bankruptcy."

The President was right. The credit of the United States is the foundation upon which our system of credits must rest. Destroy faith in the credit of the Nation and our whole system of credits will collapse. The Federal Government has no power to create wealth. It can print those counters we call money, but real wealth is created by the application of human industry to the national resources. Real wealth is mostly the wealth that comes either from the surface of the earth or from the riches beneath the earth. New wealth is not the result of new theories of finance or banking or ingenious legislation. Ladies and gentlemen, it is a dangerous thing to spend wealth faster than new wealth is captured from God's eternal granary. And yet this is what we have done in prodigal fashion. For 6 years consecutively our expenditures by the Federal Government alone have greatly exceeded each year the combined gross value of all agricultural products and all the products of mines, even after inflating the farm income by Government payments. This has never occurred before in the history of America except in the 2 years of 1918 and 1919, when we did more than our part to finance the most expensive war in history.

The justification assigned for vast public spending has been the need of overcoming conditions created by the depression that Mr. Roosevelt inherited when he came into office in 1933. I was in the Senate during those trying days and I give full credit to the President and the Congress for the many brave and necessary things that were done to relieve distress and restore confidence.

Five years have passed and our recovery justified the President in saying in Wyoming on September 24 last, "The greater part of the emergency is over." We cannot continue indefinitely emergency remedies.

In 1930 the gross debt of the Federal Government was sixteen billions. It had been reduced from the World War peak of twenty-six billions by the payment of about a billion each year during the twenties. On November 6 the direct gross debt of the Federal Government was the startling and stupendous sum of $37,019,677,682.77. In addition, our Government has guaranteed in full the obligations of 25 wholly owned Government corporations and partially guaranteed the obligations of 10 semi-Government corporations. This contingent liability is approximately five billions, and all this makes the total direct and contingent obligations today approximately forty-two billions. It is true that this gross debt is subject to such credits as may come from recoverable assets and the ultimate liquidation of the 35 corporations whose obligations have been guaranteed by the Government in whole or in part. However, an examination of these numerous guaranteed Government corporations discloses a ramification of their liabilities and assets that confuses the most experienced economic experts. Years will pass before the recoverable value can be appraised and the actual credit on the present forty-two billion gross liability of our Government be determined.

I feel completely safe in saying that the credits and recoverable assets shown in the Government reports have been grossly overestimated. Take, for example, the Reconstruction Finance Corporation. The Government purchased $500,000 of stock and about $4,000,000,000 of notes of this Corporation. The stock and the notes are carried on the Government reports at face value, leaving the impression that the total assets represent sound values and will ultimately be recovered into the Treasury to reduce the public debt. This conclusion is accepted by the public by reason of the confidence in the soundness and efficiency of the chairman, Mr. Jones.

However, the Brookings Institution, employed by the Senate Committee on Reorganization, recently disclosed that two and a half billions of the assets of the R. F. C. were diverted for relief expenditures and to pay the regular expenses of other agencies and for other expenditures, none of which is recoverable. So today the stock of the R. F. C. is valueless, and the notes are not worth more than 50 cents on the dollar in recoverable assets. Yet only recently the Corporation issued a financial statement showing and claiming a surplus of one hundred and fifty millions as of December 31 last.

Why was this devious and misleading method adopted by the officials responsible for recording appropriations? An inquiry from me to a high Budget official brought the response that the only reason he could assign was the desire to avoid huge totals in the regular appropriation bills. Mr. Jesse Jones, the able Chairman of the R. F. C., is not responsible for this confusing statement. I happen to know that he has been endeavoring to have the balance sheet, as issued by the United States Treasury Department, corrected in order that it may reflect the true facts. But even Jesse Jones, as able a businessman as he is, cannot collect from Harry Hopkins money already spent for relief. Either two and a half billions should be appropriated to maintain the integrity of the R. F. C. assets or legislation should be passed to write down the securities to true value.

The financial reports of the Government should be an example of clear and candid statements such as the Government requires by law from private business, and it punishes any businessman who violates this proper law by imprisonment. The complexity of the contingent liability of the Government and the difficulties of liquidation cannot be discussed in the limited time of my address, yet we should realize that the losses in guaranteed obligations—and such losses are certain to be large—must be met some day as a Government expense and either added to the direct debt or paid by current taxes. The Federal Government has endorsed with full recourse the notes of these numerous corporations and, like any other endorser, must pay if the maker of the obligation fails to pay.

The Twentieth Century Fund, an independent fact-finding agency, says that our total Government debts—Federal, State, and local—of fifty-six billions, are "the largest that any nation has ever had." This competent authority calls this debt a great potential peril and recommends that in the next fiscal year a billion at least be paid out of current Federal revenue for debt retirement.

We are now entering the eighth consecutive year in which our Government spends much more than its revenue. In our previous history, the longest period of substantial successive deficits was 2 years. In the 3 war years, after deducting loans to allies, our Government spent for normal and war expenses only a little more than it has spent in 1935, '36, and '37, twenty-five billions against twenty-four billions.

Now let us see what the tax burden means in terms of each American family. Let us bring to roost these prolific tax chickens. In 1913 the per capita income was $350. In 1936 it was $469—an increase of 34 percent. Total Government expenditures equaled $30 per capita in 1913 and $134 per capita in 1936—an increase of 347 percent. On a per-capita basis, Government expenditures in 1913 represented 8 percent of the national income. In 1936 these expenditures represented 28 percent of the national income. Public debt equaled $59 per capita in 1913 and $430 per capita in 1936. Now about one-third of every person's income would be required to meet Government expenditures if we paid as we spend. These figures, of course, refer to total Government cost. Many of the States, cities, and counties have yielded to the contagion of extravagance. The children of Uncle Sam have followed his bad example. In 1936 the deficits of all governments in America were seven billions, nearly five billions of which was created by the Federal Government.

Should we not hearken even to the few voices crying in the wilderness? When we cite these terrifying figures someone always crys, "What—would you deny relief to human suffering?" No; we would not let anyone starve in this country, but the disturbing thing is that the increase in the regular expenses of our Federal Government is enormous in addition to the expenditures for recovery and relief.

During the prosperous years of the twenties our Government spent $3,000,000,000 each year and paid a billion a year to retire the World War debt.

To get the debt back to what it was 7 years ago we must pay one billion each year for 22 continuous years. Not even with uninterrupted prosperity for a whole generation could the people and the business of the country sustain the terrific burden necessary to run the Government on this basis and make this debt retirement. To do so would require nearly a 30-percent increase in our 1938 annual tax collections, and remember that this year our tax collections are estimated to be the largest in our history and only approached by one single year—in 1920—when war profits were subjected to high tax rates.

I want to introduce to you the mysteries of the two budget systems. I declare that our expenses are now being leveled off on the seven billion basis because of the gradual transfer of emergency expenditures to the regular Budget. In 1934 the Federal Government adopted the two-budget system; one for emergency and the other for regular expenses. We have two budgets, but we have only one Treasury. In 1934 the regular Budget presented to the Congress by the President was two billions seven hundred millions. In 1938 the regular Budget is five billions four hundred millions—an increase of 100 percent in 4 years.

A reduction is shown in the statement of recovery and relief expenditures because many of the items of emergency expenditures have been made permanent by transfer to the regular Budget. An example is the appropriation for the C. C. C. camps, which was first in the emergency budget and is now included in the regular expenses. But there has been no reduction in our total expenditures, and, excluding the nonrecurring soldiers' bonus, we will spend as much or more in 1938 than we spent in 1937, or in any previous depression year.

At best it is most difficult to comprehend the expenditure of billions, but the confusion has been greatly increased by this strange device for keeping two budgets. When the administration announces a reduction in spending for recovery and relief at once we begin to feel better and to think that finally we can look forward to a real reduction, but later we find the regular Budget has been increased and the total is as much or more. We have juggled expenditures back and forth from one budget to the other, but the taxpayers pay the bill for both budgets. The two-budget system has merely aggravated the general confusion.

It is disturbing to see the astounding and progressive increases in the regular expenses after eliminating all items in the emergency budget. The following table of regular Budget expenditures comes from official Government auditors and does not include recovery and relief expenditures.

REGULAR EXPENDITURES

1934, two billions seven hundred millions.
1935, three billions two hundred millions.
1936, three billions three hundred millions.
1937, four billions four hundred millions.
1938, five billions four hundred millions.

To the regular expenses in 1938 of five billions four hundred millions, if we add expenditures for recovery and relief, for public works, for the huge slum-clearance program begun at the last session, for additional T. V. A.'s, for the cost of the new farm program, and other costly projects either already recommended or under consideration, I am conservative in saying that we have reached a seven-billion annual expenditure—in fact, considerable restraint must be exerted to hold it to this huge figure.

Only a major surgical operation to reduce expenditures will enable us to carry the burden of sustaining this annual cost and commence to retire our emergency debt.

The difficulties of ascertaining the true expenditures are made greater by the policy of the Government in deducting from expenditures an excess of loans collected over loans made. In this manner the combined expenditures in 1937 were reduced in total by two hundred and forty-three million. Of course, the excess collected of capital loans should be applied to a reduction of the public debt.

In the Budget of 1938, two hundred and thirty million of social-security taxes is used for regular expenses. The effect of this will be to reduce the deficit by the use of a tax, collected and paid, for the specific purpose of providing old-age security.

One may imagine the denunciation a corporation would receive from the Government if it indulged in such improper financing and used for current expenses an income dedicated to a trust fund for the security of the aged.

Nothing Congress has done has contributed to extravagance and done more to destroy the Budget system than the practice of making lump-sum appropriations. About fifteen billions of such appropriations has been made in the past 4 years as compared to one and one-half billion of lump-sum appropriations in all the previous history of our country.

From these lump-sum recovery and relief appropriations, equivalent as they are to blank checks, great sums have been diverted for expenditure by the regular departments, thus expanding the activities of these departments.

Over three billions of lump-sum appropriations made for recovery and relief was allocated for expenditures by regular departments in 1934, 1935, and 1936.

I know something personally of the waste involved in lump-sum appropriations. An allocation from a lump-sum apropriation was made for the construction of homes in Virginia to be rented to mountain people and costing complete, including land and all other costs, about $8,000 per home. I had no opportunity to vote on this appropriation for my own State. A competent builder offered to reproduce one of the homes for $900, yet my requests to stop this waste near my own home were unavailing. I introduced a bill to cancel the appropriation, but the Department is working under pressure to expend all the fund before Congress meets. In the same manner the Resettlement Administration has built about 15,000 homes throughout the country, some costing more than $16,000 per home unit for rental to the low-income group. In some instances the General Accounting Office estimated the overhead expense to be 40 percent.

The huge deficits that have been added to the public debt are not due to failures of the revenue. Taxes have been increased so that in 1938 we anticipate the highest income in the history of our country.

If we were maintaining a balanced budget, even the painful exaction of enormous taxation from our people might be justified as a patriotic imposition to meet a period of national economic peril expected to be temporary. But we are paying the taxes without balancing the Budget. Our people are paying these painful taxes without relief from the conditions that cause the pain. The patient who suffers acute physical pain should be relieved by morphine but the cause of the pain must be removed or the continuous administration of morphine will make the remedy worse than the disease.

Why disguise our condition? A true diagnosis must precede an effective remedy and a true diagnosis requires a frank and fearless recognition of our economic predicament.

What is our situation today? We work under the load of the most stupendous debt any nation has ever carried. Our taxes are reaching the point of diminishing returns and today are a decided factor in the high cost of living. Remember that more than half of the taxes collected by the Federal Government comes from invisible taxation paid by the housewife, the laborer, and everyone who eats or buys necessities. Last year 43 citizens had incomes of over one million and the aggregate of these incomes was seventy-three millions. If we confiscated all of this income of these millionaires the money obtained would operate the National Government for only about 3 days.

Let us not be deceived; the people as a whole will pay most of this vast debt and carry this heavy national expenditure.

We have suspended the terms of statutory debt requirement that provide for annual contributions to the sinking fund in ratio to the public debt.

We have assumed the responsibility at heavy cost to maintain an artificial price of gold throughout the world. We are buying and burying in the ground in a costly mausoleum at Fort Knox the same gold that was dug out of the ground under the impression that it was usable precious metal.

The Federal Government is now paying on its obligations a low interest rate because money is cheap. Our guest tonight, Secretary Morgenthau, has admirably managed the issuance of obligations at the lowest possible interest rates. But when the obligations become due—and fifteen billions is due in the next 5 years—we face a likely increase in existing rates. The obligations given by the Government to the social security trust funds bear by law 3-percent interest, an increase of one-half percent over the average rate now paid. An increase in interest rates will remain for a long time as a potential new burden on the Treasury. An increase of 1 percent means $400,000,000 annually more to be paid by taxation.

We are told that a balanced Budget is on the way. I cannot credit this prophecy. On the contrary, I predict on July 1, 1938, the estimated deficit of 895 millions will be at least twice that sum. Without reduced spending the outlook for 1939 is equally gloomy because the business recession as predicted even by Government officials for 1938 and already felt by businessmen will be reflected in revenue receipts for the 1939 fiscal year.

My reasons for predicting a much larger 1938 deficit are, first, the revenue will not reach the estimates and, second, the President has allowed only 180 millions in his estimate for deficiency and new appropriations in the next 8 months while our deficiency and new appropriations in 1937 were nearly a billion.

The excessively high receipts estimated to be received from the undistributed profits tax will never materialize. This new tax system has failed as a revenue producer and has been a decided barrier to business recovery, for this law taxes a corporation an additional 27 percent for spending current revenue to build new plants and provide new employment. When a main problem of America is unemployment it is a strange theory to penalize by extra taxation a business enterprise desiring to expand and employ more people. Capital must go to work to carry the present burden of unemployment but no enterprise can expand and pay a high additional tax penalty for doing so.

As I conclude, I anticipate some may say, "Well what would you do about it?" The only constructive thing to do is to stop writing checks. Talk neither pays debts nor reduces expenses. We have talked economy, but nothing has been done about it. As one who has devoted months of study to Government spending, assisted by competent experts, I declare advisedly that we have the most costly and wasteful bureaucracy at Washington in the history of the United States of America. We have created, in 4 years, over 50 new agencies and many more bureaus and subdivisions. We have more than doubled in 4 years the Federal employees in the city of Washington, and the last report shows we are still adding new employees.

Hundreds of millions can be saved in administrative and overhead expenses and simplifying the duplications of Government agencies. Other hundreds of millions can be saved by eliminating waste and extravagance from necessary activities and by abolishing altogether the less essential activities. We should and can at once go on a pay-as-you-go basis—not by new taxes but by retrenchment.

You must remember that public economy, like private economy, is not spectacular or attractive. It is a steady, hard, uninteresting grind. The home band does not often turn out to greet a returning economizer. We talk a lot about it and do little. But under our present perilous situation the longer we defer economy the greater and more terrible the penalty we will pay.

Our Constitution

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, November 16, 1937

ADDRESS BY HON. JAMES J. DAVIS, OF PENNSYLVANIA, AT READING, PA., SEPTEMBER 17, 1937

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered at Reading, Pa., September 17, 1937, on the subject of Our Constitution.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The Declaration of Independence and the Constitution are inseparably linked together. The Declaration of Independence was the blueprint of our national liberties and the Constitution was the edifice of law based upon it. Those that produced these immortal documents had first-hand experience with the defects of centralized government and the oppression of tyranny. Washing-

ton, Madison, Hamilton, Franklin, and Jefferson, and their associates, did not read their lessons of liberty out of books but out of the current trends of the time in which they lived. Franklin and Jefferson had made practical observations while they served this country in France. They spoke with the authority of experience and their words have met the test of practical human needs ever since.

In the first part of the Declaration of Independence a new and revolutionary theory of government was announced. This theory is summed up in the three words by which it became known in France, "liberty, equality, and fraternity." Let us, however, never forget that the American Revolution first gave birth to this spirit of liberty and that the torch kindled here was later used to light the flame of freedom on European shores. Civil liberty under law, freedom of opportunity rid of class distinctions, and fraternity based on human understanding and sympathy, permitting full freedom of conscience and the rights of individual worship, have served as the basis of our great national progress. The Declaration of Independence was a remarkable statement of the known defects of bad government and the Constitution of the United States was set up to remedy them and provide in a constructive way for good government.

Liberty, to be enjoyed, must be limited by law. Where law ends tyranny and oppression begin. This was known by Edmund Burke in the eighteenth century. It is known by all thoughtful men today.

It is well represented in the words of Justice Brandeis when he said, "The greatest dangers to liberty lurk in the encroachment by men of zeal, well meaning but without understanding." The tyranny of zealous visionaries acting in the name of democracy can upon occasion prove to be just as great a stumbling block to freedom as the whip hand of the solitary dictator. A century of progress under the Constitution had thoroughly persuaded our fathers that this Ark of the Covenant was the wisest and best provision ever made for government. But the events of recent months show that this vision has become dim in the eyes of some to whom have been entrusted the vast responsibilities of the administration of government. Their lack of understanding has rendered their attempts at government the supreme tragedy of the present epoch of human events.

Before proceeding further let us, without hesitation or delay, admit that the people of the United States have it within their power not only to amend or revise but, should they desire, to abrogate the Federal Constitution altogether—and the Constitution itself outlines clearly the method whereby this may be accomplished. Our forefathers wanted to be free when they gathered in Philadelphia the summer of 1787 in order to "effect a more perfect union." They wanted to be free but they knew the freedom for which they longed could be obtained only through some representative form of government, in the absence of which anarchy and chaos would prevail. Out of that crucial hour, when the souls of men were being tried as by fire, the Constitution of the United States was born. The Constitution which is now the target of assault is the oldest comprehensive written form of government existing in the world today. The peculiar glory of the Constitution is that it is not a charter of rights granted by government to the people but a delegation of restricted powers granted to the Government by the people, by whom supreme sovereignty is retained.

Progress does not necessarily involve the abandonment of time-honored and long-tested principles. Things are not inherently good because they are new or intrinsically bad because they are old. The prophets of old were forward-looking men, but they had a voice of warning against forsaking some of the old paths. The Ten Commandments are just as true today as when Moses delivered them from Mount Sinai, and the Sermon on the Mount is our highest concept of ethical judgment, although it was set forth 2,000 years ago.

American constitutional government, like the Golden Rule, is old; but whether new or old, it is the hope of the world. Abandon it, and where will you go? Twenty years ago we entered a war to make the world safe for democracy. Where is European democracy today? One after another the democratic forms have gone down and the sword of dictatorship has flashed in the sun. Who in this community would wish to exchange the liberties which we enjoy in America today under the Constitution for the relentless control of life without liberty so much in evidence in Europe today?

The Constitution which gives us liberty is not only the most wonderful document struck off by the hand of man but it is a living body of demonstrable truth whereby the Nation moves forward from age to age. Our Constitution and manner of dealing with it through the principle of judicial review is in harmony with the temperament of the people of the United States. Amendments are used to change it from time to time. National prohibition was written in and taken out through this orderly process, requiring the action of a majority of three-fourths of the States. Other nations having written constitutions have not always been able to change their fundamental law in a peaceful and orderly way.

There have been innumerable instances of revolution and revolts in other lands. But we have had a forward-moving history of peaceful adjustment of internal differences with but one exception, the Civil War, but even that great struggle has served to strengthen the ties that bind. I have faith that our people will settle differences of opinion which confront us now in the same law-abiding way which has brought us in safety and prosperity to the present hour. We have nothing to gain by rioting, violence, bloodshed, and mob rule. Ours is a constitutional Republic with the sovereignty of the people expressed through representatives of their own free choice. The path to continued liberty is the way of the Constitution and the Supreme Court as the guardian of its integrity.

Sometimes I wonder if the American people realize how well off we are under our system of government. I am glad that I come from a family which, for generations, has had respect and veneration for the Constitution and the Supreme Court of the United States by which it is interpreted. During recent months I have had an opportunity to stand for this same Constitution and this venerable Supreme Court when they have been ridiculed by those in power at Washington. I am frank to say that when this fight began in February I did not know how it would end, for the entire force of the present administration was charged to change the Court. In fact, 4 days after the N. R. A. had been declared unconstitutional the President, in the presence of Gen. Hugh Johnson at the White House, threatened to pack the Court, and a few days later gave out the horse and buggy statement on the Constitution at a press conference. When the matter came before the Senate February 5, I immediately started work in defense of the Constitution, and at Gettysburg, February 12, in a Lincoln Day address, I said: "The American people have a fundamental respect for fair play. We do not ask that we shall always win, but we do expect to carry on under the rules of the game. Governmentally that means that we conduct our national life according to the Constitution, our national rules, the fundamental law of the land.

The only decent way to change the rules is by common consent of the people as provided by the Constitution. Making war on the umpire is something which public opinion has never tolerated in America. The proposed change in the Supreme Court is essentially making war on the national umpire. This blow directed against the life tenure of the Justices can be enacted legally only through constitutional amendment. Any action which the Congress may take on this subject will be irregular, for it will be prejudicial to the plan of life tenure and therefore an undermining of the constitutional provision. The Constitution provides that Judges of the Supreme Court shall hold office during good behavior. No legal change can be effected in their tenure of office without recourse to a constitutional amendment. The President has not suggested a constitutional amendment but has requested legislation by Congress to provide for a system of additional Judges in case members of the Supreme Court do not retire voluntarily at the age of 70. This is definitely an attempt through congressional action to put pressure on the Judges to retire at 70, and is to that extent a violation of the expressed purpose of the "tenure of office during good behavior" plan of the Constitution.

There was ample opportunity to contest the issue of an amendment during the campaign. The administration did not choose to raise it then. I now advocate that if this be considered a national issue, action on it shall be withheld until next year when the people through the ballot shall have an opportunity to show where they stand. Thus, and only thus, may we be sure that the principles of Lincoln shall endure and that the "government of the people, by the people, and for the people shall not perish from the earth."

Thus from the very beginning of this issue I took my stand resolutely against it. I was subjected to a constant fire of criticism by certain labor organizations. Only twice in my public career have criticisms from the ranks of labor been directed against me. My representation of the rights of labor is well known. I need not discuss it here. Suffice to say that I stood out against the entry of the United States into the League of Nations, and I stood out against this attack upon the Supreme Court and the Constitution. Now, I am frank to say that in both of these cases many who voiced criticism of my position are today very glad that I stood firm for American principles of government.

Great credit is due outstanding Senators within the Democratic Party, with a life-long record of liberal principles, who would not bow to White House pressure to make war on the Supreme Court and the Constitution. Stalwart leaders such as Senator WHEELER, of Montana; Senator BURKE, of Nebraska; Senator VAN NUYS, of Indiana; Senator MCCARRAN, of Nevada; Senator COPELAND, of New York; and many others refused to be a party to this proposal, which I dare predict history will record as the most reactionary attack on representative government since the days of Lord Macaulay, whose speech given 100 years ago the President reproduces only in part, that part which says only the things he wishes to believe.

But these liberal-minded Senators within the Democratic Party were constantly subjected to tongue-lashing by spokesmen of the New Deal. I cannot speak plainly on this subject, lest I be said to take unfair advantage of that one who is now in Europe. But I shall ask that these words of mine be included in the CONGRESSIONAL RECORD when Congress next convenes in order that they may be read by everyone.

I shall now make clear that if the junior Senator from Pennsylvania is still intent in referring to the Supreme Court of the United States as "nine old men," if in his opinion the Constitution of the United States is but an outmoded relic of "horse and buggy days," if he still agrees with his father that "from its inception the Supreme Court has been a partisan, political body; saturated with politics in the inexcusable sense; far more concerned with the propagation of its own political views than with a scrupulous interpretation of the Constitution; the last bulwark of reaction." If the Senator as the controlling leader of the

New Deal in Pennsylvania wishes, I say, to declare this to be the leading issue in the congressional elections next year, we, as Republicans, should be willing to accept such a challenge to debate the issue throughout the State of Pennsylvania from Philadelphia to Pittsburgh and back again.

Recently I attended a very splendid display at the Great Lakes Exposition. It was the great Aquacade of Billy Rose. The closing scene showed the strife of dictatorship and democracy. Various groups of figures, dressed in black, red, and brown, appeared with their respective banners. But they were all repulsed and gave way before the emblem of peace and freedom.

The song It Can't Happen Here, sung by Robert Lawrence, represents the desire of the American people to keep free from revolution and dictatorship. It can't happen here if we maintain our preparedness on land, sea, and air and in the minds and hearts of the American people. It can't happen here if we determine within our fraternal organizations, schools, churches, and voluntary societies that it must not happen here. It can't happen here if we keep our eyes on the traditions and ideals of the founding fathers who gave us the Constitution of the United States and set up the Supreme Court as the faithful guardian of the liberties of a free people.

Radicalism, like atheism, builds no temples and constructs no dwelling place. It is always on the march, tearing down and degrading the old, while it holds out the lure of shining promises—never fulfilled. The world is in need of constructive improvement. The true hope of the future rests in those who have sufficient respect and understanding for the past to use it as a foundation for a better tomorrow. Let's stop trying to jump out of our skins. Let's stop fooling ourselves with giddy, gilded dreams. Let's keep on dreaming but at the same time be willing to pay the price necessary to make our dreams come true. Such dreaming requires the highest type of patriotism, courage, and devotion. Such dreaming holds on to the best of the old while it reaches forward for the next step in the new. No dream has ever produced a better life than we have enjoyed in America. No dream has ever given a greater hope for humanity than our good forefathers' dream—the faith of the founding fathers in the American charter of liberty.

Address by Hon. James A. Farley at Los Angeles, Calif.

EXTENSION OF REMARKS

OF

HON. WILLIAM GIBBS McADOO

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Tuesday, November 16, 1937

RADIO ADDRESS OF HON. JAMES A. FARLEY, CHAIRMAN OF THE DEMOCRATIC NATIONAL COMMITTEE, AT A DINNER AND RECEPTION OF DEMOCRATS OF CALIFORNIA, AT LOS ANGELES, CALIF., OCTOBER 21, 1937

Mr. McADOO. Mr. President, I ask unanimous consent to have inserted in the RECORD an address delivered by Hon. James A. Farley at Los Angeles, Calif., on October 21, 1937.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It has been several years since I had the honor and the pleasure of talking to a Los Angeles audience. The Roosevelt administration then was new. It had just begun to get the machinery moving that was destined to bring this country of ours out of the depths of depression back to the highroad to prosperity.

Our people had faith in the President they had chosen to do this job, but they could not know that he would succeed. They had been fed during 3 years on promises and Pollyanna prophecies. While they huddled in the frigid misery of a bitter time they got nothing but statements that the sun was rising and that warmth and comfort was just around a certain corner. They had seen things go from bad to worse while their Government sat helplessly waiting for something to turn up, until it seemed that utter collapse was upon this great country of ours. They saw when the new President came in that he, at least, had a plan; that he was not merely letting things drift and trusting to luck to rescue the Nation.

It appears to me, and I think to you, that the people's trust and patience when we started on the new road was the finest example of trust and confidence in their chosen leader that our history affords. They knew that no sudden miracle could set us on our feet; that it was no 24-hour job to stem the flood of disaster and turn the tide the other way. Nevertheless, it required no small amount of fortitude for a people to witness their destinies being subjected to such an experiment without alarm or discord.

They did not murmur when the emergency machinery was hurriedly put together; they did not grumble when that machinery creaked during the relatively slow process of fitting the right men in the right places. In short, the American people showed themselves the best sports in the world while that trying period was passing.

It was fortunate for them; it was fortunate for the Democratic Party; it was fortunate for the whole world that our people stood the gaff as bravely as they did. Had it been otherwise, Heaven only knows how long we would have floundered in the bog of despair.

I remember when President Roosevelt, almost as his first official utterance on reaching the White House, took the people into his confidence in explaining the bank holiday. It was perhaps the simplest of his talks, but what came over the radio that night bucked up the spirit of more than a hundred million people. He said that evening: "There is an element in the readjustment of our financial system more important than currency, more important than gold, and that is the confidence of the people."

He recognized then that the confidence of the country was essential to the success of the New Deal principles, and he told this to his hearers in these words: "I can never be sufficiently grateful to the people for the loyal support they have given me in their acceptance of the judgment that has dictated our course, even though all our processes may not have seemed clear to them."

A lot of steel has come out of the mills since then. A lot of oranges have been grown and sold at satisfactory prices; a lot of bridges and public buildings have gone up; and millions of people who were hopelessly hunting for jobs in those days are now busy at living wages. In fact it is another world we are living in than it was when we breathed a sigh of relief because the banks had been shut up until it was possible to sort the good ones out and start them on a new period of activity. Incidentally, does it seem possible in this time of security that there was ever a period during which we wondered if even the best of our financial institutions would be open for business next morning?

Wouldn't it sound crazy now if most of your calm and steady men of business were pulling out their deposits and stuffing their safe-deposit boxes with gold and currency? That is exactly what they were doing 5 years ago and in some cases with excellent reason.

Men are in business to make money; their only way of doing this is to keep their capital at work. There is no profit in funds asleep in a safe-deposit box. Consequently, we must ascribe to the solvency of the banks, and the consequent faith of the bank's customers in that solvency, the position of foundation stone of our renewed prosperity.

You Californians had your share of the wretchedness of the depression, though, thanks to your marvelous climate, you were spared one form of suffering that afflicted the North and East. I imagine from what I saw in Los Angeles in 1934 and what I see today, that you came back a little faster than the rest of the country.

As a Democrat speaking to Democrats, I naturally regard as at least a part of the national recovery, the establishment and confirmation of this State as a Democratic stronghold. It was always a mystery to me how California, a land of liberalism, enterprise, and progress, remained so long in the Republican doldrums. But we can dismiss that period in the history of your great State along with the other depression elements. Our party and this administration have reason to be proud and grateful for the part the Golden West played in the 1932 campaign. I am sure that it was the most thrilling moment of my life when your honored Senator, WILLIAM GIBBS MCADOO, came to the speaker's stand at the Chicago convention and announced that your delegation and that of Texas, with the consent and approval of John N. Garner, had decided that the majority wish of the convention should be sustained and therefore cast the votes of your 44 delegates for Franklin D. Roosevelt. Let me tell you further that Mr. MCADOO, and indeed the whole congressional delegation from California, had a great deal to do with getting the New Deal measures across and I am glad to be able to congratulate California on that performance. You have a right to feel that your renewed prosperity was not due exclusively to the national administration, but that you yourselves contributed largely to the great accomplishment.

We all know that the work of recovery is by no means complete, and by the same token the work of Democracy in this State is only half done. You must—and I am sure you will—put your State government in Democratic hands at the next election. Of course, I know that the Democratic organization here is beset by a lot of problems to which you have to find the answer. It appears to be the case that the election of a Democratic Governor is so certain that quite a number of eminent members of the party aspire to the governorship. I think all of these are my friends; and I would not if I could, even by so much as a whispered suggestion, help any one of them to the detriment of the others. That is one rule that the Democratic national organization is bound to adhere to—noninterference in State campaigns within the party. It is your job to pick the fittest candidate. It is our job to insure in every way possible the election of that candidate, whoever he may be. Incidentally, so far from being dismayed by the rivalries in our own party, I feel it is a cause for rejoicing and a symptom of political health. Not only do such rivalries stimulate the activities of the members of our party but they are convincing evidence of justified confidence in the result of an election. You do not find such a group of eminent men contending for a nomination unless each feels sure in his own heart that nomination means election. So I bid you to be of good cheer and conduct such primary battles with all the enthusiasm you can muster. But do not permit to creep into the picture any bitterness that might inject a doubt into our

prospects. The power of democracy lies in the principle of party loyalty—and that means loyalty to the nominees. And that goes, whether you are happy or disappointed, in the results of primaries and conventions.

I spoke a little while ago of the relative speed of recovery here as compared to other parts of the United States. Not that the rest of the country has not come along in fine shape, but you with your fortunate situation, and perhaps the energy and enterprise that seems to go with the western atmosphere, seem to have gone faster than most on the happy road to contentment. I know of no other State so blessed. Most of our States depend largely on one or two major industries. Here you seem to have a superiority over all of them. Your wide farms, your great fruit belt, your important oil industry, your rich mines, your shipping plants, your marvelous fisheries, your cattle ranges, and your manufactories all contribute to your eminence. This city seems particularly favored. I read in your Los Angeles Times the other day that motion-picture-box-office prospects for this year are expected to gross greater receipts than at any time in the history of the film business. In your Illustrated News I find it recorded that your California farmers had been getting better prices for their products than they have had for the past 7 years. Another newspaper story told me that the earnings of California oil companies in 1937 will approach, and in some cases exceed, the records at the height of the boom, 8 years ago. The cold-blooded reports of the Government agencies confirm all of these stories. They indicate that this year the cash receipts from the principal farm products of this State will be a quarter of a billion dollars greater than they were in 1932. What is of probably more significance is that each year since the bad times has shown an increase over the year before.

What helps the farmer helps the rest of us. You can translate some of the farmer's profits into what it means to industry by referring to the automobile statistics. In bad times your farmer, like the rest of us, is going to continue to use the old machine as long as it will run. Hence, in 1932 there were only 81,000 new automobiles registered in California. This year's record will top 300,000. That means a lot more gasoline, which helps shoot up the profit of oil wells, for one thing.

Statistics are rather dreary things to discuss, so I am going to cut that part of my talk pretty short. I will just make reference to the circumstance that Californians last year had an income of nearly a billion more than they had in 1933. My favorite index of the trend of business is, naturally enough, what the Post Office, my own Department in the national administration, records. You folks out here in Los Angeles spent for postage stamps during the fiscal year 1937 two and one-half million dollars more than you spent for postage stamps during the fiscal year 1933, and the people of California spent eight and one-half million dollars more for postage stamps in the fiscal year 1937 than they did in 1933. Now the statisticians tell me that social correspondence does not vary much from one year to another, but the business mail is in a different category. The more customers your producers have, the more letters they have to write, the more bills they must send out, and the more checks they get in payment. All of this is reflected in the rising postal revenues. So the mails furnish a good barometer to the economic state of the Nation. I may tell you, by the way, that the business of my Department has attained such proportions that the present trend indicates that within the next year or so our postal receipts will equal, if they do not exceed, the entire cost of the Postal Service, including the cost of subsidies administered by the Post Office Department and the cost of franked mail and preferential postage rates authorized by act of Congress. If this anticipated goal is reached—and I have every reason to believe it will be reached—then the Post Office Department will not have to call upon the Treasury for a single cent in excess of our postal income. When postal revenues equal postal expenditures it will be the first time in the history of the Post Office Department that such a result has been achieved.

This leads me to another phase of the national fiscal situation. Our political opponents are harping on an unbalanced Budget. Nobody denies the importance and desirability of a balanced Budget; it is simple, good, sound business sense to balance a budget, and but for the extraordinary situation which has existed in this country for several years, the Budget would have been balanced. In a recent address the President of the United States said that the administration anticipated that in the next fiscal year the expenditures of the Government will be brought within its income. It appears, therefore, that this particular source of worry on the part of those who are fond of spreading gloom is nearing the evaporation point. That, of course, is not going to stop the moans and breast beatings of the crowd whose basic article of creed is that the President can do no right. They continue to bemoan the extent of relief spendings, and hail every drop in the stock market as additional evidence that the country is going to the dogs. Time and continued prosperity will take care of the relief expenditures problem, but while we are on the subject suppose we dig a little into that question. Take your own State of California. Something started and nurtured the recovery movement out here. The aggregate of Government aid to this State—loans, grants, direct relief, Public Works, W. P. A., and all the rest of it, amounted to upward of $1,700,000,000.

Who is there in this intensely practical State who believes that this was wasted? Why, your bank deposits alone show an increase of more than $1,000,000,000.

Look at it from another angle. Assume that the Federal expenditures in your State are an investment. The United States put in $1,700,000,000. The incomes of your citizens last year amounted to more than twice that sum. Roughly, that income represented an increase of $600,000,000 over what it was when the Federal aid began. I would like to leave it to any of your enterprising and successful businessmen, whether he would hesitate to make an investment which, within 5 years, would be paying 35 percent on the investment? Moreover, look at what you got for the money aside from your restored incomes.

Your additional dividends have come in the form of all sorts of civic improvements—roads, bridges, sanitation, flood control, protection against forest fires. I cannot begin to recount them all. Perhaps some of these things were not immediately necessary. Just the same, every enterprise and project made for additional comfort, convenience, and efficiency. These works kept the idle off the streets. What this method of making self-respecting citizens of many who would otherwise have had to resort to private charity, or who would have been driven to preying on others, has saved you in additional almshouses, asylums, and jails, you may be able to estimate; I am not .

Take your C. C. C. camps. They have given you an army of upstanding young men, capable, healthy, competent, in lieu of a battalion of derelicts, come to manhood with no jobs in sight; with no hope in their hearts and no stamina in their bodies. And while they were learning and training for their part in this work-a-day world they were building dams, cutting fire lanes, and cleaning up the brush heaps in your park wildernesses and doing a thousand other things that tend to make your wonderful parks more wonderful, and safeguard you against fire and flood. Does one among you think that the millions spent in that direction were wasted?

The rest of the country has fared very much as you have fared and appreciates what has been accomplished under the present administration as you do.

Of course, there is a sour note here and there in the orchestra we call public opinion. The trombones of our political enemies croak out wails and warnings of impending disasters that are not going to happen. Unable to deny the presence of prosperity, they say it will not last. In the face of restoration that is the wonder of the world, they proclaim that our Democratic administration is ruining the country.

With a whole Nation voicing its satisfaction of the manner in which the Democratic administration is doing its job, this jealous, envious, greedy group is trying to make our people believe that the captain who has brought our ship through peril after peril is bent on casting that ship on the rocks. It is the same group that fought Roosevelt in 1932. They never have forgiven him for defeating the regime that gave them everything and brought the rest of the country to the verge of destruction.

They are trying the same thing now. They are preaching the doctrine of fear. They are seeking to destroy confidence and scare the country into giving them another shot at the job they muffed so badly. More than ever we must realize, as the President has said, that the only thing we need fear is fear itself.

Sometimes the strategists of panic speak in the sepulchral tones of your own fellow citizen, ex-President Hoover, who knows what happened but apparently does not know why it happened. Sometimes their mouthpiece is a disgruntled Democrat out of step with his party and fancying that it is the party that is out of step with him. More frequently it is the newspapers which sought to put the Governor of Kansas in Roosevelt's place.

These are the people who proclaim, whenever a Democratic Senator or Congressman differs from the President on any item of his program, that our party has gone to pieces and that the President has lost the regard of the Nation. Then they bring out Senator VANDENBERG—"Phonograph Arthur"—of the last campaign, who conceived the brilliant idea of a debate with recordings of parts of the Roosevelt speeches, to sing a dirge for the Democratic Party.

Just how far they are getting in this campaign was graphically demonstrated recently. In staid Massachusetts, the other day, there was an election to fill the vacancy caused by the death of Congressman William P. Connery, chairman of the House Committee on Labor. The district concerned was formerly heavily Republican. It embraces a great industrial area and the G. O. P. announced that it would show in this election that the New Deal, of which Congressman Connery was a loyal supporter, was repudiated and discredited. So they sent their war horses into the district—among them their own Senator HENRY CABOT LODGE, JR., and his colleague from adjoining New Hampshire, Senator H. STYLES BRIDGES—and conducted an elaborate campaign on the one issue of the New Deal. The Democratic candidate accepted the issue, and so the 1936 battle was fought over again—and the Democrat won by almost the exact percentage that his predecessor won in 1936.

So let me assure you, though I do not think you need any assurance, that the so-called Democratic rift exists only in the minds of the outfit that would love to see something of the sort and that our President holds the affection and the confidence of our country, as no other executive has held it since the early days of the Republic. As a consequence, the Democratic Party is as dominant as ever in its history. It maintains its prestige by the only valid formula of politics, which is that good government is the best politics.

This administration has disbursed billions—and nowhere has there been the least hint of scandal. There are no little black bags stuffed with greenbacks in the picture. The worst they have been able to charge us with is that we may have given $4 worth of groceries to somebody who could have afforded to pay for them.

Our President has kept his feet on the ground. He has let the other fellows have the jitters, and has smiled at their ravings. He has given an example of courage in going forward with what he deemed necessary for the national welfare; an exercise of patience under a barrage of abuse that no lesser man could have shown. He has been the staunchest defender of the Constitution he is charged with flouting, and amidst the conflicts of a disturbed world he has maintained our national prestige. While other countries have been driven, or have tumbled into dictatorships or communism, we have pursued our calm course as a republic, our institutions unchanged, our liberties sustained.

It is because of these things that I am able to tell a Democratic audience tonight that our party's prospects are perfect. They must remain so, for the great task to which we were committed when we put Franklin D. Roosevelt in the White House, must be completed. And only a Democratic administration can do the job.

Monetary Policies

EXTENSION OF REMARKS

OF

HON. ELMER THOMAS

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, November 16, 1937

LETTER FROM COMMITTEE FOR THE NATION

Mr. THOMAS of Oklahoma. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD copy of a letter sent to the President by the Committee for the Nation through its proper representatives, relative to our monetary policies.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

COMMITTEE FOR THE NATION,
New York, November 10, 1937.

Hon. FRANKLIN D. ROOSEVELT,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: Since we called your attention on October 6 to the decline in basic-commodity prices the situation has grown steadily more alarming. The Journal of Commerce price index of 30 basic commodities has fallen from 177.1 on March 31 to 131.6 on November 6. This is a drop of 25.7 percent from the high point of the recovery, when basic-producers' prices were, for the first time since the depression approaching parity with their costs.

Never since the post-war price readjustments of 1920–21 has there been such a rapid and far-reaching decline. The commodity price collapse has gone as far in the last 7 months as it did in 18 months from July 1929 to December 1930, which precipitated the great depression. This 7 months' decline is twice as great as the one in 1926–27, which brought the heads of the three principal European Central Banks to New York and Washington begging for reversal of our Federal Reserve policy. This relief was sought then, and granted, in order to help maintain the international gold standard to which Great Britain had returned in 1925 with consequences which proved disastrous to British business.

The collapse of commodity prices is today world-wide. And the United States, being the only important Nation now attempting to adhere to an inflexible gold standard, finds itself in a particularly precarious position. Our corrective measures were delayed for 18 months after Great Britain abandoned the gold standard in 1931, and our recovery has lagged far behind world recovery.

While recovery has been proceeding more rapidly in other countries, we have created for ourselves new problems and intensified old ones. We have raised wages and created new tax burdens without adequately increasing our ability to pay. We have frozen costs of distribution and many fixed charges at new high levels. We have created a situation where deflation of wages and all prices down to the present level of commodity prices would set up unbearable stresses and strains of deflation.

We have, in short, recreated the problem which confronted us in March 1933. Now, as then, deflation must be stopped, and profitable prices must be restored for the producers of basic raw materials.

Continuation on the present, or a lower, commodity price level will cut deeply into farmers' spendable income, even if they grow abnormally large crops. It will mean disaster for producers of metals, oil, coal, lumber, and other basic products. It will greatly increase urban unemployment this winter. It will increase taxation for relief while decreasing the ability to pay taxes.

Failure to correct promptly the present ruinous disparity between basic commodity prices and other prices and costs must result in further unbalancing the Budget and making a much-dreaded inflation unavoidable. Either commodity prices must be brought up or national income must inevitably come down to correspond to the commodity price level. And with such reduction in the national income, present public and private debts can never be met.

We, therefore, suggest that the situation demands immediate critical reexamination of the causes of the world depression; a reappraisal of the measures which have been used to combat it; rejection of those policies which have failed, and fearless application of those measures which, in the light of experience here and abroad, give the best promise of present and permanent relief.

When conditions were at their worst in 1932 a group of American businessmen, with the cooperation of national farm organizations and a leading economic research body, studied world recovery problems, and, in February 1933, presented their facts and conclusions to advisers of the President-elect. Those who engaged in that study were, and still are, opposed to printing-press and budgetary inflation.

"Orthodox" procedure then, as now, called for still more deflation until all prices were brought down to the ruinous level of commodity prices. But realists recognized that such a deflation would result in almost universal bankruptcy, and no one dared face its social and political consequences.

After examining every suggested alternative, these investigators—who later became known as the Committee for the Nation—were faced with the conclusions reached in 1932 by the British Empire Conference: That world recovery depended upon restoring profitable prices for farmers and other producers of the basic raw materials, so that the basic-producer half of the population could buy the goods and services of the other half. How could this price restoration be accomplished.

The only means that was proving effective anywhere in the world was currency management, which was then and still is so little understood in the United States. The effects of monetary management were, nevertheless, plainly apparent in 1932 in the sales reports of American corporations doing business abroad. They showed a decided upturn in business in each country as it left the gold standard and continued depression in every country still adhering to that standard.

Argentina and Australia had been the first to abandon the international gold standard in December 1929. At least four other nations had followed before Great Britain, Scandinavia, and the rest of the sterling bloc took the same course in 1931. Those nations had escaped the worst impact of world depression by their early recognition of the importance of maintaining their internal price levels, as measured in their own currencies, regardless of the collapse of the world price level as measured by the international gold standard. So they based their monetary policies upon this elementary fact of economics:

Excluding the effect of tariffs and transportation costs, the price level of basic commodities within a country, regardless of whether it produces an exportable surplus of such commodities, is determined by (a) the amount of gold those commodities exchange for in world markets, and (b) the amount of gold in a nation's currency unit. Therefore basic commodity prices within a country respond in mathematical proportion to changes in the gold content of that country's currency unit.

Examination of the erratic post-war behavior of gold led to the conclusion that monetary readjustments throughout the world were inevitable. Governments, banks, and individuals were scrambling for gold, hoarding it and causing violent fluctuations in its value (i. e., purchasing power) until gold was no longer a reliable monetary standard. The use of a fixed weight of one commodity—gold—as the standard of value had been abandoned by the 21 sterling bloc countries under Great Britain's leadership. A cross-section of the principal basic commodities on which people depend for food, colthing, and shelter was becoming recognized as a more dependable standard, and stability in terms of a suitable commodity-price index was becoming the guide of monetary management.

British Empire monetary policy was directed first toward raising basic commodity prices which had fallen far below other prices. After restoring basic commodity prices to remunerative levels the next objective of British monetary policy was to maintain stability in the purchasing power of money, not with respect to the price of one commodity—gold—but with respect to the average of the prices of many commodities.

Since the value of gold was fluctuating violently, the amount of gold in the pound sterling was allowed to vary every day as the supply of gold and the demand for gold fluctuated. As the gold content of sterling fluctuated, the gold content of all the currencies pegged to sterling also fluctuated from day to day; but nobody got in a panic about it. Not the weight of money but what it would buy became the first consideration of monetary management. In each of the countries of the sterling bloc the objective was to arrest the decline in commodity prices within the country, keep its basic producers solvent, and through restoration of their purchasing power to rebuild the foundations of a general prosperity.

Mr. President, you started upon a similar monetary policy in 1933. And it worked. The average price, in dollars, of basic commodities within the United States rose in exact proportion to the reduction in the gold content of the dollar—that is, mathematically as the dollar price of gold was raised. This is a statistically proved fact.

Monetary policy was rapidly meeting the greatest need of the emergency in 1933. That greatest need was to lift as quickly as possible the price level of the basic-producer half of our people so that their power to purchase from the other half might be restored. Responding directly and immediately to monetary action, commodity prices rose rapidly, while costs of distribution, wages, the prices of finished goods, and the cost of living started to rise, but slowly.

If this procedure had been carried through, and without contradictory measures to offset it, economic balance and resulting prosperity would have been restored without the long delays, the consequent destruction of human and property values, and without the excessive tax burdens which have resulted from abandoning the monetary procedure to which the sterling-bloc nations have adhered.

As proof of the foregoing assertion, we offer the fact that the countries of the sterling bloc that went through with this procedure, with 600,000,000 population, have balanced budgets, prosperity for their farmers and other basic producers with expanding production, high building activity, and relatively little—in some cases no—unemployment.

But some persons, who never seem to have comprehended the principles of price changes, began in 1933 bombarding you with propaganda that all prices should be raised at once; hence N. R. A., which drove up wages and all prices. In this way we continued the disparity between farmers' and other basic producers' prices, which had fallen much the farthest in the depression, and the price level of the other half of the population. Thus our depression was unnecessarily prolonged.

Now a new disparity has been created by a new gold panic, bringing another collapse of basic producers' prices. And so long as we remain anchored to a fixed gold-content currency—that is, to a fixed dollar price of gold—our farmers and other basic producers will remain at the mercy of unpredictable world forces which again are causing violent fluctuations in the value of gold.

With the dollar price of gold fixed inflexibly, basic commodity prices, measured in dollars, must follow down or up as the world uncertainties, war psychology, speculation, hoarding, and flights of capital from country to country cause the value of gold to fluctuate.

The Committee for the Nation has repeatedly called attention to the fact that the most essential instrument of monetary management is the power to vary the official price of gold to offset fluctuations in the world value of gold. The Gold Reserve Act of 1934, which put us back on a fixed gold standard at $35 an ounce, made effective currency management impossible because our basic commodity price level was thereby tied to the fluctuating value of gold in world markets.

When our price of gold was fixed at $35 our principal competitors as raw-material producers had already raised their official prices of gold much further than we; yet they retained and still retain their freedom to go still further, if necessary, to protect their own internal commodity price levels.

The principal raw-material producing countries with which our farmers and other basic producers must compete have compensated for the shrinkage in the amount of gold for which all basic products exchange. Under British guidance these countries have increased their prices of gold much more adequately than has the United States. The table below shows the percentage of increase since 1929 in the prices of gold in seven countries, all large producers of raw materials; also the equivalent of this percentage when translated into dollars:

	Percentage increase	Price of gold
United States	69	$35.00
Argentina	140	49.61
Australia	106	42.58
Brazil	267	75.86
Canada	69	34.97
Denmark	104	42.17
New Zealand	104	42.17

With the value of gold as it has been since 1929, our dollar price of gold has never been high enough to give our farmers and basic producers normal prices with normal production. The American producer is therefore unduly handicapped by high fixed charges, freight, taxes, and interest. The farmers and raw-material producers of the sterling nations enjoy a great advantage with their higher prices of gold, because in their respective currencies they receive higher prices than our farmers receive in dollars although they must exchange their basic products for the same amount of gold that our farmers do. When their basic producers sell a ton of wheat, wool, lead, or copper, receiving, as inexorably is the case, the same amount of gold that our basic producers receive; their prices in terms of their currencies are from 20 percent to 100 percent higher than the prices our producers receive in dollars. This is the reason why their farmers find it profitable to grow and produce more while our farmers, deflated by too low a price of gold, are being forced to scarcity measures to raise prices.

A realistic outlook on world conditions shows only continuing instability in the value of gold. Changing demand for gold works irrespective of whether crops are large or small, and independently of events in any one country.

Gold was gradually losing value until the reversal of trend beginning last spring. Since March the value of gold measured by the 30 basic commodities of the Journal of Commerce index has increased 34.5 percent. This means that our basic producers, in order to get as many dollars of the same gold content as they received last March for 3 tons, must now deliver 4 tons of their products. Our farm income, based on the value of gold last March, was estimated to be $10,000,000,000. If farm production and the weight of gold in the dollar remain the same but the exchange value of gold for other commodities continues to be one-third higher than last March, farm income may be reduced next year to seven and one-half to eight and one-half billion dollars.

Let us see what a farm income of seven and one-half billion dollars would mean. Then deduct production expenses—fertilizers, freight, implements, taxes, etc. There will remain in cash and kind for farm owners and farm workers $4,235,000,000. Distributed as wages to the 10,472,000 persons gainfully employed in farming, it will give each owner and hired farm worker only $404 a year or $1.29 a day. If food raised and consumed on the farm is omitted from this calculation it leaves the farm income equal only to a wage of $1 a day for owner and worker. It leaves no capital return for farm property and nothing for the productive labor of 22,000,000 farm women and children.

If the farm income of the current year had reached the Department of Agriculture's estimate of $10,000,000,000, and if the entire sum, after deducting production expenses, were applied exclusively as wages, it would have yielded an average yearly income for each farm owner and hired worker of $526. This equals $1.68 per day, of which 42 cents is represented by products produced and consumed on the farm; the balance leaving an average cash wage of $1.26 per day. If the United States farm income, now reduced by deflationary monetary forces were lifted to $15,000,000,000, as it easily could be, by an adequate price of gold, our farmers could receive an average of 3 percent on their capital investment and have in addition a daily average wage in cash and kind for farm owners and hired workers of $2 per day—a wage still very low compared with urban wages.

A price of gold which would thus increase farm income would also lift the income and purchasing power of producers of other basic commodities by at least $3,000,000,000. Thus, without burdening the Treasury, the United States economy would have $8,000,000,000 more annually of purchasing power, an amount sufficient to create employment for three to four million more workers. Such was the road to recovery that the sterling nations have traveled.

In England's sterling bloc there are six nations in which farming and raw-material production play an important role—Argentina, Denmark, Brazil, Australia, Canada, New Zealand. These nations have raised their prices of gold an average of 132 percent, which would correspond to an average dollar price of $47.95 compared with our increase of only 69 percent to $35.

The destruction of basic commodity prices is the underlying cause of depression and continuing unemployment. Factories supplying basic producers' requirements are already feeling a slackening in sales; their slowing down will affect others. The vicious cycle of price deflation and consequent unemployment is again running its disastrous course as it did from 1929 to 1933.

If two and one-half billion dollars of farm purchasing power is destroyed, direct employment for approximately 1,000,000 urban workers will be wiped out and much more secondary unemployment created. Other basic producers are already suffering from a similar drop in prices, income, and purchasing power. Farm and basic producer income will be reduced by four to five billion dollars, and employment for two or three million workers will be destroyed if the present monetary derangement is allowed to carry through for a year.

We are confronted by the same destructive monetary force which tore down our prosperity between 1929 and 1933. The same corrective measures that proved effective in the United States in the first months of your administration, as they did in other countries, should be applied without delay. Had they been applied a few months ago, the present disasters to workers, employers, and investors could have been prevented.

Without waiting for congressional action, the President has power to raise the United States price of gold from $35 to $41.34 an ounce. Barring a still further rise in the world value of gold, this would almost immediately raise basic commodity prices 18 percent. While this would restore but little more than one-half of the commodity decline of recent months, it would steady panicky markets while permanent corrective measures were being initiated.

No stable agricultural prices, no stable business, no stable employment can be built on an unstable, wildly varying standard of value. For a century, from Trafalgar to Jutland, British sea power dominated the world, and British finance managed the international gold standard with a fair degree of success. Now the status quo is being challenged on all continents. Every nation seeks to build up a war chest of gold. Waves of war fear, speculation, hoarding, and panic enhance the value of gold. These unpredictable world forces should not be permitted to destroy the balance between the various economic groups within our own country.

More than 90 percent of all our business is internal. Our farms, mines, and forests can produce raw materials in superabundance. We have the most efficient transportation system, the best-tooled and effective factories and the most efficient labor in the world. The cause of the disaster since 1929 was a disorder in our price system—the mechanism by which goods and services are distributed. And this disorder was caused by the instability of gold, giving

us an unstable dollar which robbed and destroyed the purchasing power first of one group and then another. If this disorder were removed, most of the economic and social ills which have called for reform would disappear.

We must recognize that we are not living in the pre-war century. Then gold was reasonably stable. Now it has turned traitor, so wild, so erratic, so rapidly changing in its value relation to other commodities that no reliance can be placed upon it.

We should, therefore, get off a fixed price of gold, and stay off, returning to a fixed gold standard only if and when a complete transformation of world conditions recreates the stability that formerly made the gold standard workable.

We should establish a free market for gold in New York, as the British Empire has in London, in which gold will be treated as a commodity and its price in dollars allowed to fluctuate with demand and supply.

We should remove the present and future uncertainty as to the objective of United States monetary policy.

Economic and monetary stability cannot be attained by making the dollar equivalent to one-twentieth or one thirty-fifth or one forty-first of an ounce of one commodity, gold, very unstable under present world conditions. It can be attained constitutionally if Congress will mandate that the value—that is the buying and debt-paying power—of the dollar hereafter shall be kept equivalent to a cross section of the most widely used basic commodities.

Our economic order cannot survive continuing disastrous price level changes such as we suffered from 1929 to 1933 and again since March of this year.

Very truly yours,

COMMITTEE FOR THE NATION,
By FRED H. SEXAUER,
EARL HARDING,
Members of the Directing Committee.

Pending Farm Legislation

EXTENSION OF REMARKS
OF
HON. EDWARD C. EICHER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 16, 1937

ARTICLE BY HON. EDWARD C. EICHER, OF IOWA

Mr. EICHER. Mr. Speaker, under permission to extend my remarks, I include an article written by me for the Missouri Farmer and printed in its issue of October 15, 1937, together with comment thereon by the publisher, William Hirth, on the subject of pending farm legislation, and specifically the bill known as the McAdoo-Eicher bill, S. 2732 and H. R. 7475.

[From the Missouri Farmer of October 15, 1937]

UNCLE SAM'S FORGOTTEN NEPHEW

(By Congressman EDWARD C. EICHER, of Iowa)

How long would Henry Ford stay in business if the selling price of his automobiles were fixed by the Chicago Board of Trade, or the Liverpool Grain Exchange? He is successful because he knows to a gnat's heel exactly how much his production costs are, and because he has absolute control over his selling price.

The farm problem will never be settled until the composite farmer of America can exert an effective influence over one side or the other of his business ledger. Until that comes to pass he will continue to slide further and further down the economic scale and the distressing statistics of increasing farm tenancy will keep on accumulating.

The necessary cooperation that will enable the farmer to control his selling price can be provided by the Federal Government. It is true the Supreme Court has declared that a Federal law cannot control production on the farm, but it is also true that the same Supreme Court has said that the fixing of the price at which any commodity starts to move in interstate commerce is interstate commerce, and that, therefore, the Federal Government has the constitutional power to regulate that price in the public interest.

The Department of Agriculture continues to press for reenactment of the invalid A. A. A. production control principle in the face of the practical certainty that the present Supreme Court will again hold it invalid, and also in the face of the practical certainty that Federal subsidies, no matter how large, will not accomplish dependable production control that will prevent disastrous fluctuations in price levels, unless drought years come along again just at the right time as they did in 1934 and 1936.

Why hasn't the time arrived for direct action which will effectively give the farmer equality with industry without risk of another rebuff by the Supreme Court?

THE 1932 PLATFORMS

The Democratic platform of 1932 demanded "the enactment of every constitutional measure that will aid the farmers to receive for their basic farm commodities prices in excess of cost" and condemned "the unsound policy of restricting agricultural production to the demands of the domestic market." All of the farm organizations had agreed to this platform at conferences held on the 6th, 7th, and 8th of January 1932, and the Grange, the Union, and the Bureau had published a joint circular endorsing it as one of the three alternative propositions, the other two being the equalization fee and the debenture.

The Republican platform for 1932 declared for "the control of production to such volume as will balance supply with demand" and "the control of the acreage of land under cultivation as an aid to the efforts of the farmer to balance production." It will be seen that the A. A. A. was literally the Republican platform with the so-called "parity" idea added. This program was never agreed upon by the farm organizations and they have never been together since. I firmly believe that the farm organizations could have been kept united upon the cost of production principle.

Why is A. A. A. the wrong solution? The first outstanding reason is that the surpluses in the North and West have been so small since 1929 that the producers could afford to give them to the Government for use as an ever-normal granary in exchange for its cooperative service in fixing fair return prices for the domestic consumption percentages. The yearbooks show that for the last 20 years the average surplus of wheat was only 20 percent; of pork and lard, 10 percent; of corn, 1.3 percent; of oats, 0.9 percent; and of beef there has continually been a shortage.

Industry is paying more than these percentages for its selling expenses, and if the Government would fix the prices for the domestic consumption percentage at say $1.50 for wheat, 14 cents for hogs, $1 for corn, 60 cents for oats, and 30 cents for cotton, the farmer could well afford to take the world price for any surplus. The cost-of-production principle which all the farm organizations agreed to in 1932 would produce about these results. It was endorsed by all of the labor organizations, and recently in a Senate hearing it was endorsed by Labor's Non-Partisan League.

A. A. A. THE WRONG SOLUTION

The second reason why A. A. A. is the wrong solution is that the 1909 to 1914 basis for parity is not in fact a parity. The Department's own bulletin, Agriculture's Share in the National Income, of October 1935, page 8, shows that the per capita income of the farmers averaged only $159, while the per capita income of the whole population, farmers included, was $314. Therefore, there was $314 per capita income available for everybody, but the farmers only got $159, and the others got $395. These results are computed from table 1 on page 7, and table 2 on page 8.

Secretary Wallace has recently admitted that the 1909 to 1914 period is not a just basis and has suggested that 50 years be used instead. A check of table 2, referred to above, shows that 50 years is no better than the 6 years. In fact, the present plight of the farmers is due to more than 50 years of this speculative discrimination since dealing in futures became prevalent. Farm products are the only products that have their prices fixed in speculative markets that are controlled by the buyer.

I fear we are relying on a slender reed, if we would depend upon an ever-normal granary as a price stabilizer. There has never been a domestic shortage of cotton or of tobacco, and as a matter of fact the statistics demonstrate that, including stocks on farms, there has never been an empty granary of wheat or rice, and never even of corn unless it has been this summer and fall.

How then could it be expected that the mere process of keeping a so-called ever-normal granary full would prevent a recurrence of destructive speculative fluctuations in open market prices?

THE MECHANICS OF THE BILL

The mechanics of the McAdoo-Eicher bill are simple, workable, and constitutional. They are as follows: The Secretary of Agriculture is directed, first, to estimate the production of each crop as it comes to maturity. He shall then estimate the percentage that will be required for consumption in the United States and the balance that will be for export. Then he shall figure the 5-year average cost of production of the percentage required for domestic use. In calculating this average cost of production he shall allow a wage for all farm work comparable to that paid in industry, he shall figure material costs, taxes, depreciation of buildings, fences, work animals, breeding animals, machinery and soil, all exactly as industry figures depreciation of plant and equipment, and finally he shall figure a 4 percent capital return. He leaves out selling costs because a fixed price with the exportable surpluses controlled will automatically sell the commodities. The unit prices for the commodities that produce exportable surpluses, based upon the foregoing factors, will run substantially as hereinbefore indicated, although cotton may run somewhat higher. These prices will stand up for a bumper crop as well as for a short crop because the surplus will be controlled by holding it off the domestic market.

When a farmer brings his crop to market the dealer must under penalty pay him not less than the fixed price for the home per-

centage and give him a receipt from the Secretary of Agriculture, countersigned by the dealer, representing the export percentage. In this way the Department of Agriculture will get the entire exportable percentage under its control. Out of it can be taken such part as may be required for an ever-normal granary to meet disasters or crop failures. For the rest of it, the best available world market can be found, just as industry does with its surpluses, and after all expenses are provided for, the outstanding exportable surplus receipts can be redeemed through the post offices at the net amount realized in the world market. The bill provides that the township and county organizations shall continue to function, but the work would be advisory to the Department of Agriculture in determining equitable costs of production, instead of making allotments under a program of production control.

In no other way can Uncle Sam ever help his nephew, the farmer, to attain equality with industry. The trouble is Uncle Sam has been interfering by setting up artificial hurdles that progressively have been making the race between agriculture and industry more and more unequal. The protective tariff, the regulation of utility rates, the Social Security Act, the Railroad Retirement Act, the Guffey Coal Act, the wage and hour legislation that will be enacted at the special session of Congress likely to be called soon, all of them are samples of Government authority to fix the prices of industrial products at higher levels than would be the case were there no such laws. The farmer as a consumer is compelled to pay these higher prices. In his capacity as a producer the Government must supply him the cooperative selling power that will yield him a comparable dollar income.

READ AND THEN ACT

I hope our readers will study carefully the accompanying article by Congressman EICHER, who addressed our recent annual convention, and that then if they prefer his plan to the present shot-in-the-arm farm relief methods, they will write their Congressman to this effect, and do this while these men are at home. When the recent Congress refused to endorse the latest pink-tea farm-relief proposals, it was an indication that Congress is once more doing its own thinking, and is really groping after a sound and permanent rehabilitation of agriculture, and thus it is high time that farmers themselves made their wishes known.

There is nothing strange or mysterious about Mr. EICHER's plan—its principle is the same as that of the ill-fated McNary-Haugen bill, except that it adapts itself to the changed World conditions. From time out of mind American industry has demanded a fair return, which is only another way of saying that it wants a price for its wares or service that will enable it to pay fair wages and earn a fair return upon its invested capital. And so our workingmen have long demanded an American living standard, meaning thereby that they want a wage that will enable them to have their modest share of the comforts of life, a decent home, and to properly clothe and educate their children, and this is what the Eicher bill aims at for the farmer—a price for his products in our home markets that will assure him of production cost, depreciation on his farm plant and equipment, and a return of at least 4 percent on his investment, and can anybody say that this is too much to ask, and especially when the farmer's purchasing power is fundamental to prosperous shops, mills, and factories?

While the present "handouts" from the Federal Treasury may somewhat alleviate the economic ailments of the farmer, in the end they cannot save him—either agriculture must be put on a permanently sound basis or its eventual complete collapse is inevitable. One of the greatest dangers of the present farm-relief methods is that farmers will lose their pride and independence—that they will become mere mendicants at the hands of Uncle Sam, and thus more and more look forward to a Government check from the county agent. The "embattled farmers who fired the shot heard 'round the world" at Concord Bridge on the morning of April 19, 1775, were made of sterner stuff—they wanted liberty and justice, and dared to fight for it. Therefore, if you like the Eicher bill, write to your Congressman and tell him so, and do this while you are thinking about it.—WILLIAM HIRTH, *Publisher*.

The Poll on Lynching

EXTENSION OF REMARKS

OF

HON. CHARLES O. ANDREWS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, November 16, 1937

EDITORIAL FROM WASHINGTON POST

Mr. ANDREWS. Mr. President, I ask permission to have printed in the Appendix of the RECORD an editorial published in this morning's Washington Post entitled "The Poll on Lynching." It is one of the most sensible articles that has been written upon that subject up to this time.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Tuesday, November 16, 1937]

THE POLL ON LYNCHING

A Gallup poll indicates that 72 percent of the country favors a law making lynching a Federal offense. In the South the vote was 57 percent favorable. With the Senate pledged to early consideration of the Gavagan antilynching bill, these findings seem particularly significant. They should be read, however, with certain qualifications.

The precise question asked was: "Should Congress pass a law which would make lynching a Federal crime?" The Gavagan bill, if enacted, would not make lynching a Federal crime. It would, instead, make peace officers who tolerate lynchings without making "diligent efforts" to prevent them subject to Federal prosecution. Not lynching but failure to protect a victim from mob violence would become the "Federal crime."

How many who answered the Gallup poll affirmatively will check their Senators' votes on the Gavagan bill with this understanding? Probably not many. The average man seems to consider the lynching problem somewhat as follows: Lynching is a despicable crime that must be eradicated from the American scene; since some States are patently unwilling to stamp out such crimes by drastic measures, the Federal Government's efficient police machinery must be called into action.

This reasoning merely skims along the surface of the problem. It does not, for instance, consider the constitutional issues raised by Federal intervention into State affairs. Nor does it consider the fact that the Southern States are gradually improving their record of law enforcement in this field, as proved by the fact that Virginia has had no lynching in 10 years. There is danger, of course, that this slow process of education may be interrupted if Congress should encroach upon responsibilities that clearly belong to the States.

The major question at issue in the Gavagan bill is not lynching but the right of the people to retain control over their local officials. As Senator BAILEY has pointed out, a sheriff in North Carolina is responsible to the State and not to the Federal Government. Should Congress destroy that responsibility, it might seriously impair the American system of local self-government, without achieving the purpose at which the bill is aimed.

Suddenly Repealing Big Taxes Will Unbalance Rather Than Balance the Budget—Let's Get Down to Our Fundamental Problems—Enact Agricultural, Wage and Hour, and Reorganization, and Seven T. V. A. Legislation

EXTENSION OF REMARKS

OF

HON. MAURY MAVERICK

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 16, 1937

RADIO ADDRESS BY HON. MAURY MAVERICK, OF TEXAS, ON NOVEMBER 16, 1937

Mr. MAVERICK. Mr. Speaker, by unanimous consent, I am including herewith a radio speech made as of this date over the National Broadcasting Co. In this I have expressed my viewpoint about the psychological attitude of many of our leaders and people in general today. In my opinion, the business recession is uncalled for and a great deal of this hysteria is being forced upon the American people by selfish groups. It is quite similar to the situation preceding the World War.

In my opinion, we should not be diverted from the purposes of this special session, or scared into repealing a lot of laws which will unbalance the Budget instead of balancing it.

My speech is as follows:

Friends and fellow Americans, I have been here in Washington several days. I have talked to dozens of people and have attended the opening session of Congress. My opinion is that most of the talk is Hoover talk, and most of the people around Washington are scared. This is in spite of the fact that most of the talk out in the country is Roosevelt talk, and most of the people of the country are not scared.

Now, at the last session of Congress we accomplished very little indeed. We enacted no farm bill, neither did we enact the wage and hour bill, which the Democratic Party had solemnly promised. Our main accomplishment was the slum-clearance bill, which I find is good, but entirely inadequate and just about forgotten.

CONFUSION, SCARED PEOPLE, AND ARROGANT TORIES

Returning, I had hoped to see a better situation, but, instead, there is lack of purpose and organization, and confusion on top of that. Worse, we find scared people, scared politicians, bragging and arrogant Tories, who say contemptuously that they are out to get Roosevelt. To me that only means they are out to get the American people. To me it is a revolution of Big Money, and not the American people.

The whole cry is to evade the purposes of this short special session, forget our fundamental problems of unemployment and recovery, to blindly and hurriedly repeal the taxes on the wealthy and big corporations—in 15 minutes or less—and let the people of the country slide back into the abyss for the next 15 years or more. To slam on the brakes and knock off the big taxes in these 15 minutes would not balance the Budget, but unbalance it. Mature consideration should be given business, but we at least should take a few weeks for such consideration.

THE REINCARNATION OF HERBERT HOOVER—MAY IT NOT LAST LONG

The country heard this talk in 1930—1931—1932—and if I am any kind of a guesser, the people don't want it again. Is this jittery condition the real considered thought of the people? No! It is scare propaganda, newspaper thunder, editorialized and biased news articles, and malicious cartoons.

It is, unfortunately, the reincarnation of the shades of Herbert Hoover. May it not last long.

It is almost impossible to believe that this is the same administration, presided over by the same President, with the same Congress, representing the same constituency that I knew a short time ago. What has happened in this one year? Have the American people changed their minds? Have they decided they didn't mean what they said a short time ago? Of course they haven't—anybody who has been around the country knows the people meant what they said.

STOCK TICKERS RUN BEHIND—STOCKS DROP—WHY?

Let's review a little of what has happened. Just a few weeks ago Wall Street tickers ran behind, recording sudden drops in prices and the sales of lowered stocks. Then some of the Wall Street brokers found out what sensible economists had known for some time—that a business recession was upon us. Buying power had dropped, and naturally, sales were falling off; and all this was having its effect on business.

And just why are we in a slump? It's the same old dreary story: When prosperity began to get into swing the monopolists raised prices, grabbed off unreasonable profits, and left the public to hold the bag. Indeed, what happened is simple: Farm income, and city wages, industrial and white collar, were not sufficient to buy all the goods at these exorbitant prices. As a result inventories piled up, and haven't been worked off yet.

PURCHASING POWER—A GOOD EXAMPLE

At the same time the Government was listening to the spiel of Wall Street and "Big Business" that Government spending must be reduced because the big boys were going to take up the slack.

They didn't take up the slack.

As a matter of cold fact, no sooner did the Government lay off thousands of relief workers, stop public works, and drastically cut its spending, than business began to sag. If we ever had an example of what purchasing power means, we have had it since the first of the year.

Now, just what is it that this gang of Wall Street speculators and price fixers are asking the people of this country to do? Precisely, to repeat the mistakes of Mr. Mellon and Mr. Hoover—to let stock-market speculation again run wild, cut taxes in the higher brackets as Mellon did, and let the people bear the burden. It sounds silly, doesn't it? They must think the memory of the American people is short indeed!

Yet the same crowd that visited Hoover and bungled the Old Deal are knocking at the White House door—and knocking the New Deal.

THE AMERICAN PEOPLE MUST HAVE UNITY

Let me tell you that in this situation, we American people must have unity. We must continue to make ourselves heard above the clamor of the noisy rich, and to ask for the same sound, progressive, intelligent—and courageous—leadership of the President of the United States. One thing is sure: The President is again being denounced by all the groups and individuals who always fight progress, and who always prey on the American people. They denounce him for even slightly alleviating the misery of the American people. The President certainly knows these Tories really hate him, and are now frankly out in the open against him—so the American people must depend on him to lead.

FALSE PROPAGANDA TO SCARE THE PEOPLE

In all this there is a lot of false propaganda by the enemies of the people. They are trying to kid the man on the street, fool the farmer, and betray the worker. Don't let them stampede you, fellow Americans; don't let them fill you with scares, which will only cause you to give up the gains that have been made.

President Roosevelt and the Government of your country have not been unfriendly to either big or little business. Can it be said that big business ever cooperated with the President or the Government except on its own terms?

There are no ifs, ands, or buts about it. The Wall Street crowd and big businessmen say, "See here, Mr. President, we caused this slump because we are on strike. Now we are leaning on our shovels; we want more profits and more relief (for ourselves); we might lend our money, but you make us pay high taxes; and unless you give us more profits and knock off our taxes, we are going to continue the strike and break you. Mr. President, you may have gotten us back on our feet, but we want it plainly understood that our intention is to knock you off your feet."

PRESENT SITUATION SIMILAR TO PERIOD PRECEDING WAR

In all this I see a similar psychology and situation to our entrance into the World War. Indeed, the same old crowd is trying to frighten the American people. The idea is to scare the average man, put him in fear of his job and security—and then let big industry and big business kick little business and the ordinary American around.

What may be the next move?

The next may be to start heavier and heavier selling to warring nations, which will artificially increase employment temporarily. Then remember, in the World War, when it looked as though the war loans and war materials would not be paid for, we were pushed in the war to collect the money and to make more swollen war fortunes and more hundreds of thousands of American boys into corpses. We must not let this happen again.

LET US CARRY OUT OUR PROGRAM

Here is the point: Congress is here in Washington for certain purposes. One is to carry out the program we failed to carry out last session. Then it seems to me the honest thing is to do first things first.

So let us discuss our program, which includes the agricultural bill, the wages and hours legislation, the reorganization of the governmental departments, and the establishment of the seven T. V. A.'s.

Concerning the agriculture bill: It is impossible to discuss the details now; the various committees and the Secretary of Agriculture are not finally agreed, but I understand that a bill can be reported within a week. So what should the American people do? They should demand that Congress finish that job; certainly the welfare of millions of farmers, and the other millions of human beings indirectly affected, is more important than taxes on a tiny minority of big businessmen. In fact, this taxation business can really wait until we get at some of the more urgent problems.

HAS THE DEMOCRATIC PARTY REAL PARTY RESPONSIBILITY?

And take the wage and hour bill. It was slashed to pieces in the last session of Congress and then not even passed. It was held up and blocked by the Rules Committee of the Democratic Party. Mind you, this was a solemn promise of the Democratic Party, a party pledge, but the Democratic Rules Committee would not even let its own Democratic Congressmen vote on it. It seems to me that the Democratic Party had better face party responsibility and its duty and promises before we shut our eyes, fail to investigate, and repeal the tax bills we so laboriously enacted. And speaking of jobs, now, honestly, do you believe that suddenly repealing taxes on big fortunes and big businesses and suddenly throwing the Budget into balance with our financial system in reverse will put people back to work? Of course not.

Another problem is the matter of governmental reorganization. It is quite true that we have duplicating bureaus; we have in many instances numerous departments performing the same functions. That is a real chance for efficiency and economy, and Congress should give its attention to that. Rather than getting hysterical over a single problem of taxation, let us tackle reorganization first, and we will have plenty of time to give taxation a proper and fair treatment—which I favor and all reasonable persons favor—after the first of the year.

There is also the matter of the establishment of the seven T. V. A.'s. Why should we decline to develop the natural resources that belong to the American people, preserve them, stop soil erosion, produce cheap electric power, reforest our lands, because some utility corporations overloaded with watered stock do not like it? Why, this seven T. V. A. bill is of fundamental importance to all the American people.

WE MUST NOT INCREASE CHAOS AND FEAR

The problems that I have just listed ought to be attended to now. If we evade the problems which should be settled now, and which are before us, and go helter-skelter into repealing laws under some sort of frenzy, we will simply solve nothing and increase the chaos and fear.

YELL ABOUT THE BUDGET, PRAISE WASHINGTON, GET CALLED WISE

Now, my friends, here I am, a Congressman, just returned to Washington. There is always a tendency on everyone's part to say things superficially popular. You can praise the flag; in wartime you could denounce the Germans and the pro-Germans. In other words, you can join in the mob spirit and get yourself on the front page of every newspaper in this country.

You can yell aloud that you must cut taxes and balance the Budget, that we must get back to the old-time virtues of George Washington and Thomas Jefferson, and you will be praised as a wise man in the New York Herald Tribune and the Chicago Tribune—and maybe even in your home-town paper.

But if you say a great deal of this talk that's going around now is nonsense; that a lot of it is criminal in nature; that some of it is unpatriotic to the point of disloyalty; that much of it is wholly without foundation; that it is bad business in more ways

than one, you are likely to be charged with not really knowing what you are talking about.

THE UNITED STATES GOVERNMENT IS IN GOOD SHAPE

But that is exactly what I say—this United States of America is in good shape; so is your Government. There was no good excuse for the business recession, and there is no excuse for dozens of other things that have occurred in the past few weeks. There is no good reason for this increase in unemployment.

The national debt of the United States is an extremely small amount in comparison to other countries. The taxes paid by business in this country are very small in comparison to other countries. Mind you, the credit of the Nation is beyond question, no banks are toppling like in the Hoover administration; and moreover, what is really important, there is an administration in Washington really interested in the welfare of the American people.

Those that are scared can put faith in Hoover talk if they want to. But as for me, I propose to believe that if things are really bad that it is because the people don't have enough, and not that they have too much. Certainly, we should not have to bribe the wealthy and the great corporations to give people jobs; and even if we did it, the people would not get the jobs.

What we Democrats in Congress need to do is to get down to brass tacks and carry out the promises made of the President's great Madison Square Garden speech last November, meet our pledges, do our duty, and face the issues with confidence and courage, in order that we in turn may give confidence and courage to all our people.

Taxation

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, November 15, 1937

Mr. REED of New York. Mr. Speaker, the tax imposed on the undistributed profits of small corporations has prevented business expansion necessary to restore jobs to the unemployed. This has been a contributing factor to the present recession in industry and business. When it was proposed by this administration to adopt the present tax we Republican members of the Ways and Means Committee opposed it, and we joined in a minority report condemning the proposal, pointing out its dangers to business, and warning that its operation would have a "blighting effect upon recovery." The disaster it has brought to business and to labor is proof of the correctness of the position taken by the Republican members of the committee.

Until this strangle hold of the administration on the throat of business is removed there is little probability of industrial expansion and the initiation of new enterprises so sorely needed to relieve unemployment. Even more deplorable is the prospect that, unless relief comes as soon as orderly legislative procedure will permit, business recession will increase with great rapidity to the injury of the country in general and to labor in particular. It is important to prevent another downward business spiral before it gains uncontrollable momentum, resulting in a most disastrous crash. It is important because industry cannot draw upon a $26,000,000,000 reserve to keep men on the pay roll and pay dividends from reserve resources, as was done between 1930 and 1934. The tax on undistributed profits imposed by this administration under the "must" legislative program has destroyed the prudent business practice of setting aside a part of the profits as a reserve to meet the problems of "a rainy day."

Business prudence has been penalized by a most unjust and devastating tax. Day by day men are losing their jobs as a result of this unwise and indefensible penalty imposed on the sound business practice of setting up a reserve to cushion the blow of depression.

This tax should be repealed so as to enable business to not only resume but to enable expansion of present industry and to encourage the development of new enterprises.

I call attention, in support of the repeal of this tax on undistributed profits, to a few excerpts from business letters that have come to my desk:

If the Congress does not want to ruin business concerns of this character, then it must substantially amend this law, at least to the extent of freeing debt-ridden small business concerns from taxation when paying off their debts and, in addition, allow a reasonable amount to be set aside for improvements, additions, and a small surplus for the inevitable "rainy day."

—

Taking away in taxes a large part of the profits we make and would ordinarily put into surplus means, of course, that we cannot make improvements to our buildings or buy the machinery we would like to install, both of which would give work to the unemployed.

In the last depression we, like thousands of other businessmen, kept our men at work as long as our resources lasted—but what is going to happen when the next one comes along after the present taxation policy has left us stripped of our means to help our workers at the time when they need help most?

Frankly, it is such a cockeyed taxation policy that I cannot for the life of me see how those responsible for it could be so shortsighted.

—

The undistributed earnings of this company are tied up in buildings, machinery, inventory and other assets which cannot be converted into cash without a heavy loss, to say nothing of the damage to the business by such conversion.

The corporation has mortgage indebtedness and bank loans which should be paid. Also payment of any appreciable amount of dividends would jeopardize the credit standing of the company and might precipitate drastic action by creditors.

—

The Federal Government placing a punitive tax on nondistribution of earnings when distribution is prohibited by State statutes is outrageous.

—

For the past year we have invested in fixed assets approximately $30,000 each year. This has made possible an increase in our roster of employees from 50 to the present base of 350. The present tax situation absolutely precludes any further expansion on our part since the surplus that has been invested in our factory in the past, must now be used to meet the tax and dividend program which is obligatory. The cash that must go to pay these taxes is all the drain on our working capital that we can stand. There can be no more plant expansion for us under this present program.

A furniture company:

Our business would be growing much more rapidly if it were not for the undistributed-earnings tax, as our business, since its inception in 1912, has been built on the basis of plowing back a large portion of all profits. We find that it requires an investment of approximately $2,000 in capital assets and approximately $1,000 in working capital for each man we put to work in our business, and without a doubt our improvement program would be considerably larger if it were not for this undistributed-profits tax, as there are a lot of things we would like to do in the way of improving facilities and adding to them if we could continue our policy of previous years of plowing the profits back into the business, over and above a fair dividend to our stockholders, because our business is still a growing one.

An automobile specialties and library equipment company:

We have plans and specifications ready and would like to proceed with erecting a large addition to our plant, which would bring about the buying of a considerable amount of new machinery and equipment. We estimate that we would employ at least 200 more men if this program is carried out, but, due to the uncertainty prevailing, it is very doubtful whether we will proceed with it this year. If an exemption were allowed under the undistributed-earnings tax for purchase of new equipment and machinery and the erection of new buildings, we would proceed at once with our program.

A tool company:

If exemptions were allowed for purchases of new machinery and equipment and for the erection of new buildings, we would give employment to 100 more men on production work and from 50 to 100 additional employees in our distributing branches and sales force.

A baking company:

To conduct building operations even of a minor nature with surplus funds or borrowed money becomes a very expensive problem because of the resulting high taxes. Hence a building program of rehabilitation has been postponed, with the hope that there will be a change in the provisions of this law.

An office appliance company:

Under the present conditions we prefer to force our machinery, rather than purchase new, due to the fact that for every thousand dollars of money used to purchase machinery, another $270 may possibly have to be set aside to pay the Government in the form of undistributed surplus tax.

A metal-product company:

Our company, which employs slightly over 200 people, has just reached the point in the last year or two where our earnings are

sufficient to provide capital for reasonable expansion. In the last 3 years we have doubled our employment and doubled our floor space by putting earnings back into the business. This has meant the gain in employment of over 100 people.

This year, because of the tax law, it was necessary for us to pay out a considerable portion of our earnings to stockholders above what we would have normally paid them for a fair yield on their investment. As a result we were unable to take advantage of an opportunity to purchase a factory building in this town formerly occupied by a company in a similar line of business to ours which has recently had to cease operation. Had we had the capital to buy this building (as we would have had except for the tax law), we would have been able to take over the other property and employ 30 or 40 people that are now out of work.

It is probable that the operation would have soon needed many more people than that number, and we feel that the failure to expand our business at this time is due entirely to the unfair and unjust law of 1936.

A trailer company:

We are going to restrict our operations this year to enable us to pay these taxes and to keep in good liquid condition. While we now employ eighteen hundred people, I predict that we will reduce our force at least 25 percent in order to ride in a more comfortable position.

A lumber company:

During the severe depression from 1930 to 1936, the lumber industry was extremely hard hit. Its markets were reduced to such an extent that approximately 20 percent of production obtained. As a result, our losses impaired our capital structure, consequently we were faced with a distribution of earnings contrary to State law.

A machinery company:

For many years our company has carried out the conservative policy of paying its debts before it distributes any earnings. Due to the severe depression, we have become indebted to our bank, and would have preferred to have paid that bank rather than distribute any of our earnings for the year ending December 31, 1936. Such a procedure would have severely penalized us.

I have quoted from letters from small business concerns and space will not permit me to quote from many others which I have received, showing conclusively the disastrous effects of this tax on the development of business and employment. It must not be forgotten that this tax does not operate to the injury of many of the large, well financed corporations with high-salaried officials because they in many cases find it to their advantage to pay this tax to prevent small industries from developing to the point where they offer competition. For example, a large chemical product company reported that—

It is probably worth to us the extra taxes to limit or restrict the opportunity for the concerns who are striving to grow.

This tax as it is now imposed strikes at the very heart of concerns with comparatively small profits, which is one of the factors that is driving the country into the present depression.

Stock Market Reflects Failure of New Deal Policies

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 16, 1937

RADIO ADDRESS OF HON. HAMILTON FISH, OF NEW YORK, ON OCTOBER 12, 1937

Mr. FISH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address I delivered over the Columbia Broadcasting System on October 12, 1937:

I listened carefully to the President's fireside chat this evening but failed to find any reference to the huge depression of security values within the last 2 months, the greatest since 1929. There was no single word of encouragement, no promise of economy, and nothing that would tend to restore business confidence. However, the President did present plans for additional tax burdens on employers of labor who are struggling to keep their heads above water.

I am utterly opposed to calling Congress into a special session on November 15 as being unwise, unsound, and unnecessary. If the President wanted to expedite certain legislation, all he had to do was to arrange to have the Committees on Labor, Agriculture, Foreign Affairs, and Ways and Means begin holding hearings so as to have legislation ready for Congress when it convened in regular session the first week in January.

Of course, every American hates war, but they do not propose to fight other peoples' battles, to police China, Spain, or Abyssinia, or to join the League of Nations to wage war to preserve peace.

I do not propose to predict the rise and fall of stock values, nor do I intend to criticize the act of Congress regulating the stock exchange, which I voted for and believed was salutary and needed legislation. I propose to state why the repeated attacks by President Roosevelt on American business, destructive taxation, and bureaucratic red tape have hampered and harrassed business to such an extent that confidence has been undermined and all but destroyed.

If any country is worth living in, it is our own. We have all the natural resources we had in 1929 and an almost unlimited supply of loyal and industrious labor, and now after 7 years of depression we ought to be on a firm and stable high road to economic prosperity and well-being and the employment of American labor at American standards of wages.

No thoughtful or fair-minded person questions the original success of the present administration when it came into power in March 1933 in solving the financial crisis by closing the banks and bringing order out of economic chaos. Much of the legislation at the outset, including the regulation of securities, was essentially sound and beneficial to the public. What has happened since to shake the confidence of our businessmen and retard recovery and the employment of labor? Step by step Franklin D. Roosevelt has turned to the left until he is no longer the President of all the American people but merely the leader of the left wing of the Democratic Party composed of radicals, socialists, and officeholders united on a collectivistic program to revolutionize our entire economic, financial, and governmental structure, under which we became the greatest, richest, and freest nation in the world.

The United States is only in the morning of its glorious destiny, and even the fantastic experiments of the New Dealers can merely retard its progress to happier and more prosperous times with greater leisure and higher wages for our people.

The heights of well-being that were reached from 1923 to 1929 would be nothing as compared to the future development of this country, provided that business was only encouraged, given a helping hand, and a chance to make profits, expand, and employ labor.

Business is all ready to go over the top, but at every turn it is attacked either by the President, his bureaucrats at Washington, or strangled by red tape and held back by destructive taxes. Business and confidence are one and inseparable, just as confidence and employment are. You cannot have one without the other.

There is one main element lacking in order to attain prosperity and pass it around among all the American people, and that is confidence.

We are in the midst of a Government by confusion, bewilderment, and reprisal, and even the President and his New Deal advisers do not know what direction they are going. We need, most of all, restoration of sound common sense, practice of governmental economy, and retention of sound American principles of government, but instead we have an administration that has done more in 4 years to promote class hatred, strikes, collectivism, destructive taxation, and huge deficits than all other administrations in the last 150 years. Is there any wonder that business confidence is shaken, that investors are frightened, and employers of labor discouraged?

Only recently President Roosevelt made a bitter attack on the members of the chambers of commerce, Democrats and Republicans alike, saying that they were opposed to popular government, the rule by the majority under our American system. What a shameful arraignment by our Chief Executive of decent, honest, loyal American businessmen regardless of party affiliations! It is inconceivable and unworthy from the lips of a President of the United States who has encroached on the powers of Congress by demanding the control of the purse strings through lump-sum appropriations, and more recenty has sought to destroy the independence of the Supreme Court and make it a rubber stamp to carry out his dictates.

That the stock market reflects these attacks and the resultant loss of business confidence does not require a survey by some financial expert or stock-exchange authority. The advance in stock values during 1936 and until August of this year has been in spite of New Deal economic and financial policies and one generally justified on their earnings, as even the New Deal cannot stop American enterprise and initiative or destroy our natural resources.

I want to reiterate and make it clear that I am not predicting the rise and fall of stock prices. Personally, I am an incurable optimist and believe in America and our people and am convinced that nothing can stop them from going forward to much greater and better times. By the same token, I believe that anyone who sells the American people or American business short for any length of time will be badly scotched and rightly so.

The stock market suffered a loss of $18,000,000,000, one-half of the national debt, between the middle of August and the first

week of October, not on account of foreign developments and wars but because of the persistent left-wing shift of the administration, which delights in attacking anyone who has any money left. It has already soaked and swatted the wealthiest men in the country by taking 75 percent of their income, and the States take most of the balance in additional income taxes, real-estate taxes, school taxes, sales taxes, and gasoline taxes. Now it is seriously proposed to further increase the taxes on those with incomes of $5,000 upward.

The loss of $18,000,000,000 of actual stock-exchange values is a serious blow to American prosperity and affects every walk of life. The rich man will naturally retrench and stop his building activities, including perhaps a proposed new swimming pool. The individual of moderate means will hesitate to buy a new car, and the person of small means cuts down on his living expenses, even including food and clothing. All this affects the buying power of the country and tends to reduce business activities and sales and further increase unemployment.

Then, too, another reason for the present depressed condition of the stock market is the fact that the average investor, usually of modest means, who constitutes perhaps the largest single factor in the investment market, has been compelled through the increased cost of living, the mounting tax burden on everything he owns or buys, to spend more and more of his earnings on the actual necessities of life, leaving less for him to invest for the future, as has been his custom. In hundreds of cases I venture to say that such investors, the backbone of the American investment world, have been forced to liquidate some of their stocks to enable them to purchase things they needed which their income, due to its shrinkage in purchasing power, no longer would permit them to buy.

The administration took on itself the responsibility to help the cotton farmers of the South, and by a destructive policy of plowing under crops at Government expense proceeded to lose the cotton markets of the world. The net result has been that the American cotton farmer has lost his great export market, which has been taken over by the cotton producers in Brazil, Egypt, India, China, and Soviet Russia.

We have lost annually several hundred millions of dollars' worth of surplus cotton exports, and the Government still holds the bag. Only recent the southern cotton farmers have realized that they have been sold down the river by the New Deal and will not realize over 9 cents a pound on the Government guaranty. The cotton and wheat farmers, having lost their foreign markets for their surpluses, are beginning to get jittery.

One of the bad effects of destroying the cotton surplus export market has been to cause the cotton farmer to compete with the corn, hog, and dairy producers of the North and West, which in turn creates surpluses in these commodities. The first unfavorable trade balance we have had in 50 years, amounting to $147,000,000 for the first 6 months of this year, proves that Secretary Hull's free-trade hallucinations are detrimental to the best interests of the American farmer and workingman and one of the causes of continued unemployment in the United States.

The President on his western trip again stated that he proposed to balance the Budget, but that is an old and tragic story. A few years ago such a statement would have sent a thrill of anticipation throughout the country. But every year for 4 years the President has made identically the same promise, and each year the deficit approximates $3,000,000,000. Since the advent of President Roosevelt in 1933, the national debt has increased $17,000,000,000.

Balancing the Budget would mean curbing the collective activities of the New Deal and firing hundreds of thousands of deserving Democratic office holders. No, unfortunately, there will be no balanced Budget next year. It is too good to be true, but there will be a whole flock of new alibis. It is a mockery and a travesty to talk about a balanced budget by this administration, notorious for its orgy of spending and extravagance. Once again the dulcet tones and honeyed words of the President brings promises of a balanced Budget to a tax-burdened people, but, like the story of the boy who cried "wolf" too often, the President's words awaken no response from the American people; they apparently all come from Missouri and want to be shown.

The very words "balanced budget" from President Roosevelt arouses memories of that well-known comic strip Bug House Fables. It is just another bedtime story. The fact is the administration at Washington has no fiscal or financial policy except to pile debt upon debt, deficit upon deficit, and to issue billions upon billions of tax-exempt securities until our national debt has reached the stupendous and crushing sum of $37,000,000,000.

One of the first things for Congress to do will be to safeguard the payments made by American wage earners for social security, and railroad pensions, which are now being diverted to pay for New Deal projects.

The Congress, when it convenes in January, should:

1. Balance the Budget by putting our financial house in order.
2. Repeal the undistributed profits tax.
3. Reduce rather than increase taxes by practicing national economy.
4. Stop inciting class hatred, promoting collectivism and governmental competition with private business.
5. Encourage by a few words and by manifest acts American business to make reasonable profits, to expand, and to help put American wage earners back to work.

The first concern of the administration should be to put our financial house in order. Nothing could accomplish more to restore business confidence, encourage new enterprise, and provide a sound foundation for recovery and prosperity. If this is not done, nothing can save the ship of state from the inevitable shoals of inflation, repudiation, bankruptcy, and financial chaos.

After all these years of depression the people are entitled to go forward to better times and break all records of economic well-being and prosperity. This can be done if only the heavy hand of our bureaucratic Government at Washington is withdrawn from the throat of business. Surely, confidence would soon be restored and the birthright of every able-bodied American to permanent employment would be realized and our wage earners, scorning relief, would be able to adequately provide for their own families and give them the opportunities of life to which all American citizens are entitled.

It is only right and appropriate on this anniversary of the discovery of our country by Christopher Columbus that we should reaffirm our devotion to our free institutions and our republican form of government. Let us uphold, cherish, and defend the Constitution of the United States and go forward with the same courage, determination, and sublime faith of that great navigator and discoverer to fulfill the glorious destiny of our people and to a greater and more prosperous America.

My Observations of the Corporate Undistributed Profits Tax and the Capital Gains Tax

---

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 16, 1937

ADDRESS OF HON. EMANUEL CELLER, OF NEW YORK, DELIVERED BEFORE THE CHICAGO TAX CLUB AND THE ILLINOIS MANUFACTURERS' ASSOCIATION ON NOVEMBER 5, 1937, AT CHICAGO

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address I made before the Chicago Tax Club and the Illinois Manufacturers' Association, at the La Salle Hotel, Chicago, on November 5, 1937:

CAPITAL GAINS TAX

It is with considerable diffidence that I speak to you. I am not an expert on taxes. In all likelihood most of you are experts. Therefore, advocating before you changes in the tax law might be deemed similar to carrying "coals to Newcastle."

However, during my 15 years in Congress I have had occasion to observe from the ordinary and common-sense point of view the effect of numerous types of taxation. To my mind, the most illogical, the most regrettable types of income tax are the so-called tax on capital gains and the corporate undistributed profits tax. Our tax system is ordinarily confusing but the 1936 corporate undistributed profits tax has especially made confusion worse confounded.

Way back in 500 B. C. in China the real rulers were the nobles. The people were suffering from the exactions of the tax collector. Confucius realized more than any other these terrible tax tolls. He was traveling with his disciples slowly along a country road near Mount Tai. There, as elsewhere, he heard the wailings against taxes. He approached a woman a little distance from the road who was crying. When Confucius asked why she was lamenting in such a desert place, she answered, "The father of my husband was slain by a tiger, so was my husband, and just now my son was also killed in the same way." "Why, then," asked Confucius, "do you dwell in so terrible a place?" "Because," she answered, "here there is no oppressive ruler to inflict oppressive taxes."

Turning to his disciples, Confucius said, "Take note, students, oppressive rule with oppressive taxes is worse than a tiger."

What Confucius said so many years ago is just as true today. I repeat, of all current taxes, the most oppressive are the taxes on capital gains and on corporate undistributed profits. For some time I have been in the midst of a campaign to repeal or modify these oppressive imposts and, suiting word during last session of Congress to action, introduced several bills to bring about relief.

I was told at the time that it would be useless to offer my bill. I was told that I might as well try to hold back the Atlantic Ocean with a groan. But the leaven has spread; we are witnessing appreciable results through my efforts.

Of course, no one wants to pay taxes. It is always the case of "Let the other fellow do it." I recall the story of the man who once said he was neither a free-trader nor a protectionist. He was asked what he wanted. He replied, "I merely want a hole in my fence big enough to allow my hens into my neighbor's garden but too small to allow his hens to come into mine."

We cannot be selfish about the matter. Moneys must be raised to defray the expenses of government. We cannot let the other fellow do it. We must bear our reasonable, aliquot portion of expenses. But we have a right, nay it is our duty, to point out tax inequalities and discriminations. The two types of taxes against which I inveigh today are loaded with injustice, disparities, and unfairness.

Reforms do not come for the mere asking. They do not spring, fully grown like Athena, from the brow of Jove. Expect no miracles; only by arduous toil, vigorous campaigns to enlighten public opinion (and luncheons of this character are applicable in that regard) can these reforms become realities. Remember that pious words are insufficient. My colleagues and I in Congress, including the distinguished congressional delegation from Illinois, can do much to help you in the halls of Congress, but without your support our work becomes abortive.

Let me also give you a bit of advice. Ofttimes the attitude of businessmen, like your good selves, is one of aloofness toward Members of Congress. Sometimes your attitude is that of indifference. Too often it is one of antagonism. Frankly, you cannot catch flies with vinegar. Most Congressmen want to cooperate with their constituents and businessmen. They have the interests of business in their hearts. They are aware of the intense value of business in the community they represent.

Even if you do not like your Congressman personally, there is no good reason why you should not confer with him. The humble worker in the district, the persons in the Social Security classification, the menial under the Public Works Administration, they all go to their Congressman. They are not too proud. Why should you be? You cannot expect a Congressman to seek you out. You should therefore go to him with your burdens and your troubles. I am sure he will help. I repeat, emphatically, if you have a feeling of dislike toward your Congressman personally, you can nevertheless see him in his official capacity. Be prudent and wise.

A story is attributed to Clay and Jackson which I believe is very much in point. At a particular time they were alleged to have been bitter enemies. Clay was walking along a narrow path in the rear of the Capitol, going down toward Pennsylvania Avenue. At the same time, Jackson was walking along the identical path, going up toward the Capitol. It was too narrow to permit their passage at the same point. They stood facing each other. Jackson scowled down upon Clay and huskily said, "I never get out of the way of a scoundrel." Clay very politely, with a courteous bow, stepped aside and said, "I do."

You, therefore, must unite and organize for the purpose of spreading the gospel of tax reform. I use the word "organize" advisedly.

I once visited the Kingsbridge Hospital for the Insane. I noticed an undersized attendant endeavoring to teach individual veterans trades; the veterans were possessed of blunt weapons, like hammers, saws, etc. The attendant was unarmed. I said to him, "Why don't you arm yourself; aren't you afraid that these crazy men might organize and pounce on you and do you violence?" He said, "Never fear; crazy men never unite on anything."

Is not the conclusion inescapable that if you businessmen and accountants do not unite you must be crazy? I urge you to organize to repeal or change these taxes.

I realize that it is difficult for economic organizations to combine into one unit, almost as much so as it is to unite religious organizations. But if some four or five hundred organizations and groups are going to appear, for example, before the House Ways and Means Committee, independent, unrelated, and ofttimes antagonistic, with one or more witnesses each, we will have the usual duplications, contradictions, misunderstandings, omissions, and confusion in the testimony and we will exhaust the patience and endurance of the committee. I am going to request all organizations, groups, and individuals that intend to appear before the committee and are favorable to the tax policies I have outlined to attend a conference which will be called in Washington under the auspices of the groups responsible for this meeting. At this joint session we will agree upon amendments and arrange for their presentation to the committee. By this method we can more nearly speak authoritatively for the taxpayers of the Nation as a whole.

We are offering facilities to those who desire to do so to work in an orderly, organized, and convincing manner.

Taxation is used for revenue as well as regulation. Both are justified. It is always a matter of degree, both as to the amount of revenue obtainable and the amount of regulation. For example, we tax alcohol to encourage temperance. We tax narcotics to discourage their use. The tax on tobacco and oleomargarine are likewise regulatory. Some States enacted discriminatory chain-store license taxes to embarrass chains in the interests of independents. There are countless taxes intended as social reform, but ofttimes taxes for social reform go entirely too far and defeat themselves. Our tariff on diamonds and precious stones was inordinately high. Smuggling was highly successful. I helped cut the duty in half. Smuggling thereafter was no longer worth while. High liquor taxes invite bootlegging. On all taxes, therefore, we must exercise restraint and moderation. In both the capital gains tax and the corporate undistributed-profits tax we have gone to extremes. The results have been startlingly disappointing.

Some of the so-called reformers in Washington thought they could bring about a better distribution of wealth and destroy most of the evils of capitalism through taxation. They deemed themselves prophets heralding the millenium. But as the poet Burns said, "The best laid schemes o' mice and men gang aft agley."

What we need most in Washington is not reform by taxation but reform in taxation. Business today certainly is in the doldrums. The P. W. A., the W. P. A., and the R. F. C. and other depression agencies have folded up or are moribund. Government spending has been greatly curtailed and will soon cease. Private spending should take its place, but doesn't. Private investment shrinks as rapidly as Government spending. With no Government and no private spending, we are heading for the rocks. We are between Scylla and Charybdis. Among the causes for bringing us to this point is, undoubtedly, our Federal tax policy, which embraces two types of taxation: Undistributed surpluses or corporations and corporate gains and losses.

Both these types of taxes are blocking recovery, are frightening private capital, and are preventing increased business volume—all culminating in the prevention of reemployment. Private funds will just not come out of hiding and get invested in the kind of business on which jobs so heavily depend. Little or no money is coming into industry, mining, and agriculture. These taxes dam up the sluices of commerce and employment. They must be removed or radically changed.

I have offered two remedial bills to remove some of these tax inequalities and disparities.

The first is known as the Celler bill, H. R. 7152, with respect to the tax on capital gains and losses, proposing to amend the Revenue Act of 1936 (sec. 117), and provides:

(1) The gain or loss recognized upon the sale or exchange of a capital asset shall not be taken into account in computing gross income or net income if the capital asset has been held by the taxpayer for more than 1 year.

(2) The amendment made by this act shall apply only with respect to taxable years beginning after December 31, 1936.

Section 8 of the Federal Constitution provided: "The Congress shall have power to lay and collect taxes, duties, imposts, and excises to pay the debts and provide for the common defense and general welfare of the United States."

These provisions, I am sure, were never intended to be used to penalize initiative and discourage acquisitiveness. They were never intended to limit growth and penalize success. Frankly, I believe that our capital-gains tax actually does all this. It is punitive; it is revengeful. It does not make for the general welfare. It has long since gone beyond the point of diminishing returns. Because it is unjust and unfair, it encourages avoidance and evasion of taxes, and, lastly, it has caused a tremendous flight of capital to tax-exempt securities. The capital-gains tax as a weapon for economic reform has failed. As a measure for raising revenue, it has likewise failed.

A capital gain is not income. Our present tax system, however, intermixes genuine income with gains from sales or exchanges of capital assets. There is no segregation. The sum of all the capital gains in any particular year does not constitute any national income in the sense that the annual and regular recurrent profits from the production of goods and services does. A capital gain or loss is involved neither in regular production, regular sales, nor regular services. There is only involved a shifting of ownership.

It is refreshing to note that the United States Supreme Court has declared that the advance in property values during a series of years can in no just sense be considered the gains, profits, or income of any one particular year. Apparently our income-tax laws to not square with the opinion of our Supreme Court.

Most of our citizens who are taxpayers know that when they have a capital gain, the gain is in a sense fortuitous. They know also that the loss may be fortuitous.

If we were assured that the capital gain would recur and would be stable, I would not object to taxing it. But such a gain does not recur. It may be followed by constant loss. It often is merely a matter of luck. One of my correspondents states the following: "To form a policy on the theory that a capital gain is income is as wise as the notion of a man who finds a hundred-dollar bill in the Loop and he then goes back each day to look for another." A wise farmer plucks yearly the apples and pears from the tree. That's the fruitage or income from the tree, but the farmer who, in addition to gathering such a harvest, chops down the limbs of the tree and finally the trunk of the tree for firewood is a jackass. He is not satisfied with mere income. He wants capital besides. In taxing capital Uncle Sam is no different than the improvident farmer.

The taxpayer uses every means at his command, welcomes every sharp practice, embraces every opportunity to evade and avoid the taxes. For example, the Revenue Act of 1921 embraced a capital-gains tax of 12½ percent. It yielded from $250,000,000 to $330,000,000 in a single year. The rate was not oppressive. The tax was willingly paid. The tax was productive because it was not punitive. To change the simile, the Government today not only milks the cow but also attempts to skin her.

The president of the New York Stock Exchange, Charles R. Gay, in his report of May 1936 to the New York Stock Exchange, stated that the yield from the capital-gains tax is a relatively unimportant source of revenue. Of course, it is difficult to determine the exact amount of capital-gains tax because capital gains are intermingled with ordinary income. But President Gay states that the yield from the capital-gains tax for the year 1934, for example, could not have exceeded $12,000,000. He goes on further to say, "Obviously, the wealthy refuse to incur the tax liability." I might add, if the Government gained $12,000,000 from that source of taxation, how much in taxes did it lose? Is it not reasonable to

state that if we compare the 1934 yield of $12,000,000 with a proper yield of say $330,000,000, the loss is well nigh $1,000,000 a day? In the face of these terrible losses, it is high time that something be done. Some of the economists of the Treasury Department desire to tax Wall Street, desire to "soak the rich." I aver that taxation should be in accordance with the ability to pay. I want the rich to pay their proper share. The capital-gains tax, however, clearly shows that Wall Street and the rich are prevented from paying their proper share. I venture the assertion that the yield for the current year on capital gains will not be more than $25,000,000. A certain gentleman in Washington, whose name I will not mention, but who is, however, one of the best informed, guesses that the yield will be upward of $100,000,000. Frankly, my guess may be as good as his. Let us compromise. Let us say $50,000,000. What of it? The amount is ridiculous, woefully inadequate.

What is the remedy?

A remedy is imperative. The rate must be such as to be productive. A high rate, we know, produces little. The conclusion is inevitable. The rate must be reduced to produce more.

The tax might well be repealed or might well be changed. We might go back to the 1921 rate of 12½ percent. Sometimes when we reduce the price of an article we sell more and make more money. Henry Ford adopted that policy with excellent results. The railroads were about to be plunged into bankruptcy. They finally saw the light, reduced their rates, and are now on the road to recovery. Greater business ensued. Greater revenue resulted.

I venture the assertion that under a 12½-percent flat rate the yield on capital gains would be at least $330,000,000, if not $400,000,000, yearly. Our present system is a sort of legislative dam thrown across the stream of business. Break that dam and the stream of revenues will flow freely with increasing force into the Treasury. Many were the savants in power who advocated reduction in taxation in order to get more revenue. President Wilson, in his message to Congress in 1918, said:

"The Congress might well consider whether the higher rates of income and profits taxes can in peacetime be effectively productive of revenue, and whether they may not, on the contrary be destructive of business activity and productive of waste and inefficiency. There is a point at which, in peacetimes, high rates of income and profits taxes discourage energy, remove the incentive to new enterprise, encourage extravagant expenditures and produce industrial stagnation with consequent unemployment and other attendant evils."

We are at peace and recovery is well under way.

Senator GLASS has frequently stated that the maximum surtax could easily be placed at a figure that would deprive the Government itself of revenue and would also divert investment capital from productive activities to tax-exempt securities.

Former Secretary of the Treasury Houston similarly inveighed against excessive taxes and in the interests of additional revenue, and pointed out that it is well not to "pass the point of maximum productivity."

The late Secretary of the Treasury Mellon, before the House Ways and Means Committee in November 1923, approved the principle and applied it with eminent success. During his regime, for example, the income-tax rates were reduced from 46 percent in 1924 to 25 percent in 1926 and the revenue increased substantially.

This tax is more accurately called the capital-gains tax than the capital gains and losses tax, for while capital gains are always considered income, capital losses are not always considered deductions from income. Mr. Parker, chief of staff of the Joint Committee on Internal Revenue Taxation, stated in a round-table discussion at the University of Virginia that the present system of treating capital gains and losses in this manner "has a glaringly inequitable defect which must be obvious to all." Furthermore, while capital gains are always taxed during the year they occur, and capital losses may not be allowed, grave inequities may occur, as in the case of a firm in New York which paid in 1936 a tax of approximately 22 percent on a profit of $89,000 that it had made in the prior year on the sale of Government bonds. There was no speculation; it was simply the result of a purchase out of a steadily mounting cash surplus during 1935.

During the holiday season it was necessary for the company to sell these bonds at a profit of $89,000 to enable it to make purchases. In the following year it suffered a loss of over $150,000 on the sale of similar Government bonds. But this company could not make any deduction (other than $2,000) for the loss, whereas in the prior year it had paid 22-percent tax on a capital gain.

It is interesting to note that many of those who are familiar with the real-estate situation throughout the length and breadth of the land hold that capital-gains-tax reform would pry loose for purposes of building homes at least $1,000,000,000. There would be a tremendous impetus to the building trade, heavy-goods industries, and reemployment.

A man may have a large tract of land, but why should he sell, despite the fact that it might be needed by a community for housing purposes? Why should he bestow on Uncle Sam, he reasons, most of his profit? He hugs his property, but not because he is in love with it. He will not part with it. The houses are not built and reemployment lags.

One of the contributing causes of forcing the stock market into a tailspin doubtless is the iniquitous capital-gain tax. There are many who would purchase and sell in the stock market if the tax were less punitive, less burdensome.

Reduce the tax to 12½ percent and I am sure you will reattract thousands of investors in the stock market. They would willingly pay the 12½ percent. They evade and refuse to pay a tax that would come up to 50 percent and in many cases higher.

It is interesting to note that the United States is the only important country in the world which has a capital-gains tax interwoven into the income-tax structure. Great Britain has the longest record of all nations of income-tax administrative experience. In England's 95 years of income tax it has developed an income-tax technique that is probably the best in the world. It has shunned, like the plague, the capital-gains tax. Great Britain balances her budget. We have yet to balance ours. It balances its budget without a capital-gains tax. They left capital gains out of the income-tax structure; that is exactly what we should do. Let us follow the experience of Great Britain and other nations that have grown wise with experience.

UNDISTRIBUTED CORPORATE EARNINGS TAX

I have offered a second bill, known as the Celler bill, H. R. 7550, with respect to the surtax on undistributed profits, proposing to amend the Revenue Act of 1936 (secs. 14, 26, 27, and 41), which provides:

(1) Credits shall be allowed for improvements of real property, purchase and installment of equipment and machinery, and expansion or replacement of plant and productive facilities.

(2) Amounts paid within the taxable year in discharge of debts.

(3) General credits up to 30 percent of the adjusted net income of corporations.

(4) Distribution up to 25 percent of adjusted net income within 90 days following the close of the taxable year.

(5) These amendments shall apply to taxable years beginning after December 31, 1936.

I hold no brief for any particular corporation. Be it remembered, however, that capital usually functions in the corporate form. Be it remembered, further, that labor cannot function without capital, and capital cannot function without labor. Therefore, when you unduly strike at corporations, you eventually strike at labor.

The undistributed profits tax, which is a fine upon corporations that wish to retain some of their earnings, is a thorn in the side of the business of our 528,000 corporations. The tax varies from 7 percent to 27 percent. It is in addition to the normal tax of 8 percent to 15 percent on the net income of the corporations, the corporate excess-profits tax of 6 percent to 12 percent, and the capital-stock tax of $1 per thousand of capital stock.

Developments have justified the position that the surtax is wrong in principle and destructive in results. If, nevertheless, this method of raising revenue is not abandoned, it is important that the major imperfections of the statute be identified and early remedial action be taken. The amendments which I have offered to this measure meet the situation in large part.

It is my intention to call attention briefly to the hardships and inequities, some of which could not have been intended, that have been created by the surtax on undistributed corporate earnings.

Some of the outstanding defects of the law which have received most criticism are:

(1) Conflict between State and Federal laws, most apparent in the case of corporations with impaired capital.

(2) Exceptional and unfair burdens placed on corporations with standing debt contracted in good faith.

(3) No allowance for current earnings used for business expansion and for other appropriate corporate purposes.

(4) Failure to provide relief for corporations bound by contracts which do not meet the requirements of present relief provisions but which, in fact, operate to restrict dividend payments.

(5) Establishment of the time of dividend payments at such a date as to impose unreasonable or impossible conditions.

(6) Coercion of corporations into doubtful fiscal policies and generally weakening their financial structure.

(7) Ambiguous and harsh provisions which supply the basis for excessively restrictive regulations.

There is an intimation in this legislaton that the Federal Government is taking away from the directors the management of the corporations and from the State that incorporated them the power to determine what they should do with their earnings. There is also a compulsion in it that compels corporations to make distribution otherwise than as to their sound business judgment would dictate.

When the word "corporation" is mentioned, most people see "red." They think only of the so-called malefactors of great wealth. We must, however, view the matter of corporations and the matter of taxes thereon, if possible, in a detached, unbiased manner.

In truth and in fact the records show that corporations in general have lost more than they gained. The corporate income-tax returns for 1931 showed that more than one-half of the corporations reported net losses; in 1932, more than three-quarters of the corporations showed a loss; in 1933, two out of every three corporations suffered net losses. The total corporate losses from 1930 to 1934, for example, were over $29,000,000,000. This tax is like piling Pelion upon Ossa.

In a recent statement before the House Committee on Appropriations asking additional funds for the Joint Committee on Internal Revenue Taxation, Mr. L. H. Parker, chief of staff, said: "We have a vast amount of correspondence forwarded to us directly or through Congressmen and Senators complaining of

certain effects of the undistributed-profits tax. Almost uniformly, those are from small corporations."

Many corporations, as you are all well aware, are now finding out the hardships that this tax has worked upon them.

One of the most frequent complaints is that the tax makes it difficult for corporations with fixed obligations to obtain credit when necessary. The railroads are a case in question.

Proposals of various kinds to enact such a tax have repeatedly been before Congress for many years, but until the 1936 measure was passed they have always been rejected after careful study and thorough consideration. The staff of the Joint Committee on Internal Revenue Taxation made a comprehensive study of the taxation of undivided profits, and their report in 1927 had this to say on the subject:

"The most obvious objection to such a tax is the burden which it places on legitimate and proper business expansion. As a business expands not only does its plant and property increase, but a large working capital is required, and it is desirable that reasonable accumulations of profits necessary for the expansion and stability of corporations should not be unduly burdened. It is believed that a tax on the total accumulation of profits by corporations is not desirable because in many cases it might cause the making of unwise distributions and prevent the accumulation of reasonable and proper surplus."

The present tax, therefore, has consistently been rejected by Congress in the past, and has been repudiated in principle by its own capable and experienced advisor, Mr. Parker. In the opinion of Gen. Hugh S. Johnson, former N. R. A. Administrator, this tax renders practically impossible new enterprises to absorb our vast unemployment.

It is apparent now that the tax is in no sense a tax on corporate earnings, but a penalty on the accumulation of protective reserve, on the payment of debts, on business rehabilitation and expansion, and the creation of new jobs. This tax unquestionably retards recovery.

It constitutes an unwise and dangerous meddling in the determination of an organization's fiscal policy, making government policy, instead of sound business judgment, the controlling factor.

It is interesting to note that the first important act of the new British Prime Minister, Neville Chamberlain, was his promulgation of a withdrawal of one of his erstwhile pet forms of taxation, to wit, the tax on excess profits. He admitted his error gracefully, and thereby exemplified genuine statesmanship. I commend his action to our President.

Secretary Morgenthau, in a letter to the President relative to general tax policies, stated:

"Any changes in the tax structure should, therefore, not be in the direction of increased taxes. But this very situation makes it possible and timely for us now to consider revision of the tax laws with the purpose of removing any inequities or unnecessary administrative difficulties that may be inherent in the law and abating or modifying taxes that create unfairness to consumers or to trade or have other disadvantages which outweigh their revenue yield." I commend my amendment to him.

Senator HARRISON, chairman of the Senate Finance Committee, in discussing this tax, is reported as favoring:

"Giving further relief to debt-ridden corporations and companies unable to meet obligations, and possibly new provisions to encourage modernization and rebuilding of plants."

The late lamented Senator Robinson stated: "I should like to see a modification of the surplus corporation tax passed at the last session of Congress so that investments in new enterprises and business may be encouraged."

Secretary Wallace, I understand, also favors the change.

Jesse Jones, Chairman of the Reconstruction Finance Corporation, made the following statement:

"Especially I would like to see an amendment to this act that would encourage expenditures for modernizations of all character; for replacement of plant, machinery, and equipment; for rebuilding; and one that would make some further provision for institutions laboring under debt. I have every confidence that the President will be entirely willing to have Congress review this measure, especially if it can be shown that there are inequities, or that any provision in the act retards capital expenditures."

I hope Jesse is right. He usually is.

Joseph Kennedy, former Chairman of the Securities and Exchange Commission and present Chairman of the Maritime Commission, in a recent article widely circulated, set forth a number of objections to the law. He pointed out that if corporations distribute their earnings under the coercion of this tax they will not be adequately prepared to weather any future depression. The tax would, therefore, have the effect, he said, of extenuating the peak and depression of business. Previously, in a book which he wrote, Mr. Kennedy referred to the measure as a "new and unexpected theory of taxation," which, he said, was "premised upon a fallacious economic principle."

It is refreshing to note that Chairman Marriner S. Eccles, of the Federal Reserve Board, believes strongly that Congress should amend promptly this obnoxious tax. He claims such a change would stimulate trade and thereby increase purchasing power. He recognized the penalties placed on plant expansion and the detriment to small business. It is interesting to note that if the present trend continues, the experiment of taxing corporate undistributed profits for the purpose of making them disgorge dividends will be a tax without a friend.

The Interstate Commerce Commission, an impartial body, in its recent annual report stated:

"It is our view that railroads with weak financial structures and those just emerging from receivership or reorganization proceedings under section 77 of the Bankruptcy Act should be encouraged to use their earnings to build up and improve their property, retire their funded debt, and create corporate surpluses in amounts sufficient to meet their emergency needs, support their borrowing power, and afford insurance against obsolescence. We suggest that the situation of the steam railroads under the Revenue Act of 1936 should have the further consideration of Congress."

This statement is equally applicable to business generally, and the same concessions should be extended. There are many enterprises, in addition to the railroads, including other transportation agencies, with weak financial structures which are seriously affected by the surtax. It seems to me that the views of this impartial Commission with respect to this tax constitute a strong indictment against its discriminatory application, its injudicious use, and clearly point to the dangers to which it leads.

Finally, I desire to call your attention to the report just published by the Twentieth Century Fund, Inc. This report is entitled "A Survey of Taxation in the United States and a Program for the Future," and was prepared by the committee on taxation, of which Mr. Roswell Magill was a member prior to his appointment as Under Secretary of the Treasury. The committee, in reporting the economic effects of the undistributed corporate net earnings tax on page 471, states: "Of one thing, however, we are certain. The tax was imposed without a sufficiently thorough study of its possible economic effects and without a careful enough consideration and discussion of other methods of equalizing the tax position of stockholder, proprietor, and partner." (Mr. Magill's name did not appear on the report, he having resigned before the report was published.)

On page 476 of the same report containing the committee's recommendations the following statement appears:

"The committee recommends the repeal of the undistributed profits tax as it now stands. It is a compromise that fails to achieve any of its objectives, except in some degree the economic aims. It may not even induce the economic effects to any appreciable degree in the long run, in view of the stock-dividend and stock-rights devices; and insofar as the corporations pay the tax instead of distributing its earnings, the tax fails in all of the aims."

One of the objectives of the sponsors of the tax was the retarding of the growth of large corporations and the preservation of small enterprises. Large corporations have not been retarded and small and growing corporations have felt its harsh effects. Most economists believe that competition is vital; that keeping small enterprises alive preserves competition. This tax dries up small enterprises. It keeps them from growing. It penalizes them in their efforts to raise capital. It makes of them empty shells by emptying their reserves into dividends. Nobody wants to loan capital to an empty corporation.

I know of no tax that is more arbitrary in the fixation of rates. Undistributed profits that are below 10 percent of the adjusted net income are subject to 7 percent, but the undistributed profits in excess of 60 percent of the adjusted net income are taxed at the rate of 27 percent, or nearly four times as high. There is, indeed, no science in this. These distinctions are purely arbitrary.

A corporation saving 65 percent of its earnings may be small and struggling to grow. It has little net income, relatively small sales, and generally little property. A large corporation may have net income, sales, and property many times greater, yet save a much lower percentage of its earnings and therefore pay a much lower rate of tax.

The tax does not apply to the undistributed profits of unincorporated enterprises which withhold profits for reinvestment. Corporations pay the piper. Unincorporated entities go scot free of the penalty.

The inequalities and complexities of the tax are bewildering beyond human understanding. Banks and insurance companies receive special concessions so that their reserves may not be impaired. Corporations in bankruptcy are exempt. Foreign corporations are taxed differently than domestic corporations. Mutual investment companies are given special considerations. Tax is by no means universal. No tax bill has ever been more freakish, no tax more difficult to fathom and understand. It is bad enough to pay high taxes but far worse not to know how to compute them.

The act does not allow sufficient time to corporations to compute their earnings before declaring dividends. They do not know for some time after the close of the business year what earnings may be available for distribution. It sometimes requires 2 or 3 months after the end of the fiscal year to check up corporations accounts to determine what the real income of a corporation is. Under the tax the corporation must, willy-nilly, regardless of facts, right or wrong, conclude what its profits are.

To avoid the tax, there is a powerful inducement for the smaller corporations to abandon the corporate form.

Corporations on the verge of bankruptcy or receivership would be tempted to hasten this action in order to escape the payment of tax which is not collected from corporations in this type of insolvency.

Another alternative for those seeking to avoid the tax is to incorporate in foreign companies because foreign companies are exempt.

Furthermore, tax-exempt securities offer another effective loophole for those seeking to avoid the high surtax rate on individual incomes and who find that the surtax on undistributed profits

makes corporation surpluses less attractive as an opportunity to lower taxes.

If the surtax is to be retained, the adjustments which are covered by my amendments should be made immediately. The amendments which I have offered calling for adjustments in the base of the surtax will remove a wide range of inequities from the act.

We were told that the tax would be harmless. We know better now. It was like the kind mother giving her boy chloroform and then spanking him.

We are feeling the ill effects now.

The Federal Social Security Act

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 16, 1937

ADDRESS BY W. ARTHUR SIMPSON, CHAIRMAN OLD AGE ASSISTANCE COMMISSION FOR VERMONT

Mr. PLUMLEY. Mr. Speaker, under leave to extend my remarks I include an address of Hon. W. Arthur Simpson, of Lynonville, chairman Old Age Assistance Commission for Vermont, given before the Rotary Club at St. Johnsbury, Vt., on November 8, 1937, as follows:

The Federal Social Security Act now functions under eight different categories in Vermont. Under the public-assistance features of the act which are new and more dignified forms of alleviating philanthrophy assistance is given (1) to the needy aged who are past the age of 65 years, (2) to dependent children, (3) to the needy blind, (4) to crippled children, (5) for certain forms of vocational rehabilitation, (6) for maternal and child-health services. The seventh category of the act provides for contributory insurance for certain workers in industry against unemployment and the eighth for a contributory old-age pension plan for workers in industry on retirement at 65 years.

Old-age assistance is strictly an assistance program, not a pension, and is proving to be a broad humanitarian policy when conducted on a practical basis and within the ability of the taxpayers to finance. At the present time about 5,000 aged individuals are being aided in Vermont at a monthly expenditure of about $69,000. Old-age assistance is based on need as determined by the investigations of the State department and the monthly grants range from $5 to $30 with an average of slightly under $14. In a majority of cases the grants supplement the resources of the client and are not intended to replace the moral and legal obligations of the children and other relatives to support or assist when able.

The Federal Government reimburses the State for one-half of each grant of assistance. About 160 blind and 750 dependent children also receive aid in Vermont. Old-age assistance and old-age pensions or benefits are entirely separate and distinct, the latter being a contributory form of insurance to which employers and employees both contribute while unemployment insurance is still another division of the Social Security Act to provide for certain benefits when an employee is without a job.

Perhaps the fourth most significant change in Vermont during the past decade is the gradual decline in the operation of farms for agricultural purposes, which ties in closely with the pressing question of farm incomes and the great increase in tax burdens and uncollected taxes. There are a certain percentage of farms which are unsuited for modern farm operations and it is to be hoped that these properties will ultimately be purchased for summer homes or be reforested. The condition of the milk market and other factors including the termination of family ownership are, however, forcing an increasing abandonment of good lands.

We face new demands for regulation of hours and labor which will be prejudicial to agricultural interests, a greater dependency upon Government and in the face of tremendous importation of farm products from abroad, a further regulation and curtailment of production.

The disastrous effect of these conditions is rapidly being reflected in the increased tax rates and a greater amount of uncollected taxes, which after all is an increased charge against the community. The people of this country are already paying a tremendous tax toll in the increased cost of living. It is now realized that Federal policies cannot longer be continued on a borrowing basis and that there is imminent prospect of new and drastic taxes but is there not a greater danger in the destruction of public morale through a further dependence on governmental bounty and an extension of the sphere of governmental regulation and control?

It is a fact that the best of motives can actuate reform and regulatory measures but once inaugurated they may prove difficult to control and usually lead to further demand for benefits to militant minorities.

No one can soundly advocate a return to the abuses of any former system, but one does well to ponder the fact that under the American system we have, as a nation, enjoyed more comforts, more conveniences, and greater privileges than have been enjoyed by any people in any period of world history.

Unfortunately there is little popular appeal in the common sense of the commonplace for many people, perhaps a majority are looking for miracles to happen. It is the sad truth, however, that along with great reforms we must inevitably work out our problems rather than to be floated out on the tide of Government spending.

A restoration of free enterprise, a greater dependency upon initiative and industry, and the encouragement of thrift are essential if our democratic form of government and a free national life are to be perpetuated.

Adherence to law and the rules of fair play are likewise essential in any industry, but, to paraphrase a great American, it is doubtful if free enterprise and democratic institutions can exist in this Nation, half regulated and half free.

Chicago's Salute to the Railroads

EXTENSION OF REMARKS

OF

HON. MORRIS SHEPPARD

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, November 17 (legislative day of Tuesday, November 16), 1937

ADDRESS OF HON. JESSE H. JONES, CHAIRMAN OF THE RECONSTRUCTION FINANCE CORPORATION, AT THE FIFTH ANNUAL DINNER OF THE ASSOCIATION OF STATE STREET SENIORS OF CHICAGO, CHICAGO, ILL., NOVEMBER 1, 1937

Mr. SHEPPARD. Mr. President, I present for incorporation in the RECORD a speech by Hon. Jesse H. Jones entitled "Chicago's Salute to the Railroads," delivered in Chicago on November 1, 1937.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, Mayor Kelly, ladies, and gentlemen, I am glad of the opportunity to join with the State Street Council in their salute to American railroads. Situated, as it is, in one of the most productive sections of the world and on the southernmost shore of the Great Lakes, Chicago inevitably is a city of destiny. Even in the days of primitive methods of transportation it was a focal point of travel and trade. The large area lying between the Great Lakes and the Rocky Mountains would still be a comparative wilderness, and even beyond these boundaries, had it not been for the railroads.

Notwithstanding its many natural advantages, it was not by accident that Chicago became the largest railroad center in the world, with 107,000 miles of railroads terminating here. Railroads bring into Chicago an average of 150,000 people every day and take out as many. The fastest passenger trains in the world operate in and out of Chicago, and experience has already proven the wisdom of meeting the demand for super high-speed trains. They are profitable. People want to travel fast and comfortably and are willing to pay for such service.

Four hundred and eighty-three passenger trains and approximately 600 freight trains operate in and out of Chicago daily. An average of 36,000 freight cars are handled every day at Chicago. One hundred and twenty-seven railroads have offices in Chicago. Eighty thousand men and women in Chicago are employed by railroads. While many carloads of freight are switched from one railroad to another in Chicago, no passenger car or Pullman passes through Chicago. It is "change cars" at Chicago and visit State Street, the shopping district, "between trains." I imagine the State Street Council had something to do with the arrangement that made Chicago a terminus for passengers—a point of destination.

I would not undertake to say that Chicago built the railroads or that the railroads built Chicago. They grew up together, one as inevitable as the other.

If one name is more associated with Chicago in the minds of the American people than any other, it is Marshall Field. And as State Street is synonymous with Chicago, Marshall Field is synonymous with State Street. It is therefore fitting that in commemorating the centennial of this great American city, the president of Marshall Field & Co., Frederick D. Corley, is chairman of the State Street Council, and presiding here this evening. Mr. McKinsey, chairman of Marshall Field & Co., is also present.

Other familiar names associated with the building of Chicago and the railroads include John T. Pirie, the Mandel brothers, E. J. Lehman, Charles Netcher, C. D. Peacock, John Farwell, Montgomery Ward, Richard W. Sears, Julius Rosenwald, Potter Palmer, Henry Lytton, merchants. Mr. Lytton, who is 91 years young, is present

at the dinner tonight. In the packing industry, Phillip D. Armour, Nelson Morris, Michael Cudahy, and Gustave Swift. Bankers, John J. Mitchell, Lyman Gage (late Secretary of the Treasury), James B. Forgan, George M. Reynolds, and N. W. Harris. In the railroad world, Marvin Hughit, Jim Hill, E. H. Harriman, E. P. Ripley, Stuyvesant Fish, and George M. Pullman.

The first mayor of Chicago was William B. Ogden, in 1837, 100 years ago. He later became president of the Pittsburgh, Fort Wayne & Chicago Railway. Other mayors, in addition to your present mayor, the Honorable Ed Kelly, who will long be remembered, include Long John Wentworth, back in 1857; Roswell Mason, your mayor at the time of the great Chicago fire; and Thomas Hoyne, who followed him in 1875; Carter Harrison, five times elected mayor, first in 1879; and his son, Carter, who also served five terms, beginning in 1897. Carter, Jr., now 78, is collector of internal revenue at Chicago and still going strong.

Chicago, although not incorporated until 1837, was founded in 1803 by two fur traders, John Kinzie and Gurdon Hubbard, and a roving French interpreter, Antoine Wilmette. The first census of Chicago was taken in 1840, and your population was recorded as 4,047.

I am pleased to relate that John Farwell, the merchant, built our State capitol in Texas in the eighties and took payment for it in land at a dollar an acre—3,000,000 acres. Texas had more land than money, and John was a good trader. Our Texas capitol, though not so pretentious, was patterned after our National Capitol at Washington. Its building proved a good investment for Texas and the 3,000,000 acres of land a good investment for Farwell.

Many more names could be appropriately mentioned in connection with building Chicago and the railroads that terminate here, but these are enough to illustrate that progress and accomplishments come through the driving force of manpower.

There have been three distinct eras in the history of our railroads, even though their entire development is embraced within a single century. First there was the period of construction, when they changed the geography of our Nation by pushing our frontiers westward from the Alleghenies to the Pacific, across the Mississippi, the Great Plains, and the Rockies.

They brought settlers who helped turn territories into States and made possible not only the winning of the West but the holding together of a country so vast that even such a wise statesman as Daniel Webster, 90 years ago, considered it impossible for regions so remote as the old Oregon country to become or remain an integral part of the Union.

How suddenly all this was changed by the discovery of gold in California and by the far-sighted patriotism of Abraham Lincoln and others who proved the practicability of the Pacific Railway project, completed in 1869.

For 50 years railroad building proceeded at a rate unparalleled in any country, and as a new enterprise it dominated the financial, industrial, and commercial life of the Nation. The westward movement, which had begun by wagon train and canal boat, was stimulated a hundredfold. New cities sprung up almost overnight; new industries were born, a striking example being the meat-packing industry, of which Chicago is the greatest center in the world.

By about the turn of the century frontiers had been pretty well eliminated and railway mileage completely covered the country. Then came the era of improvement and refinement of our railroads, as well as their practices and methods.

Thousands of miles of line were rebuilt on easier grades and better alinement, so as to carry more economically and expeditiously the constantly increasing burden of travel and traffic. Larger and better trains and locomotives were developed. Double tracks were laid. Signal systems were installed. Heavier rail and ballast provided safer and smoother roadbeds.

In that era railroads practically had a monopoly on transportation, although there was vigorous competition between systems, both in occupying territory and competing for business. This competition was healthy in that it gave us better roads, better equipment, and better service, although in the light of later events it gave us too much mileage.

The roads are now in the third and current era, with a new kind of competition, competition that was not dreamed of when the roads were being built—travel and traffic by the highway, continued expansion of canals, rivers, and waterways, and now the skies.

When we were building our railroads the demand for them seemed limitless, but with new modes and new styles in travel it appears that we have more railroad mileage than we can support. We can improve their service and give them new dresses, but we are not content with that. We must have the new. The fact, however, that we are living in a streamlined age does not mean that we can do without the railroads, or that they should not continue to keep abreast of the times and fight to hold their places. They should not be allowed to deteriorate and we ought not demand service of them that we are not willing to pay for.

Whatever the shipper and the traveler lack in paying the cost of transportation must be paid by the investor in railroad securities or the taxpayer, and they are largely one and the same. Our insurance companies and savings banks, reservoirs of the savings of millions of people, including especially women and children (everyone depending on an insurance policy or who has a savings account), are our largest investors in railroad securities.

The roads were given an emergency increase in certain freight rates for the year 1936. This amounted to approximately $95,000,000 for all the roads, but expired at the end of 1936. The Interstate Commerce Commission recently restored about one-half of this emergency charge. But to get even that small increase required almost a year's consideration by the Commission.

The roads are now asking the Commission for additional revenue in increased rates, both passenger and freight, to cover recent increased costs of operation over which the roads have no control. These are increased wages, increased cost of materials, the cost of social security, and pensions to cover retirement.

The Commission will undoubtedly give proper consideration to this request, but management should not rely too heavily upon increased rates to meet its problems. There is much that management can do by eliminating unnecessary duplication of service.

For example, there are six independent systems maintaining nine tracks to serve the territory between Chicago and the Twin Cities. They operate 24 through passenger trains daily each way, some of them operating at a loss. Two or three of the more direct routes could handle the through business with probably 8 or 10 trains a day each way, adding extra sections when necessary.

Local traffic could be continued by all of the routes, but with fewer and less expensive trains, still serving every locality.

There are four roads with eight tracks between Chicago and Milwaukee, and five between Houston and the Dallas territory in my home State. Similar situations exist all over the country and they include freight as well as passenger service. In respect of freight, some roads run squarely into Government subsidized water competition. This should be taken into account in fixing rates.

Undoubtedly we have as good and as capable men operating our railroads as are to be found in any other industry, and they are not overpaid. But I sometimes wonder if railroad management had to find their own salaries through economical management, were freed of banker domination, and could not seek the shelter of the courts in lean years, if they would not bring about many savings that are possible under laws and regulations now governing their operations.

Notwithstanding that Congress is slow in enacting railroad legislation and that the Interstate Commerce Commission may be none too fast in adjusting rates to suit changed conditions, and that taxes and other costs are continually on the increase, management could help a great deal by eliminating unnecessary and uneconomical duplication of service. This would involve somewhat less labor, but labor has a dismissal wage contract with all class I railroads upon which to rely under such circumstances. One of the principal purposes of this contract was to permit operating economies by consolidations or coordinations and to afford protection to labor for loss of employment. It provides that the displaced employee shall be paid certain sums based on his length of service and past earning power. These payments can amount to more than a year's earnings if paid in a lump sum, or at the employee's choice, a somewhat greater total amount if taken in monthly installments over a period of 3 years. Coordination of operation of railroads throughout the country would undoubtedly result in substantial savings.

Holders of railroad securities cannot expect the Government to insure their investments any more than the Government insures the investments in other private enterprise, but with Government regulation as to service, charges, responsibility, working conditions, et cetera, Government should protect the roads against unfair and irresponsible highway traffic and Government-subsidized water rates, and should not permit unnecessary and uneconomical duplication of service between the roads.

The driver of a locomotive is only allowed to run so many miles a day. The driver of a truck that is not a common carrier, and the majority in operation are not common carriers, may be at the wheel as long and as often as he wishes, regardless of the danger to the life and property of others on the highway, and there is nothing to require that his employer pay him a wage commensurate with intelligent and efficient service. Nor is there any regulation as to rates or adequate requirement for responsibility. Incidentally, it would require 750 average-sized trucks to carry as much coal as a 75-car freight train. It is bad enough to have to wait at a railroad crossing for a freight train to pass, but imagine trying to get by 750 trucks on the highway.

We must have all forms of transportation and every method should be perfected to insure safety of life and property and to give prompt and efficient service at the lowest possible cost, but there should be no disparity of treatment as between the various methods of transportation either by the Government or the public.

If we build and maintain highways for the use of trucks and busses that operate as public carriers, we should take this into account in the treatment of our whole transportation problem.

We should be as exacting of highway transportation in each category, including rates, responsibility, and working conditions, as we are of the railroads.

Impoverished railroads mean less spending for labor and materials, and this adversely affects the national prosperity. Yat we must be careful not to get rates so high that the consumer suffers. It is not an easy problem we are confronted with, though a perfectly practical one, and entirely possible of solution. I feel sure if the railroads are allowed to earn sufficient to enable them to borrow the money, they would spend a billion dollars for rehabilitation, equipment, additions, and improvements in 1938, and without sufficient earnings to bolster their credit this expenditure will probably not be more than half that amount.

The greater part of railroad capitalization is borrowed money, and every $5 net income available for interest enables the expenditure of $100 for labor and materials. I know of no other situation in our economic structure where the net earned dollar is multiplied 20 times in the volume of business thus created.

We know that when railroads earn money they spend it, and this makes for better business and better conditions. It furnishes employment and gives the farmer a better market for his produce. Paying interest and dividends on inflated railroad capital need no longer be feared. The water has all been squeezed out.

I referred a while ago to our excellent passenger service, but probably of greater importance is the fact that freight trains are now operating upon schedules faster and more dependable than passenger trains were operated a few years ago. This makes unnecessary the carrying of large stocks of every character. Purchasers in almost every line are now able to buy for scheduled delivery and rely upon it.

In the past 5 years it has been my business to get acquainted with the railroads, and I never travel but that I marvel at the perfection and dependability of the service. I can leave Washington at 5 in the afternoon, spend the entire next business day in Chicago, and arrive at San Francisco or Los Angeles with but 1 business day lost. This is possible only because of the intelligence, integrity, and devotion to duty of thousands of men in overalls, not only those who operate the trains but those who build them and who maintain the track and equipment and who operate the intricate signal systems. The failure of any one of these factors would disarrange engagements and cause the loss of life and property. It is little short of amazing that of the hundreds of millions of train passengers carried each year, practically no lives are lost.

Railroad employees are high-class men and devoted to their calling, whether in the cab, the caboose, at the brakes, in the president's office, or any other branch of the service. And while in large measure the men in the ranks make their own rules for service, and demand good wages, they give value received, and keep their agreements. Their demands may sometimes seem inopportune, but by and large very little fault can be found with what we term "railroad labor."

You may be interested to know the Reconstruction Finance Corporation was created in large measure because of railroads. Beginning with 1929 they were forced to lay off men and stop buying supplies to such an extent as to be an important factor in bringing on the depression. They had used up their cash and available credit, and the bankers could no longer accommodate them. Between 1929 and 1933 the gross income of railroads was cut in half, and it is to the credit of railroad management that they were able to reduce operating expenses 47 percent, almost in equal proportion to the loss in gross. This is a creditable record in meeting a very serious situation—making a landing from great height when the gas gave out, with only slight damage to the machine and very few casualties.

Banks, business, industry, agriculture, and livestock, all were equally sick and needed Government help, but the railroads were prominent in the discussions before Congress that led up to the creation of the Reconstruction Finance Corporation.

Yet of the $12,000,000,000 R. F. C.-Government credit by authority and direction of Congress, only $1,070,000,000 has been allocated to the railroads, less than 10 percent. Of this amount, $276,000,000 was not used, and, agreeable to the applicants, the loan authorizations have been canceled. We have actually disbursed $733,000,000, including $196,000,000 for purchase of railroad securities from P. W. A. We still have commitments to railroads aggregating $61,000,000, which will be disbursed if needed. We have collected $331,000,000 on railroad loans, leaving a balance outstanding of $402,000,000. Of all R. F. C. disbursements for loans and bank stock investments, almost three-fourths has already been repaid and without any pressure. We will have no ultimate net loss on the balance. What few individual losses we have will be more than offset by net earnings from interest over expenses and interest we pay for the money we borrow to lend.

We have made loans to 79 railroads and receivers of railroads, 32 of which roads have paid us back in full. We have loans to 22 railroads aggregating $163,000,000 that are in the hands of the court. I am glad to say there are very few railroad debts maturing within the next year. I refer to the whole railroad situation and not to R. F. C. loans; but unless income available for fixed charges can soon be substantially increased many roads will be operating on short rations and some of them in serious difficulty.

While holding no particular brief for the railroads except as they affect the whole national economic structure, I believe the problem may best be solved by coordination of operation of roads occupying the same general section. Many actual consolidations should be made, being careful always to preserve competition between principal industrial centers and agricultural sections.

West of the Mississippi we might have, say, five systems, two occupying the Northwest and middle Northwest, two the West and Southwest, and one the central section. East of the Mississippi two systems could occupy the South and Southeast and two or possibly three the territory between St. Louis, Chicago, and the East, including New England, again being careful to preserve active competition between the systems occupying a given territory.

In the past we as a Nation have encouraged competitive railroad lines, but new conditions confront us, and many of the roads are in a bad way. Many cannot survive without higher rates than the consumer can pay. Furthermore, when rates are too high the traffic is not forthcoming. While the railroads still handle a great majority of all freight, other forms of transportation are taking enough business to threaten the stability of the industry if we continue to operate all of the mileage on a highly competitive basis. Railroads maintained at their highest possible efficiency are essential to the general welfare.

The question comes up, therefore, in a desire to avoid Government ownership, as to whether railroads should not be considered more as monopolies, such as the telephone and the telegraph, but subject to strict Government regulation both as to service and charges, maintaining regulated competition between the several groups.

It would seem that if our genius can make railroad travel safe at 120 miles an hour, travel by air at more than double this speed, navigate the seas beneath the surface, and carry the voice around the world in an instant, that those of us in business should be able to solve these purely practical problems.

Just a word about business conditions. There has been entirely too much attention paid in recent weeks to the gyrations of the stock market. I have no information as to what percentage of our people owns stocks that are listed on the exchanges and traded in daily, but it is not large. I repeat here a statement I made in a recent address before the oil industry at Houston: "Whatever the cause, we should all realize that it is better to make money by working for it than by betting on the rising and falling figures of the ticker tape or which horse can run the fastest."

The legitimate income of the average working man or woman, regardless of station, is not affected by whether stocks go up or down; it is, or should be, the dividends that he is interested in, if interested at all, and earned dividends are not being withheld. Extreme fluctuations do, however, create a psychological influence in the mind of the average person because he does not understand the reasons for them. In that way they may prevent normal spending.

Our country has seldom been more prosperous than it is now. We have abundant crops of all kinds and prices are fair. They could be better, but they have been much worse. Certainly there are no clouds on the horizon that could adversely affect the average American citizen unless it be foreign wars, and that possibility is remote insofar as our becoming involved in them.

Address by the President at Cheyenne, Wyo.

EXTENSION OF REMARKS

OF

HON. H. H. SCHWARTZ

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Wednesday, November 17 (legislative day of Tuesday, November 16), 1937

INFORMAL, EXTEMPORANEOUS REMARKS OF THE PRESIDENT AT CHEYENNE, WYO., SEPTEMBER 24, 1937

Mr. SCHWARTZ. Mr. President, President Roosevelt recently in Cheyenne, Wyo., delivered an address dealing with national problems. In order that it may receive wider distribution, I ask that it may be incorporated in the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Some people wonder why I am here. Last January a good friend of mine came to me and said, "Why, during the next 4 years, don't you take it easy? Why don't you coast? You climbed up a long, steep grade over the past 4 years and now, during the next 4 years you might as well have a good time."

I said to him that I was going to continue during these 4 years the practice of the last 4 years and that, incidentally, in so doing I would have a good time.

I don't want to coast and the Nation doesn't want me to coast with my feet up on the front wheels.

I have thought that it was part of the duty of the Presidency to keep in touch, personal touch, with the Nation. And so, this year, since January, I have already made one trip through a number of the Southern States on my way back from catching some fish and now I am going out to the coast for the third time since I have been President—not counting campaign trips—going out to take a "look-see"—to try to tie together in my own mind the problems of the Nation in order that I may, at first hand, know as much about the questions that affect all the 48 States as possible.

As you know, the greater part of the emergency is over—not all of it because there are still a great many difficult problems and I want to talk to you, very briefly, about some of the things that the National Government has done and is doing.

For example, during the past 3 or 4 years we have spent in every part of the country a great deal of Federal money in putting people to work. That was the primary objective, but at the same time we have tried our utmost to accomplish useful things and there is not a State—there are very few communities in the whole Nation that have not benefited by these Federal expenditures, not in a temporary way but in a permanent way.

I was thinking this morning of the question of airports and I don't know whether it is thoroughly realized by you here on one of the stations on one of the main transcontinental air lines that the Federal Government has assisted in the building, not of several dozen new airports in the country, not of several hundred, but of many thousands, with the result today that the United States is checkerboarded with airports in every State. That is an accomplishment of the past 3 or 4 years.

In the same way, not dozens or hundreds but thousands of schools have been built or renovated with a combination of State, local, and Federal funds.

We have to come some day to an end of the greater part of that program, and just the other day, in Washington, we allocated the last of the Federal money for Public Works projects. This consisted of more schools, more sewer systems, more waterworks, and things of that kind where there was a very clear need for replacement or where the States or the localities had already voted the funds.

I will tell you one amusing story of the allocation for school projects. Congress told me to confine them to those schools where the schools had been burned down or where a new school had to be built to replace a building that was about to tumble down. There came a project from one of the Southern States for the building of a new school building and a new library. The school building was to replace one that was about to fall down and we granted that project. But in the case of the library they apparently did not have a library and it was therefore not a replacement project. With great regret, we rejected the application.

The head of the school came to Washington to see me. I told him how sorry I was that we could not spend Federal funds for new buildings, no matter how much they were needed, unless they were to replace one that had burned or tumbled down; and he said, "But, Mr. President, our library did burn down." I said, "That's funny, because there is nothing said about that in the application. When was it burned down?" And he replied, "Mr. President, our library was burned in 1864 by General Sherman."

On this trip I am looking at many types of projects. I am always eager, when I come West, to get more people out of the East to come West and see things with their own eyes.

The other day I read in a big newspaper of the Middle West an editorial which took as its text the fact that one of the W. P. A. dams in Kansas had in part been washed out. It meant undoubtedly the loss of a good deal of money; and the editorial pointed out that this was the way the Federal Government was wasting its funds.

Well, I believe that engineers are human, just like I am, and that they do not make a home run every time they come to the bat.

But the editorial went on, taking that dam as a text and pointed out from their point of view, which I do not believe is the point of view of the Nation, that in the construction of great dams by the Federal Government we are creating millions of kilowatts of power which will never be used by the people.

I think that you and I and most people realize that when you do create power the public finds some useful way to use it.

In the same way they went on to say that all of these reclamation projects mean a pure waste of money, that to build a project like Casper-Alcova or Grand Coulee we would make available unnecessary farm lands, and that there are enough good farms in the United States to take care of all the people who need them for 50 years to come.

You and I know that that is not so. You, here on this great central highway, know of the number of people—families—who have had to leave their homes on their farms in the drought area, some of them from the eastern part of this State, from the Dakotas, Nebraska, Kansas, Oklahoma, Texas, people who could not make a go of it on the poor land—families forced to leave their homes to avoid starvation. Those people have come farther west, looking for a chance to earn their livelihood, looking for good land and not being able to find it.

So, in the same way, there are thousands of families in the East who are unable to make good on the land they are tilling now for very obvious reasons. It is land that ought not to be under the plow. So, for all those families I believe that it is the duty of the Federal Government and the State governments to provide them with land where it is possible to do it, where they can make a living.

I could go on talking about W. P. A. and P. W. A. and soil erosion and the C. C. C. camps. As a matter of fact, they have all served a useful purpose. It is a better country for having spent for a few years more than we were taking in in taxes; but don't let anybody deceive you—the Government of the United States is not going broke.

So here I am, trying in this short trip—for it must be short—to get a cross-section point of view, the point of view especially of the rank and file of the American people in this western country. Yes; it is part of the duty of the Presidency to represent, insofar as possible, all the people; not just Democrats, but Republicans and others as well; not just rich people, but poor people as well. And I have been trying very simply to do the most good for the greatest number.

Out here in the cattle country and the sugar-beet country, of course, I am interested in the prosperity of the raisers of cattle and the growers of beets.

Perhaps somewhere down in my heart I am a little bit more interested in the 10 men who have a hundred head of cattle apiece than I am in the 1 man who has a thousand head of cattle. And perhaps I am a little more interested in the 10 men who have a hundred acres of beets than I am in the 1 man who has a thousand acres of beets.

It seems to me that is one of the orders—one of the necessary things that goes with the Presidency.

In these next few years—4 years, 8 years, 12 years, 20 years—I am very firmly convinced that the people of the Nation will have, more and more, a national point of view.

You people out here realize far better than you did 4 years ago that your prosperity is tied up very intimately with the prosperity of the cotton growers of the South and with that of the industrial workers of the East. And in the same way those people in the great factories of the East and Middle West and on the cotton farms of the South, in the Corn Belt, and in the Wheat Belt know that their prosperity is affected by your prosperity out here.

That, I believe, will be written in history as the great accomplishment of these years that we are living in now—the welding together of the people of the United States.

So, my friends, I am glad to have been able to come out here on this annual trip, and I hope and expect to come out again during the next 3 years.

Budget Balancing

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, November 17 (legislative day of Tuesday, November 16), 1937

EDITORIAL FROM PHILADELPHIA RECORD

Mr. GUFFEY. Mr. President, I ask permission to have inserted in the RECORD an editorial entitled "Budget Balancing—Dangerous Demagogy," published in this morning's Philadelphia Record. I hope every Member of the Senate will find time to read it.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Philadelphia Record of November 17, 1937]

BUDGET BALANCING—DANGEROUS DEMAGOGY

"Why balance the Budget now?"

Ask Mr. Conservative that question and he will look at you as though you were beneath contempt. Press him for an answer and he will tell you:

That it is obvious no one can go on spending money forever and never pay it back.

That the more money you borrow today the more you have to pay back tomorrow with high taxes and danger of disastrous inflation.

That if we let the national debt grow any larger we will destroy national credit.

Let's analyze Mr. Conservative's answers.

Granted that no one can go on spending money forever without paying it back.

But most businesses have been built up by going in debt.

There is a time when it is wise to go into debt as well as a time when it is wise to pay off that debt. And that applies to Government as well as to private business. Our question was not why balance the Budget at some future time, but why balance it now.

As to Mr. Conservative's second answer that the more money you borrow the more you have to pay back with high taxes and danger of disastrous inflation.

Granted that whatever the Nation borrows it must pay back. But it doesn't follow that the more the Government borrows the higher the taxes.

Taxes take a percentage of national income. The higher the national income the less the percentage of that income required to finance the Government.

The net national debt at the beginning of the Roosevelt administration, June 30, 1933, was nineteen and one-half billion dollars, as against a national income of less than forty billion. The debt was almost 50 percent of national income.

The net national debt on June 30, 1937, was twenty-seven and one-half billion dollars, as against a national income of sixty-five billion, 42 percent of national income.

The more the Government borrows and spends, the more credit is available for further borrowing and the lower interest rates fall, unless artificially maintained by credit restriction, such as increasing reserve requirements and sterilizing gold.

Increase of the national debt which increases national income and lowers interest rates will lower taxes instead of increasing them.

So that part of Mr. Conservative's reasoning is wrong.

But we haven't answered Mr. Conservative's fear of dangerous inflation.

Inflation is creation of more money, cash or credit, than the Nation needs to transact its business. Using the sovereign power to create too much money makes money cheap in the double sense of low interest rates and low purchasing power. If the Government goes too far in diluting the supply of dollars, possessors of dollars become panicky, trade dollars for commodities at ever-mounting prices in the ascending spiral of such an inflation as destroyed the monetary system of Germany after the war.

Mr. Conservative is afraid that increasing the national debt will cause a similar inflation. Let's see whether his fear is justified.

Size of the debt must be considered in relation to public business.

If the proportion of the national debt to the national income remains constant, there is no inflation and there is no danger of inflation.

The price index—that is, the average prices of all commodities as calculated by the Federal Department of Labor—is controlled by three factors: Quantity of money (cash and credit) times its velocity, divided by volume of trade. If we increase the volume of money and its velocity (rate of changing hands) without increasing the trade of the Nation, we have inflation. But if the trade of the Nation increases in proportion to the volume of money and its velocity the price index remains constant.

During the last 5 years volume of trade has increased faster than volume of credit.

We have not increased our supply of money as fast as we have increased the work the money has to do.

Now as to Mr. Conservative's contention that if we let the national debt grow any larger we will destroy national credit.

Debt is a relative quantity and must be considered in relation to the wealth and income of the debtor.

The present debt of the United States is a huge sum, but it must be considered in relation to a huge nation. Compared with the debts of Great Britain and France it is very small. We have less than half the per capita debt of Great Britain.

In proportion to national income the comparison with England and France is even more striking. Our net national debt is less than half of our present national income. England's national debt of thirty-five billion is 178 percent of her national income of twenty billion. France's national debt of twenty-two billion is nearly double her national income.

The debt of the United States Government would be $100,000,000,000 if it were as large per capita as that of Great Britain.

The debt of the United States Government would be $115,000,000,000 if it were as large in proportion to our national income as that of Great Britain.

The present Federal debt is so far from the danger point that it is the worst sort or demagogy to frighten business with this false bugaboo.

As long as national income is mounting faster than national debt, we are spending money wisely. There is no danger of national bankruptcy or ruinous inflation.

But if we stop spending money before we have achieved a stable self-sustaining recovery, if national business drops off before we have had an opportunity to reduce indebtedness, then, indeed, this Nation is in danger. We are in the position of the man who borrows $10,000 to develop a paying business and then stops the development before the business is profitable. He is left with a debt of $10,000 and no business.

If we had gone into the World War with the declaration that no matter what the situation we were resolved to withdraw from the war when the national debt reached $25,000,000,000, the Allies would have lost the war and Germany today would be ruling the world.

We went into that war resolved to spend whatever was necessary to win.

We must press for economic recovery with the same high courage and resolution.

If everything that Mr. Conservative said were true, it would still be wrong to balance the Budget now. It happens that he is not right in an economic sense or any other sense.

A wise government, like a wise businessman, knows when to spend, when to save.

The Unnecessary Special Session

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 17, 1937

RADIO ADDRESS BY HON. WILLIAM P. LAMBERTSON, OF KANSAS, ON OCTOBER 17, 1937

Mr. CARLSON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address delivered over the radio on October 17, 1937, by my colleague from Kansas [Mr. LAMBERTSON].

The President has called Congress in special session for the 15th of November. To my mind it is unnecessary. Three major things are hinted at and two others alluded to for consideration. Five things for 5 weeks. Three are of major importance. The farm bill carries a scintilla of emergency; all the others not the least in the world.

A special session is expensive, but the object of saving is not in our machinery today. It is my opinion that the President is more interested in passing the wage and hour bill and the reorganization bill for the executive departments than any other thing, and that by calling the special session he dramatizes the situation, giving the appearance of emergency to these two bills, helping his position to pass them, which is going to be difficult, and crowding them into such a short legislative period so that they will not be considered in the usual legislative way but "gag ruled" through to passage.

The President, in his recent fireside talk, made it appear as if the special session had come out of his contact with the grass roots on recent trips. Through recent disclosures we know that he planned to call this special session before he ever started the trip.

The President of the United States is my President. I have been accused of being unduly friendly for a minority Member, so grant me about as much right to criticize him as the average man. I criticized his predecessor when, in my opinion, he was wrong, particularly on the passage of the Hawley-Smoot tariff bill, and never admired President Hoover so much after he wrung his hands like Pontius Pilate and let that bill go through.

President Roosevelt, aside from being the President of all the people, is the head of his party. I am criticizing him today as the politician, and I don't mean that in any insinuating sense, because all of us who are active in public life are politicians. The President is the most masterful politician that has been produced in many years. He is the most determined, refusing to take defeat or admit defeat. He holds a grudge against the Supreme Court for throwing out the A. A. A. and the N. R. A. He is determined to pass them both again under a slightly revamped Supreme Court and at the same time arrogate to himself more power in the Executive Department. He plans to jam these three things through the special session without the usual consideration. In his first inaugural he quoted Theodore Roosevelt about being content to bat 75 percent. Franklin hasn't admitted yet in 4½ years that he has fanned or even fouled the ball.

I am going to oppose his new N. R. A. and the reorganization bill because they are little dictatorships, and also may oppose the farm bill if it is not what the farmers of the country want. I am primarily now, as 10 years ago, interested in agriculture. There are three psychologies opposed to curtailment of production at this time: First, we have had about 5 years of drought. The elements have curtailed to an unprecedented degree. We are all anxious to raise something again with a degree of abundance. Second, we don't like the agricultural importations which have increased so rapidly under this administration in reciprocal-trade agreements. It is not consistent with curtailing surpluses that we permit increased importations. And, third, we oppose the tremendous expansion of irrigation projects in the West, which add to the surplus. In spite of the President's explanation the other night, these products go into the same channels and markets as our products.

I was amazed on a recent visit to Fort Collins and that great irrigated area to see that most of the land was raising wheat. Don't tell me for one minute that the billions we are obligated to spend in the valleys of the Rocky Mountains and the others of the West are not intended to raise crops to be sold on the market. A protected market is important to agriculture and cheap interest rates, rates like other industries are able to borrow on from the Government. What sympathy was the President giving the hard-pressed, drought-ridden, and grasshopper-eaten mortgagor last summer when he vetoed the bill to extend cheap interest rates, and we had to pass it over his objection? What was he thinking of then, pray tell me? He said we were taking money out of the Treasury. His only other economy of the last session was his objection to spending fourteen million for vocational education in the rural high schools of the country while he approved hundreds of millions that were being poured into rat holes. The President, on his western trip, had respectable ovations at every stop, but every stop was where the Government had spent a wad of money, and why shouldn't they give him ovations? Even on the river front in St. Louis they might have met him with a dozen bands, where he initiated and obligated us to a thirty million dollar expenditure for a second Thomas Jefferson memorial.

Now let us go back to his two major objectives of the special session—the wage and hour bill which Justice Black rushed through the Senate and for which he immediately got his reward. It gives five men, appointed by the President, the power to fix minimum wages. It gives them the power to vary them in every State in the Union. They don't have to be uniform. That is the power to fix wages. That means control of industries by the President of the United States. If some tragedy would happen to the President and Jack Garner would become President tomorrow, this bill would die in a minute because its promoters wouldn't accept Jack Garner's board. Legislation shouldn't be built around one man. You remember the old N. R. A. had a nine-to-nothing decision against it. It wasn't a five to four.

Then in the reorganization no reductions are planned. There will be a superorganization over all of these, which creates a lot of jobs. There will be no curtailment but there will be a concentration of power. For instance, the General Accounting Office, which was created as a direct agent of Congress, under the new bill comes under the President's wing. The Interstate Commerce Commission, and others like the Civil Service Commission who have had an independent and honorable status, sacrifice it to be coordinated under the President. The President spoke about the importance of the reorganization bill intimating saving. Then in the next breath he advocates the wage and hour bill which calls for a complete new set-up numbering into the thousands. I am against any administration reorganizing the Government for economy which hasn't practiced it and which has averaged a new commission every week for 4½ years.

At the present time, the farm bill is tearing apart the best minds of the soil. The Wallace bill, which the Farm Bureau is sponsoring, is opposed by the Grange and the Farmers' Union.

They had to go down to the fifth place on the majority side of the Agricultural Committee of the House to find a man who would introduce it in the last session. We want to do all for agriculture we can, but we are terribly divided right now on a permanent program. Yet in 5 weeks we are to settle it, with these two other big propositions that I have just spoken of. If the President of the United States can force all three of these things to a conclusion before Christmas he is more powerful than I have ever given him credit for being. He is a real dictator if he can do this. Why, it took 6 months for one House to dispose of his court proposal. Yet he expects two Houses and three joint-conference committees to dispose of these three outstanding measures in 5 weeks.

A great deal has been said lately about intolerance in connection with Justice Black and the Klan. Only this week I heard a national farm leader say that CLIFFORD HOPE had thrown the farmers down by not being willing to sponsor, even as a minority committee member, a certain farm bill. We Kansans resent this. HOPE'S fine intelligence, wonderful industry, and devotion to the cause of agriculture is the object of much comment throughout the Nation. This speaker referred to us Members of Congress as politicians several times. Then in the next breath he urged his organization to be militant, saying that they could be more effective by being active in politics.

Let me recapitulate by saying that your Representative has stood by President Hoover when he thought he was right and opposed him when he thought he was wrong; he has stood by President Roosevelt when he thought he was right and opposed him when he thought he was wrong. The three outstanding proposals he has had since the last election—the one on the Court, this one on the wage and hour bill, and the reorganization are all dictatorial and should not be passed. Senator BARKLEY says that they will all be passed before Christmas, but I don't believe it.

In conclusion let me again say that the main object of the special session is to pass this second N. R. A. and the regrouping bill, both dictatorships, and to run them through a very short session by dramatizing them as emergencies. With Kipling let us pray "Lord God of hosts be with us yet."

Should the Antitrust Laws Be Revised?

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 17, 1937

ADDRESS BY HON. ROBERT H. JACKSON, ASSISTANT ATTORNEY GENERAL, SEPTEMBER 17, 1937

Mr. PATMAN. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address delivered by Robert H. Jackson, Assistant Attorney General of the United States, before the Trade and Commerce Bar Association and Trade Association Executives in New York City, Hotel Astor, September 17, 1937:

For 40 years the United States has had a statute that appears to condemn every combination which restrains trade. Its general language might include almost any combination, trade association, or industry. But we have court decisions which make possible a plausible legal defense of almost any combination in restraint of trade. What business conduct the resulting law will really reach has become our major governmental mystery.

As a result of this confusion we are faced with the following inescapable facts:

1. The Department of Justice has no satisfactory standards by which cases can be selected for prosecution or by which the success of any given prosecution may be predicted with assurance.

2. Business enterprise has no safe standards by which it may determine in advance the validity of concerted action, even when the principal purpose is to eliminate waste or reduce costs of production or distribution.

3. The administrative arm of the Government is unable to give commitments as to any combination because the confusion of precedents and policy is such that a position taken in one case may prove an embarrassment in others.

The sum of these three facts is that there is no stated or intelligible policy which differentiates pursuit of industrial efficiency from industrial empire building.

Every antitrust problem is economic as well as legal. Economic questions are not well investigated or settled in adversary combat, conducted under technical rules and evidentiary limitations. A bitterly contested case drags a delirious course from court to court, and is seldom completed within the administration that begins it. The appropriations for enforcement will not sustain more than a half dozen contested suits, and is utterly inadequate to the task of policing our national economy.

I have no interest in "trust busting" for the sheer joy of "trust busting" or in legal assaults on combinations which have economic necessity on their side. We should not spend great sums to obtain decrees which are economically unenforceable and, when carried out in form, are often only lessons in futility. Antitrust suits provide spectacular legal battles and "famous victories." But this exercise for legal theoreticians often fails to produce any discernible economic effect.

I do not belittle the importance of present or past efforts to enforce the law through antitrust suits. Though they have failed to break up price-controlling organizations or to check the continuing concentration of wealth and of industrial control they have doubtless saved us many evils that would have accompanied completely unsupervised organizations. They have furnished, although obscurely, standards of conduct and business practices which have improved business ethics during the process of centralization of American industry. They have saved us from the cartel system of Europe.

I am interested in the establishment of a consistent national policy of monopoly control, intelligible both to those expected to comply with it and those expected to enforce it. Destruction of monopoly has been a high-sounding generality advocated by both political parties in nearly every campaign, but never with a too-troublesome definiteness. "To be grandly vague," writes Herman Finer, "is the shortest route to power, for a meaningless noise is that which divides us least." For 40 years administrations have alternated between a policy of being aggressively vague and passively vague, until an attempt to reduce business practice and controls to definite and intelligible codes was made under the National Industrial Recovery Act. Apart from any other value or defect of that plan, the brief experience with cooperative instead of competitive effort in industry should contribute richly in standards by which to weigh all future plans for social control of industry.

ANTITRUST POLICY AND ITS ALTERNATIVE

The basic philosophy and object of the antitrust laws and the probable alternative if they fail are too little understood.

The antitrust laws represent an effort to avoid detailed Government regulation of business by keeping competition in control of prices. It was hoped to save government from the conflicts and accumulation of grievances which continuous price control would produce and let it confine its responsibility to seeing that a true competitive economy functions.

But it is a mistake to believe that they represent a philosophy of unconcern or indifference about our economic life. They assert, on the contrary, a definite economic plan, a sovereignty of public over private interest in business, and an affirmative control over our economic life to provide conditions under which competition will function effectively.

To this end, though we know competition to be ruthless and at times a wasteful regulator, each competitor is protected and fostered, even if he be a "chiseler," an underseller, and a hair shirt to his industry.

Also, since there can be no effective competition except between rivals with some equality of strength and resource, and since many sources of supply are best assurance of competition, the law aims to prevent concentration of wealth and centralization of industrial, financial, or trade control, as well as complete monopoly.

This competitive system between business groups, free and uncentralized, reduces the responsibility of the Government to keeping the channels of competition unobstructed. This is the lowest degree of Government control that business can expect.

The question we face today is whether we can keep that kind of economy or whether we will be forced by its break-down to other and more drastic regulation.

American business must make up its mind whether it favors the regulation by competition contemplated by our antitrust laws or the only probable alternative—Government control. Every step to weaken antitrust laws or to suspend them in any field, or to permit price fixing, is a certain, even if unknowing, step to Government control.

Many leaders of conservative thought recognize that American business is faced with this alternative.

In April, commenting on the fact that the Aluminum Co. suit not only puts the company on trial for monopoly but also puts the existing antitrust laws on trial, Mr. Walter Lippmann said:

"The restoration of competition is the only possible alternative to socialism, and it would be useless, as well as hypocritical, for anyone to object to the collectivism of the New Deal and yet to cry out that an unmistakable economic monopoly should be tolerated by the law. * * *

"Moreover, if private big business collectivism is to be tolerated in the basic manufacturing industries, then all other producers, farmers, secondary manufacturers, and workers in other industries are compelled to organize socialistically to protect themselves against such monopolies."

Let us now turn to certain symptoms of the failure or inadequacy of the present antitrust laws.

DECLINE OF COMPETITION

Economists recognize a decline of competition and express anxiety as to its meaning.

The statistics show the disappearance of large numbers of industrial units. An era of bankruptcy has followed an era of merger and consolidation, and only a relatively small number of industrial units and sources of supply have survived. Competition among them is often moderated by financial controls, interlocking directorates, or by patent controls basing-point practices, or price leadership, or dominance in an industry. The probability of new units is greatly reduced by the constantly increasing investment

necessary to secure the benefits of mass production, and by the high cost of cultivating a national market.

The sharpest illustration of lessened competition is the experience of the Government as a buyer. It should be the last to feel a decline of competition. Not only do laws protect the existence of competition among sellers but the Government is also required by law to purchase only on the basis of competitive bids. A rather ponderous machinery is set up for the handling of sealed offers—an official call for bids, great secrecy of the sealed envelopes placed in a strong box in a department safe as they are received, a tense moment on the announced day when the bids are made public—and then a fizzle. I can bring the matter home to you best by specific examples from among many available.

The Denver office of the Bureau of Reclamation opened 17 bids for reinforcement bars, 14 of which were identical to the last penny, namely, $1,144.16. The United States engineers at Los Angeles opened 12 bids for reinforcement bars and 11 of them were identical—$194,051.89. The purchasing agent for the Fort Peck Dam opened 10 bids on reinforcement bars and each one of the 10 was $253,633.80. In February 1936, 16 companies each bid $3,483.50 on a steel-sheet order, and in June 15 companies each bid exactly the same figure again for a similar order. Steel-plate bids present a similar record. In steel pipe the prize situation appeared when 59 bids were opened by the Navy Department and each of the 59 companies bid $16,001.83.

In Government purchase of explosives about 425 bids were opened during 1935 and the first half of 1936, and the great majority were identical. Bids on cement follow the same pattern. In one instance 40 companies each bid exactly $7,148.60. On another contract 43 bids were identical. The same situation has occurred with products of nearly all metal, paper, rubber, meat, wood, batteries, explosives, cement, machinery, office supplies, chemical and medical supplies, and all plumbing supplies.

I am not now passing judgment as to whether these bids are the result of a punishable conspiracy. But they certainly were not the result of identical costs of manufacture, nor of independent estimates. They are the product of artificial marketing machinery. Our antitrust laws are often interpreted to prohibit methods rather than results. What may be illegal if accomplished in one way is held to be legal if accomplished in another.

No matter whether the private business controls and arrangements which produce identical bidding be what the courts have heretofore called legal or illegal, the effect is to compel purchases to pay a price based on calculation, not on competition. Whatever the effect of this on private buyers, it completely destroys the mechanism set up by Federal, State, and municipal governments to keep favoritism and corruption out of public buying. And it provides dramatic evidence that price competition in many industries is under mathematical control to the fraction of a cent.

CONTROLLED PRICES AND PRICE DISPARITIES

This ability of some industries to control or peg their prices, while others fluctuate, results in a disastrous price disparity.

During the depression, prices of some commodities remained relatively stationary and rigid, while certain others were flexible and moved up and down with the ebb and flow of business activity. For example, prices received by the farmer during the depression showed the greatest sensitivity and fell, as a whole, about 57 percent, and grains about 64 percent, while agricultural implements declined less than 17 percent as a maximum, and for most of the years the decline was only 5 percent or 6 percent, using the 1926 price level as 100 percent in each instance.

These figures may give the impression that we merely have a contrast between the prices of agricultural products and of manufactures. However, highly competitive textiles, such as cotton goods, compared with the average for 1926, went off 50 percent, knit goods 53 percent, silk and rayons about 75 percent, while less competitive metal and metal products reached 23 percent as a maximum and the decline for most of the period was less than 15 percent.

The conviction grows that the difference between the rigid price in some lines and the sensitive price in others is largely influenced by the private economic planning done by those who object most vigorously to the Nation's engaging in public economic planning.

PRICE CONTROL DOES NOT STABILIZE PRODUCTION OR EMPLOYMENT

If rigid prices meant stability of employment in the industry, we would find price control more tolerable. But generally the more rigid and inflexible the price of a product during the depression the more calamitous was the decline in its labor's pay roll. In some industries pay rolls almost vanished, although prices of the product were little affected. According to the Bureau of Labor Statistics, pay rolls for the iron and steel industries declined about 75 percent while the wholesale price of ingots declined only 16 percent. The depression prices of cast-iron pipe declined 7 percent and pay rolls declined 74 percent. While agricultural implements declined 14 percent in price, that industry's pay rolls took the prize decline of 83 percent. Virgin aluminum went down 21 percent in price and pay rolls of aluminum manufacturers declined about 70 percent. Cement declined 13 percent and its pay rolls 72 percent.

There seems to be something the matter with conditions which yield these percentages. This is confirmed by reference to the price and pay-roll percentages for more competitive industries. Prices on woolen and worsted goods declined 34 percent and the pay rolls about 51 percent. Cotton goods showed a decline of 43 percent and less than 51 percent in pay rolls. Knit goods declined 42 percent in price and 42 percent in pay rolls. Leather showed a decline of 44 percent in price and 42 percent in pay rolls.

Of course, there are factors influential in producing these percentages other than the factor of monopoly or price control. But the correspondence between rigid prices and low pay rolls is so general as to surpass the probabilities of coincidence. The kind of "industrial stability" which means the ability to avoid price concessions does not promote, even if it does not injure, stability of employment or wage levels.

ECONOMIC CONCENTRATION

The concentration of ownership and control of industry is fatal to the operation of competitive economy. Concentration destroys the sources and possibilities of competition, and the antitrust statutes attempt to check it, but the courts, blind to this purpose, have said "size is no offense."

Concentration of corporate ownership of wealth, chiefly means of production, has proceeded to a surprising degree. In 1932, according to the statistics of the Bureau of Internal Revenue, 53 percent of all corporate-owned assets in this country was held by 618 corporations, which constitutes only two-tenths of 1 percent of the number of corporations reporting. Five percent of the corporations owned 85 percent of all the corporate-owned wealth in 1932. More than 50 percent of all the net income enjoyed by corporations in 1932 went to 232 corporations, while of the country's manufacturing corporations 1.2 percent of the total number accounted for 63 percent of the aggregate net profits. In 1934 the only group of corporations to earn an aggregate net profit was the group whose assets exceeded $50,000,000. Thus, the process of concentration was continuing.

There was likewise a high degree of concentration in the ownership of these corporations; 1929 was a banner year for stock ownership and in that year the 3.28 percent of the population who filed individual income-tax returns accounted for the receipt of more than 83 percent of all dividends paid to individuals. And 78 percent of those dividends reported were received by three-tenths of 1 percent of our population.

In 1933 the Bureau of Internal Revenue statistics show that there were only 1,747,740 taxable individual incomes in the United States and nearly one-third of all the property reported as passing by death was found in less than 4 percent of the estates. You are all familiar with the Brookings Institution's studies in 1929 which reports that about 6,000,000 families or 21 percent of all families had family incomes of less than $1,000 annually, and that 36,000 families in the high-income brackets received as much of our national income in that year as 11,000,000 families with the lowest incomes.

Even these statistics do not properly measure the degree of concentration of control of industry for by holding companies and interlocking directorates many corporations may be under a single control and there is no discernible limit to the centralizing tendency.

The Canadian Royal Commission on Price Spreads recently made the following observations:

"At first sight, indeed, it appeared that the separate and distinct problems which emerged in the evidence called for separate treatment and almost separate reports. On closer study, however, it became clear that many of the grievances complained of, and the problems disclosed, were manifestations of one fundamental and far-reaching social change, the concentration of economic power.

* * * * * * *

"The depression has, furthermore, demonstrated that the strong and the organized are attaining an ever-increasing position of dominance in our economic life; that economic power is becoming concentrated. With this concentration old theories of economic control are proving inadequate."

This concentration of business accounts in large part for the lost influence of big business, and its press, and its legal lackeys, and its business organizations, in legislative and election struggles. Forty years ago big business had as its ally in every town and settlement the local merchant, local manufacturer, local banker, and local utility man. Each was a leading citizen, on whom many depended for information and leadership as well as for credit and jobs. This type of man has largely gone. Why he has gone makes little difference.

In the place of this strong and leading individual is a managing clerk at the chain store who cannot make a credit sale, and a local superintendent for the factory. The local bank is closed and nobody who has more authority than a bill collector represents the utility in most communities. Big business has found it to its advantage, to rotate even those men, so that no one of them is left in the community long enough to get his roots established or to really become a part of the life about him, to become a property owner, or to be regarded as a fellow citizen by those among whom he dwells as a representative of an absentee control.

Thus, big business has destroyed its own defense, it has devoured its own young. The small businessman who used to be our most ardent capitalist and the most uncompromising of conservatives has been crushed, or merged, or consolidated, or otherwise retired. This has brought about a subtle change not only in economic life, but in social and political life as well. There are values in local independence and responsibility which are being sacrificed to balance-sheet values.

The process seems not to be discernible to, or appreciated by the people who dominate the large industries in our great cities. It is plainly discernible to those who live in smaller cities and see the life of the community as a whole.

REVISION SUGGESTED

Can we say that our 40 years of antitrust litigation, conducted by administrations which alternated between aggressive and nonaggressive policy, developing fine spun interpretations by courts and creating uncertainty in business, has produced a satisfactory crop? Where do we stand at the end of it? Today the Government itself cannot get competitive bids in basic products, the welfare of our people is dislocated by disparities between controlled and free prices, great industries in slack times hold their prices though their volume falls and their labor is idle, small-business men in many lines of useful enterprise are falling like autumn leaves and the profits of commerce concentrate in fewer hands. This is a condition that I would label "Handle with care—inflammable."

In its Platform for American Industry the National Association of Manufacturers condemns all extensions of Government control and says:

"In opposing unsound economic and social measures it is unnecessary to propose alternatives."

If your business organizations take the defeatist attitude that there can be no remedy, or if their only contribution is opposition, they are losing an opportunity to bring practical, informed, and experienced advice to the aid of officials, most of whom would, as I do, admit their perplexity and inadequacy to the problem.

No flawless and unobjectionable plan will come from any source and no plan that I can foresee will be able to avoid an increase in governmental activity and control in our economic life.

The Attorney General has urged a revision of the antitrust statutes, and it would not be appropriate for me, in this stage of the matter, to put forward specific proposals which, even if advanced only as private and personal opinions, would likely be attributed to the Department or the administration. But it is not difficult to see the outlines of big questions that will need practical answers.

Can we identify a field where competition still may function and be protected? What changes should be made in patent laws, tariff laws, tax laws, and laws concerning Federal incorporation or licensing of interstate corporations, in order to mobilize all the powers of government against monopoly? Whether we should except natural-resource industries from competition and regulate them in the interest of prudent utilization now and conservation for the future, and whether any single formula can be applied to all industries must be considered.

Most challenging of all is the field in which the law is powerless to restore a competition which has already vanished. Shall we recognize and regulate monopoly where competition cannot be revived? And if so, shall we confine it to legalistic regulation, modeled on public-utility regulation, that being the only regulatory legal technique we have so far developed? Or shall we use economic weapons to combat economic ills and create a public competition where private fails, or subsidize competition when it is otherwise unable to survive?

The problem bristles with these and a thousand other questions that challenge those who would be progressive without being impractical. I urge this experienced and talented group to dedicate itself to an unimpassioned and unrestrained study of the monopoly question as it thrusts itself upon government today, and of the course that may be taken to preserve the advantages of our mass production and cheap distribution without the political and economic risks and resentments which go with monopoly.

Our solution of the antimonopoly problems must be in terms of our ideals—the ideal of political and economic democracy. We want no economic or political dictatorship imposed upon us either by the Government or by big business. We want no system of detailed regulation of prices by the Government nor price fixing by private interests. We do not want bureaucracy or regimentation of any kind, but we will prefer governmental to private bureaucracy and regimentation if we have to make such a choice. We cannot permit private corporations to be private governments. We must keep our economic system under the control of the people who live by and under it. In the words of the President in his second inaugural address, "We must find practical controls over blind economic forces and blindly selfish men."

Americanism

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Wednesday, November 17 (legislative day of Tuesday, November 16), 1937

ADDRESS OF HON. CLAUDE PEPPER, OF FLORIDA, AT A MEETING OF THE ARMY-NAVY UNION, NOVEMBER 15, 1937, IN WASHINGTON, D. C., WHICH WAS THE FIRST OF A SERIES OF MEETINGS TO BE HELD OVER THE ENTIRE COUNTRY TO PROMOTE AMERICANISM

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the Senator from Florida [Mr. PEPPER] on the 15th of November 1937 at a meeting of the Army and Navy Union in the city of Washington.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

There is no place in this country for any man or woman who does not come here to give his first and only allegiance to the American Constitution, the American form of government, and American institutions.

There is no place in this country for any uniform save the uniform prescribed by the United States Government, and these organizations who come to our shores, who form themselves into military bodies, wear the uniform prescribed by the dictators of foreign countries, are aliens and enemies to our institutions and should be driven from our shores.

There is no place in this country for any secret military organization, because such an organization is contrary to the principles of Americanism.

There is no place in this country for any flag except the stars and stripes.

Who can imagine one of the dictators of Germany, Russia, or Italy allowing Americans living in those countries to form military organizations, wearing the military uniform of the United States, and militantly crusading for democracy. If American citizens tried that sort of thing in one of those countries, they would be shot at the first ensuing sunrise, and yet they dare to take advantage of our hospitality and of our indulgence in letting them come here upon the assumption that they are coming for the purpose of being faithful, loyal American citizens, to form these organizations wearing the uniforms of their dictator abroad, forming secret military organizations, and giving their first allegiance to the dictator's flag rather than to the American flag.

This sort of thing should be destroyed and every vestige of it wiped out.

There is no need for the agitator in this country, because ours is a government of the people, and what the people want the Government wants. Our Government is trying to help the people who need help as never before in our history. We know there is much yet to be done; we know that many of our people are still ill-fed, ill-housed, and ill-clothed; we know that 10 percent of our people make less than $500 a year and that 30 percent of the farmers of the country make less than $500 a year; we know that hundreds of thousands die from preventable diseases; we know that public education is not what it should be, but the Government of the United States is striving as no government has ever labored to correct these things and to give Americans the right to live as they should live; and in this struggle for a better life for our people we will not countenance hindrance from abroad, where not help for the people, but persecution, is the rule; not tolerance, but intolerance, is the practice; and where racial and religious strife is fomented by the government instead of the government respecting the right of all men and all people to have their own beliefs and the freedom and protection which America stands for.

Remarks of President Roosevelt at Grand Coulee Dam

EXTENSION OF REMARKS

OF

HON. HOMER T. BONE

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Wednesday, November 17 (legislative day of Tuesday, November 16), 1937

INFORMAL, EXTEMPORANEOUS REMARKS OF THE PRESIDENT AT GRAND COULEE DAM, OCTOBER 2, 1937

Mr. BONE. Mr. President, recently the President of the United States visited the Grand Coulee Dam. His extemporaneous remarks on the occasion of the visit regarding the development of power, and other phases of activity dealing with this great project, were recorded; and I ask that they be inserted in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

Coming back to Grand Coulee after 3 years, I am made very happy by the wonderful progress that I have seen. And I cannot help feeling that everybody who has had anything to do with the building of this great dam is going to be made happy all the rest of their lives. Some day we will have a "Grand Coulee Association" for those people who had something to do with this construction, and membership in that association will be like a badge of honor because we are building here something that is

going to do a great amount of good for this Nation through all the years to come.

My head is full of figures and the easiest way to describe those figures is to say that this is the largest structure, so far as anybody knows, that has ever been undertaken by man in one place. Superlatives do not count for anything because it is so much bigger than anything ever tried before that there is no comparison.

We look forward not only to the great good this will do in the development of power but also in the development of thousands of homes, the bringing in of millions of acres of new land for future Americans.

I think in the State of Washington there is a splendid understanding of one of the objectives in the development of these acres that are going to be irrigated. There are thousands of families in this country in the Middle West, in the plains area, who are not making good because they are trying to farm on poor land. I look forward to the day when this valley, this basin, is opened up, giving the first opportunity to these American families who need some good farm land in place of their present farms. They are a splendid crowd of people and it is up to us, as a Nation, to help them to live better than they are living now.

There is another phase that I was thinking about this morning. When the dam is completed and the pool is filled, we will have a lake 155 miles long running all the way to Canada. You young people especially are going to live to see the day when thousands and thousands of people are going to use this great lake both for transportation purposes and for pleasure purposes. There will be sailboats and motorboats and steamship lines running from here to the northern border of the United States and into Canada.

It is a great project—something that appeals to the imagination of the whole country. There is just one other word that is worth saying from the national point of view: We think of this as something that is benefiting this part of the country primarily, giving employment to a great many people in this neighborhood. But we must also remember that one-half of the total cost of this dam is paid to the factories east of the Mississippi River. In other words, it is putting to work in the steel centers and other great manufacturing centers of the East thousands of people in making the materials that go into the dam. So, in a very correct sense, it is a national undertaking and doing a national good.

I am always glad to see a project in the construction stage because when it is finished very few people will realize—they won't be able to visualize—all the difficult work in the actual construction. I hope to come back here in another 2 or 3 years and see this dam pretty nearly completed. When that time comes I think we had better, all of us, have a reunion of rejoicing.

Grass Roots Conference

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 17, 1937

ADDRESS BY HON. DEWEY SHORT, OF MISSOURI, BEFORE GRASS ROOTS CONFERENCE OF MISSOURI REPUBLICANS AT SPRINGFIELD, MO., OCTOBER 29, 1937

Mr. SHORT. Mr. Speaker, under leave granted to extend my remarks in the RECORD I include my address before the Grass Roots Conference of Missouri Republicans at Shrine Mosque, Springfield, Mo., October 29, 1937, as follows:

My fellow countrymen, this year the American people are celebrating the sesquicentennial of the Constitution of the United States. One hundred and fifty years ago our forefathers at old Independence Hall in Philadelphia adopted the Constitution as the fundamental law of our land. For the first time in history a government with the sovereign powers resting in the people themselves was established. The yoke of oppression was thrown off and the heel of tyranny was escaped by setting up a constitutional representative democracy where government derived all its just powers from the consent of the governed..

Under this sacred charter, which is the Bible of our freedom, we have lived for a century and a half and in spite of all the vicissitudes of fortune through which we have passed, we have become the greatest Nation and the freest people on the face of the earth. In theory our form of government is sound, and in practice it will work.

Twenty years ago the United States of America entered the World War to make the world safe for the democracy which we have enjoyed and cherished, and ever since that war ended democracy has been dying in most of the nations of the earth. Today the trend unmistakably is away from government by the people and toward dictatorship. We have not escaped that general trend in this country.

In 1932 when our Nation with the other participants in that savage struggle was finally and inevitably caught in the backwash of war President Roosevelt was swept into power at a critical time. He asked and was given the wholehearted cooperation of the American people, both in and out of Congress. Under the cry of emergency he has been given power in excess of that given to any other President in the history of our Nation. While few objected to the extraordinary powers granted to the Executive during the emergency, many of our clearest-thinking citizens do object to those powers being continued long after the emergency is over. We were assured at the time that these extraordinary powers granted under pressure of a crisis would be only temporary, but it is now evident that this administration is determined at all cost to make these powers permanent.

Few people fully realize that the President of the United States today has more power than any one of his predecessors, in war or peace. He is Commander in Chief of the Army, Navy, and Air Forces of the United States. He can invoke a neutrality law tantamount to a declaration of war. He can single out any aggressor nation in any conflict. He has the power to issue currency up to $3,000,000,000; because of the devaluation of the gold content of the dollar he has $2,000,000,000 with which to speculate in foreign exchange, buying Japanese yen, French francs, British pounds, or German marks. He can coin silver at the ratio of 16 to 1; he can close the stock market at any time he chooses for a 30-day period; he can raise or lower the tariff 50 percent on practically everything that is produced in this country, whether it be on the farm or in the factory. He can build a subway in Chicago, while denying it to Indianapolis; he can build an auditorium in Kansas City, while denying it to Springfield; he can build dog pounds in Memphis and monkey houses in Little Rock, as has been done, or he can pay certain farmers benefits while denying it to others. He has practically complete control over the economic destiny of the American people. For the past 4 years a subservient Congress, under the promise of reward or threat of punishment, has cowardly and supinely turned over to the President control of the purse strings of our Nation. Napoleon said, "Give me control of the purse strings of a nation and you can have all its armies." Franklin D. Roosevelt has spent as much money since his first inauguration as was spent by all the Presidents of our country from George Washington to Woodrow Wilson. No more money has been spent by all the Congresses from the adoption of the Constitution 150 years ago down to the outbreak of the World War than has been spent since March 4, 1933. All our Presidents for the first 143 years of our history were given only $1,600,000,000 in blank-check form to spend as they pleased, while the present occupant of the White House has had turned over to him more than fifteen and one-half billion dollars without any earmarks, to spend at any time, in any manner, that he might choose.

Notwithstanding that our national debt has increased from approximately $20,000,000,000 to more than $37,000,000,000 under the New Deal, the Congress at the last session, over the protest of Democrats like Woodrum, of Virginia; Byrnes, of South Carolina; and even Joe Robinson, of Arkansas, turned over another one and one-half billion dollars to the President in blank-check form. None of that money has been spent, of course, nor will it be spent until immediately before the election next year; but in the meantime the President can hold such a huge fund as a club over the heads of recalcitrant members of his own party to beat them into submission and compel them to pass such legislation as he might demand.

Forecasting rather accurately our condition in the United States today, Lord Macauley, in 1857, in his memorable letter to Randall, of New York, said:

"Either some Caesar or Napoleon will seize the reins of government with a strong hand or your Republic will be as fearfully plundered and laid waste by barbarians in the twentieth century as the Roman Empire was in the fifth; with this difference, that the Huns and Vandals who ravaged the Roman Empire came from without and your Huns and Vandals will be engendered within your country by your own institutions."

The paramount question today is whether the American people or one man shall rule this country. Last year we did not have an election, but a public sale. What votes those in power could not buy with the taxpayers' funds out of the Federal Treasury their corrupt political machines in our large cities stole; and what they could not buy or steal they intimidated, by having hired Government agents threaten to take those off relief or deny employment to anyone who did not vote to perpetuate them in power. Fifty years hence, when history is written with open eyes and without prejudice, the election of 1936 will go down as the blackest page in American history which was won by wholesale bribery, grand larceny, and general intimidation. Last November the New Deal was continued in power by carrying every State in the Union except two and receiving all the electoral votes except eight; though Mr. Roosevelt did not receive as large a percentage of the popular vote as did Harding in 1920 or Coolidge in 1924. Notwithstanding this sweeping victory, Mr. Roosevelt, with all his patronage and relief funds, with all his power and popularity, succeeded in getting only one major piece of legislation through the last session of Congress, namely, the housing bill. That bill calls for an initial appropriation of $500,000,000, with which to clear slums in the city of New York, building $5,000 homes to house the alien and foreign portion of the people, whether they be citizens of the United States or not. An amendment to exclude aliens from receiving the benefits of this Government subsidy was defeated,

and people who should be deported from our shores will live in better homes than 95 percent of the people in this great State.

Why was it that the President succeeded in getting only this part of his program enacted into law at the last session of Congress, which lasted from January until August, inclusive? It was because of his nefarious scheme to pack the Supreme Court of the United States. That issue overshadowed and submerged all others and held the Congress in deadlock for 8 long months.

It seems incredible that on this one hundred and fiftieth anniversary of this most sacred and cherished political document that any American citizen should be forced to rise and speak in its defense, but since the advent of the New Deal in 1933 repeated and violent assaults have been made to destroy it. The President's concealed contempt for the Supreme Court was first revealed after our highest tribunal, by unanimous and ringing decision, declared the infamous, illogical, and un-American N. R. A. unconstitutional. So incensed was Mr. Roosevelt that he branded the "nine old men" as belonging to the "horse and buggy" days. Of course, the N. R. A. had collapsed of its own weight and was dead before the Court declared it invalid, but the President considered the Court as obsolete and outworn and might as well be abolished, though the Constitution specifically makes the judiciary a coexisting, coordinate, and coequal branch of the Government. The legislative, executive, and judicial branches are to serve as a check and balance each on the other, thus effectively safeguarding the liberties of all the people. This is the framework of the Federal Government, but all rights were reserved to the States or to the people unless expressly granted to the Federal authority. It is significant that a few months after the Court's adverse decision on the N. R. A., while the Ways and Means Committee of the House was considering the Guffey coal bill, the President wrote a letter over his own signature to Congressman Sam B. Hill, of the State of Washington, urging him and his colleagues "not to allow any doubts, however reasonable, as to the constitutionality of the measure to block the suggested legislation." The essence of that letter was "ignore the Supreme Court; forget the oaths you have taken to uphold, protect, and defend the Constitution; and pass this bill because I want it." The bill was passed, but the Supreme Court knocked it in the head when they got to it, and likewise threw out of the window many other New Deal alphabetical agencies, three letters at a time.

On February 5 of this year came the straw that broke the camel's back. To the amazement of practically all Members of Congress, as well as the entire American people, Democrats and Republicans alike, the President asked Congress to give him authority to name within a short time six additional Justices to the Supreme Court. Not content with swallowing almost completely the legislative functions of a previously subservient Congress, the President, by a cunning and crafty proposal couched in deceptive and disarming language, attempted to usurp the judicial functions of our highest court, setting himself above the judiciary. His whole message on judicial reform is filled with subtlety, sophistry, and subterfuge. The truth, as everyone knows, is the Supreme Court is abreast of its docket and no increase in its personnel would expedite litigation. Fifteen members instead of nine, all of whom must hear the same case, would retard rather than accelerate its speed. Not the members nor the ages of the Justices, but their decisions, is Mr. Roosevelt's concern. The President attempted to do by indirect methods that which he feared to attempt by the direct and only legal method of submitting a constitutional amendment. Ours is a government by the majority. If a majority of our citizens believe that the Constitution should be amended, and vote to amend it, the minority must abide by that decision; but let the people who are the Government be given a chance to determine for themselves its future kind and course. Let none of our liberties be lost, nor one branch of the Government trespass upon the realm of another by usurpation, as Washington warned in his Farewell Address. The Constitution is the property of the people. It was written to protect minorities and to save them from the tyranny of majorities. It is rigid and difficult to change in order to give stability and certainty to government, but it is elastic enough to be changed; however only by the power that made it, namely, the people themselves. The President cannot change it, the Congress cannot change it, nor can the Supreme Court change it; only the sovereign power of our Nation—the people—who are greater than the President, the Congress, or the Supreme Court, or all three combined, can change the fundamental law of our land.

A few years ago the Supreme Court of the State of Oregon affirmed the decision of the lower court in that State that a parent be denied the privilege of sending his child to a parochial school. The people of the great State of Oregon had to come across the continent to the United States Supreme Court in our Capital to get that unjust decision reversed. The United States Supreme Court gave not only the people of Oregon but all our citizens to understand that in this country any parent can send his child to any school of his own choosing. Religious freedom is safe only so long as the Supreme Court remains uncontrolled. Not long ago nine poor, penniless Negroes at Scottsboro, Ala., were condemned and sentenced to death by the highest court of that State, but on appeal the Supreme Court of the United States declared they did not have a fair trial, and most of those unfortunate men have been granted their liberty because their innocence was later established. Racial prejudice has no place under our constitutional form of government. There is another race in this country that has been despised and persecuted for 2,000 years. They have been driven out of Russia and expelled from Germany, and where else in the world can they be assured of greater justice than before the Supreme Court of the United States? Two members of their race sit on that highest tribunal. These nine mature Justices who grace our bench, who are not subject to political pressure, to the violence of the mob, or Executive intimidation, who are not elected to office every 2 years but hold their positions for life, men of intelligence and character, men of high patriotism and long legal training and experience, who are free to render fair, just, and unbiased opinions, who are the repository of our rights and the safeguard of our liberties, are the only barrier that stands between us and tyranny; they care not for the race, color, or creed of a man; their business is to mete out pure and undefiled justice; and while their judgment is not infallible, they have a most enviable record and deserve the high esteem in which they are held by all right-thinking people.

Why does Mr. Roosevelt wish to pack the Court? Why does he want to play with a marked deck? Why does he want to fix the jury in advance of trial? Simply because these men on our Supreme Court are not rubber stamps and cannot be coaxed or driven as Members of Congress. Those who desire a government by personal rule under the complete domination of an executive who writes the laws and interprets them, as well as executes them, will support the President in his demand for power to create a new Supreme Court by naming at once six new judges with opinions similar to his own. But, in my opinion, this is more power than a good man should want—and certainly more power than a bad man should have.

While the President's sinister plan to pack the Supreme Court was opposed by all the Republican Members of Congress in both the Senate and the House, we were so few in number—only 17 in the Senate and 88 in the House—that we realized that if this ignoble plan were defeated it would have to be done with the help of Democratic votes. It is most gratifying to know that the fight against the President's dangerous proposal was led, not by the Republicans, the Tories, the reactionaries, the mossback conservatives, the Liberty Leaguers, the "princes of privileges," the "economic royalists," but by the most progressive and liberal-minded men in the United States Senate, and some of the most ardent followers and staunchest supporters of the President up to the time his Court message was read: WHEELER, of Montana; BURKE, of Nebraska; MCCARRAN, of Nevada; O'MAHONEY, of Wyoming; CLARK, of Missouri; CONNALLY, of Texas; GEORGE, of Georgia; BAILEY, of North Carolina; GLASS and BYRD, of Virginia; COPELAND, of New York; VAN NUYS, of Indiana; and many others, all of whom are lifelong Democrats. To them should go the everlasting gratitude of the entire American people, regardless of politics, for they preserved the integrity and independence of our Federal judiciary, which is the last citadel of our liberties.

How does Mr. Roosevelt feel toward these able and outstanding men of his own party in the United States Senate? Mr. Farley, his Postmaster General, and chairman of the Democratic National Committee, in a speech at Indianapolis to the Young Democrats of the Nation the night before Congress adjourned, declared a truce and assured his hearers there would be no reprisals against the Democratic Senators who opposed the President's scheme; but at the very moment Mr. Farley was speaking and the dove of peace was hovering over the Democratic assembly, Senator GUFFEY, of Pennsylvania, chairman of the National Democratic Senatorial Committee, who had just made a personal call at the White House a few hours before, spoke over a Nation-wide hook-up on the radio, in which he said he hated the ingrates who opposed the President's Court-packing plan and promised they would be defeated when they came up for reelection. Who in the name of common sense are we to believe, Jim Farley or JOE GUFFEY? Is it possible we have a Dr. Jekyll and a Mr. Hyde in the White House, who holds sugar in his left hand and through the voice of Mr. Farley promises peace and attempts to woo back his wayward followers while in his right hand behind his back he holds a stiletto and through the voice of JOE GUFFEY threatens to cut the throats and get the political scalps of every Senator who opposed the Court plan? Cannot United States Senators exercise their honest judgment and vote their clear consciences without being punished by the President?

We had hoped that after the determined stand taken by Congressman SUMNERS, chairman of the House Judiciary Committee, the untimely death of Senator Robinson, the courageous letter of Governor Lehman, and the overwhelming vote of 70 to 20 in the Democratic Senate, whereby the Court-packing plan of the President was defeated, that this foolish and futile fight had ended. However, immediately after the adjournment of the last session of Congress the President let it clearly be known that the fight was not over, and though he studiously avoided any reference to it in his call for the special session, I warn you not to go to sleep at the switch else we shall be run over. Remember, "eternal vigilance is the price of liberty."

Because of this prolonged, bitter, but fortunately successful court fight, the remainder of the President's legislative program was either shelved or defeated in the last session. Now we are called back to a special session of Congress 6 weeks before the next regular session meets in January. This call for a special session in itself is a frank admission of the failure of the previous one. The wage and hour bill was buried in the Rules Committee of the House, the President's agricultural leaders in both bodies refused to act on farm legislation; most of the provisions of the reorganization bill were sidetracked, while the seven regional T. V. A.'s never got out of the Rivers and Harbors Committee.

Though the Constitution specifically states that the Congress is the legislative branch of government, we read in the newspapers where the President demands that the first thing we do in the

special session is to pass this wage and hour bill. Next to the infamous court bill this is the most dangerous piece of legislation that has ever been presented to the Congress. Its objectives are worthy, but would be impossible of accomplishment under the terms of the bill that was presented to the last session. Everyone wants to see child labor abolished, sweatshops eliminated, and a decent wage for labor; that has been the traditional policy of the Republican Party. Most of the States already have solved these problems and certainly the American people, employer and employee alike, do not want to surrender their liberties to a political board which arbitrarily dictates hours and wages. The sponsors of this measure have forgotten the sad experience we had with the N. R. A.

It is a known fact that recovery began when that unworkable act was declared unconstitutional. While the present bill differs from the N. R. A. in many particulars, its purpose is, and its results will be, largely the same. It attempts to resurrect the blue buzzard. "As a dog returneth to his vomit, so the fool returneth to his folly." The original administration bill on wages and hours was written by Corcoran and Cohen, but it was amended to such an extent in the Senate that it became the Black bill. The House Labor Committee was practically forced to adjourn its hearing by William Green, who evidently carried orders from the White House, and the bill was further mutilated and reported to the House as the Green bill. The truth of the matter is the bill is neither "Black nor Green," but "red"; "red" all the way through.

By its terms the Congress delegates vast discretionary powers to a Labor Standards Board that will have complete control over industry in this country. The five members of this Board are, of course, appointed by the President and hold office only so long as they meet with his approval. They may not only raise wages and lower hours, but they may also lower wages and increase hours. I cannot believe that labor itself will favor such a measure. While the bill was being considered at the last session I received a letter from William Green stating: "The wage and hour bill, as reported by the House Labor Committee, is reasonably acceptable and fairly satisfactory to labor." That is a very weak endorsement coming from the president of the American Federation of Labor; and many of Mr. Green's associates have let it be known to Members of Congress that they are opposed to the legislation. Even John L. Lewis was against placing so much authority in the hands of a politically controlled board, and only a few days ago, in Denver, Matthew Woll, a vice president of the American Federation of Labor, came out flatly against the measure. While certain House amendments have guaranteed the right of collective bargaining, the danger from the viewpoint of labor leaders is that if authority is given the Government to dictate hours and wages, the minimum wage usually becomes the maximum, and in that case there would be no need for labor unions at all.

Of course, the original bill has been so emasculated that it is scarcely recognizable. There are, in fact, so many exceptions and so many classes of workers exempted from its operation that it might truly be called a bill of exceptions, which naturally raises the question, Why are so many exceptions demanded and granted; if the bill is good for some workers, why isn't it good for all workers?

Furthermore, under this act the President or the board which he appoints may raise one employer's fixed charges and production costs and reduce those of his competitor at will. Section 6 of the bill also gives the firm in interstate commerce the right to dictate the terms under which a local firm can operate even in intrastate commerce, but does not give the local firm the right to be heard or protest against the firm in interstate commerce. The board is literally clothed with power of life and death over employees in intrastate as well as interstate industry. Both employers and employees are at the mercy of an arbitrary, arrogant, and all-powerful board which by artificial regulation attempts to change the laws of nature. Such board is even granted the power to enact criminal laws, and anyone who violates its orders, rules, or regulations is subject to both fine and imprisonment. The board can send its agents into every town in every State of the Union to examine the files and records of any business coming within the scope of this act, and such information is not even required to be kept confidential. If Congress passes this act, we will have an army of snoopers and spies hounding and harassing businessmen everywhere. The board is given authority to institute a suit, criminal or civil, against a transgressor in the United States district court. The board will have no attorneys' fees or expenses to pay, whereas the individual citizen, whether petitioning for redress or defending himself in a criminal action, is taken far from home and required to file his suit in the United States circuit court of appeals.

Working conditions in America are, of course, not perfect, but it is high time that someone remind us that nowhere else in the world does the common laborer receive such a high wage or work so few hours as he does under the Stars and Stripes. Our country has the highest standard of living on earth, but if this bill is enacted into law the inevitable result will be increase in unemployment, decrease in production, lower standards of living, smaller consumption of raw materials, including farm products and lower prices for them; geographical and artificial barriers, higher production costs and increased imports of foreign products. How silly it is to ban goods manufactured with the employment of child labor or substandard labor in this country, yet admit to interstate commerce competitive goods manufactured by child labor, sweatshop and slave labor in foreign countries.

This bill will squeeze the little-business man out of existence, encourage and foster monopoly, increase the cost of living to consumer and make it impossible for the farmer to employ labor, while destroying much of the domestic market for his products. In my opinion the bill is plainly unconstitutional and will be so held unless the President should succeed later in packing the Supreme Court with men who would uphold the validity of this Spanish Inquisition. If the bill is enacted into law it will destroy industry and close factories in the South and Middle West. If the great tri-State mining industry, a part of which I have the honor to represent, is compelled to pay time and a half for labor from 12 o'clock to 6 o'clock a. m., not overtime, mind you, but simply a regular shift employed during those particular hours, it will close many of the mills in this great area.

The President states that he wants this legislation in order to raise the pay of the lowest-paid workers. That is a noble purpose and a worthy aspiration, but if it is enacted into law it will place the necks of both employer and employee in a noose and will simply give the President and his board vast additional powers over both industry and labor, and if hours and wages are dictated, then prices will be fixed. To have all our lives and businesses regulated by a Federal bureaucracy and centralized government at Washington is not the American way.

The second piece of legislation which the President wants enacted into law is the crop-control bill. This is nothing more than the old A. A. A. in disguise. Stripped of its mask, it is nothing more than a deliberate and insidious attempt to circumvent the adverse decision of the Supreme Court of the United States on the old A. A. A. law. Just as the N. R. A. had attempted to regulate business and dictate to industry, so the A. A. A. attempted to regiment the American farmer. Over one billion dollars were handed out to producers of certain products for not raising those products. These checks went to fewer than half the farmers of our country, and certain classes of farmers were penalized in order to assist other farmers, just as certain sections of the country benefited at the expense of others. The benefit payments also varied from more than $1,000,000 to certain large sugar corporations and payments running into hundreds of thousands to large plantation owners, down to a few dollars to the small farmer, tenant, and share cropper. The whole philosophy underlying this administration's farm program is to raise prices by producing less. Because of the restriction of production and limitation of acreage, food prices advanced 40 percent and the small-salaried people in the country suffered for want of food. Over 6,000,000 pigs, 1,000,000 cattle, and 2,000,000 sheep were destroyed, while imports of these products enormously increased, thereby destroying the American farmer's domestic and export markets, with the balance of trade against us. Today more foreign products and commodities produced and manufactured by cheap labor abroad are being imported than we are exporting American products grown on American farms and produced in American factories.

Personally I have never yet understood how we expected to get rich by sitting down and doing nothing. All the wealth of the world comes from labor and production, but after the advent of the New Deal we changed our philosophy and decided we were suffering from surplus and overproduction, though anyone who has traveled over our country realizes there are thousands of people who are suffering from maldistribution and underconsumption. In fact, the President himself, after 4 years of New Deal experimentation, informs us that one-third of our population is ill-clothed, underfed, and poorly housed. And the New Dealer proposes to house, clothe, and feed these unfortunate citizens by knocking pigs in the head, killing cattle, plowing under cotton, producing a scarcity, and raising the prices of commodities so high that the common laborer and "forgotten man" cannot purchase what he actually needs.

There is no logic, common sense, or consistency in the agricultural program of this administration when the Secretary of Agriculture spends $1,000,000,000 in taking 36,000,000 acres of good, tillable land out of cultivation, while the Secretary of the Interior spends hundreds of millions of dollars in opening 1,600,000,000 acres of new land in the arid West on irrigation and reclamation projects that have never been in cultivation before.

Not only has this silly, idiotic, and destructive policy robbed the American farmer of his export markets but it has decreased domestic consumption of farm products by advancing prices. Any housewife can tell you of the tremendous increase in the cost of living. The "brain trust" preached the abundant life, and in order to bring about its fulfillment they advocated a philosophy of scarcity which has produced misery.

The farmer always should remember that before he receives his Government check, or any benefit, he must first surrender his liberty and submit to the arbitrary control of the Secretary of Agriculture.

The President says that he wants a farm bill passed in order to give the farmers higher prices for their commodities. That is a laudable purpose and helpful to the farmer if the farmer did not have to surrender his freedom in advance. Under the terms of this act the farmer is made a slave to the Department of Agriculture that issues bureaucratic orders from a centralized government in Washington. Jefferson said, "Were we directed from Washington when to sow and when to reap, we should soon want for bread."

When I was a small boy I drove a pair of jennies to a little wagon. I remember going out in the pasture of a morning with an ear of corn in front of me while holding a halter in the other hand back of me to coax those little jennies in order to get the halter on them. The ear of corn was so tempting that they could not resist taking a free bite. When they came up to get the corn I put the halter on them and got them in the harness and hitched them to the wagon. We would start up the hill with a heavy load. As

the collars rubbed their shoulders raw and the traces took the hair from their sides, I would throw the blacksnake in their flanks and the ear of corn did not taste half as good on the hillside as it did down in the pasture.

The method of this patronizing, paternalistic New Deal government is the same as the method employed by every benevolent despotism from the Pharaohs of Egypt down through the Caesars, through Machiavelli to the present hour. This legislation will make the Secretary of Agriculture a czar who holds out a sop to the people in order that he can put the halter on them to work them in the harness as he sees fit. Whatever program of aid is offered to the farmer must leave him a free man instead of rendering him a serf, subject to the direct control of a bureau in Washington.

The third piece of legislation the White House has ordered for the special session to consider is the reorganization bill, which would bring all boards, bureaus, commissions, and Government agencies with quasi legislative and quasi judicial functions to perform under the complete control and dominance of the Executive. The President could consolidate, abolish, increase, or decrease at his own will these agencies which would lose the last vestige of independence they now possess. Realizing the danger of such an extraordinary proposal and the dictatorial power which such a reorganization would grant to the President, the Democratic leadership in the last session of Congress sidetracked this legislation and appeased the President by voting him six chamber boys whose chief duties will be to run errands at salaries of $10,000 per year, but who, no doubt, will be used for political and propaganda purposes. While many alphabetical agencies of our Government today need to be abolished, certainly no one would want to see the Federal Power Commission, the Federal Trade Commission, the Interstate Commerce Commission, the Securities and Exchange Commission, the Federal Communications Commission, and other similar departments brought under the control of the Executive. If this bill should become law, then the President of the United States could set up a censorship of the press, the radio, and the movies until we should have a Joseph Goebbels in this country to tell us how we shall worship our own God, if allowed to worship one at all. I am afraid He has not been worshipped much recently. Whatever the purpose of this particular legislation is, the result is absolutely certain, namely: The concentration of more power in one man at Washington.

The fourth piece of "must" legislation which the President has demanded of the special session of Congress is the enactment of the seven regional T. V. A.'s bill. In 1933 the New Deal set up the T. V. A. down in the Tennessee Valley, a barren, wild waste, sparsely populated, the soil badly eroded, with only a few industries, undeveloped. They are going to construct 11 dams down there. No one knows how much it will cost. They told us first it would be $100,000,000, but it is now evident it is going to be between five and six hundred million, and before the Tennessee Valley alone is fully developed, with the construction of dams, along with the improvement of navigation and flood control, the prevention of soil erosion, and conservation of forests, it will cost the American taxpayers around $1,000,000,000.

In order to overcome constitutional objections, these dams were constructed in the name of flood control and the improvement of navigation, but the great and outstanding purpose and the chief interest is the development, distribution, and sale of hydroelectric power. At first much of this power was sold below the cost of production, and many private utility companies were driven out of existence because of this subsidized Government activity that is paid for by all the citizens of our Nation. A false yardstick was established, which made it impossible for private enterprises that pay taxes, insurance, and interest to compete with the Government. Much of the cost of these dams was charged off to flood control and navigation, but very little was charged off to power.

After building these dams, Mr. Ickes even made grants and gifts to towns up to 45 percent of the cost of municipal steam generating plants, loaning the remainder of the money to the municipalities at 4-percent interest, to cripple the efficiency, the growth, the credit, and in the end to destroy privately owned utilities. Later the holding-company bill, with its death sentence, further crippled and embarrassed private business.

Now the fourth and final blow is being struck. That is the bill calling for the establishment of seven regional Tennessee Valley authorities, blanketing the Nation with public power companies under Government regulation, managed by politicians who are willing and anxious to destroy the private utilities of this country.

I hold no brief for the mistakes, nor do I condone the wrongs of certain holding companies in the past, but I still believe in a system of free competition, without the American taxpayers being destroyed by the Government they support. The seven T. V. A. authorities to be established throughout the Nation are not at all comparable to the Tennessee Valley. For instance, the 17,000,000 people in the Ohio Valley that is richly developed, both agriculturally and industrially, have all the power they need. Why should the Government duplicate those lines? It might give the citizens in that area better electric rates, but it will pile enormous taxes upon them that will overcome any saving they might have, and if the private utility industry in the United States is destroyed, it will throw out of employment many of the 250,000 employees, good honest American citizens, who are entitled to a decent living. It will dry up the source of taxation that amounts to $250,000,000 a year that goes to the support of the Government itself. It will likewise destroy billions upon billions of dollars of the 4,000,000 American investors, most of whom are not plutocrats nor bloated businessmen, but the great middle class of people who have invested their savings in this great American industry. This is nothing more than socialization of industry, and when you socialize one industry it leads to the socialization of another. Perhaps we shall have socialized medicine next, where you will not be able to choose your doctor and the doctor will not be able to choose his patients. If the reorganization bill would give the President control over the transportation of this Nation, then this regional T. V. A. plan would give him control over the light and power industry in the Nation. Such regimentation of industry and such concentration of power one can find only in Soviet Russia.

Our opponents, and even some uninformed Republicans, ask us for constructive criticism and for an affirmative program. Here it is:

In the first place, the Republican Party should refuse to sidestep, pussyfoot, or evade the big issues now before the American people and should wholly and uncompromisingly repudiate the underlying fundamental, paternalistic philosophy and the idiotic socialistic economic theories of the New Deal. New Dealism believes in the maximum degree of government and making the State supreme. Republicanism accepts the American doctrine as enunciated by Thomas Jefferson, that "that government is best that governs least," and gives the individual the greatest degree of liberty. We should pledge ourselves to halt the concentration of power in a Federal bureaucracy, and restore the American system of an indestructible union of sovereign independent States, insisting upon State rights and local self-government. This was the philosophy of Lincoln as well as Jefferson.

Secondly, Congress should take back the powers it has granted to the President, under the cry of emergency, and cut the cost of government to the bone by actually abolishing the New Deal alphabetical agencies and discharging a vast army of political parasites who are not needed for the useless tasks they perform today. We should insist upon balancing the Budget, not so much by increasing taxation but by a drastic reduction in useless and unnecessary Government expenditures.

As always in the past, we should now insist upon sound money and an honest dollar, establish our fiscal affairs upon a firm and fixed basis, and put an end to the constant tinkering with the currency and the flirtation with inflation.

We should continue to oppose the League of Nations, the World Court and every movement that will embroil us in foreign wars. In 1920 Mr. Roosevelt, as the Vice-Presidential nominee on the Democratic ticket, went from one end of the country to the other advocating the League of Nations. He was an internationalist then and he is an internationalist now. As late as 1935 he brought all his influence and the power of his great office of the Presidency to bear upon the United States Senate to enter the League of Nations by the back door of the World Court. Only because of the untiring efforts of Senators BORAH and JOHNSON was that scheme defeated. We do not want Mr. Roosevelt to police the world, and no one man should have the power to declare for war or peace, a right which belongs to the Congress and to the people themselves.

We should take politics out of civil service, and adhere to the merit system in the selection of Government employees.

We should preach a doctrine of plenty rather than scarcity, and assist agriculture not by reducing production, since all wealth is the result of production, but continue the low rate of interest on the farmer's indebtedness, reduce taxes on real estate, teach him diversification of farm activities, develop and expand both our domestic and export markets; discover through scientific research new uses for farm products, and give him, as we have given labor and industry, a tariff high enough to prohibit the importation of commodities which can be produced within the confines of our own country.

We should immediately take the Government out of competition with private enterprise; free business from the shackles that now enslave it, and compel the Government in its building program to submit to the same rules and regulations imposed upon private business while completing the work it already has undertaken. Certainly we should not strangle the life out of business while at the same time demanding that business itself solve the great problem of unemployment.

We should establish common honesty and decency in government by carrying out the assurance that the Government will no longer violate the sancity of contract, but will keep its word with its own citizens.

We should advocate only a reasonable, workable, and constitutional social security program, embracing old-age pensions and unemployment insurance, assisting dependent children, helpless cripples, the blind and maternal welfare. The taxes paid by the American people for these specific purposes should be kept in a sacred trust fund, as the law requires, and not be illegally diverted by this or any other administration for any other purpose. Nearly $1,000,000,000 that the New Deal has collected this year under the social security program has been applied to the current expenses of the Government. This amounts to little less than thievery.

We should immediately insist that the administration of relief be returned to the various States and local communities. By so doing we should cut the cost of administration in two, by discharging the thousands of relief authorities who are now drawing good salaries for doing nothing, and the people who are really suffering would receive more than they now get.

We should plead with the American people to remember with some pride the old-fashioned virtues of their fathers, to develop

once more the spirit of individual self-respect and self-reliance, and instead of idleness and destruction to practice the homely virtues of thrift and industry.

We should never allow an able-bodied American citizen who is willing to work to go hungry, but we should lay down the law that he who can work and refuses does not eat.

Above all else, we should affirm our undying faith in the Supreme Court and pledge our lives, our fortunes, and our sacred honor to the preservation of the Constitution of the United States. On different occasions I have taken the oath to uphold, protect, and defend that sacred document. In my present office I have a vow in high Heaven to defend it. So has the President of the United States. I declare unto you, and do so deliberately that any public official, whether he be potentate or pauper, whether he be President or police judge, who has taken that solemn oath in the presence of God and his fellow countrymen, who has sealed that oath with his lips on the Holy Bible, and who then ignores or deliberately violates it, that official, regardless of race, party, or creed, is guilty of treason, deserves impeachment, and should receive the eternal opprobrium of his fellow countrymen.

These principles enunciated are sound and progressive which all Americans can accept. They should appeal to both age and youth. Today there is closer affinity between the Republican and Democratic Parties than there is between Democrats and New Dealers. Not as partisans but as patriots all the lovers of liberty will rise in their might to make our Government the servant and not the master of men.

I cannot close this address with sounder advice than was once written long before the advent of the New Deal by John Stuart Mill, one of the greatest political philosophers of all time, when he said: "A people may prefer a free government; but if from indolence or carelessness or cowardice or want of public spirit they are unequal to the exertion necessary to preserve it; if they will not fight for it when directly attacked; if they can be deluded by artifices used to cheat them out of it; if by momentary discouragement or temporary panic or a fit of enthusiasm for an individual they can be induced to lay their liberty at the feet of even a great man, or trust him with power which enables him to subvert their institutions—in all these cases they are more or less unfit for liberty."

Some Unusual Effects of the Federal Surtax on Undistributed Profits

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 17, 1937

Mr. CELLER. Mr. Speaker, I herewith set forth the various means, through the "dividends paid credit" and without reducing cash resources, that corporations may avoid payment of the Federal surtax on undistributed profits. I have been greatly aided in the preparation of this statement by Prof. D. E. Casey, noted economist on the faculty of Georgetown University. The data on which this statement is based has been gathered after a great deal of research by myself and Professor Casey. Most of the information has been obtained from the files of the Securities and Exchange Commission. A careful study of the unusual effects of the surtax and undistributed-profits tax reveals the difficulties and dangers besetting the various corporations subject thereto. It is readily discernible that this tax becomes a matter of confusion worse confounded.

In general, there are four methods by which that end can be accomplished, namely: (1) Payment of dividends in stock of the corporation (such dividend must be taxable to the recipient); (2) payment of dividends in obligations of the corporation; (3) payment of dividends in assets other than cash; (4) sale of additional stock to provide funds for the payment of cash dividends to reimburse the treasury for cash dividends already paid.

Thus far the most common means of avoiding the undistributed-profits tax without the payment of cash dividends has been the distribution of stock dividends. The amount of credit that can be claimed for a stock dividend is the fair market value on the date of payment. Rights to purchase new stock are treated the same as stock dividends. It should be kept in mind that a corporation is entitled to the dividends paid credit only if such stock dividend is taxable to the stockholder. Pursuant to a Supreme Court decision stock dividends are in general deemed to be taxable if they change the proportionate interest of the stockholder in the company. For example, a dividend payable in common stock to holders of common stock is not taxable, for, of course, it does not change the interest of such holder in the corporation and therefore the corporation cannot claim this payment as a dividend credit. An exception to this is that if the stock had previously been issued and held in the treasury—as a result of reacquisition or otherwise—the stock distributed would then be regarded as taxable to the recipient. Such stock is considered for tax purposes as an asset of the corporation, and the dividend payable therein a dividend payable in property.

A method of paying a stock dividend and at the same time avoiding the undistributed-profits tax is for a corporation to offer stockholders the option of taking cash instead of stock. In that event the stock dividend becomes taxable and the corporation can take advantage of the dividend credit. This is true even if no stockholder chooses the cash option. Furthermore, relationship of the cash offer to the value of the stock dividend apparently has no bearing on the matter. In actual practice the cash offer has usually been substantially less than the value of the stock dividend when payable in common stock. For instance, at the respective dates of declaration of optional dividends by American Seating Co. and General Refractories Co. the cash option was worth about 25 percent less than the stock dividend. In some other cases the spread was even wider. In almost all cases where figures were available it was found that the holders of only a small proportion of the stock took a cash dividend in preference to a common-stock dividend, generally less than 20 percent. Where the dividend was payable in cash or preferred stock the ratio of the cash distribution was usually higher. By having the optional dividend underwritten a corporation, of course, could protect itself against the necessity of distributing cash. There would naturally be expenses for commissions and for registration under the Securities Act in event of a public offering of the stock taken up by the underwriters. The Greyhound Corporation, which negotiated an underwriting for an optional dividend payable in cash or preferred stock, is the only example that could be found in this connection.

Another type of stock dividend which is taxable is a dividend on the common stock payable in the preferred stock of the corporation. However, if a corporation has had only one class of stock outstanding and declares a dividend in an issue of preferred stock created for purposes of the dividend, there is considerable doubt whether such dividend would be taxable, as it could be held that such a dividend did not change the proportionate interest of the stockholders in the company. In three cases at least—Caterpillar Tractor Co., California Packing Corporation, and Soundview Pulp Co.—this question was surmounted by making the first dividend payable in the newly created preferred stock or cash. In each instance a subsequent dividend was paid in preferred stock without the cash option.

Still another kind of stock dividend for which a credit can be claimed is a dividend on preferred stock payable either in preferred stock or common stock. Such dividends are paid usually to liquidate arrears. The undistributed-profits tax has been a stimulus to corporations to rid themselves of accumulations of preferred dividends not only in order to eliminate, through an exchange for new stock, sinking fund, and other provisions of the old issue which handicap the corporation in payment of cash dividends, but also to take advantage of dividend credits by means of payment of arrears in stock.

With reference to the second method listed above, the payment of dividends in obligations has been used by only a few large corporations, but has been the refuge of a number of small ones. If repeated often the soundness of this method would appear to be open to question. Dividends of this type are credited at the principal amount of the debt issued or its fair market value, whichever is less. If the fair

market value is less than the principal amount, the difference, subject to adjustments for discount taken as a tax deduction for the year of issue, and so forth, may be used as a dividends paid credit in the year the debt is paid off.

With respect to the third method to avoid the undistributed-profits tax—that is, by distribution of assets other than cash. Only a few corporations have done this, at least primarily for that purpose. Several companies during the past year and a half have made such distributions, but for some other purpose, although, of course, they have been entitled to the benefit of dividend credits therefor. With respect to such distributions credits must be taken at the fair market value of the property or the "adjusted basis," whichever amount is the smaller. The "adjusted basis" is the one on which a taxable gain or loss is computed when property of the corporation is disposed of.

The fourth method listed above, that of the sale of additional stock to provide funds for cash dividends, was the answer of the Government to the argument that payment of dividends forced by the undistributed-profits tax would impair the cash resources of the corporation. During the past year a number of companies have sold additional stock to provide funds for the payment of cash dividends or to reimburse the treasury for dividends paid. Usually funds for other purposes have been raised at the same time. An underwritten stock issue, of course, has the advantage over an optional dividend in that it insures the corporation against any cash outlay except for the expenses of the issue. However, for a small corporation, such expenses are usually heavy because of the high rate of commission it is necessary to pay the underwriters. More often the high expense involved is prohibitive.

Below are given examples of dividends that have been paid in a medium other than cash in order to avoid the undistributed-profits tax. They are grouped together according to the type of dividend. Where a statement by the corporation with respect to the dividend is available, the parts thereof pertinent to the tax are quoted. All dividends are on the common stock unless otherwise stated.

Below is a list of companies that during the past year have sold additional stock to provide funds to pay dividends or to reimburse the treasury for dividends paid.

DIVIDENDS PAID ENTIRELY IN STOCK

Bellows & Co.: In March 1937 paid a dividend on the class A stock of 50 cents in class A stock, and on the B stock a dividend of 75 cents, payable in class A stock.

Bon Ami Co.: Paid in December 1936, 2 percent in common A stock on the common A stock, and 1 percent in A stock on the B stock. The stock distributed was reacquired stock.

Bonwit Teller, Inc.: The following with regard to the stock dividend paid by this company is quoted from a letter to stockholders:

> In the event the proposals referred to in the notice of meeting aforesaid are approved by the stockholders, your board of directors proposes in order to avoid payment of surtax on undistributed net earnings to declare a dividend payable prior to January 31, 1937, of three-tenths of a share of said 6-percent preferred stock on each share of common stock then outstanding.

The preferred stock is $10 par, representing a 10-for-1 split-up approved at the stockholders' meeting referred to above.

California Packing Corporation: Dividend of ten two-hundredths of a share of 5-percent cumulative preferred stock—$50 par—for each common share held paid in February 1937. For previous optional dividend see optional dividend list.

Caterpillar Tractor Co.: Dividend of six two-hundredths share of 5-percent preferred stock—$100 par—paid in December 1936. For previous optional dividend, see optional-dividend list.

Chesapeake & Ohio Railway Co.: In January 1937 a dividend of $2 a share was paid in new 4-percent preference stock—$100 par. A letter to stockholders dated October 7, 1936, stated:

> Under the 1936 Revenue Act, a corporation is taxed heavily to the extent it does not distribute its annual earnings by way of dividends. Notwithstanding the excellent operating condition of the company's physical properties, substantial amounts are required to be expended each year for additions and betterments, and it has been the policy of the company to provide such expenditures in part from current earnings. The declaration of cash dividends to the extent of the company's entire earnings would deprive the company of this advantage and necessitate increased public financing. The availability of the proposed preference stock would not only provide the company with an additional medium of financing for its general corporate purposes but would enable your board of directors, when deemed desirable, to supplement cash dividends to the common-stock holders with stock dividends payable in the preference stock, thus making available to the company for its capital requirements a part of its current earnings and at the same time giving to its stockholders an additional dividend return.

Whether the company will be able to use this stock dividend paid in January as a dividend credit appears to be a question, as at the date of the dividend only the common stock was outstanding. It is understood, however, that the company is not now relying on the foregoing dividend as a dividends paid credit. On the other hand, any future dividends payable in the new preference stock can seemingly be so used.

Cooper-Bessemer Corporation: To liquidate arrears on the preferred stock a plan was put through in 1936 which involved a share-for-share exchange for $3 prior preference and a dividend of six-tenths share of common and 50 cents in cash on the new stock to pay off the arrears on the old preferred. The following is taken from a letter to stockholders dated November 3, 1936:

> The company is advised by its counsel that the stock dividend of six-tenths of a share of common stock to be paid on the new $3 prior-preference stock will represent taxable income to the recipients under the Federal income-tax law in the same manner as dividends generally are taxable. If the plan be declared operative before December 31, 1936, it is proposed to pay in this year the cash dividend of 50 cents per share and one half of the stock dividend of six-tenths of a share of common stock and to pay the other half of such stock dividend in 1937, thus distributing over 2 years the recipients' income-tax liability in respect thereto. By the dividend payments in 1936 the company may accomplish a saving of as much as $80,000 in surtaxes imposed by the Federal Revenue Act of 1936 upon undistributed profits for 1936, which saving will inure to the benefit of all shareholders.

According to the provisions of issue, dividends on the new prior preference in 1937 and 1938 may be paid in common stock and the semiannual dividend in 1937 was so paid.

Falstaff Brewing Corporation: A dividend of $1.50, payable in 6-percent convertible preferred stock, was paid on the common stock in December 1936. Some of this preferred stock had previously been issued.

Fidelity Investment Association: Dividend of 50 percent in 5-percent participating preferred stock ($100 par) was paid on the common stock in December 1936. The preferred stock had previously been outstanding.

General Acceptance Corporation: Paid in 1936 on class A and common one-tenth share of $1.50 preferred stock (no par). Shares of preferred stock had been outstanding prior to the dividend.

General Alloys Co.: Company is offering holders of class A preferred in settlement of arrears of $4.20 a share, $1 in cash and a warrant expiring in 1939 to buy 1 share of common, at $5.

Gosnold Mills Corporation: Stockholders in November 1936 approved plan to liquidate $27 arrears on 6-percent preferred through distribution of $2 in cash and 1 share, 5-percent prior preference (par $25). The company had stated that unless such a plan were adopted the tax on undistributed profits would more than double the tax bill.

Graton & Knight Co.: In 1936, $40.25 arrears on 7-percent preferred stock liquidated through distribution of $4.25 in cash and 1 share, $1.80 prior preference.

Heywood-Wakefield Co.: In the latter part of 1936 a plan of recapitalization was effected whereby first preferred stock was exchanged for equal par amount of 5-percent debentures and arrears of dividends of $47.25 per share were liquidated through payment of $22.25 in cash and 1 share of new series B preferred stock ($25 par). The second preferred stock was exchanged for four shares of series B preferred and arrears of $50.75 per share were liquidated through pay-

ment of 75 cents in cash and 2 shares series B preferred. The 1936 report stated:

In the computation of Federal taxes the company has deducted as dividends paid credit the amount of the cash paid and stock dividends issued December 15 on account of arrearages on both classes of preferred stock, resulting in the complete elimination of any surtax on undistributed profits under the 1936 Revenue Act.

Hickok Oil Corporation: In June 1937 paid on the class A and class B common $1 in 5-percent preferred (par $25). The preferred was outstanding prior to the dividend.

Kinsey Distilling Co.: In 1936 paid one-fifth share of prior preferred stock in settlement of arrears on the preferred stock.

Kobacker Stores, Inc.: In 1936 paid on the preferred stock $1.75 in cash and one share common (no par value) in liquidation of $22.75 arrears.

S. H. Kress & Co.: A dividend of 50 cents a share in special preferred 6-percent stock was paid May 1, 1936. Purpose of declaring dividend in this form not announced. This stock dividend was a charge against surplus of only $587,956, as compared with total dividends of $5,118,545. The special stock was not a newly created issue.

Marchant Calculating Machine Co.: In January 1936 distributed to preferred-stock holders one-fourth share common on account of arrears.

Mead Corporation: Liquidated in 1936 arrears of dividends of $19.50 a share on $6 preferred through distribution of $4.50 in cash and one share common. The following is taken from the letter to stockholders dated October 10, 1936:

You are doubtless informed as to the recently enacted provisions of the Federal Revenue Act of 1936, imposing heavy surtaxes upon the portion of net income not distributed during the taxable year in the form of taxable dividends. At this time it appears that the earnings of the company for the current taxable year will be sufficient to clear up the accumulated dividends on the cumulative preferred stock, series A, but in the opinion of the management it is inadvisable from a working-capital standpoint to pay the entire accumulation in cash. The method suggested in the proposed amendment will, in the opinion of counsel for the company, enable the company to obtain a dividend credit in the amount of the cash dividend plus the market value of the common stock distributed and result in a substantial tax saving. At the same time the working capital of the company will not be impaired.

H. A. Montgomery Co., Inc.: Declared a dividend of one-fortieth share of common payable September 30, 1937. As the dividend is being paid out of reacquired stock held in the treasury, it seemingly can be used as a dividends-paid credit.

National Gypsum Co.: In 1936, $2.50 a share in 5-percent second preferred stock ($20 par) paid on class A and B common. The following is from a statement by the company:

The payment in stock will permit the company to retain its earnings in the business without subjecting itself to heavy taxes and thereby provide funds for necessary improvements and working capital without additional financing.

Tax experts have advised that this method of payment complies with purpose of the Revenue Act of 1936 and, the dividends being taxable income to the recipient, should eliminate necessity of the company paying out about $100,000 as a tax on undistributed profits, provided the stock is authorized and in stockholders' hands before the year closes.

National Manufacture & Stores Corporation: In April 1936 put through a recapitalization plan which involved exchange of old preferred for new $5.50 convertible preferred, on which for the first 3 years dividends are payable in cash or common stock. Dividends so far have been paid in common.

National Pumps Corporation: In December 1936 paid dividend of one-tenth share convertible preferred—$10 par—for each share common. The preferred was a newly created issue, but just prior to the dividend a block of the shares was sold to an underwriter.

New York Trap Rock Corporation: Arrears on the $7 preferred stock to December 31, 1936, were cleared up through distribution on January 1, 1937, of $6 per share in treasury preferred stock valued at $100. The 1936 annual report in this connection stated:

Heavy Federal taxes upon undistributed earnings made it wise, in the opinion of your directors, to arrange for the settlement of preferred stock dividends to December 31, 1936, and the payment of a dividend of 25 cents per share upon the outstanding common stock. Provision for such payments was accordingly made, partly in cash and partly in treasury preferred stock.

Parkersburg Rig & Reel Co.: In December 1936 a dividend of 0.024375 of a share of $5.50 preferred stock was paid on each share of common. The preferred stock had previously been outstanding.

Patchogue-Plymouth Mills Corporation: Paid in December 1936 three shares of 3-percent preferred stock—par $1—for each share common. The preferred was a recently created issue, but an offering of the shares was made to stockholders prior to the dividend.

Republic Investors Fund: In December 1936 distributed for each 80 shares held, 1 unit—consisting of 1 share 6-percent preferred ($10 par) and 1 warrant to purchase common stock.

Safeway Stores, Inc.: In December 1936 paid $2 a share in 5-percent preferred stock—$100. There was outstanding at the time 6-percent and 7-percent preferred ranking equal with the new preferred. The following is quoted from a letter to stockholders dated November 9, 1936:

Two considerations led your directors to the conclusion that such a dividend is desirable from the point of view both of the company and its stockholders. The company's sales are running at an average of approximately $6,500,000 per week in 1936, as compared with approximately $5,650,000 in 1935 and approximately $4,650,000 in 1934. This increasing volume of sales, coupled with the fact that rising prices require a larger investment in inventory, make it desirable to retain a substantial part of the company's earnings as additional working capital. On the other hand, the Revenue Act of 1936 imposes a heavy surtax on the net earnings of corporations not distributed in taxable dividends to the stockholders. The company is advised by counsel that the earnings of the company distributed as this dividend will not be subject to the surtax under the provisions of the revenue act relating to dividends paid credit, for the reason that the market value of the 5-percent preferred stock received by the common-stock holders will constitute taxable income to them to the same extent as though they had received cash equal to the market value of the preferred.

Schenley Distillers Corporation: $2.50 a share paid in 5½-percent preferred stock in December 1936. The preferred was of the same class as already outstanding. The following are the comments in the 1936 report regarding dividends:

The initial dividend on the company's common stock of 75 cents per share declared on June 16, and the subsequent declarations of like amounts on September 18 and November 20, were fixed with a view of establishing $3 as the annual dividend rate on the company's common stock. However, the enactment of the tax on undistributed corporate profits made it advisable to accelerate a dividend of 75 cents per share, which normally would have been payable in January 1937, and also to declare an extra dividend, payable before the year's end, of $1.50 in cash and one-fortieth of a share of the company's authorized unissued 5½-percent cumulative preferred stock for every share of common stock outstanding. The future dividend policy of the company will, of course, depend upon the company's earnings, business requirements, and the tax situation.

Securities Acceptance Corporation: In December 1936 paid 50 cents a share in 6-percent preferred stock, $25 par. Some of the preferred stock had previously been outstanding.

Simmons-Boardman Publishing Corporation: In December 1936 liquidated arrears of $16.50 on $3 convertible preferred through distribution of $1 in cash and one-third share of the $3 preferred. The preferred used as a dividend had apparently been held in the treasury.

Soundview Pulp Co.: Paid in December 1936 a dividend of five two-hundredths of a share of 6-percent preferred stock for each share common. Had previously paid optional dividend. See optional-dividend list.

Southern Pine Chemical Co.: Liquidated $12 arrears on the preferred through distribution in December 1936 of $2 in cash and one share common.

Thermoid Co.: A plan to liquidate arrears on the preferred put into effect in 1936 involved an exchange for new preferred stock and a stock dividend of three shares of common on the new preferred, of which one share was paid in December 1936 and the balance this year.

United Printers & Publishers, Inc.: Plan of recapitalization put into effect this year included the liquidation of $12 a share arrears on the preferred through distribution of $1.25 in cash and two shares common. The company in

proposing the plan stated that surtax for year ended February 28, 1937, would be $46,000 unless a dividend were paid. Payment could not be made in cash because agreement with bank creditors required any increase in working capital to be applied to retirement of debt.

DIVIDENDS PAID AT OPTION OF STOCKHOLDER IN CASH OR STOCK

Alaska Pacific Salmon Co.: In December 1936 paid one share new 5-percent preferred stock, $20 par, for each five shares common or three-fourths share preferred and $5 cash. About 75 percent of the stock took the second option.

American Seating Co.: Stock dividend of 10 percent or $2 in cash paid in December 1936. As of the expiration date for giving notice of election the stock dividend was worth about $2.30. Ninety percent of the stock chose the stock dividend. The following is quoted from a letter to stockholders:

This dividend was declared in the manner indicated with the view toward minimizing liability for undistributed-profits tax and at the same time conserving the company's resources to the extent that the shareholders elect to take stock. In that regard we have been advised by our tax counsel that where stockholders are given such an option the corporation is entitled to take credit in determining earnings otherwise subject to undistributed-profits tax, for stock payments as well as cash. To the stockholders in turn the dividend will form part of their own income whether taken in stock or cash.

Baldwin Rubber Co.: Declared dividend payable September 20, 1937, of $1.15, or ten sixty-fifths shares. At the expiration date for giving notice re option the stock dividend was worth about $1.75.

Bellows & Co.: In March 1937 paid on class A stock 25 cents in cash or in class A stock, par $10. Information as to percentage taking stock not available. However, the stock dividend was worth about 40 cents.

Berland Shoe Stores, Inc.: Paid in January 1937, $1.25 in cash or one share for each $12.50 worth of dividends. Information as to the division between cash and stock dividends not available.

California Packing Corporation: Optional dividend of 50 cents in cash or in new 5-percent preferred, $50 par, or part cash and part preferred paid in January 1937. This dividend resulted in the distribution of $312,986 cash and $169,550 par amount of stock. For subsequent dividend payable only in stock see stock dividend list. The following is quoted from a letter to stockholders dated November 30, 1936:

The Federal tax law of 1936 imposes a graduated tax, ranging from 7 percent to 27 percent, upon the undistributed earnings of corporations. Unless the corporation distributes its earnings for the year to its stockholders it will be compelled to pay a tax on its undistributed earnings. The volume of business transacted by the corporation during the present fiscal year to date shows a considerable increase over that of the same date last year, and in view of this and our outstanding debentures it is deemed essential that the working capital be increased. At the present time profits for the year cannot be determined, but it is anticipated they will exceed the normal dividends.

The corporation has been advised that if preferred shares are created and thereafter a dividend is paid to its common stockholders payable in the alternative at the option of each stockholder either in cash or preferred shares, and if thereafter a further dividend is paid to the common stockholders in such preferred shares, both of these dividends will comply with the prerequisites of the Federal tax law of 1936 as to distribution and the corporation will receive credit therefor in the same manner as though cash had been distributed. The amount of preferred stock to be issued as dividends will depend upon the amount of earnings in excess of dividends paid during the year.

Philip Carey Manufacturing Co.: The following is quoted from the press of November 28, 1936:

In order to save an estimated surtax of around $50,000 on 1936 undistributed earnings and, at the same time, conserve working capital, directors propose to pay the dividend accumulations before December 31 by means of one-fifth share of new 5-percent preferred stock of $100 par value plus $1.50 in cash for each 6-percent share outstanding, or under a second option, by paying $19.50 in cash.

Holders of 81 percent of the 6-percent preferred accepted the new 5-percent preferred.

Carib Syndicate, Ltd.: The following is quoted from a letter to stockholders dated May 6, 1937:

In view of the fact that the sale of the Colombian Petroleum Co. stock may result in a taxable gain to your company, your directors have decided, in order to minimize the undistributed-profits tax, to declare a dividend payable on June 7, 1937, to stockholders of record at the close of business on May 14, 1937, as follows:

In cash at the rate of 50 cents for each share of stock held on such record date; or

At the option of the stockholder (exercisable only as set forth below), in common stock of the company at the rate of one-quarter of one share for each share of stock held on such record date.

On the expiration date for advising company as to the option, the stock dividend was worth 46 cents. Figures have not been published as to the proportion of stockholders taking either option.

Caterpillar Tractor Co.: Optional dividend paid in November 1936 of 50 cents payable in cash or in new 5-percent preferred stock ($100 par) or part in each. A total of $573,064 in cash and $368,056 par amount of preferred was distributed. For subsequent dividend payable only in stock see previous list. The following is quoted from letter to stockholders dated September 29, 1936:

The Federal tax legislation of 1936 imposed a graduated tax upon the undistributed earnings of corporations, the top bracket of which graduated tax is as much as 27 percent of such earnings. Unless your company makes a very substantial distribution to its shareholders, it will be compelled to pay a very large tax on its undistributed earnings. The business of your company is at the present time active and increasing and it is essential on that account that the working capital of your company be increased. If a substantial distribution in cash be made, either such working capital will be decreased or it will be necessary for your company to incur a large bank indebtedness. Obviously, either course would be most disadvantageous to your company and in turn to yourselves.

Your company has been advised that if preferred shares are created, and thereafter a dividend is paid to its common shareholders, payable in the alternative at the option of each shareholder either in cash or preferred shares, and thereafter a further dividend is paid to the common shareholders in such preferred shares (this second dividend containing no cash option) both of these dividends will comply with the prerequisites of the Federal tax legislation as to distributions and that your company will receive credit therefor in the same manner as though cash had been distributed.

Early & Daniel Co.: Optional dividend of $2 cash or one-tenth share of common paid in May 1937. The stock dividend was worth about $3. No information is available as to distribution as between stock and cash.

Federal Mogul Corporation: In October 1936 paid $1.60 in cash or one-tenth share of common. The stock dividend was worth about $2.10. Holders of 97 percent of the stock chose the stock dividend.

General Plastics Inc.: Paid in November 1936, $1.25 and in 1937 to date $3 in cash or 6 percent preference stock ($25 par). Previously had paid 50 cents in preference stock without cash option. No further information available.

General Refractories Co.: In June 1937 paid $2 in cash or one twenty-fifth share common for each share held. At expiration date for advising company as to option the stock dividend was worth about $2.35. Holders of about 88 percent of the stock chose the stock. The following is from the letter to stockholders dated May 21, 1937:

The reason for this optional dividend is taxation. On July 1, 1937, the company's outstanding bonded indebtedness will have been reduced to $2,250,000. To redeem these bonds out of earnings during the current year would cost the company approximately $460,000 in Federal surtax on undistributed profits. We are advised by counsel that in its opinion the payment of such an optional dividend renders the entire dividend taxable as income to the stockholders (the value of the stock distribution being computed at the market value existing on the date of distribution), and permits the company to the extent that stockholders elect to take stock to apply an equivalent amount of net earnings for the current year to the further reduction of its outstanding bonded indebtedness without thereby incurring additional tax. If the earnings of the company during the balance of the year justify it, and the plan finds favor with the stockholders, the management proposes to declare similar dividend in the fall, in this way reducing to a nominal amount the company's outstanding bond issue, or possibly even permitting its retirement in full. As the cash retained will be used to pay off the company's outstanding bonds, no substantial dilution will result from the issuance of additional shares, as the interest saved on bonds redeemed will allow a substantial dividend on the new stock.

Gleaner Harvester Corporation: In December 1936 paid $2.50 in cash or one-tenth share common stock. The stock

dividend was worth about $3.25. Holders of 82 percent of the stock took the common. The company is controlled by Commercial Credit Co.

Goldblatt Bros., Inc.: For a number of years has been paying optional dividends in cash or stock. Present regular quarterly rate, 60 cents in cash or one-fiftieth share of common. At present quotations the stock dividend is worth about the same as the cash dividend.

Greyhound Corporation: Paid dividend in December 1936 of 75 cents in cash or in 5½-percent preference stock—par $10. The dividend was underwritten. Eighty-one percent of the stock was taken by the stockholders and the balance sold to underwriters at par. The following, taken from the order of the Interstate Commerce Commission authorizing the issue, is of interest:

Apart from the Revenue Act of 1936 it would be difficult to justify the issuance of preferred stock as a dividend, and it does not appear that applicant would seek such authority. Its prior policy of financing additions and betterments largely out of earnings would, moreover, taking all the circumstances into consideration, be consistent with the views which we have heretofore expressed, as in the above-quoted statement from Stock of Delaware, Lackawanna & Western R. R., supra, in regard to the desirability of a substantial uncapitalized surplus "providing for emergency needs, offsetting obsolescence and necessary investments in non-revenue-producing property, and serving as a general financial balance wheel." However, the revenue act makes it impossible to continue this prior policy except at a severe penalty and was apparently designed to impel the distribution of a larger proportion of current earnings to the stockholders.

The question, therefore, is the practical one of determining the course which is "compatible with the public interest" in these circumstances. The choice is between a course which imposes a severe financial penalty and one which carries with it certain other disadvantages. After careful consideration our conclusion is that these other disadvantages are of lesser consequence in the public interest and that the proposed issue of preference stock should be approved. We are influenced in this conclusion by the fact that this course appears to be in consonance with the present policy of the Congress and by the further fact that, as we interpret the proposed transaction, the preference stock will in actual effect be issued to finance additions and betterments for the system companies, notwithstanding the form it takes as a stock dividend.

Hammond Clock Co.: Paid $2 in cash or 6-percent preferred—par $50—in December 1936 and March 1937. About 86 percent of the December dividend was paid in stock and 77 percent of the March dividend likewise.

Investment Co. of America: In December 1936 paid $7 in cash or 15 percent in stock. The stock dividend was worth about the same as the cash dividend. Holders of about 65 percent of the stock took the shares.

Spencer Kellogg & Sons, Inc.: A dividend was paid in August 1937 of 50 cents in cash or one-fiftieth share of stock. On the last day for giving notice as to the option the cash and stock dividends had about the same value. Information is not available as to the proportion of stockholders choosing each option.

Libby, McNeill & Libby: In December 1936 paid a dividend of $1 in cash or one-tenth share common. On the expiration date for advising re option the stock dividend was worth about the same as the cash. Holders of 79 percent of the stock chose the shares. The following is quoted from the newspaper announcement:

The reason for this dividend is that the company is subject to an undistributed profits tax on its earnings for the 12 months ending December 31, 1936, which have not been distributed in dividends. The company will have paid during the calendar year 1936 dividends on preferred stock amounting to $583,800. It is expected that the payment of this dividend on common stock, amounting to approximately $2,000,000, will avoid the payments of undistributed-profits tax, which otherwise would exceed $400,000. It is the judgment of your directors that the interest of the shareholders and the company will be served best at this time by this action.

New York-Buffalo Trading Corporation: In December 1936 paid $8.50 in cash or stock or part in each. Further information not available.

Noblitt-Sparks Industries, Inc.: Paid in December 1936, $1.50 in cash or one-twentieth share common. On the expiration date for advising re option the stock dividend was worth about $2. Holders of about 89 percent of the stock chose the stock dividend.

Prosperity Co.: In December 1936 paid on class A and B stocks 25 cents in cash and $1 in new 5-percent preferred stock, $100 par, or $1.25 in preferred. From figures available it would appear that holders of about 40 percent of the stock took the dividends entirely in preferred. The following is quoted from a newspaper article:

The distribution, it is believed, would be a taxable stock dividend and thus enable the company to decrease the surtaxes which the company would otherwise have to pay.

* * * * * * *

The prospects for increased business in 1937 make it desirable that the company conserve its cash and, in the long run, it is not to the interest of the stockholders that there should be a substantial cash disbursement to stockholders at the present time, Mr. Braun, the president, says.

Daniel Reeves, Inc.: In June 1937 paid 12½ cents in cash or one share preferred for each $100 worth of dividends. No figures have been published as to the division between the two options. A similar optional dividend was declared payable September 15, 1937. The preferred is currently quoted 98½ bid. As the preferred stock had been outstanding prior to the declaration of the first optional dividend, it would not appear to have been necessary for the company to offer the stockholders the cash option in order to use the dividend as a dividends paid credit.

Retail Stores Corporation: In February 1937 paid 90 cents in cash, or 7½ percent in common stock. At the payment date the stock dividend was worth about the same as the cash. Information as to the division of dividend between cash and stock not available.

Russeks Fifth Avenue, Inc.: In January 1937 paid $2 in cash or 6 percent in stock. At expiration date for advising as to option, the stock dividend was worth about $2.05. Holders of about 80 percent of the stock took the stock.

Soundview Pulp Co.: Paid in November 1936, 50 cents in cash or one two-hundredth share of new 6-percent preferred stock, $100 par. Holders of 60 percent of the common chose the preferred. In December 1936 a dividend was paid in preferred stock without cash option. See previous list. The following is quoted from letter to stockholders dated October 1, 1936:

Your company has been advised that if preferred shares are created, and thereafter a dividend is paid to its common shareholders, payable in the alternative at the option of each shareholder, either in cash or preferred shares, and thereafter a further dividend is paid to the common shareholders in such preferred shares (this second dividend containing no cash option) both of these dividends will comply with the prerequisites of the Federal tax legislation as to distributions, and that your company will receive credit therefor in the same manner as though cash had been distributed.

Spencer Chain Stores, Inc.: Paid in April 1937, 75 cents in cash or eight one-hundredths share of common. At expiration date for advising re option, the stock dividend was worth about 75 cents. Figures as to division of the dividend between cash and stock not available.

DIVIDENDS PAID IN OBLIGATIONS OF THE CORPORATION

American Asphalt Roof Corporation: In December 1936 paid $10 a share in 3-percent 6-month notes.

American Wringer Co.: Paid in December 1936, $1 a share in 5-percent 10-year notes.

Austin-Nichols & Co.: On account of accumulations on prior A stock, $1 paid in cash and $4 in 5-year 4-percent notes in April 1937. The company made the following statement:

In order to reduce bank loans and build up working capital, the directors had not contemplated the declaration of a dividend in the current fiscal year ending April 30. However, in view of the tax on undistributed corporate profits, the directors declared a dividend of $5 on the prior A stock.

Auto City Brewing Co.: In December 1936 paid 20 percent, 20 cents a share, in 6-percent notes, 1941.

Bobbs-Merrill Co.: To liquidate arrears on preferred stock, $14.62½ a share was paid last May in 4½-percent 5-year debentures.

Copperweld Steel Co.: In December 1936 paid $1 a share in 10-year 4-percent certificates of indebtedness.

Fairchild Aviation Corporation: Paid in December 1936, 15 cents a share in 5 percent 1-year notes. The following is taken from a press notice:

Commenting on this action, Sherman M. Fairchild, president of Fairchild Aviation Corporation, said that while the corporation's cash on hand is sufficient to cover this payment out of 1936 earnings, present contracts and prospects are such that the directors felt it best not to diminish working capital.

Garlock Packing Co.: In December 1936 paid $2 in 10-year 4½-percent convertible notes. The following is quoted from the Wall Street Journal of January 19, 1937:

Garlock Packing Co., in a letter sent to stockholders by George L. Abbott, president, declares that the Federal surtax on undivided profits has placed the company under a distinct "disadvantage." Company is showing a substantial profit; never has passed a dividend.

* * * * * * *

Especially onerous, the company declares, is the Treasury Department's ruling that the amount of the company's mandatory sinking-fund payment on funded debt is not a properly deductible item from the undistributed income subject to surtax. Another point hit by the company is the provision whereby no exemption from surtax is provided for the purchase of equipment and facilities, for increase in working capital and for reserves against future necessities.

Faced with this problem, Mr. Abbott adds, the company decided:

(1) To distribute in cash dividends only the approximate amount that would be normally so disbursed.

(2) To avoid the imposition of the surtax in the higher brackets by the distribution of a dividend in obligations of the company.

(3) To accept the imposition of the surtax in all or some part of the two lowest surtax brackets.

Griesedieck Western Brewery Co.: In December 1936 paid $3 a share in 5-year 5-percent debenture notes.

Hotel Bond Co.: Pursuant to plan for liquidation of arrears on the 7-percent preferred, a dividend of $29.75 a share was paid on this issue early in 1937 in non-interest-bearing notes due in 1 to 5 years.

G. R. Kinney Co.: Paid on the 8-percent preferred stock in December 1936 a dividend of $1 a share in scrip due December 28, 1938. The scrip was redeemed in July 1937.

Kuehne Manufacturing Co.: In December 1936 paid $3 in 4 percent notes, 1941.

Laclede-Christy Clay Products Co.: In December 1936 paid 25 cents a share in 1-year 3-percent notes.

Lane Co.: In December 1936 paid $6 a share in 10-year 8-percent notes.

Mercantile Stores Co.: Dividend paid in January 1937 of $3 per share in 10-year 5-percent debentures. Company offered to pay to stockholders par for any debentures up to March 1, 1937. Out of $447,375 debentures, $143,751 were repurchased by company prior to expiration of offer.

Pan-American Petroleum & Transport Co.: Paid in December 1936 dividend of 60 cents a share in 3½-percent 7-year notes. The following is from the notice accompanying the dividend:

While the capital requirements of your company necessitate the conservation of its cash at this time, the provisions of the Revenue Act of 1936 are such that to retain any substantial portion of its earnings for this year would necessitate the paying of heavy surtaxes. Your board accordingly determined to declare this dividend in the form of 7-year notes bearing interest at the rate of 3½ percent, payable semiannually.

Penn Electric Switch Co.: In December 1936 paid 25 cents a share in 3-percent notes.

Reynolds Metals Co.: In December 1936 paid $1 a share in 3½-percent debentures 1951. The following is quoted from a press notice of November 5, 1936, based on a letter to preferred stockholders:

Preferred dividend payments this year have been $275,000 and common dividends $960,322, leaving approximately $965,000, which would be subject to an undistributed-profits tax of about $110,000.

The excess of earnings for 1936 should be retained in order to take care of the increase in business and for working capital, and should not be paid out in cash dividends.

Rogers Paper Manufacturing Co.: In December 1936 paid on account of arrears on $3.60 convertible class A, $18 in 5-percent 20-year debentures.

Southwestern Development Co.: In December 1936 paid a dividend in 4-percent notes 1942. Forty-seven percent of the stock is owned by Mission Oil Corporation and 51 percent by Consolidated Oil Corporation. See Mission Oil Corporation in list next following.

Sundstrand Machine Tool Co.: In December 1936 paid $1.50 a share in 5-year 6-percent notes. The company recently sold additional common, part of the proceeds thereof to be used to redeem the above notes.

United Drill & Tool Corporation: In December 1936 paid 80 cents a share, one-half in series A notes due June 23, 1937, and one-half in series B notes due June 23, 1938. Through an offering of stock to stockholders both series of notes were paid off this year.

Utica & Mohawk Cotton Mills: Paid in December 1936 $4 a share in notes due quarterly in 1937.

DIVIDENDS PAID IN ASSETS OTHER THAN CASH

Acme Stock Co.: In December 1936 paid dividend of 62½ cents in preferred stock of Acme Brewing Co.

American Cigarette & Cigar Co.: Beginning in March 1936, quarterly dividends have been paid in common stock B of American Tobacco Co. The rate has been one-fortieth share quarterly, except in December 1936, when one-twentieth share was paid. Purpose of dividends in this form has not been announced, but the company apparently used the dividends as a dividend-paid credit in its 1936 return.

American Commercial Alcohol Corporation: In December 1936 distributed two shares 5-percent preferred stock—$10 par—of American Distilling Co. for each five shares of American Commercial held. The following is from the newspaper announcement of November 28, 1936:

Cash requirements of the company for purposes of tax payments are such, Russell P. Brown, president, stated, that it was essential to make the dividend payment in this form.

Anheuser-Busch, Inc.: In January 1936 a distribution of one-twentieth share of Borden Co. stock was made. While, of course, the purpose of this dividend was not to establish a dividend-paid credit, it presumably was so used by the company.

Congress Cigar Co.: In both November 1935 and 1936 paid an optional dividend of $2 in cash or in 6-percent bonds of the Porto-Rican American Tobacco Co. In 1936 the value of the bonds for dividend purposes was placed at 81. Holders of about 46 percent of the stock took the bonds.

Corn Products Refining Co.: In August 1936 paid a dividend of one twenty-fifth share of Allied Mills, Inc., stock. The undistributed-profits tax was not mentioned as a reason for the dividend, but presumably the company was able to take advantage of it as a credit.

Diamond Match Co.: In June 1937 dividends of one-fiftieth share and four-fiftieths share of stock of Pan-American Match Corporation were paid on the preferred and common stocks, respectively. Purpose of the dividends has not been stated.

Fairchild Aviation Corporation: In connection with the reorganization of its activities, the corporation in June 1937 distributed one share of stock of Fairchild Engine & Airplane Corporation for each share of Fairchild Aviation.

Finance Co. of America: In September 1936 paid one-fiftieth share of 6-percent preferred stock—par $25—of Baltimore Pure Rye Distilling Co.

Mission Oil Co.: In December 1936 paid $2 per share in trustee certificates in 4-percent promissory notes, 1942, of Southwestern Development Co., in which it has a 47-percent stock interest. The following is taken from the findings of the S. E. C. concerning the declaration filed with respect to the issuance of the trustee certificates:

The declarant, a registered holding company, is the owner of 19,294 shares of common stock of the Southwestern Development Co. Such shares constitute its only important investment. The Southwestern Development Co. is preparing to make a distribution to its common-stock holders on account of its earnings during the current fiscal year. Such distribution will be made in the form of unsecured 4-percent promissory notes, which will mature on July 1, 1942. As a result of such distribution, the declarant will receive one of such notes of Southwestern Development Co. in the principal amount of $832,985.38. It is expected that, shortly after the receipt of such note by the declarant, the maker of such note will make a cash payment thereon of $144,682.50. Such note

will be endorsed to evidence the receipt of such cash payment, and there will then remain an unpaid balance on such note of $688,302.86.

Such note will constitute taxable income received by the declarant in the current fiscal year. Under the Revenue Act of 1936, the declarant will be obliged to pay a surtax on its adjusted net income for the current fiscal year to the extent that it fails to make an equivalent taxable distribution to its stockholders. The declarant, therefore, has effected an arrangement whereby it will distribute to and among its own stockholders equitable rights in the balance which will remain unpaid on the aforesaid note of the Southwestern Development Co. after the endorsement of the aforesaid cash payment thereon.

* * * * * * * * * * * *

* * * It is the obvious intent of the Revenue Act of 1936 that corporations shall make the fullest practicable distributions of earnings to and among their stockholders for the calendar year in which such earnings are realized. Distribution to the stockholders of the declarant is in keeping with the purposes of that statute and will serve an urgent corporate purpose of the declarant by enabling it to effect the distribution of earnings which, in its judgment, will avoid the surtax penalties to which it would be subject if it failed to declare such a dvidend. An additional issue of common stock would not be taxable in the hands of its stockholders and, therefore, would fail to accomplish the desired objectives, and, if the declarant can accomplish that same purpose without the issuance of a bond on which it will incur a direct liability, it is desirable that it shall do so. Under the circumstances of this case, the Commission finds that the issuance of the proposed trustee certificates will serve a necessary and urgent corporate purpose of the declarant, that the requirements of the provisions of section 7 (c) (1) would impose an unreasonable financial burden upon the declarant and that the public interest or protection of investors does not make those requirements necessary or appropriate.

Morrison Bond Co., Ltd.: In March 1937 distributed one-twentieth share of Security Realty Corporation, Ltd., 6 percent preferred.

Munsingwear, Inc.: In both December 1936 and January 1937 paid one-half share of Wayne Knitting Mills stock (par, $5). Purposes of the dividends, as stated, were other than to avoid the tax on undistributed profits.

Niles-Bement-Pond Co.: The following is quoted from a letter to stockholders dated December 4, 1936:

Results of the operations of your company for the first 10 months indicate that the net profits for the current year will be reasonably satisfactory. Cash dividends aggregating $1 per share have been paid this year, and, in the opinion of your board of directors, it is desirable that the balance of these profits be added to your company's working capital rather than distributed in the form of additional cash dividends. The recently enacted provisions of the Federal Revenue Act of 1936 impose substantial surtaxes upon net income of corporations not distributed by them during the taxable year in the form of dividends taxable to the recipient. However, your company owns 50,000 shares of the common stock of General Machinery Corporation, and, as the proposed consolidation of the two companies has been abandoned, as explained in this letter, your directors have authorized a dividend of 43,256¼ shares of stock of General Machinery Corporation, payable to the stockholders of this company on the basis of 1 share of said stock in General Machinery Corporation for each 4 shares held in this company.

In the opinion of counsel for your company, this distribution will constitute a dividend which is taxable to the recipient and which will enable your company to obtain a dividends paid credit, resulting in a substantial tax saving to it without impairment of its working capital position.

Pacific Investors: In July 1936 distributed one-eighth share of Pacific Southern Investors class A common.

South Coast Corporation: Distributed in January 1937 three shares of South Shore Oil & Development Co. stock (par, 10 cents).

United States Corporation: In January 1937 distributed one-fourth share of Clewiston Realty & Development Co. stock.

Waialua Agricultural Co., Ltd.: In November 1936 distributed one-tenth share of Hawaiian Pineapple Co., Ltd., stock. It is interesting to note that the Waialua Co. is now offering an additional issue of its own stock to stockholders, most of the proceeds therefrom to be used for further purchases of Hawaiian Pineapple Co. stock.

LIST OF COMPANIES WHICH DURING THE PAST YEAR HAVE OFFERED STOCK TO PROVIDE FUNDS FOR DIVIDENDS OR TO REIMBURSE TREASURY FOR DIVIDENDS PAID [1]

Berghoff Brewing Corporation.
Brown Rubber Co.[2]
Casco Products Corporation.
Cluett, Peabody & Co., Inc.
Consolidated Retail Stores.
Diamond T Motor Car Co.
Emerson Electric Manufacturing Co.
General Tire & Rubber Co.
A. Hollander & Son.
International Radio Corporation.
G. Kreuger Brewing Co.
R. G. Le Tourneau.
R. H. Macy & Co.
Marchant Calculating Machine Co.
Montgomery Ward & Co.
New Britain Machine Co.
Reliance Electric & Engineering Co.
Simonds Saw & Steel Co.
Standard Tube Co.
Sundstrand Machine Tool Co.[2]
Veeder Root Corporation.
Yellow Truck & Coach Manufacturing Co.

NOTE.—The surtax on undistributed profits is in part responsible for the additional stock issue of Phillips Petroleum Co. now in registration and for the one contemplated by Ludlum Steel Co. Grabler Manufacturing Co. has a stock issue now in registration to provide funds to redeem notes issued as a dividend.

[1] In almost all cases funds for other purposes were raised through the same offering.

[2] Stock issued to redeem notes paid as a dividend and for other purposes.

A Job for the Women

EXTENSION OF REMARKS
OF
HON. VIRGINIA E. JENCKES
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, November 17, 1937

EDITORIAL FROM THE WASHINGTON HERALD

Mrs. JENCKES of Indiana. Mr. Speaker, I desire to bring to the attention of the Members of the House of Representatives and of the citizens of our Nation, especially American women, a terrible injustice which prevails in the District of Columbia and which is being perpetrated against the taxpayers of the District of Columbia.

The citizens of the District of Columbia are not permitted to vote. The citizens of the District of Columbia are not allowed to express their desires at the ballot box on issues concerning the welfare of the District, notwithstanding the fact that they are compelled to pay exorbitant and unfair taxes.

I desire to place in the CONGRESSIONAL RECORD an editorial which was written by Mrs. Eleanor Patterson, the distinguished editor and publisher of the Washington (D. C.) Herald and the Washington (D. C.) Times. The editorial is entitled "A Job for the Women" and appeared in the November 10, 1937, edition of the Washington (D. C.) Herald exactly as given here:

A JOB FOR THE WOMEN

Along with idiots and criminals the residents of Washington are denied self-government.

This condition at the heart and Capital of the world's most powerful and respected democracy denies the text and the spirit of the Declaration of Independence upon which the democracy was built.

The denial has a color of legal authority because of a clause in the Constitution which was written in a day when the modern Washington was not even a dream of wildest fancy.

When the Constitution was written Congress insisted that it alone should make the laws for whatever district should become the permanent seat of the Federal Government.

Who could have foreseen a city of 625,000 people by 1937, a city of 1,000,000 which our planning experts anticipate in 10 years more?

Clearly the Constitution, as it stands, is working against the real interests of democracy. For 1,000,000 Americans cannot be

denied their voting rights and the United States still be called a democracy.

Washingtonians today are mere chattels of Congress. It is no exaggeration to say we are as helpless as the victims of any foreign dictator. Those people pay taxes and have no voice in the government. Do we? They are not represented in the councils of the rulers. Are we?

Nobody is being shot in the streets here for being against the administration, and we can still complain without being beaten up, and if that is consolation for not having the vote, make the most of it.

But the fact remains that Washington is governed in a way contrary to democratic principles. And badly governed.

We lead the Nation's cities in infant mortality. We are second in tuberculosis deaths. For years Washington has ranked among the five cities which the Department of Justice's uniform crime reports show are the worst crime-ridden in the country.

The state of our municipal finances is a perennial scandal. The Capital has been an actual bankrupt twice. It closed the last fiscal year with an illegal deficit.

The privilege tax, just enacted this past year, along with a raise in real-estate taxes, has struck business a staggering blow. In some cases, the total tax payments have been nearly doubled.

And Congress continues to renege on its plain duty to share the burden of operating this "ornamental" city.

How much of this sort of thing can you take?

As long as Washington is governed from afar you are going to get more and more of it.

The remedy for bad government, for democracy denied, lies with the people of Washington. The rest of the United States has the vote. Liberty and the vote were won by a fight; a long fight, and a fight in which no holds were barred.

Washington can get liberty and the vote for itself only by facing some hard facts and doing some hard work.

Appeals to sweet reason and statements of profound logic just don't work with Congress.

Able citizens have been doing that sort of thing for years. All they get is an annual glassy stare. Then Congress gets down to the business of appeasing the folks back home who can vote a fellow out of his job if he doesn't do what's wanted.

Fear, not faith, is what it takes to move the mountain of a politician's concern. We people of Washington can get the help of those voters back home to rouse that concern only if we earn it.

We can earn it by putting up a fight for the vote such as has not been seen, literally, since Sam Adams led a group of patriots to throw British tea into the Boston Harbor.

In that Revolution, the men did the tea throwing and the women stayed at home. Each did a noble job and an effective one. But this time, the women have got to come out with the men—lead them, too, if need be. It is not a shooting job, but a plain, open fight for recognition of rights. Not a suffragette thing. Not a campaign based on feminism.

This is everybody's problem. But the women are entitled to show they can handle it.

The women know how wrong things are. Mothers have been passing the hat for hot lunches in the schools, standing by helplessly while slum babies die, worrying secretly about the future of their own children in a town where a youngster's chances of getting ahead, either in Government or business, are pretty slim unless he knows a Senator or a big-wig in the administration—any administration.

Too many Washingtonians have been ducking their duty. They have their little circle of friends, their little groove of politics or lobbying or law or government. They are within a tight little, right little world of their own.

The women of Washington can shatter that smug front and start a real campaign for the vote.

Today's the day to start.

Let's see a show of hands. How many women are willing to join for the duration of the—well, if necessary, war?

ELEANOR PATTERSON.

Bill Providing for Government Ownership of the 12 Federal Reserve Banks

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 17, 1937

Mr. PATMAN. Mr. Speaker, officials of the American Bankers' Association have commenced a fight against the passage of H. R. 7230, a bill which is sponsored by more than 150 Members of the House of Representatives, providing for Government ownership of the 12 Federal Reserve banks. A few State banking associations are also opposing this bill. It is my impression that the opposition is due to a misunderstanding of what the bill purports to do, except in the case of the officials of a few large banking corporations, who prefer to have charge of the money and credit facilities of this Nation instead of permitting the Government to have any control over them.

STOCK ARGUMENTS AGAINST BILL

The stock arguments made against the bill, all of which are unfounded, are these:

First. That it threatens the dual banking system.

Second. That it is intended to enforce a unified banking system under the control of a Federal agency.

Third. That it would serve as a possible entering wedge in the field of Government ownership of the entire banking system.

Let me answer the first argument; the proposal, if it becomes a law, will not threaten the dual system, but will preserve it. Under present laws only 7,000 banks are permitted to use the Federal Reserve banking system. Less than 1,000 of these banks are State banks. The 9,000 other banks, which hold State charters, do not belong to the system, and do not receive benefits from it. If present laws and policies of the Federal Reserve System remain, the State banking systems are on the way out. I predict they will not survive many years unless they are given advantages somewhat on a parity with national banks in the use of the Government's credit.

Under our proposal, all these State banks will be permitted to receive the same benefits, advantages, and opportunities from the 12 Federal Reserve banks that national banks now receive. They will not be required to remain in the System unless they desire. They will not be forced in. They will not be forced out—neither will they be forced to remain in the System after they have become affiliated with it. The connection of these 9,000 nonmember banks with the Federal Reserve Banking System will be permissive and voluntary, and in no way compulsory. They can get out whenever they choose and for any reason or no reason if they choose to do so.

Therefore, instead of the proposal threatening the dual banking system, our present laws and practices threaten the dual banking system, and our proposal, if enacted, will rescue it.

UNIFIED SYSTEM NOT CONTEMPLATED

It is not contemplated that a unified system will be forced under this proposal. It will permit those State banks and national banks which affiliate with the System to work in unison, but will in no way compel any State bank to become affiliated; if it has affiliated, our proposal will not compel it to remain affiliated if it does not choose to do so.

OWNERSHIP OF ENTIRE BANKING SYSTEM NOT PROPOSED

In answer to the third objection that is urged, the 12 Federal Reserve banks are not engaged in what is known as a purely banking business—they are engaged in the business of issuing the Government's money and credit. Our group does not have in mind the ownership of the entire banking system in presenting this proposal; neither do we have in mind that it will serve as an entering wedge into that field. It is our view that all banks should be permitted to receive the benefits of this great System instead of a few banks, and that all communities in this Nation should be served by the use of the Government's credit, and not restrict such benefits to the large cities and a few communities.

NO BANKERS TO BE ON BOARD

Another objection urged by the banks is that it will divorce the Federal Reserve Board from the lending institutions, the national and State banks that are now members of the System, and not permit officers of banks to become members of the Board of Governors of the Federal Reserve banks. Our proposal will prevent bankers from being on this Federal Reserve Board. It is not right for the money-issuing privileges of this Nation to be exercised by bankers who could serve their own selfish interest. Those who insist that bankers should have any control whatsoever over the Federal Reserve Banking System should, in order to be consistent, insist that the members of the Interstate Commerce Commission be owners of the railroads. It is just as reasonable for the railroad owners to control the Interstate Commerce Commission and fix rates in their own interest as it is for

the bankers to control the Federal Reserve Banking System and be privileged to use, if they desire to do so, the credit of the Nation in their own interest and in their own behalf. The same argument carried to its logical end would cause one to insist that the Federal Communications Commission should be composed of owners of radio stations, and that the members of the Federal Trade Commission should be selected from officials of the large business and industrial concerns of the Nation.

TWENTY-FOUR BANKS OF THE NEARLY 16,000 BANKS OWN PRACTICALLY ONE-THIRD OF ALL BANKING RESOURCES

Twenty-four banks own 30.1 percent, or almost one-third, of the entire banking resources of this Nation. At the last report there were 15,964 other banks. These 24 banks are located 13 in New York City, 2 in California, 3 in Illinois, 1 in Massachusetts, 3 in Pennsylvania, 1 in Michigan, and 1 in Ohio. During the depression the resources of these 24 banks increased 25 percent, or over $16,000,000,000 to $20,000,000,000.

A study which I completed a few months ago, and which was inserted in the CONGRESSIONAL RECORD at the time, is convincing that there is a concentration of banking resources of the 24 leading commercial banks; that there is a further community of interest as indicated by the interlocking directorates in the leading banks; that there is a well-established trend toward fewer and larger banks; that the trend is more rapid and consistent with banks than with nonfinancial corporations.

During the period 1921–36, the total number of commercial banks decreased from 30,848 to 15,988. There is concentration and control of wealth in the leading banks of this country. The officials of these leading banks have considerable influence over the activities of the American Bankers Association and many State associations.

It is in the interest of the people that Government officials who cannot serve their own selfish interest have control over the money-issuing privileges of the Federal Government. It is further in the interest of all the banks of this Nation, except possibly the 24 leading banks I have mentioned, for the Government to own the 12 Federal Reserve Banks, and the facilities of these institutions used in the interest of all banks, not a few, and in the interest of all business, labor, and agriculture.

INDEPENDENT BANKS AND INDEPENDENT BUSINESS HAVE A COMMON PROBLEM

I urge all Members of Congress to give this question serious consideration. Monopoly is rearing its head in the banking business. If something is not done, the unit bank will fade out of the picture and the dual system will be destroyed. Independent banks and independent businessmen have a cause in common. All Members of Congress who are opposed to a few wise men from the East dictating and controlling banking, retail distribution, and other lines of business, should give this question very careful thought and consideration.

Radio Address of the President Commending Community Chests

EXTENSION OF REMARKS

OF

HON. LAWRENCE LEWIS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 17, 1937

RADIO ADDRESS OF THE PRESIDENT OF THE UNITED STATES, IN CONNECTION WITH THE ANNUAL COMMUNITY MOBILIZATION FOR HUMAN NEEDS, BROADCAST FROM POUGHKEEPSIE, N. Y., OCTOBER 18, 1937

Mr. LEWIS of Colorado. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following radio address by the President of the United States, delivered in connection with the annual community mobilization for human needs, from Poughkeepsie, N. Y., October 18, 1937:

Chairman Taft, Community Chest workers, friends of human needs, each year, as we emerge further from the insecurity and want of the depression, we have a better right to look back with satisfaction at the ground which we have covered. But even while we can take satisfaction in this glance backward we have a serious, inescapable obligation to look forward at the same time and to do it with honesty and vision.

There is danger that we may be blinded by the welcome light of returning prosperity to the very real need that still exists for a considerable part of our population. We must not forget that there are people who are still hungry, their children undernourished; that rags are the clothing of many of our countrymen and miserable shacks or crowded city tenements their only home. These are the things that make it imperative for us to go forward without hesitation in our efforts to bring security, opportunity, and a decent standard of living to all our people, so that our prosperity may be a more true prosperity for the whole Nation.

In this great effort to better the conditions of those who do not now share the freedom from actual want which most of us enjoy, it is important that all agencies, both public and private, receive the Nation's support. It must not be thought that the responsibility which the public assumed through its government, local or national, for the problems of welfare lessens the need for the many services of the private agencies. This need continues and can only be met with generous support from those who are fortunate in their ability to give, even though the gift be relatively a small one.

Again this year, community chests representing these agencies in your own community, will appeal to you for moral and financial support so that these needs may be met. All of us have an obligation to face this need honestly and then to give as generously as our individual means will permit. To help our neighbors is a part of the best American tradition. For us the long view of life has included at every turn the principle of mutual aid.

The Federal Government, with the return of prosperity, must more and more narrow the circle of its relief activities and reduce the amount of Federal revenue to be expended in the amelioration of human want and distress in the various communities of our land. I say this because we all agree that unless Federal taxes are to be greatly increased, the expenditures have to be brought within the existing tax receipts. Although Federal Government relief activities have to be curtailed, there must needs be no abatement of State, local, and individual relief work. Indeed, local and private activities must be increased.

I would, therefore, make an especial appeal that Federal officials and our Government employees wherever they are found ought to take a leading part in cooperating with local and community relief workers in carrying forward their unremitting campaign for the alleviation of the want and suffering that still stalk the land. The wholehearted cooperation of Federal workers will not only aid the work immediately in hand but it will also afford an excellent and practical example of the right community spirit.

And as I dwell upon the practical force of good example in well-doing there comes to my mind the example of the city of Denver which now for half a century has given to the other cities of the country. Denver, I am informed, is observing tonight the fiftieth anniversary of joint financing. The Denver beginning was a forerunner of what has been developed into the 450 community chests of the country.

State and local governments are assuming an increased responsibility for those unable to work, for those who are ill, for the provision of adequate educational and recreational opportunities for all. In every American community the generosity of private giving makes possible the never-ceasing campaign waged by private welfare agencies to bring opportunities otherwise denied; to render needed services not otherwise available and to pioneer in new fields that widen the horizon of us all.

This work can only go forward with the generous cooperation of all of us. The community chest offers us once again the opportunity to express our fundamental belief in the principles on which our democracy was founded, by the generous, wholehearted, and spontaneous giving of our money and our good will. I ask you to help even more greatly than ever before.

Agricultural Prosperity Has Not Yet Come to the Third District of Nebraska

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 17, 1937

Mr. STEFAN. Mr. Speaker, I wish to report to you and the membership of this House that during the short time I have been away from Washington I have visited 20 of the 22 counties in the Third District of Nebraska which I have the honor of representing in this honorable body.

Before leaving my district, Mr. Speaker, I promised the people there I would report to you and the House membership the conditions which exist in that district. About seven or eight of those counties are still drought stricken and every resource of our Government is needed there now to keep the farmers in those stricken counties on the farm.

In other counties we have had a partial to a fair crop of corn. So that in those counties where we did have a crop conditions are somewhat better than they were a year ago when we had a total crop failure.

However, the membership of this House should know that notwithstanding this partial crop, conditions are not good and that whatever the farmers in my district have raised will be sold to pay debts and to keep humanity alive.

In the counties where the crop failure has been complete relief must continue to come from the Federal and State Governments. In these counties especially, Mr. Speaker, there is and has been human suffering. In these and other counties we must be lenient in the collection of our feed and seed loans. In some cases these feed and seed loans cannot be paid and should be canceled entirely. The newspapers, the movie-news pictures, and even Members here and high Government officials continue now to shout from the housetops that the farmer "is in clover." That he is better off today than ever before. This is giving the country a wrong impression because that is absolutely not true of the farmers in my district. I resent these statements which would lead people here to believe that our farmers are so well off today. I say they are worse off today.

Mr. Speaker, I am very much disappointed that I did not have a longer time to spend with the people in my district. It requires considerable time to travel over 22 counties. It is my belief that I have been sent here by the people of my district to represent and to speak for them. It is my belief that I am sent here by these people to express their views and their wishes. Therefore, I feel very badly that here today we come for a special session of Congress only to find that we have no program to work on and no real business to transact. I feel that if there is no program we should have been allowed to stay home to get a better opportunity to visit with our people and to get better instructions from home. I feel that these idle hours we are spending here could be better put to real use in asking more instructions from our people back home.

However, Mr. Speaker, during the short time that I had to cover my district I feel that I have some sort of picture of conditions there and also feel that from contact with my constituents I know in some manner what they wish me to do while I am here.

Mr. Speaker, my district is purely an agricultural district. There are approximately 300,000 people who live in my 22 counties and who live from the resources of the farms. Therefore the people there are intensely interested in what we do here during this session regarding the proposed legislation on a permanent farm measure. In all of my contacts with the people back home I found a determined and forceful feeling against anything that would be compulsory in any farm bill we pass.

The people in my district feel that the loaning of Federal money on farm crops to stop the speculator is a good program. Most of them feel that the soil conservation program has been of some benefit. But there is a unanimous feeling that when we do draw up a farm measure that there will be nothing compulsory about it. That there will be no fines and penalties or regimentation which in any way would take away from the farmers their freedom and individual independence on their own farms.

Mr. Speaker, the people in my district feel that there has been an undue amount of force in collections of feed and seed loans in cases where farmers did not raise enough crops to even feed what animals they have on their farms. Many of these farmers feel that my bill which would allow them to repay feed and seed loans bushel-for-bushel in kind when they do raise a crop, should be given consideration by this House. I hope the House committee will consider this bill and give me the hearing I merit on that bill.

Mr. Speaker, the farmers in my district are debt-burdened. They no longer can afford to borrow money. If the present conditions continue, these debt-burdened farmers will be forced on relief and out of the farm homes in which many of them have lived for 30 or more years. These farmers need refinancing and not more indebtedness. These farmers in my district are anxious that we make permanent the 3½ percent on land-bank loans and commissioner loans. These farmers are pleading for the passage of our bill to refinance their indebtedness at a low rate of interest with a long amortization period. Many of them agree with me that if we could pass this refinance bill in this House and if God Almightly would give us bounteous crops, we would need no other farm-relief measure.

Mr. Speaker, my investigation over my own district leads me to believe that our farmers are opposed to any trade agreements with foreign countries which result in putting our own farmers into competition with farmers of foreign lands. The farmers in my district are against surrendering the American farm market to foreign farmers. Our farmers are willing to trade with foreigners for those things which we do not have for sale. They are even willing to buy farm products from foreigners when we do not raise enough farm produce to feed ourselves. But they are opposed to putting the foreign farmer into the American market when our own farmers have anything to sell in their own market.

Mr. Speaker, I call your attention to the promises which were made to our farmers in the campaign to eliminate prohibition in our land. Our farmers were then promised a great market for their corn and grain if they would eliminate prohibition. But that promise has not been carried out. We find today that the foreign blackstrap molasses trust is bringing this molasses into our country and distilling it into alcohol and destroying a market for millions of bushels of American corn and grain annually.

In my State farmers have hoped some day to manufacture alcohol from their corn grain and other farm products in order to distill industrial and spirits alcohol. In this way many of our farmers hoped to eliminate any danger of farm surplus. However, we find that this meritorious plan of our farmers and their dream of expanding the use of American farm products is being destroyed by inroads made by the products of foreign farmers to whom we are opening the doors of the American farmers' market.

Mr. Speaker, the American market belongs to the American farmer first of all. Farmers in my district look with fear and trembling over the importations of fats and oils, meats and grains from foreign lands into their own market at a time we tell them we plan a permanent farm crop reduction control program. Many of them feel that they should be allowed to raise all the food Americans can consume and then discuss the destruction of surplus food. That is why, Mr. Speaker, so many farmers in my district who have felt the ravages of four or five complete crop failures fear any plan whereby we may destroy any food whatever.

Mr. Speaker, the people in my district are grateful for whatever aid which has come to them through the Federal relief programs. But they are Americans who love their country and pray for good statesmanship in government. They pray for common-sense legislation and careful distribution of Federal money which they recognize is their own tax money which we so liberally spend here. The people in my district urge upon me as their Representative to protect their interests in the expenditure of their tax dollar. They are opposed to any kind of waste in the distribution of their funds and I urge you that whatever is done here in the way of appropriations that these funds be spent wisely, economically, and efficiently in order that every dollar so expended is used for the purpose intended. These people whose interests I must guard in this great legislative body are the best people of America, Mr. Speaker. They are not party-politically minded. They are people whose ancestors came from all parts of the world.

They represent great pioneers who had their beginnings in Europe and later from Virginia, Wisconsin, and other States. They broke the raw prairies of Nebraska and built

great farms and comfortable homes for their families. They represent those who opened the old Oregon Trail and drove the covered wagon to the gold fields of California. They are those who fought the wild man and who have gone through many other droughts and dust storms and insect plagues and blizzards. They represent the hardy pioneer man and woman of early American history and who today find themselves facing many of the battles which their pioneer forefathers faced years before them. They have the inspiration of those early pioneers and they love America and love the land from which they dig their daily bread. They are serious in the selection of the men they send to their State and National lawmaking bodies. They are hard-working, frugal men and women who know what it means to earn a livelihood. So they are worried over the financial condition of our Federal Treasury today. They are men and women who pay their debts when that is possible. They believe that the payment of debts is a human obligation. Therefore, they are worried over our national debt of nearly $40,000,000,000 and our spending of once more as much as is represented in our receipts. They are generous people, Mr. Speaker; people who want to help their neighbors who are less fortunate. They are the people who were so liberal in their contributions to the Red Cross and to the sufferers of the Ohio floods. So they have not been adverse in the expenditures of great sums of money from their own Treasury for the relief in national depressions or emergencies. But they are beginning to feel, Mr. Speaker, that much savings could be made in better administration and better distributions of these funds. They demand economy and efficiency; and if that is the objective of the present reorganization program, I feel they would want me to support it.

For that reason, Mr. Speaker, I wish to call to your attention another matter of spending which is worrying the people of my district, as it is worrying me as their representative. It is the matter of the moneys collected in social-security taxes. It is true that my district is composed mostly of farmers. But in my district are many merchants, small factories, and people who employ others. Hundreds of these, Mr. Speaker, as employers, pay into the social-security fund and thousands of employees also pay into that fund. Under the law, these taxes are collected from the workers and employers as a trust fund, out of which old-age pensions are to be paid as they accrue. The taxes are being collected. But here we find that this money goes into the general fund of the Treasury, and is being spent for general government expenses as fast as they come in. Our Treasury simply places an I O U—a piece of paper—in a special compartment of the cash drawer and calls it the "Social Security Fund." Instead of a large reserve, the Treasury is accumulating merely a pile of special obligations in this important trust fund. When the time comes to begin paying pensions, the bonds will have to be sold to the public for cash—to the same public which is now paying in the social-security taxes. Meanwhile, the taxpayers must pay increasing taxes to cover the interest on the bonds. This, Mr. Speaker, is not good housekeeping with the taxpayers' money. I hope, at this special session of Congress, that some of these matters shall be remedied in order that the people back home will know that we are doing our utmost to run an orderly house and spending their money with as much frugality as if it were our own money.

At some later date, Mr. Speaker, I shall take the floor again to discuss in detail the matter of protecting the American market for the American farmer. In the meantime I hope that Members will keep in mind the importance of my bills to keep out of this country the competing fats and oils, the blackstrap molasses, and other foreign farm produce which will destroy the future welfare of the American producer. Also, Mr. Speaker, I wish to repeat, in closing, that no matter what the farm receipts figures show today I wish to deny the implications made so many times here these days that the farmers' conditions have improved so much. So far as the Third District of Nebraska is concerned, the farmers are no better off than they were a year ago. I say they are worse off today than they were a year ago. I only wish every Member of this House could go with me through the Third District of Nebraska to see for himself how really "well off" our farmers are. I especially direct the attention of the Members from the industrial East to this statement.

Ever-Normal Granary

EXTENSION OF REMARKS

OF

HON. CLYDE L. HERRING

OF IOWA

IN THE SENATE OF THE UNITED STATES

Wednesday, November 17 (legislative day of Tuesday, November 16), 1937

ARTICLE BY HON. HENRY A. WALLACE, SECRETARY OF AGRICULTURE

Mr. HERRING. Mr. President, I ask leave to have printed in the RECORD an interesting article appearing in the New York Times Magazine, of the issue of the 14th instant, by Hon. Henry A. Wallace, Secretary of Agriculture, on the subject of a balanced abundance and the ever-normal granary.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times Magazine of November 14, 1937]

WALLACE URGES BALANCED ABUNDANCE—IN THE EVER-NORMAL GRANARY THE SECRETARY SEES THE SALVATION OF THE FARM AND THE CITY

(By Henry A. Wallace, Secretary of Agriculture)

In the summer of 1934 hot winds and drought swept the Corn Belt and there was a smaller corn yield per acre than ever before in the recorded history of the United States. Again, in 1936, the same thing happened and the yield of corn per acre was less than in any other year with the one exception of 1934. Not one person in a hundred on the Atlantic seaboard can imagine the wreckage caused by drought. But one needs no imagination to understand high meat prices. The newspaper articles on the New York kosher meat strike might well have carried the headline, "The droughts of 1934 and 1936 finally visit New York City."

Meat prices and livestock production are determined more by the size of the corn crop than by any other single thing. But the corn crop unfortunately is very subject to drought. The corn supply affects not only the price of beef and pork but also, to a lesser extent, that of butter and eggs. It can accurately be said, therefore, that the variability of the weather in the Corn Belt is one of the leading sources of national disequilibrium.

It is rather surprising that in the past we have ordinarily carried over from one year to the next only about 7 percent of the corn crop, as compared with 15 percent of the wheat and 30 percent of the cotton crop. The carry-over of corn on the farms of the United States from one year to the next is ordinarily only about 170,000,000 bushels. This means that when a drought like that of 1936 comes along, which reduces the yield by nearly a billion bushels, the shortage is so appalling as to affect in one way or another every person in the United States.

In view of the droughts of recent years, it is essential that the Nation should have a corn carry-over from one year to the next several times as large as it has been having. In normal years it should have a carry-over of at least 350,000,000 bushels, instead of only 170,000,000. The welfare of the entire Nation demands this. Such supplies would insure New York consumers against meat shortage like that experienced this fall.

But while the larger carry-over seems to be vital from a consumer's point of view, there are many corn farmers who feel strongly that their prices and incomes ought to be protected against the price-depressing effect which it would be certain to have in the absence of adequate protective measures. Some of them remember that back on October 1, 1932, there was a carry-over of 250,000,000 bushels, which was only 90,000,000 bushels in excess of the normal carry-over, and that corn prices in the Western Corn Belt went down to 10 cents a bushel in November of that year. In South Dakota certain elevators actually offered as low as 2 cents a bushel for corn.

The big supplies of corn and other farm products in 1932 were accompanied by grief to farmers which they are not likely to forget soon. Moreover, their grief was communicated at once to the farm machinery and automobile factories and then on to the steel mills and finally in a thousand different ways to the people in New York City. Corn was so superabundant in the fall of 1932 as to be almost worthless. But the abundance brought waste, not plenty, to the people in the cities. Thousands of bushels of corn were burned because corn was a cheaper source of heat than coal.

Consumers are right in asking that they be protected from the after effects of droughts like those of 1934 and 1936. They don't

want to pay so much for meat as they did this fall. But farmers are equally right in asking that they be protected in the situation which results when corn supplies are too large. The problem is how to help both farmers and consumers by making it practical to have on hand a normal carry-over of corn from the preceding crop of from 300,000,000 to 500,000,000 bushels.

So far as corn and meat are concerned, this is what the ever-normal-granary legislation is all about. We want to bring greater stability to the supplies of corn from year to year so that the meat supplies also will have greater stability from year to year. We want to make it impossible for either a 1932 superabundance or a 1936 drought to do us such great harm.

It is therefore proposed in years of abundance that the Federal Government should lend enough money on corn at low rates of interest to make it possible to carry over corn from the good years into the bad years. It is further proposed that the loans be handled in such a manner that in the good years there will be enough corn available to feed sufficient livestock to take care of the needs of the consumers of the United States at a reasonable price, but not enough to cause the corn price to slump to a point destructive to the purchasing power of the corn farmer.

Ever since the Civil War we have had again and again a situation when hog prices 1 year would be twice as high as they were 3 or 4 years later. When the prices were high the consumer was hurt, and when the prices were low the farmer was hurt. What both farmers and consumers want is a more uniform price and a more uniform supply from year to year. The ever-normal-granary legislation is designed to iron out the peaks and fill up the valleys.

The suggestion has been made in New York City that the ever-normal granary would not be practical until the country has ever-normal weather, ever-normal bugs, and ever-normal plant-disease pests. In reply I would say that it is because weather, bugs, and pests are so abnormal that the Nation should build an ever-normal granary to equalize between the good years and the bad.

Farmers have already had experience with this kind of thing. In the fall of 1933 the Federal Government lent 45 cents a bushel on 270 million bushels of corn. This corn was stored under Government seal on the farmer's own farm. That is the cheapest place to store it. That is the place where as a rule it will finally be needed. We can say quite definitely because of our knowledge and experience that the cheapest and most practical way to operate the ever-normal granary for corn and meat is by means of Government corn loans and corn storage on the farm.

The most difficult administrative problem is presented by the need for controlling the surplus when the granary overflows. We need in this country now only about 2,370,000,000 bushels of corn annually to feed our horses and mules, our chickens and dairy cows, and to produce a supply of pork and of fat beef about 30 percent greater than has been consumed in 1937. With the present income of the United States and present productivity of city factories, corn crops of 2,370,000,000 bushels will most nearly bring the interests of both farmers and consumers into harmony. But suppose we should have two corn crops of 2,800,000,000 bushels and the granary was overflowing. Obviously the Government loans would be imperiled and we would be in danger of repeating the Farm Board fiasco. To guard against this the farmers must use Government power to control the overflow.

The most practical way of controlling the overflow is by means of marketing quotas and storage quotas. These would be used only in the Corn Belt extending from eastern Nebraska to western Ohio and from southern Minnesota to northern Missouri. Marketing and storage quotas would not be used in this area unless the Corn Belt farmers by two-thirds vote approved them. The essence of marketing and storage quotas is to require farmers who have overplanted their land to corn or who have had an unusually large yield per acre to seal up a certain percentage of their corn under Government loan. The objective would be to bring the total amount of corn thus sealed to a point which would leave available for market about 2,370,000,000 bushels.

Noncooperators in the soil-conservation program who have overplanted their land to corn and who have a small percentage of their land in soil-building crops would be given the right to borrow money on their sealed-up corn but at a somewhat lower rate than the cooperators. It is obvious that these men who have been overplanting corn or destroying the Nation's precious heritage of soil fertility should not have the privilege of borrowing from the Government at a rate per bushel which might later result in the Government's having to take over their corn at a loss to itself. The noncooperators should be treated fairly, but they should not be allowed to unload on the Government.

If during the years ahead there should be 3 or 4 years of good crops in succession, the plan I have described would result—in case of affirmative votes by two-thirds of the farmers—in the Government's requiring the sealing under loan of larger and larger percentages of the crops. After the second year of good weather, many farmers would find it necessary to build more cribs. Even the noncooperators would then begin to cut down their corn acreage. However, they would know that the corn sealed under Government loan on their farms could come out from under seal whenever the total national supply was cut to a manageable point. A year or two of bad weather would bring the sealed corn out onto the market.

In the system I have described it is obvious that a lot depends on the amount lent by the Government per bushel. If too much is lent, the result will be an eventual Farm Board disaster, no matter how tightly the overflow from the granary might be controlled. A high loan would make every farmer eager to produce to the limit, and, therefore, most farmers would object strenuously to any action hampering their corn planting or corn marketing. The combination of high loans and drastic controls to back up such loans would inevitably lead to an explosion which would blow up the whole system unless the vast majority of Corn Belt farmers fully understood and were agreed as to the desirability of the system.

In saying this I am speaking about the undesirability from the standpoint of the farmers themselves of high loans and high-powered, drastic control of marketing and production. It is much safer from the farmer's point of view to have more reasonable loans which can better be defended to the consumer and which will not cause so many farmers to want to expand their production beyond the true needs of the market.

At the present time corn would have to be selling for 87 cents a bushel in order for a farmer to buy as much with a bushel from the cities as he brought before the war. It can hardly be said, therefore, that 45 cents a bushel is an excessive loan so long as cities are charging farmers such high prices.

Under many conditions a higher loan than 45 cents would be justified in order to set up an ever-normal granary in such a manner as to minimize the likelihood of $1.20 corn in years of drought. Every year the conditions are different and there must be examined all the surrounding factors, such as the size of the new crop, size of the carry-over, number of head of livestock, and the way in which the corn loan will best stabilize the livestock cycle.

The point I am making is that considerable freedom should be left to the administration in determining loans. As in other business enterprise, the program should be carried out over a period of years so as to make it possible to improve the ever-normal-granary model, as we improve our automobile models from year to year.

It is essential that the loan policy should in the long run bring the maximum of security and stability to both farmers and consumers. It must be high enough to encourage the carrying over of abundant corn supplies from the good crop years to the poor crop years. If it does this there will never again be quite such a meat shortage as we experienced this fall—unless, of course, we should have year after year of bad weather. On the other hand, the loan must not be so high as to pile up surpluses impossible to control with any ordinary means. Corn farmers would not want the loan policy to cause the Government losses running into the hundreds of millions of dollars. There is a sensible middle view which can and should be embodied into legislation.

I will not take the space here to discuss the details of the proposed ever-normal-granary legislation as applied to cotton and wheat. The principles are much the same, except that it is essential to make sure that the loans do not interfere with exports. This is especially true with cotton.

Because our high tariffs have destroyed the ability of many foreign countries to pay a decent price for our extra cotton and wheat, it is proposed to pay both cotton and wheat growers a special adjustment payment to compensate them for the market lost to them by our tariff policy. The money for this would come from a tariff-equalizing tax.

But in no event is there any likelihood that the market price of wheat and cotton, plus the tariff-equalizing tax, would be sufficient to give the farmers as a 5-year average a total equal to the share they had in the average consumer's income before the war. With all the benefits of loans, soil-conservation payments, and adjustment payments, it is impossible to give cotton and wheat farmers an income which will return them on the average more than 3 percent on their investment and more than $300 to $400 a year for their labor and capital above out-of-pocket costs. Wheat may average a little more than this and cotton somewhat less. The Dakota wheat farmer and Alabama cotton farmer both have an income which, with all Government payments added in, is pitiably low, and their standard of living in many cases is below that of the tenantry and peasantry of western Europe.

Some people say farm-land values are too high, not realizing that, if we take 1921 to 1925 as a base, farm land today is less than one-half as high as industrial stocks after the October 1937 crash. No, farm land has had the water squeezed out until it is cheaper than before the World War, whereas industrial stocks are still several times as high as they were before the war. But on the bone-dry values for farm land the return is low, and the labor return is much lower on both an hourly and a yearly basis than labor in the cities.

Before the war, even after counting in the value of the house rent and the value of the home-raised food, the average farm family received only $1 as compared with $2 for the average city family. In the decade of the twenties the farm family received only 90 cents as compared with the city family's $2.

A few city people will say: "What do we care about the farmer? What if he is hard up? His loss is our gain."

But most city people now understand the interdependence of farm and city. City workmen know that low farm income constantly threatens their jobs. Low farm income means that farm children will come to town willing to work for low wages. City businessmen know that low farm income means small sales in the farm territory.

The problem obviously is to find that happy middle course which will give the farmers enough income to keep them in proper balance with labor and business. Since 1920, farmers in nearly every year have received less than the amount necessary to bring about such proper balance. Our tariffs, our changed relationships

to the outside world, certain practices of our corporations and some of our labor policies have all contributed to the farmer's disadvantage.

The farmer does not want to attack tariffs, corporations, or labor unions. Rather he wants such bargaining power as other groups have, and he wants all groups to exercise their separate grants of power jointly under the common limitation that they all serve the general welfare. He believes the Soil Conservation Act and the new farm legislation now being proposed are the means by which he may serve both himself, the consumer, and the general welfare. He believes he can achieve balanced abundance for both the consumer and himself if the soil is sensibly handled, if the farm income is fairly maintained, and if highly variable weather is offset by a workable ever-normal-granary policy.

Acting under a joint resolution adopted by both Houses of Congress and signed by the President on August 24, the first order of business when Congress reconvenes tomorrow will be ever-normal-granary legislation. All the farmer organizations are agreed as to the fundamental principles of such legislation, though there is difference of opinion as to details. They all believe the farmer should get a fair share in the national income and that the consumer should be protected against scarcity. They all believe in commodity loans and in storing up crops in the good years which can be of service in the bad years. When there is this much agreement in principle it is certain that the details can eventually be adjusted.

I am convinced ever-normal-granary legislation will be enacted into law and that it will be looked on by future generations of farmers and consumers as vital to their mutual welfare.

Un-Americanism Marches On

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 17, 1937

Mr. DICKSTEIN. Mr. Speaker, are the Nazis gaining a foothold in America? Will the liberal democratic Government of this Nation be able to survive the Fascist and un-American trend, which during the last 4 years has risen in alarming crescendo? Will our Government be able to expose the subversive methods now being employed by paid foreign propagandists and Nazi agitators? Has any group in America the right to organize camps and uniformed armies for the purpose of carrying out foreign doctrines and ideology? Will this country wait until it is too late to suppress insurrection, which is being planned by Nazi and other American Fascist revolutionaries?

The Congress of the United States, now convening, will, I believe, once and for all answer these vital questions in the coming months. The American Nazis, known as the German-American Bund, have in the past 2 years erected over 20 camps from coast to coast, and have enlisted over half a million members, including several hundred thousand storm troopers. Their boldness is unequaled in the annals of this Nation. Their uniformed parades, rifle practice, meetings, and constant maligning agitation against Jews, Catholics, and Negroes, constitute them as an unprecedented menace. Subsidized from within the United States and from without, cleverly connected with the consular service, using the Hapag Lloyd Steamship Company—North German Lloyd—as their vehicle of communication with Germany, these American Nazis as a serious threat cannot be taken lightly.

Under the direct inspiration of their Führer Fritz Kuhn and encouraged by a vicious propaganda press of German origin direct from Berlin, these uniformed maniacs are striving and working night and day among revolutionary groups throughout the Nation. They hope that by 1940 the subversive groups will have agreed upon a definite set of policies Fascistic in nature, to allow them to present a strong united front as the "Fascist Party of the United States."

The way Germany uses its diplomatic offices to carry on its propaganda in and around this country is best exemplified by the activities of the German Consul General at San Francisco, Von Killinger, whose activities I exposed a few months ago on the floor of this House.

A statement furnished me from authentic sources even discloses his connection with the execution of Helmuth Hirsch. It will be recalled that Helmuth Hirsch, concerning whom the question of American citizenship was presented by our State Department at the time of his execution, was killed as a spy in Germany by the so-called Peoples' Tribunal of that country on June 4, 1937. It appears now that Von Killinger was a member of the Peoples' Tribunal which sentenced Hirsch. The members of the Peoples' Tribunal are never professional judges, nor are their names generally published, but it is surprising that Von Killinger, who was among the proscribed individuals in the so-called Nazi purge on June 30, 1934, escaped death. He was imprisoned for a long time, and Hitler himself finally pardoned him on the condition that he display loyalty to and activity for the National Socialist Party. It was therefore Killinger's desire to do something spectacular to prove his loyalty to Hitler, and he did that by his membership in the Peoples' Tribunal and his sentence of Helmuth Hirsch. Having been shown his loyalty to the National Socialists, Hitler then appointed Von Killinger, who was not a professional diplomat, to the position of German Consul General at San Francisco, and on June 25, 1937, Killinger was appointed to that position.

Here on the coast his aim and object is to contact particularly the anti-Semitic organizations in Mexico which he whipped into shape, and they cooperated with him in the present anti-Jewish legislation which the Mexican Government is sponsoring. After Mexico he will continue with his work in Canada, where the initial steps of a Fascist movement have been taken by the so-called anti-Communist drive, which the government of Quebec has recently instituted.

The names of the Nazi organizations on the west coast of the United States in cooperation with the west-coast bund leader, Herman Schwinn, who is directly under orders from Killinger, are as follows:

LIST OF PUBLIC SPEAKERS AND AGITATORS OF HITLER MOVEMENT IN LOS ANGELES, CALIF.

(These men work up and down the west coast of the United States. Names of these 100-percent Nazis are correct; addresses may not be very correct at this time)

Abrath, Elfriede, 5635 Carlin Street, Los Angeles, Calif.; citizen, Los Angeles.

Arno, Paul, 310 South Grand Avenue, Los Angeles, Calif.; citizen, Los Angeles.

Austein, Johanna, 7905 Selma Avenue, Hollywood; alien, Los Angeles.

Baecker, Clemens, Huntington Hotel, Pasadena, Calif.; alien, Los Angeles.

Baldauf, Carle, 1428 East Fifty-ninth Place, Los Angeles, Calif.; citizen, Los Angeles.

Baltuttis, Heinrich, 601 East Fourth Street, Los Angeles; alien, Los Angeles.

Bantle, Claire P., 3117 George Street, Los Angeles, Calif.; citizen, Los Angeles.

Bantle, Joseph E., 3117 George Street, Los Angeles, Calif.; alien, Los Angeles.

Bauer, Wilhelm P., 644 Eighth Street, San Diego, Calif.; citizen, Los Angeles.

Baumgartner, Ludwig, 140 East Fourth Street, Los Angeles, Calif.; Austrian, Los Angeles.

Becker, Fried. Wilh., 515½ North Spaulding Avenue, Los Angeles, citizen, Los Angeles.

Behm, Kurt (care of Mr. Wheaton), Hotel Huntington, Pasadena; alien, Los Angeles.

Boehm, Fritz, 414 Sixth Street, San Pedro, Calif.; alien, Los Angeles.

Boernge, Ernest Friedrich, 1452 Wiliose Avenue, Hollywood, Calif.; alien, Los Angeles.

Boernge, Frederich Wilhelm, 1452 Wiliose Avenue, Hollywood, Calif.; alien, Los Angeles.

Boernge, Gertrude, 1452 North Wiliose Avenue, Hollywood, Calif.; alien, Los Angeles.

Breitung, Dr. Erick, 6812 Santa Monica Boulevard, Hollywood, Calif.; alien, Los Angeles.

Burchardi (Hutterer), Emma J., 4969 Ambrose Avenue, Los Angeles, Calif.; citizen, Los Angeles.

Burchardi, Konrad, 4969 Ambrose Avenue, Los Angeles, Calif.; citizen, Los Angeles.

Casprowiak, Joseph, 1004 West Washington, Los Angeles, Calif.; alien, Los Angeles.

Conrad, Carl, Route 1, Box 832 B, San Diego, Calif.; alien, Los Angeles.

Conrad, Caroline, Route 1, Box 832 B, San Diego, Calif.; alien, Los Angeles.

Culemann, Otto W., 1842 Princeton Street, Glendale, Calif.; alien, Los Angeles.

Demmler, Rafael, 451 South Irving Boulevard, Los Angeles, Calif.; citizen, Los Angeles.

Doepping, Otto, 127 East Twenty-fifth Street, Los Angeles, Calif.; citizen, Los Angeles.
Dorn, William, care of Union Oil Co., box 661, San Luis Obispo (Middlewater); citizen, Los Angeles.
Ernst, Hermann R., 917 South Norton Avenue, Los Angeles, Calif.; alien, Los Angeles.
Ernst, Lotte, 917 South Norton Avenue, Los Angeles, Calif.; alien, Los Angeles.
Ferenz, Franz K., 5407 Hollywood Boulevard, Hollywood, Calif.; citizen, Los Angeles.

Americans, wake up before it is too late! Americans, protect your country from this ever-growing menace of fascism which is creeping into all parts of the country! Let us be Americans and have Congress authorize an investigation. Let us find out what laws can best be passed to combat the un-American movements in our country. Let us also investigate the financial sources of these subversive organizations which are being directed from within and from without.

The facts are here. Similar incidents are occurring daily. Let us do something, and let us do it now.

Warning to United States Brewing Association to Clean House and Eliminate Abuses or Face Another Prohibition Fight

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 17, 1937

ADDRESS BY HON. JOHN J. COCHRAN, OF MISSOURI, AT PITTSBURGH, PA., OCTOBER 27, 1937

Mr. COCHRAN. Mr. Speaker, under leave granted me I submit a speech I delivered before the United States Brewers Association at a banquet in connection with the sixty-second annual convention of the organization at Pittsburgh, October 27, 1937. I was invited to make the speech by Col. Jacob Ruppert, president of the association. The speech follows:

President Ruppert, members of the United States Brewers Association, I have accepted the invitation to address the United States Brewers Association because I wish to speak plainly to you about great problems that concern your industry and the public welfare. I shall neither flatter you nor indulge in unfair criticism.

You are the heads of a great industry that is subject to attacks by professional prohibitionists and which was once destroyed by the power of professional propaganda. You hold your destiny in your own hands.

Your products have contributed much to the health, happiness, and sobriety of the world. But in a rebellion of public opinion culminating in 1919—preceded by years of bitter controversy—your industry was legislated out of business. It is claimed and not denied that experience cost the industry in round figures a billion dollars and the loss of more than 13 years of profitable business. It cost untold thousands their means of making a living for themselves and families.

After another raging controversy over the merits of prohibition, the people, voting directly in 38 States, restored your industry to legality and good public standing. The popular repeal majority in these 38 States was nearly 10,000,000 votes—the largest ever recorded on any issue up to that date.

You are now in the fifth year of your new adventure in business. The vital question that concerns you here and now is whether you are permanently or temporarily in business. As a Member of Congress who fought prohibition at every opportunity, I hope that you are on a permanent basis.

But there are ominous clouds on the horizon. The dry organizations are rapidly revitalizing themselves and reorganizing on wide fronts. Numerous powerful organizations have all passed resolutions pledging themselves to fight for the return of prohibition. There are at least 5,000,000 sharpshooters sniping at you. In the last analysis, public opinion will judge you on your merits and render its verdict accordingly.

Organizations that represent the public welfare, particularly of children and youth, are complaining that all is not well in the distribution and retail end of the trade. Many citizens strongly opposed to the principle of prohibition are voicing similar complaints. There are disquieting reports of a train of evils. I do not need to tell you what they are. You know. You come in daily contact with them. You realize they are threatening. You know they are creating a hostile public opinion against you. Thousands of local-option elections are being called. A discouraging number of these elections have gone against you. The record of the repeal elections of 1933 would indicate that the drys would have little difficulty in voting at least 1,000 counties dry. That would be a big loss to you. It would give great impetus to the dry cause.

I am not going to ask you to take my word for this, but let us see what some of the results show. Take this State of Pennsylvania, where local-option elections were held in 194 communities scattered in 36 of the counties of the State. What was the result? Fifty-eight communities that were permitting the sale of beer voted against the sale of beer in the future. Seventy-nine voted to continue to permit the sale of beer. In 43 communities where petitions were filed to permit the sale of beer, the people voted "No." Forty-nine communities voted to stop the sale of distilled liquor. Sixty-one voted to continue the sale of distilled liquor. In 34 communities the people voted to continue as they have been in the past and not permit the sale of liquor. Nearly 250 communities that sought to vote on the wet-and-dry issue were denied an opportunity because the courts held petitions were not properly prepared. They will vote at the next election.

Look at Tennessee. The referendum to permit the sale of liquor in that State was defeated, the vote being 38,928 for the sale of liquor and 105,961 against.

It is unnecessary for me to say that when a county votes to prevent the sale of beer that it is a loss to the brewing industry, just as it is a loss to the distilling industry when the sale of distilled liquor is prohibited. The main thing is, such results will certainly give encouragement to those who are advocating a return of prohibition.

You are all acquainted with the name of F. Scott McBride, the man who for many years was the superintendent of the National Anti-Saloon League. We find him now superintendent of the Pennsylvania Anti-Saloon League. If the papers correctly quoted him, he is prepared to put an entire dry slate of candidates in the fall election for the State legislature, in the general primary elections which will be held next May. What does that spell? That, of course, means that this resourceful fighter who has always had a capacity to make trouble for the brewing industry is going to try to dry up the legislatures. That is the method that they followed in the early days—first secure recognition in the communities, then in the counties, and finally, elect men to the legislature who are in sympathy with their cause.

Some of you, at least, are familiar with the tremendous cost of fighting local option and State-wide prohibition contests. Let me give you some reminders from the records of public investigations of your industry in what is known as the "old days." Between 1902 and 1907 there was an assessment of 20 cents a barrel on all beer sold in Texas to raise a fund to fight prohibition. That assessment yielded $900,000. In 1908 and 1909, $400,000 more was expended. Then in 1910 the assessment was increased to 30 cents a barrel, and in 1910 and 1911 that produced $670,000 more. Between 1911 and 1915 the Pennsylvania Brewers' Association spent $922,151.64. In 1 year alone, 1914, your own organization, the United States Brewers' Association, spent $1,404,485.24 trying to save the brewing industry from destruction. In Colorado the assessments ran as high as 60 cents a barrel. I do not have other State records, but, in the aggregate, the industry must have taxed itself enormously to fight its enemies, and in the bitter end not only lost everything but found itself so thoroughly discredited that it was entirely helpless.

I have cited these records to show you what a strain prohibition agitation puts upon the finances of your industry. You cannot afford, from your own selfish standpoint, to let the woods get on fire again. You must find the cause of the present unrest against your industry—you must locate the source of infection—and vigorously apply the surgeon's knife. You can save your industry—you can protect your profits, by keeping the retail industry clean and respectable, and by yourselves avoiding sharp trade practices prohibited by law.

When Congress passed the Federal Alcohol Administration bill it exempted the brewing industry from its provisions. Congress put you on your good behavior. It expects you to keep faith. Congress put the distilling industry in irons. It said to that industry: "Thus far you can go and no farther. This you may do, and this you shall not do."

If you break faith with Congress, and with the people of the country by permitting your retail establishments to become indecent, obnoxious, and outrageous, there will be strong agitation in Congress for the submission of another prohibition amendment. We do not want another prohibition fight in Congress. A majority of the Members come from so-called dry districts. It would not require a great deal of agitation to foment a formidable prohibition movement in Congress. The drys are of the opinion that even without a new constitutional amendment they could bring about a real effective national prohibition under the provision of the twenty-first amendment, prohibiting the shipment of intoxicating liquor into States in violation of their laws.

It appears that in less than 5 years after repeal we must face the threat of a new prohibition fight. You wish to avert that. So do I. So do the Members of Congress. We do not want this distracting subject again brought into the Halls of the National Assembly. But the professional propagandists find in the conditions that exist today the ready-made propaganda they need to fill their coffers. Prohibition propaganda is a profitable racket. The Anti-Saloon League, largest and most resourceful of the nearly 100 professional dry organizations, collected $50,000,000 from a gullible public to put over prohibition and spent an additional $20,000,000 between 1920 and 1930 trying to save the amendment. For many years its resources were in excess of $2,500,000 a year. All the dry combined organizations must have had at least $5,000,000 a year to finance their campaigns. Many thousands of persons lived profitably and comfortably upon the fruits of professional propaganda. With the aid of these tremendous funds, and by capitalizing on the mistakes of the brewing industry, they demolished you and discredited you in the public mind. They forced the ratification of the eighteenth amendment by 46 of the 48 States, and supported this with State laws and State amendments. The question is, What are you going to do about it? Are you going to invite your own destruction by permitting conditions to exist in the industry that create a hostile public opinion against you and furnish your enemies with the ammunition they need to shell you? You do not have to go outside of your own industry to find a precedent to guide you in your present course. You have it. I wish to give it to you and to commend the policy therein to your earnest consideration.

I wish to take you back to 1916 for the precedent. In my home city of St. Louis there was much public criticism of saloon conditions. As you know, the national prohibition movement was then well under way. A great St. Louis brewer rose to meet the emergency created by violations of the law by saloonkeepers. I wish to quote you now a letter the late August A. Busch then wrote to the excise commissioner of St. Louis, who had jurisdiction over saloon licenses.

"There are two sides to this question," Mr. Busch wrote, "and our own observation prompts us to say that you should be

sustained in any effort to correct conditions. We make no question that the responsibility for the correction rests, in a large part, with the business itself. The law alone cannot do it. As an official you are put to the proof, and you must often be hampered by technicalities. On the other hand, we cannot do it without your guidance.

"We are persuaded, however, by cooperation a better result can be obtained. Every disreputable saloon should be closed. Whenever your authority is insufficient to discontinue such a saloon we are prepared to act on your judgment. If you will say to us that a saloon which is our customer should, in the interest of public peace or welfare, be closed, we will withdraw whatever support it may draw from us. We do not ask you to take any responsibility beyond suggesting what should be done. We will take the responsibility of the decision. Inasmuch as the police department must be conversant with conditions we shall be glad to have you confer with that department in order that no establishment that in the judgment of properly constituted authority is a menace to society may be overlooked."

Other great brewers of that time, particularly Col. Jacob Ruppert, Mr. Julius Liebman, Mr. Ed Schmidt, and Mr. Gus Becker, all of whom are members of the board of directors of the United States Brewers' Association, shared these sentiments of their associate and took similar actions in an effort to correct then existing conditions.

Gentlemen, there is your precedent and your remedy. Apply the principles laid down in the letter to your retail conditions today and you solve your problem and perpetuate your industry. Such a policy will bring you wide public support and throw behind you a sustaining public opinion and good will that you have never enjoyed before.

I know what the attitude of some brewers has been in the past. It is that the industry is not fully organized and that it cannot meet this situation until all brewers are in agreement that the disreputable retail establishments must go. These brewers have taken the position that unless you sell to a disreputable customer some other brewer will do so. Now, I say to you that it is your duty as brewers to see to it that every disreputable tavern, regardless of whose customer it may be, is put out of business so that no brewer can sell to it. I am glad to learn that your association, recognizing this obligation to the public, has sponsored a brewers' foundation to carry forward just such a program.

It is your duty to organize the industry 100 percent behind such a policy. You must stand united for decent conditions in the retail trade, because there is where your troubles largely originate. In order to do this brewers must all stand together, and both State and national organizations must cooperate to the end that there will be a united front in your efforts to stamp out the evils in the industry.

I advise you to get busy. Lay aside petty jealousies. Organize, not to take advantage of other brewers, but to compromise all your difficulties so that you may be as one big happy family, determined above all else to keep your industry clean and respectable in all of its departments. Place this industry upon the high repute that it enjoys in England, Germany, and Canada.

When there was laid down the policy to which I have referred, of cleaning up the saloons, there was also laid down, in my opinion, the principle that led to the relegalization of beer and the repeal of the eighteenth amendment. In fact, 4 years before the eighteenth amendment was imbedded in the Constitution, such men as Colonel Ruppert and Mr. Busch, as well as the other great leaders in your industry, began the fight for repeal.

I know the inside story of the fight for repeal. I was in Washington throughout that fight. I think I ought to tell it to you for your own information and guidance. I give credit to the men whom I have mentioned and to every other right-thinking brewer, more than other private citizens, for the legalization of beer and the repeal of the eighteenth amendment.

When the eighteenth amendment became effective in January 1920 these men to whom I refer adopted as a policy for their companies strict obedience to the letter and the spirit of the law. They endeavored to build up a business in nonalcoholic beer. They soon found themselves crowded out of the market by floods of illegal liquor and beer. Thereupon they began a series of investigations and exposures of conditions under prohibition. Investigators developed proof that both the United States Government and a superintendent of the Anti-Saloon League had embarked upon bootlegging enterprises. The Government entered the bootlegging business for a prize of $100,000,000 a year in ocean passenger traffic. With rare courage they exposed both the United States Government and the Anti-Saloon League, with far-reaching effect on public opinion. Throughout the entire prohibition period this small group of brewers continued to develop the facts and create avenues for getting the facts to the public. Information was furnished that brought about the exposure in the Senate of the powerful Anti-Saloon League, which had millions of dollars at its command and a great army of skilled directors to control it. I personally saw much of these operations from the inside, and I know what I am talking about.

Of course, these men are not wholly responsible for legal beer and repeal, but they originated the fight and were the leaders behind the scenes. They had powerful aid toward the end of the battle, but the fact must always remain that they developed more than 75 percent of all the factual material on which the great issue was fought, and created, on this subject, perhaps more publicity than any other private individuals in the world.

By pursuing a policy of law obedience and law observance, and by the exhibition of rare courage and intelligence in dealing with this great public problem, it resulted in the restoration of brewing. This restored the entire industry to good public standing. Within a short time after repeal, 46 of the 48 States passed beer laws. This was the exact reversal of the conditions that prevailed at the beginning of national prohibition.

In the example and the policies thus laid down you have the formula for the salvation of your industry. If there are any horns now sprouting, cut t..em out. Let the industry stand as one man for the rigid enforcement of the law to make retail places of sale clean and respectable. Cooperate to the limit with law enforcing and licensing officials. Take the initiative. Remove the cause of public irritation. Don't satisfy yourself by talking about bad conditions. Act, and act swiftly and vigorously.

If a few brewers by their courage and vision and intelligence, could create and execute a policy that assisted so much to bring about repeal and restore your industry to good public standing, the combined vision, courage, and intelligence of all the brewers of the United States ought to be able to devise and execute a policy that would protect repeal and save the industry.

In closing, let me again emphasize the importance of uniting within your ranks and of a unanimous, determined effort on your part to so conduct your business and to see that distributors and retailers so conduct their business as to merit public support.

The industry realized the statements I made warranted action and I am pleased to record before the convention adjourned the following code of practice was adopted by a unanimous vote:

CODE OF PRACTICE

The brewing industry of the United States, custodian of an art and science practiced since the beginnings of recorded history, supplies a mild beverage to the major part of our population. Beer is the bulwark of moderation and sobriety. The industry recognizes its direct responsibility to itself and to the Nation to conduct its operations in accord with the desires and conscience of the American public. Members of the United Brewers' Industrial Foundation in convention assembled, representing nearly half the production of beer and ale in the United States, mutually and individually pledge themselves to the following code of practice:

We pledge ourselves, as citizens and as businessmen, to conduct our business in conformity with established laws in cooperation with the authorities.

We pledge ourselves as scientific brewers to maintain exacting high standards in the brewing and packaging of beer and ale.

We pledge ourselves, with all thoughtful citizens, to the promotion of practical moderation and sobriety.

We pledge our support to the duly constituted authorities for the elimination of antisocial conditions wherever they may surround the sale of beer to the consumer.

We pledge ourselves morally to support and encourage the great body of retailers who sell beer as law-abiding citizens and who operate legal, respectable premises.

We pledge ourselves to cooperate with the duly constituted authorities to prevent beer sales to minors or to persons who have drunk to excess.

We pledge ourselves to truth in the advertising of beer.

We pledge ourselves faithfully to observe the provisions of this code of practice, convinced that beer is the Nation's bulwark of moderation and sobriety.

Is This Business Recession?

EXTENSION OF REMARKS

OF

HON. JERRY J. O'CONNELL

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 17, 1937

Mr. O'CONNELL of Montana. Mr. Speaker, under leave to extend my remarks, I wish to include herein an Associated Press dispatch from New York of November 12, showing that the income of the Anaconda Copper Mining Co. for the 9 months ending September 30, 1937, amounted to $36,965,194, equal to $3.11 a share. During this same period in 1936 their income amounted to $9,940,132, or $1.15 a share. In other words, for the first 9 months of 1937 their income was $27,025,062, or $1.96 a share more than the same period in 1936. Can this be the business recession which we hear so much talk about today? Is this the unwholesome situation which capital complains so much about?

Notwithstanding this tremendous income, the Anaconda Copper Mining Co. is closing its mines in Butte, Mont., and is throwing thousands of men out of work. It is evident that the Anaconda Copper Mining Co., along with all the other wealthy corporations in the United States, are pur-

posely causing this so-called business recession in an effort to sabotage the New Deal and frighten this Congress into granting all of these great corporations tax concessions to which they are not entitled.

There is no need for the mines in Butte being closed. There is no need for the thousands of miners in Butte to be thrown out of work.

The Associated Press dispatch, which I quote below, shows that this wealthy corporation is making ample money. In order to mold public opinion in the State of Montana, the Anaconda Copper Mining Co. owns practically all of the daily newspapers within the State of Montana. Their Montana Standard, Butte Post, Daily Missoulian, Missoula Sentinel, Helena Independent, Helena Record Herald, Billings Gazette, and Livingston Enterprise are operated at a tremendous loss. The Anaconda Copper Mining Co. has sufficient money to continue running these newspapers even though they are a steadily losing proposition, but they have no money to put starving miners in Butte, Mont., to work.

I am at a loss to understand why this Congress should give any thought whatsoever to the question of granting tax concessions to any of these corporations, in view of the concerted effort which they are all making to thwart recovery. Let this Congress exert itself to enact legislation for the benefit of those who have not. Those who have seem to do a pretty good job of looking after themselves.

A. C. M. EARNS $3.11 A SHARE ON 9 MONTHS OF BUSINESS, IT REPORTS

NEW YORK, November 12.—Anaconda Copper Mining Co. and subsidiary companies said today consolidated income for the 9 months ended September 30 amounted to $36,965,194, equal to $3.11 a share on 8,674,338 shares of capital stock.

Equity in undistributed earnings of subsidiaries not consolidated and not included in the consolidated income account totaled $1,569,085, or 18 cents a share.

Net income in the comparable 1936 period stood at $9,940,132, or $1.15 a share.

The Postal Service and Its Part in Our Nation's Progress

EXTENSION OF REMARKS

OF

HON. JOSEPH B. SHANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 17, 1937

ADDRESS BY HON. JOSEPH B. SHANNON, OF MISSOURI, BEFORE THE ANNUAL CONVENTION OF THE NATIONAL ASSOCIATION OF LETTER CARRIERS AT KANSAS CITY, MO., SEPTEMBER 6, 1937

Mr. SHANNON. Mr. Speaker, under the leave to extend my remarks in the RECORD I include the following address delivered by me on September 6, 1937:

When I stood on the streets this morning and witnessed your colorful parade, into my mind came a vision of the great armies that are now embattled in deadly conflict raining bombs, poison gas, death and destruction on each other, apparently without aim or purpose. I looked at your units marching by with beautiful uniforms and banners that spoke of peace, harmony, and good will. I could look across the lines of your parade and see an army of a quarter-million letter carriers and post-office employees knit together in harmony throughout the States of the Union—a grand army of peace—and I recall the inscription engraved upon the post-office building at Washington, D. C., which reads:

"Messenger of sympathy and love
Servant of parted friends
Consoler of the lonely
Bond of the scattered family
Enlarger of the common life.

"Carrier of news and knowledge
Instrument of trade and industry
Promoter of mutual acquaintance
Of peace and of goodwill
Among men and nations."

I thought what a wonderful privilege it was to be a messenger of such a gospel, to know that your coming from day to day is eagerly watched for in every home in the land, whether you bring news of loved ones, pledges of friendship, greetings from distant travelers, news of the great world of industry, or even messages of sorrow, for even these, as you deliver the letter, are tempered with the sympathy of your presence; and I thought how very human a thing is the great Department of the Government of the United States which you peacefully marching men of today so faithfully represent.

THE FIRST POSTAL SERVICE

The carrying of messages is as old almost as the history of civilization. Every civilization of which there is any record has had a post-office system of some kind, or at least the bringers of news from distant places. It occurred to me that it would be interesting for you today if I took the trouble to look into the record of the origin and growth of the modern postal system.

The primitive carriers were either fast runners or riders. The riders rode horses, mules, camels, or young dromedaries, but always in the old days the fleet of foot who carried the news of victory or defeat were honored as heroes. The world today has not forgotten Pheidippides, the man who brought the news of the great battle of Marathon.

The name "post office" originated with the Romans, who used posts along the side of the road to mark the convergence of post roads. These posts were called "post offices" and the highways along which the courier ran became known as "post roads." I find in this statistical record that there was a postal system in Persia (now Iran) under Cyrus the Great as early as the sixth century before Christ. The imperial government appointed the postmaster general, who supervised the runs of the couriers and appointed grooms to look after the horses. Couriers of other posts brought their packages of letters to his central post, which were forwarded by fresh carriers and fresh horses to the next post toward their destination. This was the pony express of the ancients. So you see that there really is nothing new under the sun, not even our own pony express, about which I will say a few words later on.

THE COLONIAL PENNY POST

When the colonists came to America there appeared to be no great desire at first for communication among themselves, but many of them did wish to keep in touch with the motherland. This brought about the penny post. Letters were brought from England to America for 1 penny each. Bags to receive the mail were placed in the coffee houses in London, from which sources they were collected before sailing. I find a curious entry in the records of the General Court of Massachusetts as early as 1639 with reference to these ship letters. I am sure you will enjoy its quaintness and very human flavor. It read:

"Richard Fairbanks, his house in Boston, is the place appointed for all letters which are brought from beyond the seas or are to be sent thither; they are to be brought unto him and hee is to take care that they bee delivered or sent according to their directions and hee is allowed for every such letter 1 penny and must answer all miscarriages through his owne neglect in this kind; provided that no man shall be compelled to bring his letters thither except hee please."

The first post route officially established in America was in 1672, when Governor Lovelace, of New York, decreed that there should be a monthly post between New York and Boston. This route, however, was not very successful and was soon abandoned.

Many other post routes were established from time to time, some of which were failures from the very start and others surviving for short periods.

On February 17, 1691, William and Mary granted to Thomas Neale, by letters patent, power and authority to establish a postal system for the American Colonies. Neale's term was fixed at 21 years. He remained in England, but nominated Andrew Hamilton as Postmaster General for America. Thus Mr. Hamilton, who served from April 4, 1691, until his death in 1703, was the first Colonial Postmaster General. He was succeeded by his son, John Hamilton, who served from 1703 until 1721. Both Andrew Hamilton and his son are recognized as having operated the postal system for the convenience of the public, and their services were given a high place in the estimation of the colonists.

Some of the other early Postmasters General in this country were:

John Lloyd, who served from 1721 to 1730.
Alexander Spotswood, from 1730 to 1739.
Head Lynch, from 1739 to 1743.
Elliott Benger, from 1743 to 1753.

THE ORIGINAL NORTH-SOUTH LINE

Now, when we go delving into history we are always likely to run across something either that we never knew or that we have long ago forgotten. It was news to me that practically the first division between the North and the South in this country was exemplified in the Postal Service long before the Mason and Dixon's line became a division line between the slave States and the free States. As a matter of fact, that Mason and Dixon's line began as far back as 1753 and the first line merely marked the division between Pennsylvania and Maryland; and here is a strange fact that I encountered in my researches which will perhaps be news to most of us. There was a time when there were two Postmasters General for this country, one for the North and one for the South, away back in colonial days. About the year 1753 the British possessions in America were divided into northern and southern postal districts, and Postmasters General were appointed for each district. Perhaps here was where all the subsequent trouble began that ended in Abe Lincoln's day. It was a definite recognition of a nation divided in interests.

The first postmaster general for the southern district was Benjamin Barons, who served from 1765 until 1766. He was succeeded

by Peter de Lancy, who served from 1766 until 1771; then George Roupell served from 1771 until after the Revolution.

The northern district, established in 1753, had two postmasters general—William Hunter and Benjamin Franklin—who served jointly from 1753 to 1761. Hunter was then succeeded by John Foxcroft, who served with Franklin until the latter's removal by the British Government in 1774.

START OF MODERN SYSTEM

But let us come to our own United States that found birth with our Declaration of Independence and our severance forever from the tyranny of England. We were no sooner organized as a nation than we began to establish our post offices and postal system. In July 1775 a United States Post Office Department was established by the Congress and our first Postmaster General was none other than old Ben Franklin. The British postal system in America was officially discontinued in the following December, but, of course, during the period of the Revolution the mail service was necessarily limited and the transmission of letters infrequent and unsatisfactory.

When the Constitution was adopted in 1789, President Washington appointed Samuel Osgood, of Massachusetts, as the first constitutional Postmaster General. He was not, however, made a member of the Cabinet. His office was subsidiary to that of Alexander Hamilton, the then Secretary of the Treasury. The establishment of a general post-office system throughout the country was authorized by the Congress in 1792, and from that time on the service steadily improved.

JEFFERSON A POSTAL PIONEER

And here let me refer to a man who stands out head and shoulders above all the men of his period in broad vision, in the extension of the influence of the United States, in the westward expansion of the country, as he did in inculcating the basic principles of human rights and the liberties of the people. I refer to Thomas Jefferson. As he did in everything else that he undertook, he foresaw that the Postal System was to become the great arterial system of communication between the States of the Union and between the home folks and the pathfinders of the West. He was the first who saw that speed was the essence of the system. He found fault with the service of his day principally on two grounds: First, that it was not fast enough; and, secondly, that it was not always dependable.

In 1792 he wrote to T. M. Randolph:

"I am now on a plan with the Postmaster General to make the posts go from Philadelphia to Richmond in 2½ days instead of 6, which I hope to persuade him is practicable."

Again, in another letter, he wrote:

"I opened to the President a proposition for doubling the velocity of the post riders who now travel about 50 miles a day and night without difficulty, go 100, and for taking measures (by waybills) to know where the delay is, when there is any."

So earnest and efficient were Jefferson's efforts to increase the speed of the Postal Service that he became known in his day as the Father of Fast Mails. As President of the United States, Jefferson's interest in improving the Postal Service continued, and the Department under his administration was widely commended for the excellency of the service and the efficiency of its administration. And, in this connection, let me add, it was another great President who first recognized the fact that the Department was important enough for its head to become a member of the Cabinet. The first Postmaster General to be made a member of the Cabinet was William T. Berry, of Kentucky, and he was invited into the Cabinet by President Andrew Jackson in 1829.

BIRTH OF THE PONY EXPRESS

One of the most romantic periods in the Postal Service was between April 3, 1860, and October 26, 1861, during the operation of the pony express.

The pony express is of peculiar interest to the people in this vicinity because it had its origin in St. Joseph, Mo.

One of the founders of the pony express was Alexander Majors. Majors' bullwhackers had been engaged in the freighting business since 1848, principally between the Missouri River and the military posts in the frontier West. His first train of six oxen-drawn wagons started from Independence, Mo., in 1848. In 1855 he went into partnership with Russell and Waddell of Lexington, Mo., and it was he and Russell who took the lead in the establishment of the pony express.

Alexander Majors' son, Greene Majors, later described the preliminary arrangements for the pony express as follows:

"To establish the pony express required 500 of the best blooded American horses; 190 stock stations for changing the riding stock; 200 station tenders to care for the horses and have them ready, saddled and bridled, for the incoming rider to mount and be off like the wind; 80 of the keenest, toughest, bravest of western youths for the riders, with stations all supplied with hay, grain, and other needed materials. It required $100,000 in gold coin to establish and equip the line."

The saddles of the pony express riders were of special design, light in weight, and were made by the saddlery of Israel Landis in St. Joseph. There was a bit of doggerel concerning his saddles that went something like this:

> If a good saddle you would find,
> One that's just suited to your mind,
> You need not to St. Louis go,
> For you can get one in St. Joe.

Mr. Landis was also active in politics, and took a leading part in the fight to remove the county seat from Sparta to St. Joseph.

Many of the horses used by the pony express were purchased from Captain McKissack, of Leavenworth.

As the time drew near for the inauguration of the pony express service, excitement was at fever pitch. Announcements were carried in all prominent newspapers to the effect that beginning April 3, 1860, a pony express would run weekly between St. Joseph, Mo., and Sacramento, Calif., and that it would cut the time between New York and San Francisco, for telegraphic dispatches, to 10 days, and for letters to 13 days. This was a saving of 12 days in the coast-to-coast mail service. The movement was hailed with enthusiasm.

THE RIDERS AND THEIR OATH

Extensive preparations were made for the opening of the pony express. The riders began drifting in weeks before the date set, and they were all quartered at the famous Patee House, built by John Patee in 1856. Many entertainments were given in their honor. They were costumed in red shirt, blue trousers, fancy boots, and a buckskin jacket, and were provided with a horn for use in announcing themselves at relay stations. The mayor of St. Joseph at that time was Jeff Thompson.

Alexander Majors tried hard to impress upon his employees the importance of proper conduct. He required each of the riders, as he had required his employees in the freighting business, to sign this pledge:

"I do hereby swear before the great and living God that during my engagement, and while I am an employee of Russell, Majors & Waddell, I will, under no circumstances, use profane language; that I will drink no intoxicating liquors; that I will not quarrel or fight with other employees of the firm, and that in every respect I will conduct myself honestly, be faithful to my duties, and so direct all my acts as to win the confidence of my employers. So help me God."

After signing the pledge, each rider was presented with a copy of the Bible. It is true that some historic doubts have arisen as to the results of Mr. Majors' moral campaign with the pony express riders. But if occasionally the Bible was forgotten or the oath relaxed, the lapses were easily forgiven when it was remembered that these hardy mail carriers of the West were kept busy dodging Indians on the prairies, blizzards on the plains, snows in the mountains, and incredible hardships that often brought death on the road. Some of the best know riders in St. Joseph were Johnny Frey, Billy Richardson, Charlie and Gus Cliff, Alex Carlyle, Henry Wallace, Don C. Rising, and J. H. Keetley, and in Kansas City, some 8 or 10 years ago, there passed away one of the most courageous riders of the old express, well known to Kansas City pioneers. His name was Henry Avis.

The pony express had a remarkable and spectacular existence, although not a very long one, in the face of innumerable hazards. It was in operation 79 weeks. During the first month the trips between St. Joseph and Sacramento were weekly, then they were semiweekly each way; 308 one-way trips were made. The pony express route was something like 2,000 miles long, and the riders covered 616,000 miles. Approximately 30,000 letters were carried all told.

FROM PONIES TO AIRSHIPS

The transcontinental telegraph, completed in 1861, rang the death knell of the pony express. It had never been a financial success, but it was a great moral lesson in the transportation of the mail. It demonstrated the ability of man and beast to overcome all obstacles. It increased the speed of mail deliveries. Its greatest achievement was the carrying of the news of Lincoln's death from Washington to Sacramento in 7 days. After all, there is a blood kinship between the pony express and the Department of today with its Air Mail Service, its 44,877 post offices, and its grand army of carriers whose representatives are meeting here today.

The days of the pony-express riders have been cut down to the few hours of the air-mail pilots who, while they have no hostile Indians to contend with, as the pony-express riders did, yet go forth in all seasons, through storms and blizzards and across high mountains to keep up the tradition, established by Thomas Jefferson, of speed and dependability in the service of the mail.

TRIBUTE TO JIM FARLEY

And now, gentlemen and ladies, in conclusion let me say a word about the man who today occupies the position of Postmaster General of these United States.

I have the honor of his personal acquaintance. I have come in contact in various ways as a Congressman with the workings of his Department, and I want to say here and now that there has never been a man who occupied that position from Ben Franklin's time down to the present day who has been more honest, more earnest, or more efficient in the discharge of his duties. He has been a pioneer, too, in his way. He has coordinated the system into a vast organization that works together in harmony, and, more than that, he has humanized the system.

Jim Farley, Postmaster General, has in his own inimitable way made the postmasters, the mail carriers, and the mail employees of this country understand that he is standing by them, that their interests are his, and that, in fact, he regards himself, as you do, as the servant of a great system.

STAMPS RECORD HISTORY

There is one feature of his administration that I must refer to. I have heard Mr. Farley criticized for his stamp-printing office. I want to say that I am not a stamp collector, but I am a reader of stamps. I never affix a stamp to a letter that I do not take a look at the portraits that are printed thereon. Mr. Farley has made these stamps of historic interest. He has made us stop in our daily business to recall the great men of the past who have contributed to the

history and the development of our country. Jim Farley's stamps are historic records in brief.

I came across one yesterday that contained the portrait of Putnam and on the other side a portrait labeled "Cutler." Now, everybody who knows anything of the history of this country knows Israel Putnam, but I failed to find any of my acquaintances who knew who Cutler was. I didn't know myself, and thanks to Mr. Farley's history lesson, I went to the book and found out that the picture represented one of our forgotten heroes, Manasseh Cutler, the civil organizer who followed in the footsteps of George Rogers Clark and wrote the Ordinance of 1787 which established the civil government of the Northwest Territory, including the Ohio Valley, and added it to the domain of the United States.

So here are my hand and voice in a closing tribute to Jim Farley, Postmaster General of the United States, organizer and historian, and a man whose sympathies are not only concerned with methods of efficiency and speed in the delivery of the mails, but in broad human sympathy with the men who carry on the work of the Department from one end of this country to another.

Restoration of Foreign Markets for Our Agricultural Surpluses

EXTENSION OF REMARKS

OF

HON. J. BURRWOOD DALY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 17, 1937

LETTER FROM HON. CORDELL HULL, SECRETARY OF STATE

Mr. DALY. Mr. Speaker, as the life and prosperity of our Nation depends primarily upon agriculture, and the profitable disposition of our farm surpluses has given the country great concern for many years, I think it fitting that the attention of the Congress be called to the agreements that have been effected with foreign nations toward that end and effected with great benefit to the farmer, and consequently to the advantage of the United States, by the Department of State under the most efficient direction of the Honorable Cordell Hull. I therefore incorporate in my remarks a copy of a letter sent to the Honorable ARTHUR CAPPER, United States Senator from the State of Kansas, by the Secretary of State, wherein is briefly set forth a résumé of the agreements and the beneficial effect upon our agriculture.

OCTOBER 18, 1937.

The Honorable ARTHUR CAPPER,
Topeka, Kans.

MY DEAR SENATOR CAPPER: My attention has recently been called to reports in the press that you propose to conduct what was described as a "grass-roots campaign" against the reciprocal trade agreements program. It is further reported that you denounced the program as a disguised method of "selling out the farmer for the benefit of eastern manufacturers" and that, in support of this statement, you cited the increase in imports and decrease in exports of agricultural products in the fiscal year ending June 30, 1937, as compared with the preceding fiscal year. Assuming that you are correctly reported, I feel that it is my duty, as one charged with a heavy official responsibility in connection with the formulation and execution of the program, to bring to your attention relevant facts and considerations which, in my opinion, show not only that your impressions are ill-founded but that as a matter of fact farmers are about the last group in the United States which should oppose the program.

Ever since the inauguration of the trade-agreements program there have appeared, from time to time, in the press and elsewhere, statements designed to foster the belief that agricultural interests are being injured. In some cases these criticisms have doubtless been due to misinformation on the part of the individuals concerned as to the facts of the situation. Much of the time, however, the circumstances attending their dissemination are such as to leave no doubt of a deliberate intent to alienate public, and particularly farm, support by means of an incomplete and biased presentation of trade figures. As a result of such distortions of statistics by opponents of the trade-agreements program, many persons who have sincerely at heart both the general public interest and the welfare of the farming population, but who are unable to devote much of their time to a study of the complex facts concerning trade agreements, are likely to be seriously misled.

The gist of the argument of those who contend that agriculture has been "sold out" appears to be somewhat as follows: (1) that imports of agricultural products are unduly large and have been increasing rapidly to the great detriment of the farmers; (2) that trade agreements are in large measure responsible for this allegedly unfortunate state of affairs; and (3) that the trade agreements have been ineffective as a means of expanding outlets for farm products. The evidence commonly cited in support of these propositions contains just enough admixture of partial fact, or of half-truths with misleading implications, to convey, in a most insidious manner, what are essentially complete untruths concerning this whole situation. An examination of the outstanding facts with reference to the character and trend of our imports and exports of farm products, and of the role played by trade agreements, will show that this is the case.

Before going into these facts, however, it may be well to point out that prices alone furnish strong presumptive evidence that there is something radically wrong with any theory which says that the tariff and other policies of this administration affecting agriculture have been detrimental to the interests of farmers.

In 1932, 2 years after the enactment of the Smoot-Hawley tariff, the average farm price of corn in the United States was 28 cents a bushel; in 1936 it was 77 cents, and for the first 8 months of 1937 approximately $1 a bushel. In 1932 the average farm price of wheat was 39 cents a bushel; in 1936, 96 cents; and for the first 8 months of 1937, $1.17. In 1932 hog raisers got, on the average, $3.44 a hundred pounds for their pigs; in 1936 they got $9.17; and for the first 8 months of 1937, $9.79. In 1932 beef cattle brought the producers, on the average, $4.07 a hundred; in 1936, $6; and for the first 8 months of 1937, $7.62. Butterfat yielded dairy farmers an average of 17.9 cents a pound in 1932, 32.5 cents in 1936, and 32.6 cents in the first 8 months of 1937. Wool growers got 8.7 cents a pound for their wool in 1932; 26.7 cents in 1936; and in the first 8 months of 1937, 31.8 cents. It must be recognized, of course, that the high prices of some of these products in 1937 were largely due to drought, hence prices for 1936 are also given. The drought factor is particularly significant, for example, in connection with the 1937 price of corn; with the harvesting of this year's more normal crop the price of corn may be expected to recede.

Without going into all the factors affecting these prices, it must be evident that such figures fail to square with the fantastic notion that farmers have been "sold down the river" by this administration, either through its tariff policies or otherwise. On the contrary, what they suggest, and what is the actual fact, is that the real "sell-out" occurred when the Smoot-Hawley Act was passed. That was the time when agriculture received the real body blow from which this administration has sought for the past 5 years, with marked success, to rescue it.

Now let us examine a little this question of farm imports about which so much is heard. Which agricultural imports have increased? To what extent are they competitive with domestic farm products? Why have they been increasing?

From the fiscal year ended June 30, 1934, to that ended June 30, 1937, the value of our agricultural imports increased by $699,000,000, or 83 percent. Of this total, $252,000,000 represents increases in the leading imported commodities not produced in the United States and not substituted for the farm products which are produced in the United States. These imports, the principal among which are coffee, tea, cacao beans, rubber, silk, bananas, and spices, compose more than 36 percent of the increase in agricultural imports upon which so much emphasis has been placed. They have no proper place in any discussion of the tariff problem, and are usually lugged in simply in order to swell the total of agricultural imports and thus excite unwarranted apprehension on the part of uncritical observers. Instead of being hurtful, they are well nigh indispensable; and yet they are paraded as injurious imports.

A further $141,000,000 of the increase in farm imports is accounted for by increases in the leading items affected by the great droughts of 1934 and 1936. Most of these products we ordinarily export rather than import. In years, however, of extremely poor growing conditions (and hence low yields per acre) we may have inadequate supplies in spite of large acreages originally planted. Under these conditions prices rise sufficiently to make it profitable for foreigners to send us supplementary supplies of the drought-affected commodities. Such imports in no sense displace the products of American farms. They supplement the domestic supply. They relieve shortages of feedstuffs which could not otherwise be relieved. They do not depress prices, but, on the contrary, come in precisely because prices are high. They do, of course, tend to check the rise of prices to famine levels. Hence they benefit the many farmers who have to buy feed for their livestock, as well as the ultimate consumer. The leading imports which have been increased in this fashion during the past 3 years are corn, wheat and wheat flour, fodders and feeds, meat products, barley, barley malt, tallow, and butter. In the case of butter, while there is always some seasonal importation in the winter months, there is no doubt that high prices of dairy feed in consequence of the drought have tended to increase prices of butterfat, and thus to attract larger imports of butter over the present tariff of 14 cents a pound. Increases in imports of this general class of items account for over 20 percent of the total against which so much criticism has been directed.

Of the remaining $306,000,000 increase in agricultural imports during the past 3 years, forty-five millions represents the increase in sugar imports. Sugar imports into the United States are subject to strict quantitative control. The quotas for foreign countries are fixed in such a way as to reserve for domestic producers at least as much of our home market as they can supply at a reasonable price. As a matter of fact, the quantity of sugar imports has increased only slightly in the past 3 years. Most of the rise in their aggregate value has been due to higher prices. Under the circumstances that rise is hardly detrimental to American agriculture.

After deducting these three categories—i. e., the leading imports of commodities neither produced in the United States nor substituted for our farm products, the principal drought-affected products, and sugar—there is a remainder of $261,000,000, representing the difference between the total increase of $699,000,000 and the sum total of these three groups. By far the greater part of this is accounted for by commodities which we regularly import in large quantities in spite of high tariffs, because we cannot produce enough of them at reasonable prices to supply our needs. Imports of such products have increased because economic conditions in this country have improved, with the result that we have been using greater quantities of both industrial raw materials and foodstuffs. The increases in the value of imports have reflected both larger quantities entered and higher prices. The leading items in this group are vegetable oils and oil seeds, dutiable types of wool, hides and skins, certain types of nuts, molasses, long-staple cotton, wrapper tobacco, field and garden seeds, sausage casings, olives, and dates. These enumerated items account for $178,000,000. The remaining $83,000,000 is made up of a large number of small items distributed throughout all of the categories above mentioned, except, of course, sugar.

Thus, in summary, the figures with reference to the increase in our agricultural imports between the fiscal year ended June 30, 1934, and the fiscal year ended June 30, 1937, stand as follows:

Group:	*Excess of 1936–37 imports over 1933–34*
1. Products not grown in the United States or substituted for domestic farm products (major items only)	$252,000,000
2. Products the imports of which were affected by the great droughts of 1934 and 1936 (major items only)	141,000,000
3. Sugar	45,000,000
4. Products normally imported in large quantities because we cannot produce enough of them at reasonable prices to supply our needs (major items only)	178,000,000
5. Residual of small items distributed throughout groups 1, 2, and 4, above	83,000,000
Total increase in imports of farm products, 1933–34 to 1936–37	699,000,000

The assumption that large imports of agricultural products denotes distress to farmers is not warranted.

Agricultural imports exceeded $2,000,000,000 every year from 1925 to 1929 and in none of these years was domestic production curtailed by drought to anything like the extent experienced in 1936. As a matter of fact, there is a direct correlation between imports and farm income. For example, in 1929, when farm income amounted to nearly $12,000,000,000, agricultural imports totaled $2,218,000,000. In the succeeding depression years farm income and agricultural imports declined in about the same degree, both of them reaching a low in 1932, when income was $5,337,000,000 and imports $668,000,000. Since then the two have increased again with imports only a little larger in proportion to farm income than previously, and this is fully explained by the droughts of recent years and the rapidly increasing imports of agricultural raw materials in consequence of economic recovery. I take it that you would not view the latter of these causes as a matter for regret.

There is no basis whatever for the belief that duty reductions in reciprocal trade agreements have been a major cause of the increase in agricultural imports in the past year. This is strikingly shown by a comparison of the increases since the trade agreements became effective in items upon which the duty has been reduced and those on which it has not. Most of the trade agreements, other than the one with Cuba, went into effect between May 1935 and June 1936. Accordingly, by segregating items on which duty reductions have been made in trade agreements and those on which no reduction has been made and comparing imports in the first half of 1935 with the first half of 1937, an indication can be had of the relative importance of duty reductions and other factors in increasing imports.

Take, for example, foodstuffs. The figures show that excluding sugar, imports of which are regulated by quotas, there was a total increase of $112,643,000 in imports of the principal foodstuffs in the first half of 1937 as compared with the same period 2 years earlier. But note how this was comprised. Of the total increase, $56,544,000 (more than half) is accounted for by dutiable foodstuffs or foodstuff groups upon which duties were not reduced. A further $42,410,000 is accounted for by free-list items—on which, obviously, there could be no duty reductions. These two groups, on which there were no duty reductions, account for 88 percent of the total. A third category which is somewhat, but not primarily, affected by duty cuts (groups of dutiable foodstuffs on less than half of which duties were reduced) accounts for $7,589,000, or some 7 percent, of the total increase. Finally, there is the group consisting of dutiable foodstuffs or foodstuff groups, including wrapper tobacco, on more than half of which the duties were reduced. This group accounts for just $6,100,000, or 5 percent, of the total increase. It is of interest also to note that imports of dutiable foodstuffs on which no tariff reductions were made increased by 77 percent; whereas imports of that group of foodstuffs on the greater portion of which the duties were reduced, increased by only 41 percent. (Imports of free-list foodstuffs increased by 33 percent; and of foodstuffs not primarily subjected to duty cuts, likewise by 33 percent.) It is clear from these figures that factors other than trade agreements must have been chiefly responsible for the increases in imports which took place.

A complete list of changes in import duties since the passage of the Tariff Act of 1930, prepared by the United States Tariff Commission, is enclosed.

While the concessions that we have granted with respect to agricultural products have been unimportant to our farmers, the value of the agricultural concessions obtained from other countries is considerable. In spite of the extreme policies of protection for agriculture in many foreign countries and the consequent difficulty of obtaining concessions on agricultural items, tariff, and tax reductions and liberalization of import quotas have been obtained on agricultural commodities which comprised about one-third of our 1929 agricultural exports to the countries with which agreements have been concluded. Duties on agricultural products constituting almost another third of imports have been bound against increases during the life of the agreements, thus bringing up to some 60 percent the value of all agricultural products favorably affected. Especially valuable concessions were obtained from Canada, which country reduced its duties on about 125 agricultural and horticultural products imported from the United States.

While significant increases have occurred in exports of a number of agricultural products for which concessions have been obtained, the full benefits have not been realized up to the present time because of greatly reduced surpluses or actual shortages of some of the most important farm products in consequence of severe droughts. I am enclosing a list that enumerates the important export products benefiting from reciprocal trade agreements signed up to May 1, 1937.

The direct concessions obtained for exports of farm products do not by any means, however, suffice as a measure of the benefits of the trade agreements to agriculture. What is altogether too commonly ignored are the indirect benefits. When increased foreign outlets are obtained for our industrial exports that inevitably results in expansion of economic activity and employment in our cities and hence a better market at home for American farm prod- by over two and one-half billion dollars between 1928–29 and 1932–33, the magnitude of the sums involved is apparent. If we regain a substantial part of this lost trade in consequence of trade agreements, as we are already commencing to do, the results, in terms of increased employment and purchasing power for products of both farm and factory, right here in our own market, will be tremendous.

Another indirect benefit to agriculture resulting from the trade agreements is their tendency, insofar as they increase outlets at home and abroad for such products, to check the diversion of land and labor from production of export crops to crops raised for domestic consumption. An outstanding example of this is cotton, exports of which have been reduced by lack of buying power in many foreign countries and by other factors. Unless export outlets for cotton are maintained large areas in the South will ultimately be used for the production of farm products which, in the past, have customarily been purchased from the Middle West.

It hardly needs to be recited that as a general proposition agriculture stands to gain far more by a liberal commercial policy and to lose far more by a high tariff than other elements of our population. The price of the bulk of what the farmer produces is governed by world prices and no amount of tariff can increase his return. What the farmer buys, on the other hand, is protected and, more often than not, the cost is higher as a result of import duties than it otherwise would be. The trade-agreements program, by lowering excessive duties in exchange for concessions by other countries, is designed to lessen this discrepancy. Opponents of the program, whether intentionally or otherwise, are in effect advocating the perpetuation of a long-standing policy of tariff discrimination against the farmer.

Those who continue to advocate higher import duties to protect the farmer seem to forget the terrible experience that we had with excessive tariffs only a few short years ago. The misery and confusion that befell our people in the years prior to 1933 were felt by none more acutely than the farmer. The Smoot-Hawley tariff, which was protectionism run amuck, ushered in the most disastrous period in the history of American agriculture. In my opinion, no greater disservice could be rendered to our farm population than by alienating their support of our present liberal trade policy, which is not only the most effective way of safeguarding our farmers from a return to the conditions prevailing under the Smoot-Hawley Act, but is also the policy which offers the only solid foundation for peace.

Sincerely yours,

CORDELL HULL.

The Worker Over 40

EXTENSION OF REMARKS

OF

HON. THOMAS O'MALLEY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 17, 1937

RADIO ADDRESS OF HON. THOMAS O'MALLEY, OF WISCONSIN, OCTOBER 31, 1937

Mr. O'MALLEY. Mr. Speaker, under the leave to extend my remarks in the RECORD I include the following address

delivered by me over the radio on October 31, 1937, and also a bill which I introduced yesterday:

For the opportunity to address you this evening I am indebted to the National Broadcasting Co. through whose courtesy and cooperation the next 15 minutes has been made available to me. With much publicity being given to the fact that the forthcoming special session of Congress will have as one of its main objectives, legislation on wages, hours, and fair-labor standards, it seems to me most timely that another problem of great importance to American workers be brought to public attention and so I have chosen as the subject for my discussion tonight the problem of the worker over 40 years of age.

Perhaps most of us are familiar with the now commonplace phrase that "Life begins at 40." For a few endowed with ample means and well established economically this may be true, but for the vast majority of men and women employed in industry or in the ranks of the unemployed and seeking a place to market their services, the far more pertinent phrase occurs to me—"the fight for economic survival begins at 40."

Some months ago my interest was directed toward the problem of working men and women over 40 by the activity and publications of a small group banded together under the title of the Forty and Over Clubs of America to bring to the attention of the legislators of the States and Nation the growing menace to our economic system of an almost universal policy in both industry and Government to deny employment to citizens of 40 years of age and over. As a result of the information gathered by these thoughtful people I agreed to introduce in the next session of Congress appropriate legislation, designed to forbid discrimination in Government employment by reason of age where applicants were qualified and able to do the work which they sought. My bill proposes further to repeal such laws or parts of laws which permit any governmental agency, department, or service to make regulations fixing the hiring policy of the Government, at an age lower than that now established as the retirement and old age pension benefit ages provided in the Social Security Act.

Since press reports concerning this proposed legislation were published, letters from persons in all parts of the country have reached my office. These letters testify not only to a Nation-wide age-discrimination policy in industrial and governmental employment, but they give appalling and heartbreaking examples of the hardship of the unemployed in the higher-age brackets and the dangers of unemployment facing those over 40 who may now be employed but who may wake up tomorrow without a job unless something is done to stop this growing trend.

Much attention has been given by Government, industry, and organized labor to the problems of the younger worker whose services are in demand and often at a premium because of the "speed-up" policies upon which our economic and industrial system has developed since the World War. The real "forgotten men and women" in all the programs that have been put forward and all the advances that have been proposed for the worker are those employed and unemployed who are 40 years of age and over. Many organizations have recognized the seriousness of the problem but no practical solution as yet has been suggested. The condition has been deplored and resolved against but no one or no organization has offered a program designed to correct this dangerous and unfortunate condition which directly affects nearly 30 percent of our total population. Like every other problem those most affected are usually the best fitted to devise the most effective solution. Thus, to the interested men and women past 40 it is sufficient to merely endeavor to point the way toward those objectives which their organized efforts can gain.

In September the Secretary of Labor, in commenting upon unemployment and the growing tendency toward consigning men and women of 40 years of age and over to the economic and industrial junk heap for no other reason than age, recognized the existence of a widespread policy of discrimination against the worker, "after 40." She said, and I quote her remarks, "as a State or Federal Labor Department official over a period of 15 years I have seen it grow until now it is a menace and terror to thousands of family breadwinners when they reach the age of 45 or 50 * * * with the reopening of many plants older workers were not called back to their jobs, their places going to younger men and women, and while many industries still retain workers to the age of 60, or even 70, the general hiring policy is to fix an entrance limit age at 45 and, in some cases, even 35 and 40. * * * Such a policy affects the well-being and comfort of a considerable number of our citizens and threatens our social structure so that its alleviation and correction is becoming a growing matter of public concern."

Madam Secretary of Labor goes on to say that in a study of the plight of the older worker made in Massachusetts last year out of 3,781 industrial establishments, 230 had no male employees 45 years of age or over, 137 had less than 10 percent, and 434 had less than 20 percent.

As I remarked before, while no solution has yet been offered to the problem, one simple one seems to me to be most apparent. It might be briefly stated in that old-fashioned but apt statement that the "Lord helps those who help themselves." That the policy of discrimination against anyone in employment because of age is false, short-sighted, and economically unsound has been demonstrated again and again. Only last evening there was brought forcibly to my attention that a valuable scientific employee of the Government was beginning his eighty-sixth year in the full vigor of his faculties, and that in work and research in the scientific field in which he specializes he had contributed as much as might reasonably be encompassed in two average lifetimes. In ancient times men were not supposed to have reached maturity until the age of 30, while upon entirely false premises today industry arbitrarily declares that 30 years marks the beginning of the process of elimination and refusal of employment, with the mental and physical capabilities of men and women totally and cruelly disregarded.

It must occur to all of you who are among my listeners this evening that the breadwinner at 40 faces in the next 15 or 20 years of his life the period of his greatest economic burden. His children are in their "teens" where the expense of their support and education are at the highest figure, his financial obligations of home, insurance, medical expenses, and other necessities are at the highest point of the normal working lifetime. Yet our laws from the Social Security Act on down, bar him from any prospect of retirement on any income if he should be unfortunate enough to be without employment or facing the loss of his job because of the age discrimination policy now in effect.

That industry is short-sighted in the continuation and encouragement of such a policy is evidenced by the fact that the people between the ages of 40 and 60 in the United States, plus those dependent upon them for support, purchase and consume approximately 50 percent of our manufactured products. It is inconceivable, therefore, that any sound economic policy would dictate a program that would eliminate a large group of people from the ranks of purchasers of more than the sheer necessities of life.

In my own travels and my own investigation of this problem I have been at a loss to understand the reasons back of a business policy that employs boys and girls in their "teens," who should be in school acquiring an education and fitting themselves for the responsibilities of life, when the fathers of these same boys and girls, experienced, capable, and skilled craftsmen, sit in an enforced idleness, refused an outlet for their services and denied an opportunity to support and educate the children who have replaced them in the factory, filling station, store, and office. The only possible explanation is the desire for cheap labor and the fact that the workers over 40 have failed to make their number and their power felt by those who draft and direct employment policy.

I have always believed in Government setting a good example to industry in its employment practices. Therefore, I have consistently supported legislation to improve wages and working conditions in Government, just as I have supported legislation designed to have the same effect in industry. It is a ridiculous contradition for Government, through legislative enactment, to say to business "you must pay decent wages, work your employees reasonable hours, and provide for their health, safety, and retirement" when Government itself fails to do the same things. It has, therefore, seemed to me that the place to strike at the root of the evil of discrimination against a worker solely because of his or her age should be in the Government's employment system, and toward that end I have directed my first efforts.

Here before me, for instance, are some examples of governmental employment policy that should interest and arouse the American citizen and voter of 40 years of age and over as examples of how far this unfair discrimination policy has crept into the Federal Government itself. Here is a civil-service application for examination for substitute railway postal clerk, which states on its face, "applicants must have reached their eighteenth but not their thirty-fifth birthday on the date of the close of receipt of applications." Here is another, for associate engineer, which states, "applicants must not have reached their forty-fifth birthdays, and applicants for assistant engineer must not have reached their fortieth year." Here are a few more gathered at random from the civil-service announcement of examinations: Associate refuge manager and assistant refuge manager, age under 45; assistant in home economic information, age under 45; associate geophysicist, age under 45; cotton seed technologist, age under 40; associate commodity exchange investigator, age under 45; assistant commodity exchange investigator, age under 40.

In many of these examples I have cited you must realize that, especially in the professional field, men and women cannot ordinarily gather the widespread practical experience that makes their services of unusual value in a position below the ages specified above as the absolute limit upon which applications for employment would be accepted. Business and industry cannot wholly be blamed for the pursuit of a policy of consigning men and women to permanent unemployment during the best years of their lives, when Government itself is practicing such a policy through its employment regulations. To the American men and women who believe that this problem must be corrected and this dangerous and menacing policy in employment definitely eliminated I appeal for the support of legislation designed to apply more humane principles, so that nearly 30 percent of our entire population may not be without hope of permanent employment.

Alert, organized, and intelligent American men and women of 40 years and over can solve this greatest of present economic problems through their own collective efforts better than anyone else. Your elected Representatives can do much to aid in bringing about reforms in laws so as to prevent discrimination against you in employment because of your age. To be successful, however, your Representatives must first know what you want and have brought to their attention a knowledge of your difficulties and the pledge of your support. When the initial measure I propose to introduce comes before the House, you can aid much toward its successful enactment by enlisting the support of your own Representative toward its passage.

None of us employed or unemployed can afford to be lulled into disregard of the gravity of this age-discrimination problem and its disastrous effect on a large mass of our population. For every

man and woman dependent upon personal employment for a livelihood the slogan we need to keep constantly before us is that the "fight begins at 40" for from that age onward the struggle for economic survival is a bitter one unless American employment policies are radically changed. Like any fight for a good cause and sound humane principles if we want success we must begin on those fronts where immediate victory is possible because the means and methods are under our control. Thus, when we have removed the age-discrimination evil from the employment system of Government we can go forward from there to the education and encouragement of industry to abandon its similar unfair and unwise policy.

In closing, let me say that I should be pleased to hear from any of you among my listeners who are interested in the legislation I am sponsoring and would be glad to supply copies of these remarks. At some later date I hope to discuss in greater detail the problem of the worker over 40 and submit facts and figures resulting from a study of age discrimination in employment in various industries. Thank you for your time and allow me to express my pleasure in being able to address you tonight.

H. R. 8390. A bill relating to age limits for individuals seeking positions in the executive branch of the Government, and for other purposes

Be it enacted, etc., That notwithstanding any provision of law or any rule or regulation promulgated thereunder, no individual who is otherwise duly qualified shall be held to be ineligible for appointment to any position in the executive branch of the Government, whether or not in the classified civil service, solely by reason of having attained at the time of appointment an age not in excess of 65 years.

SEC. 2. (a) Section 1 (relating to the time of eligibility for retirement) of the Civil Service Retirement Act of May 29, 1930, is amended by striking out the words "15 years" the first two times they appear in such section and inserting in lieu thereof "10 years."

(b) Section 2 (relating to the time of automatic separation from service) of such act of May 29, 1930, is amended by striking out the words "15 years" where they appear therein and inserting in lieu thereof "10 years."

SEC. 3. In the making of appointments to positions in the executive branch of the Government, whether or not in the classified civil service, preference shall be given to individuals 40 years of age or over to the extent necessary in order that, of the total number of individuals holding such positions, there will be at all times (1) not less than 25 percent between the ages of 40 and 50 years, and (2) not less than 25 percent between the ages of 50 and 65 years.

Philippine Independence

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, November 18 (legislative day of Tuesday, November 16), 1937

ARTICLE BY JAMES G. WINGO

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the RECORD an article by Mr. James G. Wingo, correspondent of the Philippine Press, and appearing in the Washington Star of November 14, concerning the Philippine independence question.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Washington Star, of November 14, 1937]

FILIPINO ANNIVERSARY FINDS OLD ISSUE ALIVE—EARLY INDEPENDENCE QUESTION, LONG REGARDED AS SETTLED, REVIVED BY PRESIDENT QUEZON

(By James G. Wingo)

The second anniversary tomorrow of the Philippine Commonwealth will find the islands once more engaged in an issue over early independence.

President Manuel Quezon revived what had been considered a settled question when he proposed to President Roosevelt to ask Congress to grant Philippine independence on December 30 (Filipino Hero-Martyr Jose Rizal day), 1938, or July 4, 1939. Recently Quezon announced that he would not seek to amend the Philippine constitution to allow him to run for a second 6-year term. This leads observers to believe that the long-time Filipino leader is ambitious to become the first president of the Philippine Republic.

Under the Philippine Independence Act, as written, the islands will be set fully free on July 4, 1946. Unless independence falls before November 15, 1941, Quezon's successor will become the new Republic's first President.

Quezon gave reasons not so personal as this, however. He recently told his national assembly that if there were objections to independence now, they will still exist in 1946.

NEW DEAL ANOTHER REASON

Another reason he gave for wanting early independence is the New Deal. "It will be to our best interests to secure independence during and under the administration of President Roosevelt," he explained. "I have no doubt that under his leadership we will receive from the Government of the United States the fairest treatment that we may ever expect to receive under the leadership of his successors."

Opposition to early independence, however, has grown tremendously in the past 2 years. Sugar and coconut planters and others whose businesses depend upon United States-Philippine reciprocal free trade have succeeded in creating a public opinion favorable to a continuation of the Commonwealth. A Nation-wide poll recently conducted by the American-edited Philippines Free Press indicated that 55.46 percent of the people are against Quezon's early independence proposal.

A joint preparatory committee on Philippine affairs, composed of American and Filipino experts appointed by President Roosevelt and President Quezon, last week ended a 3-month study of economic conditions in the Philippines. The American experts are now on their way back to Washington, but the Filipino members chose to remain in Manila because of a reported disagreement. It had been previously reported that President Quezon once threatened to withdraw the Filipino group. Ambassador John Van A. MacMurray, chairman of the committee, denied that a split existed but admitted that members were not in agreement in all things.

CHIEF MATTERS DISCUSSED

Main problems given consideration by the committee were the character of the trade preferences which should exist for a specified limited period between the United States and the Philippines; the precise arrangements for governing the trade relations between the two countries after termination of preferential trade relations; economic adjustments that could be undertaken in the Philippines and methods of executing and financing them; the need or appropriateness of changes in the Philippine currency and banking system, and in the provisions for servicing Philippine bonded indebtedness, that may be required to implement the plan for economic adjustment recommended by the joint committee; adequate protection of the rights and interests of the United States and its citizens in the Philippines and of the Philippines and its citizens in the United States after the attainment of independence, and the bearing which the possible negotiation of the neutralization agreement provided for in the Philippine Independence Act would have on the problems studied by the committee.

The committee gave no consideration to the political relations between the two countries but took cognizance of the bearing which the advancing of the date of Philippine independence would have on the chances of the Philippine economic structure to survive. The committee's report will be presented to President Roosevelt in December or early in January. High Commissioner McNutt will fly to Washington to discuss the report with the President before he makes recommendation to Congress.

Despite the uncertainty created by the revival of the independence issue, general prosperity exists in the Philippines. Although government expenditures have grown considerably, no new taxes have been imposed. On the other hand, one of the main sources of government revenue the poll tax, was abolished recently.

TAX REFUNDS IMPORTANT

This prosperity has been brought about by increased values of exports to the United States, increased shipments of gold bullion to this country, the value of which now averages more than $2,000,000 a month, and the tremendous contribution made by the United States Treasury to the Philippine Government in the form of refunds of Philippine coconut oil tax and Philippine sugar processing tax. These windfalls amount to more than $30,000,000 annually. Last summer accumulated collections of coconut oil excise tax totaling approximately $50,000,000 were paid to the Philippine Government.

After spending 8 months abroad, President Quezon returned to Manila last August and called the National Assembly, a unicameral body which he is now seeking to make bicameral, to a special session. He recommended means of spending the windfall from the United States.

First problem he tackled was the ancient agrarian trouble, which has caused sporadic uprisings in various parts of the archipelago. He recommended the appropriation of $3,500,000 for the purchase of large haciendas. Observers were surprised by the small size of the allotment. Quezon explained that if he announced that the Government would buy all large estates, those who would want to sell their haciendas would promptly start tenant trouble. He said, however, that he was determined to destroy the political power of hacienda owners, who control the social and political life in their respective bailiwicks.

In line with the Commonwealth policy to develop Mindanao, Quezon revealed that he had been in negotiation with the Goodyear Tire & Rubber Co. for assistance in the development of rubber plantations in the second largest island of the archipelago. This company's 2,500-acre rubber plantation in Mindanao is currently earning a high yield, on par with the best in Sumatra. When Quezon was reminded that Firestone refused to invest in the Philippines because of the limitation of corporate landholding to 2,500 acres, he said both the sugar and coconut industries have prospered under the same limitation.

One of Quezon's current pet projects is the raising of wages in all industries, not only as a social-justice reform but also as a means of spreading out to all the people the benefits of United States-Philippine relationship, especially free trade. Keen observers pointed out that this plan does not jibe with his early

independence proposal. Inasmuch as those advocating independence are mostly nonsharers of free-trade benefits, it looks as if Quezon is fermenting public opinion against his early independence proposal by making everybody have a proportionate share of the fruits of United States-Philippine relationship.

Another obvious reason for Quezon's solicitude for the underpaid workers is that the newly organized Philippine Popular Front is making considerable headway among the masses. The Popular Front is a federation of all the political organizations, which see virtual dictatorship in the Quezon administration, including Bishop Gregorio Aglipay's republican party, Gen. Emilio Aguinaldo's national socialist party, and Benigno Ramos' Sakdalistas, the group which staged a bloody uprising in 1935.

M'ARTHUR WINS APPROVAL

Although objections to universal military service continue, the plan designed by Maj. Gen. Douglas MacArthur is being carried out. The Army has the rebellious Moros under control. However, the Army has supplanted education as the largest item of government expenditures. In the next fiscal year national defense will cost $12,500,000, about one-third of the total income of the Philippine government (excluding the windfalls from the United States). Immensely satisfied with General MacArthur, the field marshal of the Philippine Army, the National Assembly is seeking the continuance of his services upon his retirement from the United States Army at the end of the year.

Women of the Philippines became last May the first of their sex to be granted suffrage in the Orient. Taking advantage of their newly acquired right, women are running for provincial governors and municipal mayors in the long-delayed election next month.

Pointing out that radical groups may disturb the peace of the country, President Quezon and the National Assembly postponed the election constitutionally set for last June. The continuation in office of every elective municipal and provincial official depended upon Quezon. Persistent cries of dictatorship finally led to the setting of the election next month. It is believed that, although a number of popular front candidates will be catapulted into office on the dictatorship issue, the Fusion party, a coalition of the parties of Quezon and Vice President Sergio Osmena will win handsomely.

JAPANESE EXPANSION FEARED

President Quezon dismisses the Japanese penetration of Mindanao with the remark, "There is no Japanese problem in Davao," but Filipinos are still apprehensive of Japanese incursions. "Right now," they say, "the Japanese have their hands full in China, but what will happen to our country when they are through there and resume their southward empire march?" At the Manila hearings of the joint preparatory committee of experts, Japanese frankly and unabashedly asked for equal economic and trade privileges in the Philippines with the United States.

Relations between the high commissioner, the representative of the President of the United States in the Philippines, and the Commonwealth, which was widely discussed editorially in the United States a few months ago, may be described best by the following excerpts from Quezon's recent message to the national assembly:

"The present United States high commissioner has been but a few months in our midst. Some of his early acts were misrepresented or misunderstood. * * * It is my pleasure and my duty to report to you—and what I am going to say is no mere gesture of official courtesy, but an honest and straight talk—that I could wish for no better United States high commissioner in the Philippines than His Excellency Paul V. McNutt. * * * Since my return we have had some difficult problems to settle and I had occasion to appraise the measure of him. * * * He deserves our respect and affection. The best spirit of mutual cooperation characterizes our official association, and we have also become good friends."

Outstanding achievement of Commissioner McNutt, besides his winning the confidence of the Filipinos even after he had made it plain that he, as representative of the sovereign Government precedes the President of the Philippines, is the repeal of the law which stopped the payments of pensions to American teachers who had served in the islands. McNutt urged Quezon to recommend the repeal of the law, the enactment of which the Filipino President himself had recommended.

Contemplated Trade Agreement With United Kingdom

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, November 18 (legislative day of Tuesday, November 16), 1937

ANNOUNCEMENT BY STATE DEPARTMENT

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD a memorandum issued yesterday by the State Department concerning negotiations with the United Kingdom for a trade agreement.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

The Secretary of State announced today that this Government contemplates the negotiation of a trade agreement with the United Kingdom, and invited interested persons to submit suggestions as to the products that should be considered.

This preliminary announcement, which is made with a view to obtaining suggestions from interested persons in the early stages of the discussions, should not be confused with the formal notice of intention to negotiate regularly given. The formal notice will be issued at a later date, after receipt of the proposals of the Government of the United Kingdom, at which time there will also be made public a list of products on which the United States will consider granting concessions to the United Kingdom.

The object of this preliminary announcement is to provide notification at the earliest possible date that negotiations are contemplated, in order that interested parties may have an opportunity to suggest the import or export products which, in their opinion, should be included in the negotiations. Such suggestions, particularly those in regard to export products, are most useful to the trade-agreements organization if available at an early stage. Full information should be submitted as soon as possible.

Exact technical descriptions of the products in question should be given, including, so far as possible, their nomenclature in the tariff laws of the importing country. These suggestions may be submitted in any form and need not be under oath. They should be addressed to the chairman of the Committee for Reciprocity Information, Seventh and F Streets NW., Washington, D. C., and should reach the committee not later than December 16, 1937.

Suggestions received by the Committee for Reciprocity Information will be distributed promptly to all agencies of the trade-agreements organization for use in the preparation of lists of commodities that may be involved in the negotiations. The list of commodities upon which the United States will consider the granting of concessions to the United Kingdom will be published along with the formal notice of intention to negotiate. The formal notice, as heretofore, will indicate dates for the submission of briefs and applications for oral hearings and the dates on which the customary open hearings will be held. The listing of products will indicate to American producers and importers whether or not particular tariff rates in which they are interested are under consideration. They will thus be saved the work of preparing briefs on products of interest to them but which are not expected to be involved in the negotiations.

The United Kingdom is the largest foreign market of the United States. Our exports to that country in 1936 were valued at $440,122,000 and accounted for nearly 18 percent of our exports to all countries in that year. The value of the trade in 1935 was $433,399,000. In 1929 it totalled $848,000,000.

As a source of imports into the United States, the United Kingdom was second only to Canada in 1936, supplying about 8 percent of the imports from all countries. Imports from the United Kingdom in that year were valued at $200,385,000 as compared to $155,282,000 in 1935 and $329,751,000 in 1929.

Preliminary figures for the first 9 months of 1937 indicate a still further recovery of our trade with the United Kingdom. During that period our exports to the United Kingdom were valued at $342,763,000 and our imports from that country, at $158,182,000. The export figure represents a gain of nearly 16 percent over that for the corresponding period of 1936. A similar comparison of import figures for the same periods shows a gain of 14 percent.

In 1936 the import trade of the United Kingdom was divided among the principal supplying countries, in the order of importance as follows: The United States, 11 percent; Canada, 8.8 percent; Australia, 7.2 percent; Argentina, 5.3 percent; British India, 6.1 percent; New Zealand, 5.1 percent; Denmark, 3.9 percent; Germany, 3.9 percent; France, 3 percent; and the Netherlands, 3 percent.

The countries which purchased the largest amounts of the exports of the United Kingdom in 1936 were as follows: The Union of South Africa, 8.5 percent; British India, 7.7 percent; Australia, 7.3 percent; the United States, 6.3 percent; Canada, 5.3 percent; the Irish Free State, 4.8 percent; Germany, 4.3 percent; France, 4.0 percent; New Zealand, 3.9 percent; and Argentina, 3.5 percent.

A detailed compilation showing the principal products involved in the 1929 and 1936 trade between the United States and the United Kingdom, prepared in the Bureau of Foreign and Domestic Commerce of the Department of Commerce, is appended. Additional copies may be obtained from that Bureau or from any of the district offices of the Department of Commerce, as well as from the Committee for Reciprocity Information, or the Department of State.

CORDELL HULL,
Secretary of State.

WASHINGTON, D. C., *November 18, 1937.*

UNITED STATES EXPORTS TO UNITED KINGDOM

[Data for individual export items include only United States products]

Commodities	1929			1936	
	Unit	Quantity	Value	Quantity	Value
Exports, including reexports			$848,000,000		$449,122,000
Meats and edible animal fats, total	1,000 pounds	462,099	75,755,000	139,513	23,855,000

Industry's Tax Burden

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, November 18 (legislative day of Tuesday, November 16), 1937

EDITORIAL FROM PHILADELPHIA INQUIRER

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Philadelphia Inquirer of November 17, entitled "Congressmen: Cut Industry's Tax Burden Now." I voted against the bill that contained the tax on corporate surpluses when it passed the Senate in June 1936. Our problem now is to open the way for industry to go forward as the President has indicated it should do. More employment must be created. Punitive taxes stand in the way. It has been estimated that in American industry as a whole it takes $8,000 to provide one job. For the railroads $25,000 is the figure. Each job in one automobile company represents $9,000. One out of every seven "gainful workers" in this country derives his or her pay directly or indirectly from the automotive industry. The number of separate industrial plants in which they are engaged runs into the thousands, including steel, rubber, wood, textiles, glass, gasoline, and oil. The stream of private capital into these industries has dwindled to such a low point that we now face a condition of despair in the minds of many business and labor leaders. The trial and error methods of taxation have hurt business and made investors fearful. The way forward is to establish confidence of labor and industry in the Government. This is the supreme task of Congress at the present time.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Philadelphia Inquirer of November 17, 1937]

CONGRESSMEN: CUT INDUSTRY'S TAX BURDEN NOW

It is plainly up to Congress to do its part to end the business recession which menaces recovery, wages, employment, and the welfare of every American.

Congress can do its part by slashing away—right now, without delay—the fetters that are strangling industry, hamstringing its attempts to put the Nation back on the road to prosperity.

President Roosevelt, in his message to the special session, seemed to give Congress the "Go!" signal on limited tax revision to help business. Congress should do no less than promptly take the President at his apparent word and go head.

The country cannot go ahead unless industry goes ahead. Industry cannot go ahead unless the Government eases taxes and, by ending extravagant spending, proves that it is working toward a balanced Budget, without which there is positively no cure for business jitters.

In spite of the President's frank recognition of industry's problems and the generally conciliatory tone of his message, there is danger that his view that recovery depends more on business policies than on Government policies and his implication that tax revision can wait until his huge, controversial legislative program is adopted, will do the Nation more harm than good.

It is up to Congress now to take recovery in its own hands, to make the administration's vague assurances to business factual, and to do it at once.

The President hopefully bespoke the cooperation and goodwill of industry. But there is vastly greater need for Government cooperation with industry than for industry's cooperation with Government. What the administration does not seem to be able to understand is that its one best means to attain the more abundant life for all, to increase national income, to swell buying power and to provide more jobs and higher wages, is in helping business to help itself.

At no time since the administration began its great crusade in the spring of 1933 has business, as a whole, skimped in its cooperation with Government. It has not, contrary to the usual administration plaint, been a slacker. Instead, industry has surmounted almost unconquerable difficulties to maintain employment, wages, and earnings.

There was the N. R. A. With unbelievable unanimity business rallied to support what it thought was a Government-supervised movement for industry's self-improvement and self-regulation.

But what did business find? It found itself in the meshes of a Government net that destroyed its liberty and prevented its growth and development. It found itself in a maze of codes, rules, laws, orders, denunciations, and penalties over which the "blue eagle" presided like a bird of ill omen.

The N. R. A. fell to pieces because it represented a degree of Government regimentation of business that could not possibly work in a democracy. Collapse of the N. R. A., and its outlawing by unanimous decision of the Supreme Court, was proof positive that Americans were still free, that this country was not ready to go the way of Russia, Italy, and Germany.

The N. R. A. was a sorry adventure for most of business. But did it make industry desert the Government and refuse to cooperate? Not at all. So far as it could, business went along with the Government, even to the extent of supporting dubious policies. Above all, it went on producing goods, employing workers, paying wages while struggling under a burden of taxation unparalleled in American history.

It is commendable for the President to talk about cooperation and good will. But it is high time that the administration accorded to business a fraction of the cooperation that business has given the administration. Congress now has the opportunity to provide that cooperation. If the administration could take credit for recovery by saying, "we planned it that way," it should frankly shoulder its share of the blame for the present industrial recession—unless, again, it "planned it that way."

Industry is retarded, employment hampered, recovery checked, in part by intolerable taxes and in part by dangerous Government financial and economic policies. The first mandatory need is that Congress repeal or revise drastically the taxes on undivided surpluses and capital gains. The next requirement is for Congress to put the brakes on extravagant spending so that a balanced Budget may become a reality. The third requirement is for Congress to reconsider those Government activities that constitute competition and undue interference with business.

The time to reduce the tax load on business is right now. Farm relief, wage-hour legislation, Government reorganization, and regional planning can wait a few weeks. Tax relief can't wait. It is a positive "must" now, if recovery is to be brought back quickly. A slash in Government spending is almost as necessary, with a let-up in Government competition a close third.

Let first things be put first. Let Congress revise its schedule so that it can ease industry's tax burden immediately. There is no time to be lost.

Congress has the opportunity, now, to free business and lead the country back to the high road of prosperity.

Congressmen, it's up to you.

The Brussels Conference

EXTENSION OF REMARKS

OF

HON. HENRIK SHIPSTEAD

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, November 18 (legislative day of Tuesday, November 16), 1937

EDITORIAL FROM PHILADELPHIA RECORD

Mr. SHIPSTEAD. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Philadelphia Record of yesterday morning dealing with the question of foreign relations.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Philadelphia Record of November 17, 1937]

ARE THEY PEACE-LOVING OR EMPIRE-LOVING?

The United States entered the Brussels Conference with the avowed purpose of maintaining the front of the democratic, "peace-loving" nations against the aggressive, treaty-breaking Fascist nations.

The conference now has voted a condemnation of Japan and prepared the way for further specific action against Japan. A glance at the vote on the resolution condemning Japan indicates that the Powers voting for the resolution may be quite as much concerned with preserving their own territorial conquests as in preserving democracy or upholding the sanctity of treaties.

Norway, Sweden, and Denmark, the three most democratic, nonaggressive and truly peace-loving nations in the world, did not vote for the resolution.

Their deliberate abstention from voting casts a fatal suspicion upon the character and motives of the whole conference. If the Scandinavians believed this conference a bona fide gesture in line with the principle of collective security, they would have cooperated enthusiastically with the majority. The fact that they did not is much more important than the vote of the majority.

Of the 15 nations that voted for the resolution, 6—Great Britain, Canada, Australia, New Zealand, India, and the Union of South Africa—are included in the British Commonwealth of Nations. In foreign policy these nations are dominated largely by the present reactionary Government of Britain, which is not too horrified by Fascist aggression to be making the most friendly gestures toward Germany and Italy.

Another is the Fascist Government of Portugal, which is actively aiding Franco's aggression in Spain, and which is Britain's oldest and closest ally on the Continent. Portugal, incidentally, still maintains in China its possession of Macao, the classic example of imperial exploitation and inefficient government.

Another is the Netherlands, which maintains a colonial empire that fears Japan.

Two others are France and Belgium, which have extensive colonial possessions.

The remaining nations are Bolivia, the United States, Mexico, Soviet Russia, and China.

The group of nations joining in the condemnation is not, as a whole, especially predatory or aggressive. Neither is it as a group especially "peace-loving" or democratic or devoted to the principles of collective security.

What that group as a whole has in common is susceptibility to Britain's imperial interests plus special interests of the various countries in maintaining their own preferred position in the Chinese market and in the backward countries generally.

Bearing in mind that any real "police work" in the Orient will have to be done by the naval power of the United States, doesn't the line-up at Brussels suggest that Norman Davis had better pack up and come home—quick?

National Conference of Mayors

EXTENSION OF REMARKS

OF

HON. WILLIAM H. DIETERICH

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, November 18 (legislative day of Tuesday, November 16), 1937

INTRODUCTORY SPEECH OF PRESIDING OFFICER EDWARD J. KELLY, MAYOR OF CHICAGO, AT RELIEF AND UNEMPLOYMENT SESSION, NATIONAL CONFERENCE OF MAYORS, WASHINGTON, D. C.

Mr. DIETERICH. Mr. President, I ask unanimous consent to have inserted in the RECORD the introductory speech delivered by the presiding officer, Hon. Edward J. Kelly, mayor of Chicago, at the relief and unemployment session of the National Conference of Mayors, at the Mayflower Hotel, Washington, D. C., November 16, 1937.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

Fellow mayors, large and vital issues are at stake here today.

We face an economic and political imperative in the present national tension, not only to maintain recovery but to accelerate it.

Today's tension in business and government is the pause for second wind on the upward climb; we are refueling our booster engines for the last push over the hump.

We are not here to determine merely the whys and wherefores of relief, unemployment, housing, taxation, and municipal management.

We must determine wherein our unity of thought can consummate a thoroughgoing and corrective action—to build even stronger backlogs against even the slightest cave-in of our credit and confidence.

This tension in financial and trade marts marks a transition that has brought out a healthy crossfire of conjecture and prophecy.

The real threat to prosperity is not in government or business.

It is in people's thinking.

And what the people think is influenced by what they see and hear about them.

A few ragged-looking beggars with tin cups on a busy street may start thousands of people thinking that there are dark days ahead.

A newspaper picture of an evicted family with their furniture strewn upon the street may breed a germ of discouragement and fright that will infect the mental attitude of thousands of families.

Even those more fortunate than others will start immediately hoarding their money and postponing purchases they were on the verge of making.

Every unfortunate who may be cut off relief goes back to his own neighborhood as a messenger of despair.

In these times, when we are all jittery, panicky feelings gather momentum out of small exhibitions of poverty, which, unchecked, may blanket whole cities with dread.

What happens? Business marks time, orders are canceled, the wheels of industry are retarded, and fear gets a foothold.

It seems to me that we should make every effort to provide the incentives for the right thinking of our citizens.

If our people are assailed by any doubts and uncertainties that might sour their present faith and undermine their forward-looking courage, we will face more than production lags and security slumps.

We have come away, and a far way, from the period of hedge and squeeze when timid money froze in the storm cellars of credit, and we don't want to go back.

But more important, we have helped to inoculate our citizens with a definite trust in our future by practical measures for stimulating business and sound programs for enhancing public service, and we don't want to go back.

Our analysis of the present national set-up must be realistic.

Our diagnosis of our needs and problems during the coming months calls for the utmost in clear-headed resolution and action.

We cannot retreat from recovery.

We cannot be intimidated by false propaganda.

We must be line buckers in carrying the ball and not buck passers.

Let's face a few of the facts.

Organized Government relief, whether local or Federal, may not be here to stay but it will be with us until industrial employment takes up the slack.

Call it "pump priming" or "spending to save"—the Government cannot now reduce its commitments for relief, and moreover will be faced with the possibility of increasing them.

Business may retrench during any market slump and put up the "no help wanted" sign—but Government cannot retrench and put up the "no help given" sign when such recessions occur.

The endeavor to create a balanced Budget and to reduce deficit financing occasioned by the extraordinary expenditures of relief may bring about in the coming months social involvements and economic penalties which will hasten another depression.

And so I ask: What price an immediate balanced Budget?

Will we be clearing the decks for stabilized credit while millions of unemployed are swept into the backwash?

Will we be window dressing our financial status—putting up an imaginary front of a balanced Budget while unbalanced bread lines drag up in the rear?

Shall we mop up, and pay up, our paper deficits and take a run out on relief?

Poverty and assistance of the needy is one thing we cannot end by decree.

We should not favor a balanced Budget that will sacrifice the unemployed to an economic slaughter.

We should not concur in any effort that will place the pruning knife on essential relief expenditures for some time to come—it's gambling with human misery.

Government exists for a higher purpose than merely creating a big dollar reserve, building battleships, or promoting a favorable trade balance.

Its larger objective is to build up the character and security of every individual citizen—to assist in stimulating a wider diffusion of employment so that there may be wider diffusion of purchasing power—and to do everything in its power to conserve human resources even above physical resources.

Let those in the "house of have" look into some of the "hovels of the have nots" and see if they would let humanity go into default by lessening Government support.

Day in and day out we hear complaints from those who haven't got the facts. If they would analyze our burdens, they would sanction our demands for continued Federal aid.

I believe our picture in Chicago on relief and unemployment typifies the situation in other industrial and commercial centers.

A year ago September the relief commission had 67,000 on its rolls.

This past September that number had increased to 88,500.

In addition to the 88,500 families on relief, there are approximately 49,000 relief clients employed by W. P. A., which makes a total of 137,000 families in Chicago, or, roughly, a half million people, who require assistance.

Your situation may differ in numbers and percentages, but at bottom we know that if W. P. A. activities are suspended and Federal money withdrawn, we shall be plunged into municipal bankruptcy.

Where is the community, attempting to ferret out additional taxes, that would place the last straw on the camel's back of real estate.

Already crushed and oppressed beyond endurance, the property owner, especially the small home owner, would rather throw up the sponge than go on as the tax goat.

Mounting real-estate taxes have rinsed out the values of properties, killed off continuing investments, multiplied defaults, and threaten to stagnate the building industry.

When one building artisan is denied work it means that another man who makes his tools is out of work, another man who makes his clothing and shoes is idle, another and another all down the line are placed on the lay-off list.

When we think of such unemployment in terms of hundreds and thousands of men, it is a shuddering and ghastly nightmare.

And the grand total of a further tax gouge on real estate is beyond figuring in dollars and cents—the backbone of the Nation's well-being is broken.

As I see it, then, we face four alternatives relative to this problem of relief and unemployment:

First. Our current and capital financing will be disrupted and our essential public services will be jeopardized by relief demands.

Second. Any curtailment of relief is certain to bring about wholesale starvation, evictions, and relief disturbances.

Third. Added relief demands will force communities to the impossible task of placing an additional load on the already crushing burden of local taxation.

Fourth. We can sustain the unemployables and put the employables to work on productive enterprises through Federal subsidy by W. P. A.

My analysis of the problem has led me to the conviction that the fourth alternative is our only solution.

I have endeavored to give you a cross-section of opinion on this relief problem. I wanted my thoughts to be merely high lights on the subject and no infringement upon the particular phases of the problem to be treated by the competent authorities you will now hear. We cannot get too much information nor miss any opportunity to get a clearer insight into relief and unemployment.

Neutrality Act and the Sino-Japanese Conflict

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, November 18 (legislative day of Tuesday, November 16), 1937

RADIO ADDRESS BY HON. ELBERT THOMAS, OF UTAH, ON NOVEMBER 4, 1937

Mr. MINTON. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a radio address delivered by the junior Senator from Utah [Mr. THOMAS] on November 4, 1937, entitled "Shall the President Apply the Neutrality Act in the Sino-Japanese Conflict?"

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Shall the President apply the Neutrality Act? I assume that the question is asked as a result of the fighting in the Far East. The question is then, Shall the President apply the Neutrality Act against China and Japan?

My answer is definitely "no."

There is ghastly war in the Far East and there have been various phases of it for a long time, but there is not, strictly speaking, a legal state of war there. By that I mean that neither China nor Japan has declared war, and neither one of them has even declared a state of war to exist. Thus, to date a state of war, as that condition would affect other than the fighting nations, does not exist. It is well for the world that this is so, because terrible as the lawlessness and the bloodshed are, they are not as bad as they would be if a legal state of war existed. And they are today very much easier to correct than if the world had to adjust to peace after having recognized a state of war.

I realize that such statements as these sound insincere and smack of begging the question. If the consequences were merely a legal face-saving by hiding behind a difference between a dictionary definition of what constitutes "war" and a "state of war," I would not stoop to such an argument. The facts, though, are these: Neither country has declared war; and, what is more, neither dares face the responsibility of declaring war. That means that neither country wants war in the legal sense, and both want to avoid the conditions incident to a state of war. These statements being true, we now should ask, How would the application of the Neutrality Act affect the present condition? It would put America in the position of recognizing a state of war. Immediately each nation now fighting, or both of them, might declare that war was forced on them as a result of America's action and the present ignoble lawlessness would become a glorious war, a war, too, which would by the government affected be justified and therefore made bigger and more intensive by appeals to patriotism, sacrifice, and devotion to country.

To turn today's needless, senseless, and useless slaughter into righteous deeds, justified under the necessities of legal war, is a step which America should hesitate before taking. It would be a responsibility with dire effects upon the whole world and it would be ours, because the present conditions are at least localized. Other nations have not been directly affected so far, because neither combatant can claim a war right, but each could claim such right in the light of a recognized existence of war. For example, the present fighting does not justify the Japanese Navy in molesting the shipping of the world, but a recognized state of war would.

Therefore I say that the President should not apply the Neutrality Act, because to do so would be to change the present lawlessness into lawful war, where Japan and China might then appeal to national honor and glorious sacrifice and thereby turn the present awful wickedness into a righteous defense of might.

There are those who might say that this picture is an impossible one. If that is so, why, then, does not Japan call what she is doing "war"? Or why does not China declare that a state of war exists? The answer is a simple one—either action would make present conditions worse instead of bettering them. If China and Japan will not admit war, then America should not force the admission.

Such an attitude is consistent under the Neutrality Act. The last three Neutrality Acts were all passed primarily to keep America out of war. The present very difficult situation was pointed out by some of us, when we protested that to pass a mandatory neutrality act meant to consider all wars alike. It was shown that wide discretion must be left to the Executive, because no two wars could be exactly the same and our relation to them would always be a changing one—never a constant one.

The spirit of America is for peace. The American people condemn war, and they condemn a resort to war. In the neutrality acts this condemnation is found, for never in our history was war so universally condemned as it was during the discussion of these bills. The acme of condemnation came with the declaration of the late Senator Robinson, when he said, "We want no war and we want no profits gained from war!"

If the application of the Neutrality Act could by any flight of the imagination stop the fighting, we might be forgiven in attempting it. But it would not. It would be purely a unilateral action, which would not affect the fighting one whit. Under the Neutrality Act both belligerents must be treated equally. By it, condemnation of both China and Japan would result, and not a condemnation of the wrong-doer in the fight. Impartial neutrality is a physical impossibility. If we do nothing, we help the stronger. If we act impartially, we still help the stronger. No one in America would want to see us allied with either of the combatant states; above all no one wants to see us aiding the stronger of the two. But an application of the Neutrality Act would do just that. If we should embargo the shipment of arms we would not in any way affect the ability of the state with plenty of arms from continuing the war. If we refused to sell to only those who could not come to get our products—Japan only could buy our goods because no Chinese boat could get past the Japanese fleet. The American people would not stand for taking sides in this way. Of course, we could maintain that we were impartial, but there can be no impartiality if an action of ours should throw all of our resources to the side of the nation strong enough to come to take them.

The virtue of our Neutrality Act rests in the fact that we condemn war; that we put restraint upon ourselves by proclaiming to the world that we would stress our duties as a neutral, rather than demand our rights. The Neutrality Act is self-imposed to keep us from taking steps which might cause us to become involved. The act is domestic legislation—it means nothing to the rest of the world unless it is put into force at the same time as similar action on the part of others. Action solely by us would in no sense restrain either of the two present combatants of the Far East.

Applying the Neutrality Act will not remove American interests from the Far East. It would after a time leave American citizens without even an implied protection against wrongful molestation which they now have. It must never be forgotten that most of the Americans in the Far East are there for humanitarian purposes. They are not there for wealth, but for sacrifice.

We do not want war. We will have to be long-suffering. We must restrain ourselves almost beyond endurance; but we should not take action which might invite insult to the harmless and innocent. If we want to keep out of war in the Far East, and I know we do, we must be prepared to stand wrongdoing.

We must school our patience and forgive, but to ask of the American people that they restrain themselves in the face of insult, is asking more than the American people will ever stand.

Single-handed condemnation of two fighting belligerents—treating each equally—would force both to recognize before the world that they are at war. This would bring nothing but ill; it would bring more war in the wake of the present awfulness. We cannot afford to do this. We should not do it. We would wrong one of the present combatants by making her helpless before the other. We would be unjust to the other of the combatants, in that it would arouse her to drastic sacrifice in defense of a position which she must not be forced to maintain.

China and Japan's phychology, their theories, their wills to action, must be studied and appreciated before we take action. To study the particular conditions of particular nations affected is our duty before we act. In this Far Eastern crisis, we have not yet done this. Let us act only to heal, not to cause wounds to be more deeply cut. Our Neutrality Act, therefore, should not be invoked against Japan and China. We want a return to real peace in the Far East, not a resort to more war.

Interstate Commission on Crime

EXTENSION OF REMARKS

OF

HON. HATTON W. SUMNERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 18, 1937

EXTEMPORANEOUS REMARKS OF CONGRESSMAN HATTON W. SUMNERS AT INTERSTATE DINNER OF THE INTERSTATE COMMISSION ON CRIME, HOTEL PHILLIPS, KANSAS CITY, MO., FRIDAY, SEPTEMBER 24, 1937

Mr. SUMNERS of Texas. Mr. Speaker, there was held at Kansas City during the recess of Congress, the third annual session of the Interstate Commission on Crime of the Council of State Government. For the purpose of directing the attention of Congress and the public to the importance of the work of this Commission, especially in our present circumstances, I have asked and received leave to print in the RECORD the following remarks:

Governor Hoffman, ladies, and gentlemen, I appreciate very much this privilege to speak in support of this great movement. I want us all to remember the date of this meeting. I am going to venture to be a prophet tonight. We are assembled here tonight at a time which the historian of the future will evaluate as the highest point in human history. This is one of those rare times in history when the nations of the earth are brought to judgment; when the balance sheet is being struck; when peoples are being put to the test. We are in the midst of a great tragedy; free governments are disappearing from the earth because the ability of the people in proportion to their difficulties to govern is disappearing. With every movement away from the people of governmental responsibility there goes a lessening of their governmental capacity.

Serious, deliberate, practical people cannot fail to be deeply concerned as to whether or not we will be found fit, whether or not we can preserve free government in this country. Our problems are great, and it is absolutely certain that when the problems of government of any people get beyond the capacity of that people to provide in themselves an instrumentality through which the business of government can be carried on, that government of necessity lays its hand on a dictator, not because the people want to have a dictator or even because someone wants to be a dictator, but because the business of government must be carried on and the people are not equal to the job.

Now why is this meeting important? It is important because of its immediate objective, but that is not all. It is important because it implies that we realize that, as a people, we have been losing governmental capacity because of the nonexercise of our opportunities as a self-governing people and something must be done about it. In my State, for instance, and in your States no doubt, it is true that when some problem, some difficulty comes to challenge us and gives to us an opportunity through the struggle with that difficulty to develop a capacity to do the bigger governmental job of tomorrow, we turn our backs on that opportunity and cry out for Uncle Sam to come and do the job for us. This movement of the States is important chiefly because it embodies a practical recognition of the destructive influence of that policy upon the governmental capacity of the people and therefore upon justifiable hope for the perpetuity of free institutions. Nature has one fundamental, universal law that controls. Nature will not permit the ability to do a thing to remain where that ability is not exercised. There are no exceptions to that rule. The reason why we are in this situation tonight is not difficult to understand. Directly after the war we went on a grand jazz in this country. Until the last 3 or 4 years we would not give serious consideration to any serious matter. That is not true tonight. On that fact rests the hope of this people. In my judgment, I have studied the thing as best I can, we are certainly at the time when the instincts of an Anglo-Saxon people are endeavoring to turn us toward a return to normal Anglo-Saxon system of government. We must not turn aside to quarrel with each other. We have no time for that.

When this administration went into responsibility the whole economic structure was tottering for the fall. A fascinating thing took place, a psychological governmental phenomenon not infrequent in the long history of Anglo-Saxon government. Anglo-Saxon peoples seem to have the ability, when they confront a situation requiring a quicker pick-up and a stronger power than their institutions ordinarily afford, to sense that situation and to concentrate an emergency power in the executive authority to deal with that emergency situation. At the same time, they are able to retain the power to control the exercise, if necessary, of that emergency power, and to recapture and redistribute it when the emergency situation is over. To that ability, instinctive now, I believe they owe their relative freedom from dictatorship. I believe we are in the back-wash of that instinctive reaction or instinctive movement in the other direction. I doubt you could have done 3 years ago what you have done this year. I am sure you could not. The remarkable success and progress that you have made in this movement is indicative of the fact that this urge, this instinct of the people, is moving in the direction that you are striving to go—back toward the smaller units of government which are close to the people. I am interested, of course, in this crime thing, but I am tremendously more interested in the fact that this may be the turning point. I am inclined to think it is the turning point. If you people can demonstrate by this movement that it is possible for the States by cooperation to deal with these crime problems, you will have done a thing of first importance.

The States are the agencies of government in our system through which Anglo-Saxon institutions of government can function. The Federal Government is essential, of course, as a general central governmental agency, but the Federal Government administered now by a personnel of around a million people with only one person elected is too big in numbers, in territory, too far from the people, for a general governmental agency of free government. Its governmental machinery is not adapted to popular control. The voice of the individual cannot be heard in the tumult of over 130,000,000 voices, and the influence of the individual cannot be felt there. The States function through smaller units where the voice of the individual can be heard and his influence felt. It is the field where the possibility of doing something and the necessity to do something puts him to the effort. Through that effort, and only through it, he retains and increases his governmental capacity to govern in a free country. About that there can be no doubt. If you can make this demonstration that the States can work together and do this job you will have done one of the greatest pieces of constructive statesmanship ever done in this country, and that is why we should be tremendously interested in it. I do not know of any other movement in the United States so calculated to grip the imagination of the people as this movement. They are ready to help you, and if you can make the demonstration I think it is not too much to say—I do not want to be extravagant—I say this, that you will have made as great a contribution toward the salvation of free institutions in America ever made by any group. I think you are doing a great deal bigger thing than you imagine you are doing.

Thank you very much.

Wages and Hours

EXTENSION OF REMARKS

OF

HON. ALFRED N. PHILLIPS, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 18, 1937

Mr. PHILLIPS. Mr. Speaker, under leave unanimously granted me I append herewith an explanation and summary of the wage and hour substitute bill, H. R. 8406, which I introduced in the House.

On Wednesday, November 17, I introduced a substitute wage and hour bill in the House of Representatives. The measure provides for a 40-hour maximum workweek with minimum wages fixed at 35 cents an hour. Certain specific occupational exceptions are made. Eight additional hours of employment are allowed in defined cases of emergency with pay at one and one-half times the regular rate. The Labor Standards Board is done away with and the Department of Justice is held responsible for the enforcement provisions of the act.

The minimum of 40 cents an hour in the original bill is low for my section of the country, but when legislating for the entire country lower costs of living caused by climatic and other conditions, particularly in the South, must be recognized. I hope eventually for a flat 30-hour workweek with commensurate increase in wages as a solution to the unemployment problem, but feel that the enactment of this bill is a step in the right direction. The employees' right to bargain collectively is not in any way affected by this measure, inasmuch as these rights have already been guaranteed by law.

The substitute minimum-wage and maximum-hour bill which I have offered contemplates the enactment of a law embracing all the practicabilities and merits proposed in the discussions given this character of legislation and at the

same time meets the matter with simplicity and with due regard to the need of economy.

In considering the bill, of course, it is understood that my bill provides for the establishment of fair labor standards in employments in and affecting interstate commerce.

My bill provides:

First, the establishment of a 40-hour week, 8 hours per day, as the basis, with the further provision that 8 additional hours may be worked in case of emergency, but such work in excess of 40 hours shall be paid for at the rate of time and a half.

My bill provides:

Second, for the establishment of a 35-cents-per-hour minimum wage.

My bill provides:

Third, that the enforcement of this law shall be in the hands of the Department of Justice, and that each United States district attorney is required, upon receipt of the information that the law is being violated, to proceed to indict and to prosecute for the violation of the law.

My bill provides:

Fourth, for the exemption, of course, of individuals employed in an executive, administrative, technical, supervisory, outside salesman, or professional capacity; railroad employees who are subject to the provisions of the Hours of Service Act, or any employee of any common carrier by motor vehicle subject to the qualifications and maximum hours of service provisions of Motor Carrier Act, or any air-transport employee subject to the provisions of title II of the Railway Labor Act, or in the taking of fish, sea foods, or sponges, or any person employed in agricultural production.

I think it is important that we give consideration to the difference in the aspects of the maximum workweek and the minimum wage. In the case of the establishment by law of a maximum workweek, I feel that this is necessary in the interest of national defense. It is generally conceded that the only practical manner by which unemployment can be successfully attacked is by and through the reduction of the workweek and the number of days to be worked. Obviously a continuation of unemployment or the increasing of unemployment constitutes a menace to the Nation itself. Therefore employment opportunities must be made in order to meet the vast developments that have occurred and are now occurring in the introduction of labor-saving devices, mechanisms, and processes.

There are those who ask the question as to why the workweek should be placed at 40 hours instead of a lower number of hours. My answer to this is that we cannot definitely know whether the 40-hour week universally applied will meet the unemployment requirements or not. This can only come by a test and a trial. A reduction in the workweek naturally affects the cost of living, and if the workweek is reduced to a point not necessary to cover the unemployment situation, then we find ourselves imposing an increase in the cost of living that might be totally unnecessary.

The regulation of the workweek is not now a matter that involves health or life or life's expectancy, as was the case 25 years ago. In my judgment, it now involves the Nation's welfare and security.

My bill provides for an 8-hour emergency period. In the case of emergency if men are required to work in excess of the basic 40-hour week, I feel they should be paid the usual standard and customary rate of overtime.

In the matter of the minimum wage, my position has always been unfavorable to the establishment of wages in private industry by law; however, in this instance I am supporting a 35-cents-per-hour minimum as a welfare measure. Some criticisms have been made against this low minimum. I have purposely proposed a law to the end that the spirit of the initiative may be conserved in the first instance and that the principle of collective relationship as between employer and employee organizations may be conserved. I believe that the most lasting and responsive arrangement as to wages can best be measured through the principle of collective bargaining by and between the employers and employees who are engaged in an industry in which they have an unescapable community of interest and, too, in which they are better informed as to the physical possibilities of the industry upon which they are dependent. This low minimum of 35 cents per hour seems to me to adequately dispose of any claim upon the part of any group of citizens in any particular section of the country of differential because this is a low minimum and it would be difficult indeed for anybody to justify a minimum wage below $14 per week.

In further connection with my position upon the minimum wage proposed in this bill, I do believe it will reduce to a very substantial degree cutthroat competition which is destructive to the interest of the industry and all of its human elements as well as to the Nation itself. Low as this minimum may be, at least it establishes a floor below which no manufacturer can go who is engaged in a business that comes within the purview of interstate commerce.

The enforcement provisions of this bill are calculated to meet the very great opposition to the establishment of additional bureaus with enforcement power. Likewise the provision contemplates the accomplishment of the results without substantial cost to the Federal Government. I am proposing the enactment of a law that will be enforceable by the same processes through the Department of Justice that are applied to any other law dealing with interstate commerce violations.

Under my proposed plan the responsibility of ascertaining violations is upon the public as in every other case. The fair employers and the representatives of the workers will have a personal and direct interest in seeing that the law is fulfilled. If there be the chiseler and the law violator, then it is the duty of the citizenry in each community to bring the matter to the attention of the United States district attorney in the district in which the violation occurs. The indictment can be made, the trial held and the imposition of the penalties in the bill can be made to the district courts in the district in which the violation occurs. It is my frank judgment that 99⅞ percent of the employers of America will adhere to this proposed law if placed upon the statutes, and with it the Government of the United States will be free from the tremendous cost attendant to administration as measured by previous experiences, and industry of our country, made up of the investor, management, and labor, will be removed from the state of suspense and uncertainties which have heretofore and now exist, which uncertainties, in my judgment, are seriously affecting productivity and delaying complete recovery.

Un-American Activities

EXTENSION OF REMARKS

OF

HON. THOMAS H. CULLEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 18, 1937

RADIO ADDRESS BY HON. SAMUEL DICKSTEIN, OF NEW YORK, ON OCTOBER 5, 1937

Mr. CULLEN. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address delivered over the radio on October 5, 1937, by my colleague from New York, Mr. DICKSTEIN:

In one of my radio addresses, I had occasion to refer to the fact that our late lamented war President, Woodrow Wilson, refused to shake the hand of one of the leaders of a so-called German-American, because he said, "I do not know in this country any German-American, nor any other hyphenated American." He said, "that in this country we can only recognize one allegiance, the allegiance to our Stars and Stripes, and not any foreign ideology or religious or political group."

And so following the footsteps of our great leader, permit me to use this also to tell the radio audience of America how important it is that we in this country recognize but one allegiance, the allegiance to our own Government and Constitution.

Only a few days ago this city was decorated with flags, and was full of welcoming signs to members of the American Legion who held their convention here 19 years after the Armistice, which terminated the great war fought by us, again quoting Woodrow Wilson, "To make the world safe for democracy." But the last 5 years saw a crumbling of democratic institutions all over the world. In Italy, fascism became the national creed in 1922. Thereafter, Germany in 1933 became converted to the philosophy and ideology of nazi-ism, which is a form of fascism stressing racial intolerance and hatred, particularly directed against everything so-called non-Aryan, whatever that term may mean. Before fascism, communism established a so-called dictatorship of the proletariat in Russia, and right along a number of European countries would be copying dictatorial methods, whether of the right or of the left, some in the form of fascism and some in the form of communism.

This country has for many years past been infested by foreign agents well supplied with money and subsidized from abroad, who are preaching nazism, fascism, and communism, and who seek to impose an alien ideology upon our American people.

I showed repeatedly in and out of Congress this alien menace, and gave a very detailed story as to how well organized propaganda from foreign sources is seeking to overwhelm our American democracy. I showed how printed propaganda is being disseminated in this country; how foreign agents go about among our people preaching disloyalty to the Government and are undermining the democracy upon which our country was founded.

On this question no racial or religious issue is involved, and it makes no difference whether one is a Catholic, Protestant, Mohammedan, Jew, or follows no religion. It is purely an attempt to protect the American people from foreign intervention and to protect the American home directed by propaganda from foreign sources. I know this menace and I know this propaganda, not only because for years past it was and now is a part of my official activity, but because I receive evidence almost daily of the fact that this menace continues unabated, and nothing is being done to prevent it. Alert to the danger of this propaganda, Congress authorized an investigating committee in 1934, but the investigating committee, while it was successful in exposing it, was only able to scratch the surface, and since the committee ceased functioning, conditions have gone from bad to worse.

If I could take my audience with me to various places in the country where our American flag is trampled upon, and our American institutions derided and made a mockery of, I should have no trouble in proving to you, men and women of America, what a great menace to our institutions these foreign subversive attempts really are. These attempts will crop up from time to time, and we have them with us, and unless something is done to put an end to these continuous attempts to undermine our institutions and Government, I tremble for the future of America.

And you do not have to take my word for it. A very prominent newspaper, the Chicago Daily Times, saw fit to engage the services of three investigators, who made a thorough study of the situation, and who published a series of articles in the paper describing in detail the operation of Nazis and Fascists in America. These investigators were not satisfied with superficial facts, but became members of subversive organizations, and as such members, became intimately associated with the organizations in question, and were able to present a detailed picture as to how these subversive organizations are doing their business.

And so we find constant pressure on Americans to let go of their ideals and philosophy of government, and proclaiming the wonders of fascism or communism or other un-American isms. They tell us that our President does not amount to much since he is only one President elected by the people of the United States every 4 years, while Germany waited 2,000 years for its new messiah. They tell us that our democracy doesn't mean anything, but that the right kind of government is a government by a leader who dictates to his people, telling them what to do, when to sleep, what to eat, and what a god to worship. And so in order to carry out their program they organize camps, camps for adults and camps for children. In the camps for adults foreign uniforms are worn and they are taught how to goose-step, click their heels, and pay homage to a foreign ruler under the foreign emblem. In the camps for children they are not allowed to speak English, but German is the language of conversation and instruction, and children are taught how to salute the flag of a foreign government. Not only children of German residents in the United States but American-born children, who under our laws are citizens of this country, are also trained in un-American activities under the guise of education and as a smoke screen "to fight communism."

When a committee of Congress, under a resolution sponsored by me, was investigating this subversive movement back in 1934, it was not nearly as widespread and comprehensive as it is today. Then it was only the nucleus of a Fascist organization in this country. Now the organization has spread in more than 40 States, and boasts of a score or so of camps throughout the length and breadth of the United States. And what do all these subversive organizations teach their votaries? Do they teach them to revere our flag? No! Do they teach them to love our institutions? Do they teach them to respect our Government by the people, for the people, and of the people? No! Do they teach American history; do they teach them how our forefathers gained their independence, and how the ideals of liberty and justice were proclaimed in our first charter of liberties, the Declaration of Independence? No! Do they teach them how the ideals of our liberty and freedom resulted in the freeing of the Negro slaves and the granting of political equality to persons of an alien race? No! Do they teach them through the years of American history it was always our aim, desire, and ideal to bring freedom to all the oppressed all over the world, and that we went to fight Spain in order to make Cuba free? No! Do they teach them how we went only 19 years ago to make the world safe for democracy? No! Do they teach them that this very Republic was founded on the principle of giving a haven to the oppressed and refuge to those who were persecuted for their religious or political belief? No! Do they teach them that through all the years of American history, and that all through the future America as visioned by our people, we shall never relinquish our ideals of freedom, liberty, and equality? No!

All these camps are nests of vicious propaganda against the democratic principles of the United States, and the things our children have been taught to love, admire, and respect.

Are we going to permit foreign groups to spread intolerance into this country? Are we going to permit bigotry? Are we going to permit hatred to be imported from abroad arraying one class of people against another, one race against another; one group against another? It is the avowed intention of these foreign agitators to save this country from communism. Do we need their help to combat communism? And if that be so, why should it be necessary to wear foreign uniforms, the swastika, or organize camps? Has Hitler become so generous as to finance the fight against communism from the German Treasury? Are we not strong enough to do it ourselves without the aid and assistance from foreign sources? And if this country should decide to go communistic, as the commander of the American Legion stated in his recent address, what business is it of theirs?

We can settle our own political institutions in our own political way, and you foreign agitators of a dual allegiance keep out of this country, and stop at once this un-American conduct, else we will drive you out.

We cannot let the situation go on unchecked. Uncle Sam has been a sort of good-natured old gentleman permitting these agitators to roam around using this country as a dumping ground for foreign propaganda. During the last World War German spies paid no attention to our neutrality laws and plotted their subversive activities quite unmolested on American soil until this country entered the war on the side of the Allies.

We do not want the situation to arise where we shall be confronted with foreign ammunition depots and foreigners being trained by our own Army officers in military tactics.

A few months ago the German Government issued a questionnaire to individuals in this country—a good many of them are citizens or have declared their intention to become citizens, and even some native-born Americans who happened to have German names—asking them to enroll for military service in Germany. And after the questionnaires were returned the German Government went a step further and practically instructed all Germans in this country, whether naturalized or not—and, as I said before, some of them were native-born—to join our own Army or State militia, so as to obtain military training at the expense of our Government, so that when the time comes for these men to fight, they will fight for Germany. Their real allegiance is always to the foreign government, and we cannot allow this condition of affairs to continue.

The recent convention in New York of the so-called German Day has definitely demonstrated to the American people the Nazi movement in the United States, something that we Americans would not dare to do in Germany or any other Fascist country. Military parades are staged of a nature that breeds dictatorships; foreign uniforms, goose-stepping, teaching the philosophy of Hitlerism, everything foreign to our way of thinking, to our way of living, and to our democracy.

If the people at that convention were really and truly interested in America, it was unnecessary to assure the President of the United States as to their loyalty, nor was it necessary if they were Americans, to tell Hitler how much they admire him and how the groups here are ready to follow in his footsteps; it was unnecessary to take young children and put foreign uniforms on them, and teach them to stretch out their hands in foreign salute to a dictator, and goose-step these young children around the hall, in the fashion of the youth movement in Germany.

All of this, I say, is unnecessary to be an American citizen and to believe in our Constitution. We who love our Constitution do not need goose-stepping and the wearing of foreign uniforms; we do not praise or revere any other form of government except our own, which we must always be ready to defend, whether in peace or war; we do not need any outside advice, foreign to our democracy, nor do we need self-appointed and self-designated policemen from foreign shores to tell us that they have saved America from communism. America can take care of herself, her own people and does not need any foreign uniformed policemen, whether Nazi, Communist, or Fascist to save America.

I am happy, however, to note that the vast majority of our German citizens, millions of them, refused to heed this call of the German Government and have proved themselves to be real, loyal, and patriotic Americans.

I feel that I would be an unworthy representative of the people of the United States if I did not bring this matter to the attention of our public. When a foreign government seeks to intervene in the daily life of our people, it surely is time to utter an energetic and warm protest.

A few days ago in opening the academic year of Columbia University, the president of that institution warned this country against this menace of fascism. He said that while communism was objectionable, nevertheless the principal danger assailing all democratic institutions comes from fascism. He also said that the time has come for democratic countries to no longer passively resist the encroachment of dictatorships, but that we must assume a militant attitude in combating the dangers of fascism. Likewise, at the convention of the American Legion just concluding, a resolution was passed calling upon Congress to make a thorough investigation of this danger.

At the opening of the next session of Congress I shall reintroduce the resolution to investigate these subversive forces.

I assure you I have no personal grievance against any one race or creed, but will expose all of these subversive forces without fear or favor.

And so I wish to plead with you, my fellow citizens, to give me your support and write to your Congressman and Senator to be on the alert, and to vote for the investigation of fascism, communism, and nazi-ism, and all other subversive movements in America, whether from within or without.

The Last Best Hope of Earth

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 18, 1937

ADDRESS BY HON. JAMES ROOSEVELT, SECRETARY TO THE PRESIDENT

Mr. McCORMACK. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by Hon. James Roosevelt, secretary to the President, before Catholic Youth Organization, Loyola University, Ill., November 5, 1937:

For this invitation to talk with Catholic American youth—about the plans they share with all American youth to build an American civilization worthy of the gifts God has showered upon this country—I am deeply grateful.

And I am particularly glad that we are discussing our common hopes in Chicago and under the auspices of the Chicago Catholic youth organizations. For here—where the farm, the city, the sea, and all the races of man meet—is a city marked by destiny to be the most vital center of American civilization in our generation. Even a man from Boston has eyes to see that.

That is why it seems to me most fortunate for all America that direction of youth in this City of Youth should have the guidance of Cardinal Mundelein and Bishop Shiel. For here they are directing the future with the ages-old wisdom of the Catholic Church about the fundamentals a civilization must have if it would meet the needs of the human heart, be in tune with the human soul—and thereby be fitted to endure as an expression of human life.

I suppose the common ambition of every generation of youth can be stated as a hope that they may find a way by which in their years of maturity they can live together as generously, as courageously, and therefore as happily, as in their years of youth—that they may find a way in which the democratic comaraderie so natural to youth—before disparity of wealth and power come to spoil it—can become the natural democracy of the whole Nation, young and old alike.

That ambition conceals every difficult problem of human association. It is not a cinch course.

But so far as our generation is concerned, I feel sure of two things about that ambition—that we have a chance to realize it, that we have an obligation to realize it, as no other youth of modern times.

Why do I think we have a chance?

Because from the struggles of the courageous and generous generation ahead of us I am sure we have learned two truths, old truths which Christianity proved and taught all mankind centuries ago.

A first truth, that no scheme of political or economic association can keep itself in balance unless it satisfies the human heart of the average man and woman—and that it will never satisfy that heart unless it seeks and preserves as its primary objective the human dignity of the average man and woman.

A second truth, that we cannot achieve a society based on human dignity unless we are wise enough to follow the teaching of St. Paul that we are members one of another who cannot live or achieve apart from one another—that we cannot achieve a stable and productive society unless we willingly agree that we are each our brother's keeper—a philosophy of individualism invented to justify greed simply does not work as a substitute for that corporate action through which alone men of good will can work out the kingdom of God on earth.

To minds trained in Catholic doctrine and steeped in the encyclicals, those truths are nothing new.

What is new is that today those truths are realized by all Americans as the essential working principles of practical secular government. Those relationships between all parts of the population which the mother church—and all churches—have long commanded their sons and daughters to observe as a matter of religion, have become the relationships which the great majority of the American people want government deliberately to create in order to preserve political democracy and economic and social stability.

For at least 300 years the world has made it hard for the average man and woman to maintain faith in their personal dignity.

Gloomy philosophers have assured them that their human world was at the mercy of great unhuman forces.

Greedy individualists have appealed to their vanity to abandon their old instinct to cooperate with their fellows—that sound instinct through which was once built the unity of all Christendom. And in that individualism, man has been helplessly alone.

As the moral dignity of every man as a son of God crumbled, the moral codes of right based upon that dignity crumbled with it. Might supplanted right because men were no longer important. Race hated race, nation hated nation, because man was no longer important.

When the World War and depression broke upon us, the average man and woman, despite all education was supposed to have done for them, had far less faith in themselves, far less courage in their ability to make a world of justice and security for themselves and their children, than men and women of hundreds of years before. And once the average man has lost confidence in his ability to meet the personal problems of his social and economic life, it is only a short further step to obtain his acquiescence that he is incapable of using his political liberty.

In Europe the end of the road was just that. Dictatorships came because man had been "educated" out of his demand that there should be dignity in the single human life. Political freedom, economic freedom, even religious freedom had come to seem doubtfully worth fighting for. And with the loss of that vital spark, men, no longer sons of God in their own eyes, were easily herded to be cannon fodder for Caesar.

Even in this country when the depression struck us the majority of the population were not too sure of their own right to dignity.

But the spark was not completely out as in so many places in Europe.

When leadership asked the average man and woman to try through a new use of Government to recreate the kind of a world in which the average human being could live with dignity and peace, the spark fanned up into flame.

And taking their courage in their hands, the average American man and woman, through government as their instrument of corporate action, dared to order affairs of man that were supposed to have escaped beyond the control of man—dared to do what common sense told them should be done with the problems of family income, of family savings, of the family home, with the problem of opportunity for youth, with the problem of security for age—with the problem of balancing life so that it might be more than a desperate scrambling up before 30 and a desperate shambling down after 40.

What that meant economically you have heard many times.

But have you thought what it meant spiritually—what it meant to the self-respect of mankind to have the average American man and woman, through the organized self-help of government, reassert their faith in themselves and their own dignity and break the spiral of the defeatist lack of faith in the common man of good will which in Europe had ended in surrender to the forces of ill will? The statutes and the policies that carried out this determination of a people's government to improve a people's life were more than matters of bread and butter. They were a new declaration of independence of the spirit of man.

Today our democracy has unshakeable economic strength because we have the courage to refuse to be frightened by those who would tell us we must keep hands off economic laws, because we have the courage to do what we need to do and to go as far as we need to go to make new economic laws to fit man's needs.

Of course, we still have economic difficulties. There are those today who want to emphasize our difficulties. But the average man and woman is wiser in emphasizing our strength and determination to face facts in time and to meet today's problems in the same spirit as we have met yesterday's problems—a spirit that demands that remedies must benefit the whole country and the average man and woman in it—not just meet the demands of the most articulate few. For American democracy is prepared today to do whatever needs to be done to go as far as it needs to go to keep the fate of the many from falling back into control of the few.

And today our democracy has unshakeable political strength because the many whom Lincoln called God's poor give back to democracy today, as they have always given back to the church which has mothered them, the unmatchable strength of their grateful loyalty to those who really believe in them and really know their heart's desire.

It is just because we have so relearned human courage—just because we have so relearned democratic cooperation—that there

will be no communism, no fascism, no dictatorship of any kind in this country.

It is because our American democracy of today rests on such spiritual bedrock that I think the youth of this generation has a chance to make its own natural democracy the common instinct of the whole Nation.

What of our obligations?

Today the world is at war with itself for the fundamental reason that nations cannot find a way to peace among their peoples at home. Dictatorships and foreign wars are merely vain ways of escape from internal resentments and class hatreds bred by a self-defeating unwillingness of those who have much to let a way be found to get a little more to those who do not have enough.

Desperate men and women, hungry for dignity as well as for food, distrusting themselves as well as their neighbors, in their disappointment turn to the false gods of one "ism" after another just as the disappointed Israelites of old turned to the golden calf and Baal. And solemnly leaders of opinion in other lands talk about class war to come which will divide the nations of Europe against each other as well as within themselves.

Peace needs nothing right now so much as a proof that somewhere men have found a way which other men may copy to relieve the internal strains of a modern nation by effecting a fairer distribution of national income—without injury to the legitimate rights of property—without autocratic interference with the liberties of any group of the population—within the peaceful processes of democratic cooperation.

This Nation is mankind's only present opportunity to give that proof. And the years immediately ahead of us are desperately short to make that demonstration effective in time.

Catholic youth, trained in devotion to the Prince of Peace, trained in the conviction that right and justice will eventually prevail over night and darkness, trained in faith in the ultimate ability of the average man and woman to justify their kinship with God, will particularly feel the greatness of the opportunity and of the obligation.

The peace of democracy in this hemisphere may mean the peace of God throughout the world and a revival of that sense of the moral unity of the civilized world whose potentialities the church proved hundreds of years ago.

The hopes of the Christian Church, the hopes for world peace, and the hopes for a triumphant American democracy all need each other.

As Lincoln said in his message to Congress just before the Emancipation Proclamation, "We shall nobly save or meanly lose the last, best hope of earth."

No more could Catholic youth—no more could all American youth—ask God to give them to work for!

Thirteen Original Colonies

EXTENSION OF REMARKS

OF

HON. J. BUELL SNYDER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 17, 1937

ADDRESS DELIVERED BY HON. J. BUELL SNYDER, OF PENNSYLVANIA, AT THE MEMORIAL MARKING AND TREE PLANTING EXERCISES ON THE POTOMAC, OCTOBER 23, 1937, IN COMMEMORATION OF THE ONE HUNDRED AND FIFTIETH ANNIVERSARY OF THE SIGNING OF THE CONSTITUTION OF THE UNITED STATES

Mr. SNYDER of Pennsylvania. Mr. Speaker, under permission to extend my remarks I include an address delivered by me at the exercises held by the Thirteen Original State Societies on the George Washington Memorial Parkway, an acreage set aside on the banks of the Potomac between the Memorial Bridge and the Key Bridge on the Virginia side, to commemorate the one hundred and fiftieth anniversary of the signing of the Constitution of the United States.

The Thirteen Original Colonies that signed this immortal document are in order as follows, together with the type of tree the State societies selected and planted to represent their own State:

Delaware, December 7, 1787, red oak.
Pennsylvania, December 12, 1787, hemlock.
New Jersey, December 18, 1787, white oak.
Georgia, January 2, 1788, pecan.
Connecticut, January 9, 1788, red maple.
Massachusetts, February 6, 1788, American elm.
Maryland, April 28, 1788, white oak.
South Carolina, May 23, 1788, willow oak.
New Hampshire, June 21, 1788, American ash.
Virginia, June 26, 1788, red oak.
New York, July 26, 1788, American plane (sycamore).
North Carolina, November 21, 1789, sweet gum.
Rhode Island, May 29, 1790, Kentucky coffee tree.

The National Park and Planning Commission appropriately set aside this acreage for the erection of a memorial marker and the planting of trees. At these exercises each of the Thirteen Original States planted three trees each. Each State was permitted to select the tree to represent their State. As a result 39 trees were planted, which represented the 39 signers of the Constitution. The chairmen of the several State societies selected to represent their State on this occasion were as follows: Gov. Richard C. McMullen, Delaware; Hon. J. Buell Snyder, Pennsylvania; Walter Hall, New Jersey; Henderson Latham, Georgia; Capt. B. T. McQueenie, Massachusetts; Senator Augustine Lonergan, Connecticut; Col. Harry C. Jones and John Marshall Boteler, Maryland; Col. Edwin A. Halsey and Wilbur C. Hall, Virginia; Hugh E. Phillips, South Carolina; John S. Davie, New Hampshire; Maurice C. Sands, New York; Gen. R. L. Cox, North Carolina; William J. Crane, Rhode Island.

The Honorable Sol Bloom, director general of the United States Constitution Sesquicentennial Commission, delivered the principal address of the day. The Army Band, the National Park Service, and the Cavalry from Fort Myer participated and helped to make the occasion an outstanding one.

The address is as follows:

"What constitutes a state?" the poet asked, and answered that it was not impressive edifices or vast public works that constitute a state, but people, living together under rules in a land which is their country, knowing and observing the laws which govern their association, which constitute a state.

And so, when we ask what constitutes the United States, our answer must be, not the Capitol and all the other monumental buildings housing the multitude of Federal functionaries, but the fundamental law of the land, our Constitution, and the other laws prescribed pursuant thereto, and the people who accept those rules as the expression of their will and are guided by them in their daily conduct.

Our Constitution is thus more than a written document, preserved and guarded from the ravages of air and sunlight in the Library of Congress. It is more than a scrap of paper. Paper constitutions were turned out in wholesale lots by a French theorist during the French Revolution, but there was no life in them. Our Constitution is a living law and not a literary exercise.

It is more, too, than a body of doctrine or set of ideas contained in or expressed by the phrases of the written instrument when grasped and understood by an intelligent mind. Legal doctrines and ideas about Government can be, like the words in which they are clothed, the idle speculations of a jurist or political philosopher. But the Constitution which we honor is the Constitution which finds reality as a social force of the first magnitude in the actual life of the American people.

No more fitting ceremony, therefore, could be devised to commemorate the one hundred and fiftieth anniversary of our Constitution than that we, the people in whose minds and conduct the Constitution is preserved, and this the land upon which it holds sway, should unite in reaffirming the vitality of our Nation's Government through the symbol of these trees planted by the people of our Thirteen Original States and rooted in our country's soil.

Pennsylvania participates with particular pride in today's proceedings because the Declaration of Independence, which proclaimed the right of the 13 united States to form for themselves and their posterity a new Government of such character as should to them seem capable of insuring their welfare and happiness, as well as the Constitution, in which those States did exercise the right so claimed in the declaration, were both formulated on Pennsylvania soil, the one in 1776 and the other 11 years later.

The species of tree which we have chosen, the hemlock, is also appropriate because of its historical association. At Stanton, the estate of Dr. Logan, on the outskirts of Philadelphia, regarded as one of the outstanding examples of early American architecture and preserved through the efforts of the Colonial Dames, there stood a venerable avenue of hemlocks when George Washington made his headquarters there in 1777 during the American Revolution, and when Thomas Jefferson was Secretary of State, and sitting under those calm trees discussed with foreign diplomats the measures by which the neutrality of our country might be preserved in the midst of the foreign wars which then were raging. Dr. Logan himself was a patriotic Quaker physician, who, on his own responsibility, unofficially visited both France and England in order to do what he could to maintain peace between those countries and America and who condemned particularly the

newly-adopted mode of warfare in which gallant combat between armies in the field was replaced by measures designed to cause starvation and suffering among the inoffensive civilian population of women, children, and the aged.

May these trees of the same variety as those under which Washington, Logan, and Jefferson sat remind us that the same qualities of courage, to defend our country and its rights by force of arms, if need be, and benevolence and prudence, to retain by reason of our just dealings the friendship of other nations and avoid entanglements in the animosities and hostilities arising in the course of their relations with each other are needed today when the Nation's Capital is situated here in the District of Columbia just as much as they were needed when the Nation's Capital was located in Pennsylvania.

On behalf of the people of the Commonwealth of Pennsylvania, the Keystone State of the original thirteen, I dedicate these hemlock trees in commemoration of the one hundred and fiftieth anniversary of the Constitution of the United States.

Will the United States Be Tricked Into Another War?

EXTENSION OF REMARKS

OF

HON. BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 18, 1937

Mr. GEHRMANN. Mr. Speaker, 20 years ago our beloved United States was in the midst of the World War that was to make the world safe for democracy. Of course, we all know that it has done just the opposite, and instead of strengthening democracy it has entirely destroyed it in several countries, and fascism and dictatorship have taken its place. We are paying the penalty of this foolish, unwarranted, and unnecessary participation in that wholesale slaughter of the world's manhood and will continue to pay for more than a generation to come. Millions of our finest young men were sent across the ocean, thousands of miles from our shores, to be killed, maimed, and crippled for life. Nearly every single man that saw action on the front, even though apparently uninjured at the conclusion of this terrible slaughter, now feels the effects of the hardships they were forced to undergo. Hundreds of thousands of those men are now incapacitated to the extent that they cannot perform hard manual labor and are rejected even on W. P. A. jobs because of a bad heart, defective lungs, rheumatism, arthritis, or other similar ailments, but never were treated while at the front, or if they were, the ailments at that time were of a slight nature, so they are unable to establish service connection, and, of course, under present laws or rules, are denied aid or compensation. Many thousands of these men and their families are now objects of charity. The number of these, and their degree of disability is increasing rapidly, and Congress must face the task of providing sufficient amounts of money to make it possible for those heroes to live in decency and not be public charges.

So we are going to pay for the short-sightedness of entering that war in April 1917 in ever-increasing amounts; but since we were foolish enough to allow Congress and the President to declare war 20 years ago I hope that at least a lesson will have been taught us, so that we will not make the same mistake again and send more of the flower of our manhood across the waters to aid some foreign powers to divide the spoils, and mainly to aid munition and war-material manufacturers to make billions in profits, for which the lives of millions must be sacrified while the war lasts; and, after that, several generations must have a large share of their people hungry, ill-clad, and without homes, to pay for it.

I have just been reading the wonderful speech made by our great leader, now departed, Senator Robert M. La Follette, Sr., on the floor of the Senate on April 4, 1917. I have also read some of the speeches made by those that were war mad and branded our hero as a traitor and everything imaginable. I wonder if they are as proud of their record as was old Bob before he died. Oh, he was most certainly a prophet, because then he could not know what we know now—that the Allies had made a number of secret treaties how they would divide the spoils after victory. The International News Service has just recently released the official text of the document, which clearly shows that these undercover pacts were in existence when we entered the war. Of course, when the Allies were getting us into this war no word was heard of these secret agreements; then the Allies were supposedly battling against German imperialism and militarism, and we were asked to join to make the world "safe for democracy."

Well, we did join, and of course "we" won the war, not England, France, and the other Allies. But when the diplomats gathered around over the spoils, the Allies forgot all about democracy, and its safety with which they enticed us to enter the war. President Wilson found himself dealing with a group of shrewd and very practical war lords whose main interest was in grabbing all they could get. These same powers, whose chestnuts we pulled out of the fire, refuse to pay us back even a part of the billions we loaned them.

I repeat, that it was a terrible mistake to have been fooled into that war in 1917, but at least we should have learned one lesson, and that is that we must keep our eyes and ears open, and not be taken in the second time. England would like to use us as a cat's-paw to pull her international chestnuts out of the fire; she certainly is trying this scheme in the undeclared war with China, as well as her attitude in Spain.

I believe it is dangerous to leave the question of entering into war, except actual invasion, to Congress and the President. Even though it should, and usually does, reflect the wishes of the people, an artificial hysteria and pressure could easily sway the majority of Congress to again fall for propaganda. The only way to ever declare war, except invasion of our own shores, must be left to the people themselves. We would have never entered that war 20 years ago if the people could have expressed their wish.

There is good evidence why Congress cannot be trusted with the declaration of war right now. Several resolutions that would give the people the opportunity to express themselves on declaration of war are pending. The Ludlow resolution has been there during the entire first session of the Seventy-fifth Congress. It has not been allowed to come on the floor for action, but those of us who feel Congress should not be trusted with this most important question, are signing a petition to force it up for consideration. It requires 218 signers, and at this date less than 200 have signed. That shows that less than half of Congress wants the people to say if we are to enter into another world war to help European powers to destroy helpless, smaller nations and then divide the territory.

Several similar resolutions have just recently been introduced, and I feel confident that one of them will be passed at this special session so that it may be submitted to the people for adoption at an early date. Over 20 years ago, during the memorable speech made by "Old Bob," he challenged the Congress to let the people vote on the question of entering the war with these words:

> Who has registered the knowledge or approval of the American people of the course this Congress is called upon to take in declaring war on Germany? Submit the question to the people, you who support it. You who support it dare not do it, for you know that by a vote of more than 10 to 1 the American people as a body would register their declaration against it.

Are we, as Members of this Congress, who have had time to think what the hasty action of the Congress 20 years ago has cost the American people, going to refuse the people the right of expression now, when the whole world is in a much worse turmoil than it was at that time? All of Europe is trying to gain the United States on their side and will try their best to have us become embroiled in their squabble. Let us heed the voice of "Old Bob," whose marble image is in the rotunda of the Nation's Capitol, and who, even now, seems to say to the Members of Congress as we pass by him daily, "Keep your eyes and ears open, listen to the people you claim to represent, and not the munitions makers nor the bloodthirsty war lord across the sea; allow only the people to

declare war, and the United States will be safe for democracy, so that the coming generations may have a chance to wipe out the havoc of the World War, and once again make America the land of the free and the home of the brave."

The People and the Government

EXTENSION OF REMARKS

OF

HON. HATTON W. SUMNERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 18, 1937

ADDRESS BY HON. HATTON W. SUMNERS, OF TEXAS, BEFORE THE AMERICAN BAR ASSOCIATION, ON SEPTEMBER 29, 1937

Mr. SUMNERS of Texas. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I desire to have printed in the RECORD an address delivered by myself before the American Bar Association on September 29, as that address was printed in the journal of that association from the stenographer's transcript, as follows:

I appreciate very much the privilege of talking with you this evening. This evening a representative of the press asked me for my manuscript. I told him I didn't have a manuscript. He said, "Are you going to speak extemporaneously, then?"

I said, "Worse than that."

I believe the time is coming, in America, anyway, when we ought to recognize that operating a great system of government is a practical thing. The time has come when the people of America must gather around council tables and give plain, practical, common-sense consideration to the problems of their Government. We have passed the time when oratory meets the requirement of the situation. I know it is expected I shall say something about the Court, and I am going to get through with it.

I am going to disappoint you, too, I am afraid. I tried to avoid this controversy about the Court. Then, when I saw that that issue was driving lines of cleavage among our people, driving lines of cleavage among the officers of the Government and between the Departments of the Government, I sought to stop the agitation.

It is my judgment, however, looking back, that that controversy, expensive as it has been to us, has been worth far more than it has cost us. As a nation we were dying of inaction, for in the war we went to the other extreme, from the peak, highest peak, perhaps, of unselfish world patriotism that any people ever reached. We swung to the other extreme; we became a nation of children in the presence of great responsibility; and we entered upon the grand age of jazz. Everybody tried to act young, and everybody acted foolish.

It has only been in the last 3 or 4 years that anybody in this country, almost, could be interested by plain, practical consideration of a serious matter. I believe this agitation has done more to make our people think, to make our people return to the responsibilities of free government than anything that has happened in two decades. But as I look to the immediate future, as I consider the job ahead of us, I am concerned that neither that issue nor any other issue shall be permitted to divide our people at a time when the problems of this people require a solidarity among our people and a cooperation among our departments of government which we have never required before.

I hope in these statements I am making I will not appear to be trying to lecture anybody. I think everybody now who has any appreciation of our situation is humble in the presence of our difficulties.

As we look to the future, we appreciate that we are rapidly approaching the peak of the crisis, when it shall be actually determined whether or not our economic structure will stand and whether or not our Government will stand a strain. I mean literally a strain, not something to be dreamed about, not something to be talked about as though it were on another planet, not something to be discussed academically but a proposition right square before the people tonight, where I stand here and you sit there. It is something on which nobody can venture an expression of judgment.

That is a pretty serious consideration to confront a people. We have got to balance the Budget. We have got to decentralize governmental responsibility. What is more, the people of this Nation must begin to give to this Nation the only safeguard which a free government can have, and that is an intelligent, advised public opinion.

There is only one thing I am concerned about. If I knew we had it, I would know we can win. If we have a people with the governmental capacity to preserve our institutions, I know we can win, for I know it is not written in the book of destiny that only a President and a handful of Members of Congress are going to get all the benefit that comes from the struggle with these difficulties. I know that, regardless of how great the President may be, how great the members of an office may be in other positions, only the greatest people that ever walked the earth can save my Nation.

That is what I want you to go and tell your people, that this government is not in Washington and its fate is not within the keeping of the President. The fate of this Nation is within the keeping of the American people. This Government is back among you people. You can tear down your Constitution. You can tear down your capital, and if you have a people with government capacity, as you have, they can write another Constitution and they can build another capital; but if the foundation, the governmental capacity of the people, ever fails in America, then the situation is hopeless. We are looking too much to Washington. People ask me about Washington. I come back home to see whether or not I have a people that can win the fight. We have no king. We have no hereditary nobility. There are no governors in America except the people, and, if we fail, it is the people's fault.

The time has come, my friends, and I hope when I speak with certainty that I will not appear to be speaking with presumption—you boys look at me. (President Hutchins, of the University of Chicago, had just entered and taken his seat on the platform.) I am not as good looking as that fellow, and I am not going to try to speak even in proper sequence tonight. I am not going to attempt fully to develop any thought, because I appreciate the fact that I am speaking to an audience of trained thinkers, and I have not much time. I am going to cover a heap of space, and I want all the help I can get from you.

The greatest statement, the wisest statement that came to us from the literature of the Revolution, came from the convention of Virginia. It was to the effect that there can be no liberty without frequent recurrence to fundamental principles. When I first went to Washington I heard people talk about fundamental principles. I haven't heard it for many years. We don't hear it among our people.

Doctors recognize the necessity to recur to fundamental principles. They go to school to learn the laws of God Almighty that govern the human body before they ever attempt to practice medicine.

We have schools of science that have no other business than to teach fundamental principles. No human being would attempt in any field now to go forward without knowing something of the fundamental laws that govern in the field of his activity—with only one exception, and that is the great field of economic and political government; and that is the great field of human failure now.

Governments are not accidents. Governments are provided for in the big economy. Governments are themselves governed by natural laws which human beings must respect. Yet we do not recognize in the practical operation of government that there are any natural laws which limit human discretion and fix sound governmental policies. The fact of it is, my friends—I don't want to give any offense—the lawyers of America have been going along with illogical tales with regard to the origin and nature of our Constitution instead of telling the people the truth as to where it came from.

There were great men who sat in the Constitutional Convention but it has been withheld from human genius to write the constitution of a living government. It never was done and never will be, in a creative sense. Our Constitution came from the same source that trees came from. I want to get over this point. The people no longer believe that there lived at one time a group of supermen, who met in a convention and out of their own creative genius fashioned the constitution of a living government. They don't believe it. They are swinging away from reverence for our Constitution. The fact of it is our Constitution is worthy of all reverence among a people who love liberty, because it came from God Almighty.

Governments are not accidents. They are provided for in the great economy, are themselves governed by natural law. The history of our Constitution can be traced for 2,000 years. May I be pardoned for giving you the first picture of our own Constitution? Tacitus gives it to us. He looked in upon the Germanic tribes as they gathered from the forests of Germany, and he tells us that if there was a matter of governmental importance to be considered, the leaders submitted it to the people, and, if the people approved, they brandished their weapons, and if they disapproved, they murmured, and that settled it.

So you have the place of leader, and you have the place of people, but you have the voice of government spoken by the people. Then he tells this fascinatingly interesting thing that finishes the picture. He says that their leaders were influential, they had the power to persuade, as distinguished from their power to command.

When those people five centuries afterward came to England, they planted in English soil those institutions. During the whole period of their history down to our time, even during the period of the Norman conquest, those governmental institutions continued, and that system of government continued, and whenever we abandon that system, we abandon the Anglo-Saxon system of government.

We have never had a Mussolini or a Hitler or a Napoleon in Anglo-Saxon history. Why? Because we followed principles instead of leaders. That is the reason. Whenever we abandon principles, we abandon the Anglo-Saxon system of government. Governmental capacity, like every other capacity, is preserved by its exercise. Children learn to walk by walking. People learn to do everything by doing it, and people learn to govern by governing.

The reason we are in the fix we are in now is because, two decades before this, the people turned their backs upon the responsibilities of government. They couldn't be bothered. We blame politicians, and we blame this man and that man and the other man, and this group, that group, and the other group. But fundamentally—I say it with all kindness—this is the people's Government, and when the people quit governing somebody else governs. When the people quit thinking, somebody else thinks for them and charges them so much per think.

It is not an accident that we have these three coordinate branches of government. Let me get this across: They are the vital organs through which our sort of government functions. You can't have animal life without lungs. Human beings must have lungs, and Anglo-Saxon systems of government have to have these three coordinate branches. I hope I get by with that. Nobody ever said, "Let's have a legislature." There isn't a single fundamental provision in the American constitutional system that does not go back so far and spread out so broadly that it doesn't add to the legitimate fame of a single human being as its originator. It came from God. It came from the same place the tree came from.

I am going to hurry along, but I want to give you a few points there. Some of these younger lawyers, especially, may not have made the examination. In the thirteenth century, when the commission was sent to the shires to send up representatives of the people in order that it might be ascertained as to whether or not they would pay more taxes, and when the representatives of the people arrived at the seat of the central government in England, they had been trained in local government. They were able to take care of the people because they had been trained. The most magnificent picture in human history is the struggle of the representatives of the people, those who came up from the shires and the cities and the boroughs, to protect the people's rights.

Nobody ever said, "Let's have two houses." * * * You know I think that really is funny—how that thing happened. I wasn't there, but I know how it was. * * * The representative of the folks, the ordinary people, couldn't talk about their business with the lords, and they got to meeting, first one place and then another, and after a while somebody said, "You know, boys, I have found there is a vacant room upstairs and there is nobody in there." After a while somebody looked in there and there were two houses of parliament, and nobody ever said, "Let's have it."

Nobody ever said in advance, "Let's support the judiciary," but the King got the control of the judiciary and the people said that wasn't right, and they fussed about it, and when William and Mary came on the throne, it was decided they would hold for good behavior.

When we came over on this side and established our institutions, we claimed from the beginning all the benefits of Magna Carta. A contemporaneous historian says that a representative system of government broke out in Virginia 16 years after Jamestown. It was inherent, it was instinctive among those people. We didn't have a revolution in this country, in an ordinary sense. We had a territorial secession and resort to arms to preserve an existing constitution. All the pre-Declaration of Independence row was not that we didn't have a constitution. The row was that we had a constitution, and King George and the Parliament were violating it.

When we came to write our Constitution it was perfectly natural that we should write into it those great provisions of human liberty that came down through the ages, developing out of necessity, tried by experience among a people peculiarly gifted with a genius for self-government. We wrote into our documents those things around which the battles of the revolution had been waged. Of course we did.

So we do have a Constitution that has come through the ages, every single provision tested by experience, originating out of necessity. That is what we have got to preserve. How are we going to preserve it? Are we going to preserve it on Fourth of July occasions by merely worshipping at the shrine of our ancestors? The only way we can preserve it is by emulating their example.

What are we going to do about it? That is what I am going to talk to you about tonight. I wouldn't give a whoop for these resolutions and these big speeches. What are you going to do about it? Are you willing to join a battalion of death to save the Constitution and this system of government?

I believe we are going to win, probably; I am not sure. I believe so. I have been going home feeling out the people, talking to the people, and it is my judgment that within the last 3 years there has come a regeneration in the American people that has no equal in human history.

I have been taking samples of people, seeing their attitude. When I have told my people that we haven't got an easy job, when I have told them that we have jazzed off into the jungles and there is no boulevard that leads out, that we have to cut down the trees and go out over the stumps, they have answered that they weren't afraid to tackle the job. I believe we would have done the job sooner if those of us who hold positions that enable us to know the truth had come back and told the people the truth. I don't think we need to be afraid to tell our people the truth now. I don't think we need to be afraid to tell the truth for fear they will get scary, nervous, and jittery. If they can't face the facts, we can't win through, anyhow.

Do you tell me we have got an easy job? We have got the hardest job that any people ever had to tackle on this earth, so far as I know. Now let me give you another point. I am just hitting a few high places. You have a real speaker here, and he has his all written out.

One of the most interesting things about Anglo-Saxon systems of government that I have observed is this: First, it is perfectly evident that there is such a thing as an instinct of governmental preservation. I don't have the slightest doubt about it. Government is as much an entity as you are an entity. Government is an agency of yourself, and you are the agents of government. Let me get that across. You are an agent of government and have to do its work, and if you refuse to do its work, the work of government of necessity, having to be carried on, then government lays its hand on a dictator. That is a pretty involved statement. I want to clear it up a little. From my examination of history there has never been a case where a people who once possessed the power of self-government ever lost their freedom (except by conquest) save in those cases where they got so inefficient, as compared to their difficulties, that they were no longer able to tender within themselves an agency through which the government could be carried on. I am afraid that I used too many words then.

The only reason why Hitler is in Germany tonight is because the German people divided themselves into 13 parties, each little group fighting for something for itself and not standing on any fundamental principles. There was no national solidarity, and when the great test came they couldn't do the job, and government reached over and put its hand on Hitler.

People ask me if I think we will have a dictator in America. It depends entirely upon the people. If the American people cease to be able in themselves to carry on the government of this country, since government has to be carried on, a dictator is absolutely certain.

We have thus far avoided a dictator, with probably one exception, in Anglo-Saxon governmental history, because we have developed the instinct and the genius to sense the existence of a crisis which requires a quicker pick-up and a stronger power than Anglo-Saxon institutions ordinarily afford; and in such a situation we have had the genius to concentrate in the executive emergency power to deal with an emergency situation, but also the genius to retain the power to control its exercise and the power to recapture and redistribute it when the emergency is over.

To that fact is due the sort of government we have had during this administration, to a very large degree. When this administration went into power, the whole economic structure was about to fall and, instinctively, that thing happened. Now we are getting the reaction from that. We are getting a movement in the other direction, and that explains a good deal of what is happening now.

I want to get this over if I can: Just as Anglo-Saxon peoples move instinctively in the direction of concentration of power in the executive, when there is a crisis that requires it, and requires a quicker pick-up and stronger power, after awhile they instinctively begin to move in the other direction. If they didn't, they would lose the power of self-government, because the power to govern is retained only by its use. If you tie your arm by your side, the power goes out of it. The fish in Mammoth Cave have no eyes. We ought not to retain any longer than necessary these extraordinary concentrations of governmental power, and I say that in all respect to the President, and in all respect to everybody.

You know, I appreciated very much those kind words of introduction. He said nearly everything I told him to say. I did want him to mention that I had been nominated for President. A Republican ex-justice of the peace over in Virginia did that. We know that justices of the peace are the smartest people in the world, but I didn't know it also applied to Republicans.

I don't want to talk to you folks too long and put you to sleep before my friend speaks, but probably you folks have been staying in these downtown hotels and have learned how to stay awake anyhow. * * * I will yield to questions for 10 minutes. I will yield to any questions anybody wants to ask me. [No replies.] Well, I think your judgment of my ability to answer is just about right.

There is one thing I tremendously appreciate. Seriously, I appreciate this privilege of just talking to you tonight. Tonight, men and women, we are at the highest peak in history. This is a fascinating time. Of course, governments are always subject to the laws of cause and effect, but this seems to be one of those rare times in the history of time when the nations are called to judgment. The nations of the earth tonight apparently are standing at the judgment seat. The balance sheet is being struck. The peoples of the earth and civilizations are being compelled to answer under the philosophy, apparently, of the parable of the talents. It is a terrible thing to be in a place of responsibility at a time like that. When we look about us over the earth, we see that free government is disappearing from the earth. When we make an examination of our own country we see these same causes that have worked the destruction of liberty in the other nations at work here.

I feel hopeful that we are going to win through. And there is one thing that is happening that I want to call to your attention. I came up here primarily to attend this conference on interstate crime. I had something to do with originating that legislation. You know the States are losing their power to govern in no small degree because they are not properly exercising the powers they possess. There are two sides to this concentration of power in the Federal Government. Heretofore when the State has confronted a

proposition that is beyond its capacity to handle, dealing with it alone, it has cried out for Uncle Sam to come, and many times it has cried out before there was any need of that sort.

This movement is an attempt on the part of the States, by cooperative effort, to do that which heretofore has been and is beyond the governmental capacity of the single State. If they can demonstrate the ability to do that, probably our States can do that in many other respects. * * * These State governments operate, in the main, through local units of government, small units of government. In those units of government the voice of the individual may be heard and the influence of the individual may be felt, but when you transfer a power to the Federal Government you put it beyond the reach of the average man. The voice of the individual is drowned in the voice of the multitude.

Take the executive branch of the Government through which this organization functions—there are around 1,000,000 people operating the executive machinery of the Government. As a matter of practical common sense, we know that there is only one of all those people, who is elected and that is the President. Let us look at it just a minute. We know that the President cannot, in good conscience, be held responsible for what is done by those under him, because he doesn't know who they are, he doesn't know where they are, and he doesn't know what they are doing.

This has come about while we have been preserving the exterior of the representatives system and have been talking about having a system of government by officers selected by the people. While we haven't been changing so much the written document, we have been changing the Constitution of the system of government with a rapidity unequaled in all time, with representative form of government susceptible of popular control drifting toward a great Federal bureaucracy which we know the people can't control.

I appreciate very much this opportunity to talk to you, but I guess I had better quit.

The Domestic Business Situation

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 17, 1937

RADIO ADDRESS BY HON. JOSEPH W. MARTIN, JR., OF MASSACHUSETTS, ON NOVEMBER 14, 1937

Mr. MARTIN of Massachusetts. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address, which I delivered recently over the radio:

As we review the swiftly moving tide of national affairs since the President called the special session of Congress a month ago, we are all impressed by the great change which has come over our domestic business situation in that brief interval.

The recession now felt in every important line of industry, commerce, and agriculture arises largely from confusion of thought and uncertainty of outlook regarding Washington policies. This is the overshadowing problem before the new session. If President Roosevelt, in his message to Congress Monday, does not submit an integrated program of sound and constructive policies to restore business confidence, then it will become the immediate duty of Congress to prepare its own program to those ends.

Our first obligation to the American workers and farmers is to restore that full measure of solid prosperity which has been sacrificed by some of the New Deal experimentation. The trend toward increasing unemployment must be checked at once. That is our first duty to the American people.

Real economy in public affairs should be the watchword of the session. If we are ever to achieve a balanced Budget, so often promised, there must be an end to vast and costly new experiments. On this point Congress has it in its power to restore a robust national confidence at once. But Congress cannot do this if it is to be forever under the lash of the White House for new appropriations.

With workers being dismissed from their jobs in many lines of business it will be necessary to carry a large relief roll throughout the winter. But this spending should be administered honestly and with rigid efficiency, so that the money provided by Congress actually will go to the needy. During the last 4 years, a large proportion of these funds have been diverted shamefully to political jobs, and to building up a gigantic political machine for campaign purposes. For the country as a whole, only about half the relief dollar actually has reached the needy unemployed. The rest has gone for overhead, for supervision, press and radio propaganda, and motion pictures. This cruel chiseling upon the relief funds for selfish political purposes of New Deal spoilsmen must be stopped.

Entering another winter of declining farm prices and huge surpluses in several principal farm commodities, Congress rightfully will give careful thought to the problems of agriculture. Many plans already are under consideration before the House Committee on Agriculture. Some are sound and some are utterly fantastic. Some would bring a measure of temporary relief and others would serve only to pile up new mischief and new distress for the farm home.

Meantime the one great need of the American farmer hardly has been given thought by the President and the majority in Congress. The real need is to restore the rich American market to the American farmer.

This we may accomplish simply by shutting off the swelling tide of cheap farm products from abroad under the mistaken and misguided policies of the Hull trade treaties.

Official figures recently published by the Department of Commerce show that the United States during the first 6 months of 1937 imported from abroad more than 11,000,000 pounds of live hogs, more than 38,000,000 pounds of pork products, more than 42,000,000 pounds of canned meats, more than 52,000,000 bushels of corn, more than 14,000,000 bushels of wheat, and more than 130,000 tons of hay.

We also imported during these 6 months, from various foreign countries, more than 300,000 head of cattle, more than 9,000,000 pounds of butter, and more than 30,000,000 pounds of cheese.

These figures give us one important reason for sharply declining prices for farm products. A vast and growing section of our domestic market is being supplied by low-cost products from foreign lands. This policy places every American farmer in direct competition with the low living standards of southern Europe, South America, and the Orient. So long as this condition prevails the demand for farm relief will continue to be urgent and pressing.

On the other hand, protection of the American market for the American farmer would go far toward restoring a degree of stability for all of the principal food crops. But no amount of farm relief in other directions can possibly be effective on a permanent basis so long as the floodgates are open in every direction to the cheap imports of foreign agriculture. The time has come to face this problem resolutely. Free trade is the ruination of American agriculture.

This same disastrous policy is tending to reduce pay rolls in many of our domestic industries. During the last 3 years cotton and wool textile imports from Japan have deprived thousands of American workers of steady employment throughout New England. In my own State of Massachusetts the shoe and leather factories are working but 2 or 3 days a week—because the shoes once made there for the American market are being purchased today in increasing quantities from Europe and the Orient. In a lesser degree the same applies to hats, gloves, carpets, toys, silverware, jewelry, furniture, and many other important manufactures.

How do these imports touch American labor? The answer is found in an Associated Press dispatch of last Thursday, November 11, from the great textile center of Lowell, Mass. It reads:

"The Talbot Mills, manufacturers of woolen goods, yesterday posted notice it would permanently close with the next pay day, because of poor business and uncertain future conditions. This company, one of the oldest woolen manufacturers in this section, normally employs between 500 and 600 persons."

There you have the story of what happens when we fail to protect our workers. Business is being driven to the wall by government. As plants close down, permanent unemployment is being spread throughout the land.

A report published only this week by the United States Department of Labor shows that the average daily wage in Japanese industry is approximately 57 cents, for a day of 10½ hours labor.

Is it the intention and purpose of the Roosevelt administration to sentence American working men and women to competition with such living standards? I hope not, as every thinking American wants to improve the working conditions of the toilers of this country, an effort which prevailing competition under the Roosevelt-Hull treaties retards in many different lines of business.

The future is clear: These cheap industrial imports produced by rice-and-water labor in the Orient must be excluded from the American market, or our own textile, shoe, and other industries must continue to lay off more and more American workmen.

Yet today our State Department is negotiating a new trade treaty with Czechoslovakia, the principal foreign manufacturer of shoes for the American market. These negotiations constitute another threat to American recovery. They promise, when concluded, to drive more Americans from their jobs in favor of cheap imports. They threaten to close down more shoe factories throughout the United States, to add further to the present increasing roll of unemployment.

This is far from an academic issue. Free-trade touches the pocketbook and pay envelope of every worker. More, it touches the family security and the social welfare of every household. It is not enough to say that we are adhering to some vacuous "good neighbor" policy. American wage earners and American farmers must have real protection for the American standard of living. We must, in some measure, restore the protections which have built up and maintained our boasted American standard of living.

Another fundamental issue presented for the consideration of the special session relates to the President's proposal for a hasty reorganization of the Government departments and bureaus. This proposal reaches to the very roots of our system of orderly representative government. It should be examined with the utmost care and deliberation. It contemplates a centralization of powers

in the hands of the President far exceeding anything ever suggested before in all American history. It carries the germ of one-man government, such as certainly would prove both inadequate and unworkable in a country so vast and so complex in economic and social organization.

Congress, in my judgment, will proceed in this matter with great caution. Here is presented an American and not a partisan issue. Government reorganization should be considered on that basis.

Dread and mistrust of a strong central autocracy are deep in the American heart.

Grave and costly blunders in Washington during the last 4 years should serve as adequate warning against a further concentration of dictatorial powers in the White House.

We must not centralize further vast powers in a fast-growing bureaucracy which is forever reaching out for more authority over every phase of our national life.

The time has come for Congress to tell America in words which cannot be mistaken—

"The days of rubber-stamp legislation are gone forever."

Address of the President at Bonneville Dam

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 18, 1937

ADDRESS OF PRESIDENT FRANKLIN D. ROOSEVELT AT BONNEVILLE DAM, OREG., SEPTEMBER 28, 1937

Mr. SMITH of Washington. Mr. Speaker, under leave to extend my remarks, I insert the address delivered by President Franklin D. Roosevelt on September 28, 1937, at Bonneville Dam. It was my happy privilege to be present on this memorable occasion and hear President Roosevelt deliver this speech, which will live in history, relating to the great Bonneville Dam navigation and hydroelectric project. It is located at Bonneville, Oreg., and North Bonneville, Wash., the latter being within my congressional district.

The address of the President is as follows:

Today I have a feeling of real satisfaction in witnessing the completion of another great national project, and of pleasure in the fact that in its inception, 4 years ago, I had some part. My interest in the whole of the valley of the great Columbia River goes back to 1920 when I first studied its mighty possibilities. Again, in 1932, I visited Oregon and Washington and Idaho, and took occasion in Portland to express views which have since, through the action of the Congress, become a recorded part of American national policy.

Almost exactly 3 years ago, I inspected the early construction stages of this dam at Bonneville.

The more we study the water resources of the Nation, the more we accept the fact that their use is a matter of national concern, and that in our plans for their use our line of thinking must include great regions as well as narrower localities.

If, for example, we had known as much and acted as effectively 20 and 30 and 40 years ago as we do today in the development of the use of land in that great semiarid strip in the center of the country which runs from the Canadian border to Texas, we could have prevented in great part the abandonment of thousands and thousands of farms in portions of 10 States and thus prevented the migration of thousands of destitute families from those areas into the States of Washington and Oregon and California. We would have done this by avoiding the plowing up of vast areas which should have been kept in grazing range and by stricter regulations to prevent overgrazing. At the same time we would have checked soil erosion, stopped the denudation to our forests, and controlled disastrous fires.

Some of my friends who talk glibly of the right of any individual to do anything he wants with any of his property take the point of view that it is not the concern of Federal or State or local government to interfere with what they miscall "the liberty of the individual." With them I do not agree and never have agreed because, unlike them, I am thinking of the future of the United States. My conception of liberty does not permit an individual citizen or group of citizens to commit acts of depredation against nature in such a way as to harm their neighbors, and especially to harm the future generations of Americans.

If many years ago we had had the necessary knowledge and especially the necessary willingness on the part of the Federal Government to act on it, we would have saved a sum which, in the last few years, has cost the taxpayers of the Nation at least $2,000,000,000.

Coming back to the watershed of the Columbia River, which covers the greater part of the States of Oregon, Washington, Idaho, and a part of Montana, it is increasingly important that we think of that region as a unit—and especially in terms of the whole population of that area as it is today and as we expect it will be fifty and even a hundred years from now.

I appreciate and I understand fully the desire of some who live close to some of the great sources of power in this watershed to seek the advantages which come from geographical proximity.

More than 8 years ago, when I became Governor of the State of New York, we developed plans for the harnessing of the St. Lawrence River and the production of a vast amount of cheap power. The good people who lived within a few miles of the proposed dam were enthused by the prospect of building up a huge manufacturing center close to the source of the power—another Pittsburgh—a vast city of whirling machinery. It was a natural dream, but wiser counsels prevailed and the government of the State laid down a policy based on the distribution of the proposed power to as wide an area as the science of transmission would permit.

We felt that the Governor and the legislature of the State owed it to the people in the smaller communities for hundreds of miles around to give them the benefit of cheap electricity in their homes and their farms and their shops. And while the St. Lawrence project is still on paper, I have no doubt of its ultimate development, and of the application of the policy of the widest possible use when the electric current starts to flow.

That is why in developing electricity from this Bonneville Dam, from the Grand Coulee Dam, and from other dams to be built on the Columbia and its tributaries, the policy of the widest use ought to prevail. The transmission of electricity is making such scientific strides today that we can well visualize a date, not far distant, when every community in this great area will be wholly electrified.

It is because I am thinking of the Nation and the region 50 years from now that I venture the further prophecy that as time passes we will do everything in our power to encourage the building up of the smaller communities of the United States. Today many people are beginning to realize that there is inherent weakness in cities which become too large and inherent strength in a wider geographical distribution of population.

An overlarge city inevitably meets problems caused by oversize. Real-estate values and rents become too high; the time consumed in going from one's home to one's work and back again becomes excessive; congestion of streets and other transportation problems arise; truck gardens disappear because the backyard is too small; the cost of living of the average family rises far too high.

There is doubtless a reasonable balance in all of this, and it is a balance which ought to be given more and more study. No one would suggest, for example, that the great cities of Portland, and Tacoma, and Seattle, and Spokane should stop their growth, but it is a fact that they could grow unhealthily at the expense of all the smaller communities of which they form logical centers. Their healthiest growth actually depends on a simultaneous healthy growth of every smaller community within a radius of hundreds of miles.

Your situation in the Northwest is in this respect no different from the situation in the other great regions of the Nation. That is why it has been proposed in the Congress that regional planning boards be set up for the purpose of coordinating the planning for the future in seven or eight natural geographical regions.

You will have read here as elsewhere many misleading and utterly untrue statements in some papers and by some politicians that this proposed legislation would set up all-powerful authorities which would destroy State lines, take away local government, and make what people call a totalitarian or authoritarian or some other kind of a dangerous national centralized control. Most people realize that the exact opposite is the truth—that regional commissions will be far more closely in touch with the needs of all the localities and all the people in their respective regions than a system of plans which originates in the Capital of the Nation. By decentralizing as I have proposed, the Chief Executive, the various Government departments, and the Congress itself will be able to get from each region a carefully worked out plan each year—a plan based on future needs, a plan which will seek primarily to help all the people of the region without unduly favoring any one locality or discriminating against any other.

In other words, the responsibility of the Federal Government for the welfare of its citizens will not come from the top in the form of unplanned, hit-or-miss appropriations of money but will progress to the National Capital from the ground up—from the communities and counties and States which lie within each of the logical geographical areas.

Another great advantage will be served by this process of planning from the bottom up. Under our laws the President submits to the Congress an Annual Budget—a Budget which, by the way, we expect to have definitely balanced by the next fiscal year. In this Budget we know how much can properly be expended for the development of our natural resources, the protection of our soil, the construction of our highways and buildings, the maintenance of our harbors and channels, and all the other elements which fall under the general heading of public works. By regional planning it will be vastly easier for the Executive branch and the Congress to determine how the appropriations for the following year shall be fitted most fairly and equitably into the total amount which our national pocketbook allows us safely to spend.

To you who live thousands of miles away in other parts of the United States I want to give two or three simple facts: This Bonne-

ville Dam, on the Columbia River, 42 miles east of Portland, with Oregon on the south side of the river and Washington on the north, is one of the major power and navigation projects undertaken since 1933. It is 170 feet high and 1,250 feet long. It has been built by the Corps of Engineers of the War Department, and when fully completed, with part of its power installations, will cost $51,000,000. Its locks will enable shipping to use this great waterway much further inland than at present, and give an outlet to the enormously valuable agricultural and mineral products of Oregon and Washington and Idaho. Its generators ultimately will produce 580,000 horsepower of electricity.

Truly in the construction of this dam we have had our eyes on the future of the Nation. Its cost will be returned to the people of the United States many times over in the improvement of navigation and transportation, the cheapening of electric power, and the distribution of this power to hundreds of small communities within a great radius.

As I look upon Bonneville Dam today, I cannot help the thought that instead of spending, as some nations do, half their national income in piling up armaments and more armaments for purposes of war, we in America are wiser in using our wealth on projects like this which will give us more wealth, better living, and greater happiness for our children.

America's Peace Policy

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 18, 1937

RADIO ADDRESS BY HON. HAMILTON FISH, OF NEW YORK, ON OCTOBER 22, 1937

Mr. FISH. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include an address I made over the National Broadcasting Co. network on Friday, October 22, 1937, as follows:

We are in the midst of a government of confusion and propaganda in both domestic and foreign affairs, and it is naturally difficult to discuss definite policies when none exist. Neither the President nor his advisers have any idea where we are drifting, particularly in regard to international issues. The President's speeches, fireside chats, and public statements vary from day to day, each contradicting the other and running the gamut from threats of coercion and war to dulcet pleas for mediation and peace. His Chicago speech breathed belligerency and for a quarantine of Japan, Germany, and Italy, and if carried out would have led immediately to war. It was a highly provocative, dangerous, and saber-rattling speech, filled with the usual Rooseveltian platitudes and generalities about the beauties of peace as an anchor to windward.

Behind all the saber rattling or pious pronouncements for peace and good will on earth, which follow each other as night follows day, is one underlying motif camouflaged by Presidential verbiage and honeyed words—the old skeleton of the League of Nations. The American people closed the closet door on it 17 years ago, but Franklin D. Roosevelt, Cordell Hull, and Norman Davis, our wandering ambassador at large, are still internationalists and their early love for the League of Nations is still warm in their hearts.

The President, through the greatest propaganda machine ever known in this country and almost the equal of that in such dictatorial governments as Germany, Italy, and Soviet Russia, has endeavored to give the impression that he has a monopoly on peace and good will in the world. Disastrous international failures and defeats have been turned into famous New Deal victories by skillful and extensive administration propaganda agencies, operated out of the pocketbooks of the American people who have been repeatedly "sold down the river" without their knowledge.

As Al Smith says, lets look at the record and see what it discloses:

1. The failure of the London Economic Conference, practically called by the President, but which he repudiated and thereby gained the ill will of half the world.

2. Failure to renew the Naval Limitation of Armament Treaty of 1921, which expired in 1936, and thereby launching us on a vast naval building program of battleships at $50,000,000 apiece with Great Britain and Japan. The result of this New Deal failure is that it will cost the taxpayers $250,000,000 more annually and promotes naval rivalry and competition that leads to suspicion and enmity and eventuates in war.

3. Failure of President Roosevelt to collect any of the war debts, except from honest little Finland. Under Republican administrations we collected $200,000,000 annually.

4. Recognition of Soviet Russia, by holding out a juicy bait of a billion dollars worth of trade, against the expressed opposition of the American Federation of Labor, the American Legion, the Catholic Church, and many patriotic and civic organizations. The net result of such recognition, in addition to intensifying Communist activities, has been $20,000,000 worth of trade, whereas under Republican administrations before recognition we did over a hundred million. Instead of buying $200,000,000 worth of our cotton as promised, they bought $3,500,000 worth, and borrowed that from the Reconstruction Finance Corporation to put through the deal.

However, all these glaring failures have been turned into famous New Deal victories by the sheer power of propaganda. After the last election President Roosevelt did send some eight deserving Democrats as a peace mission to South America, which by the way was the first time in our diplomatic history that the minority party had no representation on a peace mission, thereby injecting partisanship into international issues and establishing a most unwise and unfortunate precedent.

Later the President joined his Democratic colleagues at Buenos Aires and made a typical platitudinous speech. This is the sum total of his famous peace victories. We agreed to sit around the table in case of any future wars in South American countries, which do not originate world wars or have any navies.

I have given you a brief or thumb-nail record of the New Deal international failures, which, dismal as they are, still have been so cleverly turned into famous victories by power of propaganda that the American people are bewildered.

I do not ask the radio audience to rely solely on my word, but to check any statement of mine by any yardstick they wish. As for myself, I served overseas with combat troops and loathe and abhor war, and will do everything in my power to promote peace, take the profits out of war, and keep the United States out of foreign conflicts. For 16 years I have served on the Committee on Foreign Affairs in the House of Representatives, longer than any other member, and am the ranking Republican member of that committee and to that extent the spokesman of my party in the House and in the Nation.

I now propose to discuss the invasion of China by Japan. Practically all Americans sympathize with the Chinese and deplore the bombing of noncombatants, and particularly Chinese women and children by Japanese airplanes. However, there have been wars of conquest raging in China for the past 3,000 years. First the Mongols, then the Manchus, and more recently numerous predatory and plundering war lords, and now the Japanese, to say nothing of Soviet Russia's invasion of Outer Mongolia, of the British seizure of Hong Kong, and the French conquest of Annam.

It is an Asiatic problem, involving largely China, Japan, Soviet Russia, and British trade and prestige. Every American father and mother must face the facts, and answer honestly whether they are prepared to have their sons fight to preserve peace in China. As for me, I am not willing to vote $1 to send an American soldier to foreign lands to fight other peoples' battles. If the old nations of the world go stark mad, arm to the teeth, and go to war, it is their war and not ours. I propose to use every influence and parliamentary device I know to prevent Congress from giving the President the power which he has so often asked, to determine the aggressor nation. If he had had that power we would be at war with Japan today.

This is not a partisan matter on my part, as I opposed giving the same power to Secretary Stimson 6 years ago, who likewise is an ardent adherent of the League of Nations. If we are to have a war in the future it must be in defense of the United States and not in defense of China, Spain, Abyssinia, or to pull the chestnuts out of the fire for Great Britain or any other foreign nation.

The Nine Power Conference, called by Belgium with our approval, is a perfectly proper peace step, but I am fearful that with Norman Davis our chief spokesman we may become involved in intervention and war sanctions and left holding the bag for the League of Nations. The United States has never lost a war or won a European conference. Like other international conferences under this administration, our delegates are strictly partisan with no representation for the minority party, an unfortunate departure from the traditional American policy of 150 years.

1. I accuse President Roosevelt of trying to obtain power to determine the aggressor nation, which would constitute a hostile act and would, in effect, deprive Congress of its constitutional power to declare war.

2. I accuse him of conducting our foreign policies on a strictly partisan basis.

3. I accuse him of being largely responsible for our existing naval armament race with Japan and Great Britain.

4. I accuse him of promoting a war hysteria in the Nation by use of inflammable and provocative language, threats of coercion, and predictions that we were on the brink of war and could not keep out.

5. I accuse him of having nullified and repudiated the Neutrality Act, which is the law of our country, in defiance of the intent of Congress and the will of the American people to preserve neutrality and keep us out of war.

6. I accuse him of trying to lead us into the League of Nations by the back door.

The three American musketeers of the League of Nations, President Roosevelt, Secretary of State Hull, and Ambassador at Large Norman Davis, still inoculated with the virus of internationalism, are determined to join up with the League, directly or indirectly, and if necessary even force us into war to preserve peace in other nations. There can be no other interpretation of the President's Chicago speech urging "concerted action" instead of "mere isolation and neutrality." It is the old League of Nations program over again, of policing the world.

The answer of the American people will be outspoken and unmistakable if the issue is pressed to a decision. They will refuse to join up with the League of Nations on any sanctions or war commitments. They do not intend to become entangled in any ancient foreign-blood feuds or boundary disputes. They want us to keep out of all foreign entanglements, mind our own business, and try to solve our own problems for the best interests of all our people.

I do not question the peace-loving motives of the President, but rather his craving for power and obsession for collective action through the League of Nations to punish aggressor nations, which means war and the loss of American lives and treasure. As a member of the Committee on Foreign Affairs, I do not propose to vote to send American soldiers on punitive expeditions to foreign lands or to safeguard our trade in other countries. We do only fifty millions of trade with China and four times as much with Japan, but if the figures were reversed it would in no way influence my opposition to going to war for the sake of the almighty dollar.

If the President would only stop his fireside chats long enough and merely giving lip service to the maintenance of peace, he might discover the fact that Congress enacted a neutrality law by an overwhelming vote after very careful consideration. The purpose and intent of this law was to keep the United States out of foreign wars by prohibiting loans and credits and the shipment of arms, ammunition, and implements of war to belligerent nations. It was to go into effect as soon as a state of war existed, and if President Roosevelt does not know that there is a war being waged between Japan and China, he should get a new Secretary of State.

The President has deliberately nullified an act of Congress and repudiated the law of the land, while at the same time he calls upon other nations to live up to their international agreements. What is sauce for the goose might well be sauce for the gander.

The administration has misrepresented the effect of the Neutrality Act. Consequently there is considerable misunderstanding of what the effect would be on China if the Neutrality Act was invoked. The fact is it would be beneficial to the Chinese and harmful to Japan. At present Japan has free access to the American markets for arms, ammunition, and implements of war, whereas through its naval superiority it is now preventing the shipment of munitions of war to China.

If the President seriously contends that a war does not exist in China, which is utterly contrary to the fact, then he should urge the passage of my resolution at the coming session of Congress, prohibiting the shipment of arms, ammunition, and implements of war in time of peace as well as war. Why should we, for the sake of blood money and war profits, arm other nations to go to war?

In conclusion, let me refresh the memories of the American people of the advice of George Washington in his Farewell Address: "Why forego the advantages of so peculiar a situation: Why quit our own to stand upon foreign ground? Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, humor, or caprice?"

Wages and Hours

EXTENSION OF REMARKS

OF

HON. LAWRENCE J. CONNERY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 18, 1937

Mr. CONNERY. Mr. Speaker, since my entry into the House a number of our colleagues has asked my attitude and position on the wage and hour bill as reported to the House by the Labor Committee.

I want the House to know that I was elected on the promise to my constituents that I would, to the best of my ability, follow the progressive course in the Congress so well laid down by my brother, the late William P. Connery, Jr., for many years chairman of the House Labor Committee.

For the past 15 years I officiated as my brother's secretary, and I believe I am thoroughly conversant with his plans and his intentions on legislation.

Today I presented a bill dealing with the all-important question of Federal minimum wage and maximum workweek legislation, which incorporates, I have every reason to believe, the type of legislation which the late William P. Connery, Jr., would have fought to have the House Labor Committee report and later would have worked hard to have the House adopt. I sincerely trust that those interested in this legislation will give serious and favorable consideration to this bill.

While my late brother was keenly alert and anxious at all times to do everything possible beneficial to those he represented in the Seventh Massachusetts Congressional District, he well knew that his people could not retain their job opportunities if workers in other sections of the country, producing comparable or competitive products, were to be continually exploited by being forced to work long hours at low wages.

It is my belief that the American people, with few exceptions, are honorable and law abiding; therefore, I do not believe it necessary to create any new board or commission to supervise the legislation created by the Congress. However, I do believe that every worker and every employer should definitely know what the law is, and there is only one way in which they can have that knowledge and that is for the Congress to write the figures as to what are the minimum wage and maximum workweek standards in the law which I hope to see enacted at an early date.

I believe further that the Congress itself should not only declare what the minimum wage and maximum workweek standards should be but that such beneficial legislation should apply alike to the products of all workers sold in the competitive markets of our country.

Some of our colleagues have apparently been led to believe that a board or commission is necessary to enforce this legislation, forgetting, I believe, that we already have established in the Department of Labor and in the labor commissions of our States inspection services, which services should and, to my mind, will see that this beneficial legislation is properly enforced.

There is considerable demand on the part of some that wage differentials based on allegedly lower living standards should be continued. In fact, such wage differentials, I regret to note, are provided for in the wage and hour bill as reported by the Labor Committee.

All fair-minded and forward-looking Americans realize fully that low wages make necessary low or substandard living standards. A worker receiving a wage of 25 cents per hour surely cannot be expected to be able to maintain a living standard comparable to those who receive a wage of 40 cents per hour.

Incidentally I have not noted that the products of the lower or substandard exploited workers are offered for sale to the public at any lesser price than comparable or competitive articles the product of the organized and better-paid American workers.

Great stress has been laid by many on the fact that American workers, because they receive higher weekly wages than those workers producing comparable or competitive goods in foreign countries have a higher standard of living. This fact I appreciate and we should all be proud of it and retain such higher standards. Yet we know that even with this higher standard of living there are millions of American workers, due to the necessity of accepting employment at such wages as may be offered, who are necessarily the wards of Congress and are dependent upon the Congress enacting legislation which will permit of their receiving a decent minimum wage.

We have millions of American workers now unemployed. Surely, it is not to be expected that an American Congress would knowingly enact legislation which would deprive additional millions of American workers of the jobs they now have.

Therefore, any restrictive legislation to be beneficial to all American workers should and must provide that similar restrictions should apply on goods produced in foreign countries when such goods are sold in the American market in competition with or comparable to goods the products of American workers.

The need for wage and hour legislation is found mainly in those industries wherein the employers, anxious for extortionate profits through the continued exploitation of defenseless workers, have been successful in preventing their workers from organizing into national labor unions.

With this thought in mind my bill specifically exempts those employers who have entered into collective-bargaining agreements with national labor unions.

Seemingly considerable uncertainty prevails as to the attitude taken by the American Federation of Labor at its recent annual convention held in Denver, Colo., October 1937, on the question of wage and hour legislation. For the benefit of those who might not otherwise be able to secure them, copies of the action are shown on pages 500–502, inclusive, and page 633 of the official printed proceedings.

The bill which I have introduced contains, I believe, the essential features of the legislation which the American Federation of Labor has asked for. The following is the action of the American Federation of Labor on wage and hour legislation:

BLACK-CONNERY WAGE-HOUR BILL

Resolution No. 105—Introduced jointly by J. W. Williams, president; M. J. McDonough, secretary-treasurer, Building and Construction Trades Department; and John P. Frey, president; W. A. Calvin, secretary-treasurer, Metal Trades Department

Whereas the Black-Connery bill, the so-called wage-hour bill, was not prepared for introduction into Congress by the American Federation of Labor, nor was labor consulted as to its several provisions and its phraseology; and

Whereas the bill as introduced would have created a governmental agency influencing and, at its discretion, replacing collective bargaining as now carried on by voluntary association of wage earners and their employers; and

Whereas the most essential right of free men is that of voluntary association for lawful purposes, a right of which upon the exercise of free speech, free political institutions, and of religious organizations have their foundation; and

Whereas this priceless right and the freedom to bargain collectively with employers would be injuriously affected by any Federal board or commission or their representatives who had the power to in any measure replace the function of the members of the American Federation of Labor to bargain collectively with their employer; and

Whereas it would be definitely injurious to the right of voluntary organization if collective bargaining was in any way limited or abridged, and the principle of voluntarism in the activities of free men was interfered with:

Resolved, That this convention approve of all legislative measures intended to guarantee the right of labor to voluntary organization for its protection, and which, in addition, assists labor in its practice of collective bargaining with employers; and be it further

Resolved, That this convention is opposed to any form of legislation which would in any way limit, abridge, or supplant the practice of collective bargaining, or which would in any measure interfere with, supplant, or transfer the practice of collective bargaining from organized labor to boards, commissions, or other bodies established by Federal laws; and be it further

Resolved, That this convention declare its conviction that all legislation introduced into Congress, State legislatures, or municipalities relative to labor, in the preparation of which the American Federation of Labor or its representatives have not taken part, justly comes under suspicion and should be given most thorough examination before receiving approval.

So that some of the issues in the Black-Connery bill may be more clearly defined, your committee calls attention to the fact that this bill was not introduced by the American Federation of Labor, neither did officers of the American Federation of Labor participate in its preparation.

The bill was not drafted by a committee of the Senate or the House, neither did the Senator who introduced it in the Senate and the Congressman who introduced it in the House have a hand in its preparation.

The bill when first introduced gave to the commission it proposed to create authority to set up undefined jurisdiction. The bill quite evidently was intended to establish maximum hours of labor and minimum wage rates which would protect that part of labor unable to protect itself. The commission, among other things, would have had authority to set up differing minimum-wage rates along geographical lines, and within these boundaries to set differing regulations as between certain industries and groups of employers.

With the purpose of establishing a point below which wages could not be paid and hours of labor beyond which wage earners could not be employed, the American Federation of Labor is in accord. There exists, however, differences of opinion as to how this most desirable and necessary condition can be secured.

The experiences of our movement with the authority exercised by N. R. A. and the difficulty, if not impossibility, of having the unwise and conflicting decisions of subordinates reviewed and set aside, the experiences of our movement under the National Labor Relations Act give valid reason for most searching examination before we give our approval to the establishing of further boards or commissions having power to determine questions of minimum wage and maximum hours or any other phase of the relationship of employer and employed.

These experiences make us reluctant to approve the creation of any additional boards or commissions having to do with industrial relations.

It seems obvious that our trade-union movement should support all legislation necessary to guarantee and protect labor in its unlimited right to organize, in its unlimited right to choose its own representatives, and its unlimited right to carry on collective bargaining with employers.

The introduction of another principle for regulating hours and wages, after the right to organize and carry on collective bargaining has been established, raises a most serious problem. Your committee notes with approval the efforts of the president of the American Federation of Labor to secure amendments to the original bill which would safeguard the vital interests of our free trade-union movement, and which would not work against the practice of trade-union organization and collective bargaining by all wage earners of the country.

Your committee agrees with the statement in resolution No. 105, jointly introduced by the delegates representing the building and construction trades department and the metal trades department, that when far-reaching legislative measures affecting the trade-union movement are introduced without consultation with the officers and representatives of the American Federation of Labor as to the provisions and the phraseology of the measure, that labor should most searchingly examine the measure before giving approval and support for its enactment.

Your committee further agrees that when such legislative measures are introduced without our having participated in their preparation, that labor is justified in assuming a definitely questioning attitude until such time as it has become thoroughly convinced that there is nothing in the measure which would work disadvantageously to our free trade-union movement.

Your committee in addition to recommending approval for the information contained in that portion of the executive council's report under consideration, and resolution No. 105, recommends that the officers and the executive council be directed before taking further action in connection with the Black-Connery bill to call into consultation the officers of the building and construction trades department, the railway employees department, and the label trades department of the American Federation of Labor.

Secretary Frey moved the adoption of the committee's report.

The motion was seconded by Vice President Woll.

Delegate Ennis, California State Federation of Labor: As a point of information relative to the committee's report, if I understood correctly, it is the intention of the executive council to support amendments to the act to the end that those evils be remedied?

Secretary Frey: The committee's report indicates that the president of the American Federation of Labor has already introduced amendments for the purpose of remedying the dangers in the act.

The motion to adopt the committee's report was carried by unanimous vote.

TO AMEND CONNERY WAGE AND HOUR BILL TO PREVENT IMPORTATION OF PRODUCTS OF LOW-PAID FOREIGN LABOR

Resolution No. 66 (by Delegate James A. Taylor, Washington State Federation of Labor)

Whereas there was introduced in the last session of Congress a measure known as the Connery wage and hour bill which in certain of its provisions seeks to prevent entering through interstate commerce products of sweatshops and low-wage factories; and

Whereas there is imported into the country from low-wage foreign countries numerous products manufactured under conditions abhorrent to the American wage earner; and

Whereas this bill did not pass at the last session but will be reintroduced at the next session of Congress: Now, therefore, be it

Resolved, That the American Federation of Labor at is Fifty-Seventh Annual Convention assembled instruct its officers to have an amendment introduced applying to foreign imports such as those suggested for articles manufactured in this country.

Your committee recommends concurrence in this resolution and refers it to the executive council, with the request that it give full support to the legislation requested.

The recommendation of the committee was unanimously adopted.

Scrap Iron and Munitions

EXTENSION OF REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 18, 1937

RADIO ADDRESS BY HON. LYLE H. BOREN, OF OKLAHOMA

Mr. BOREN. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address which I delivered recently over the radio:

I am sincerely glad to be home in Ada, Oklahoma's fastest-growing city, and deeply appreciate the privilege of talking over

KADA and through the Oklahoma network to my friends throughout the State.

Europe still lives the ancient lie that arms mean peace. From the point of international democracy, irresponsible governments builded on ideals of force become the giant enemies of national idealism such as ours. In obedience to a growing perception that dominion and exploitation are incompatible with and detrimental to our system of government, we fought in good faith in 1914 to gain self-determination for an alien people.

Twenty years ago the average man fought a war which he believed would make the world safe for democracy. In reality the war was fought to maintain a commercially imperialistic status quo. We are retracing the same course and the same ultimate end is startlingly near at hand; 1937 has become another 1914. The rulers of Italy and Germany and Japan take no account of the moral forces in human affairs which in the long run are decisive. Power has made them blind and arrogant. But the arrogance of foreign dictators is petty when left to fret their blundering foolishness away on their own shores.

America's problem is the arrogant underestimation of the ability of a self-reliant people to control the industrial greed that, like a whirlpool, drags us into war.

Today is 1914 lived again. We are furnishing a world munitions, scrap iron, that will come back to us in unknown soldiers' graves, unless we call a halt. I am no alarmist, but the thunder of war rumbles unmistakably near our shores.

The special session of Congress will enact labor standards and farm market legislation, and it will face the determination of peace or war. I do not mean that a declaration of war is imminent, but I do mean that we are well along on the road of 1914, and we must halt and about face, or 1917 is just around the corner.

The last Congress passed a joint resolution prohibiting the exporting of arms, ammunition, and implements of war to belligerent countries and prohibiting the transportation of munitions by Americans on belligerent vessels. Some of us wanted to put teeth in that bill, but in its lines the laughing mockery of wasted gesture is always evident.

Ten thousand dollars or 5 years in prison if you sell munitions to a warring nation.

Ten thousand dollars fine to maim and murder one-half million people.

Ten thousand dollars fine to start a war.

And since that bill, 250,000,000 tons of scrap iron have been shipped to Japan alone—scrap iron that even the children know is meant to pierce the bodies of sons and hearts of mothers.

Someone pointed with pride the other day to the clean highways, that no longer are lined by old car bodies and scraps of iron and junk. "We have gotten rid of all our scrap heaps," he said, "and Japan is paying us to clean up our country."

No, my friends, we have not gotten permanently rid of it. It is coming back some day and there will be a little white cross for every scrap of iron we sell abroad.

During the last Congress, the headlines screamed that a Washington (D. C.) girl had been kicked by a Japanese officer, and the jingoes throughout the land rattled their sabers. Even a Member of Congress made a speech on the subject. I find no fault with giving a girl a kick who is prancing around a war zone longing for publicity and planning a Hollywood contract. I am glad she got kicked in the pants. She should have had two or three kicks more. Every American must know that if he wishes to enter a warring country the kicks in the pants are part of his traveling fee, and intelligent America will smile and approve each kick for a peeping Tom. American capital must learn that Uncle Sam can kick the pants of capital, too.

We must immediately embargo scrap iron and any other munitions material. I am in favor of a total American boycott of every nation at war. I am even convinced that the Panama Canal, and all our ports, should be locked against any ships that sail under a warring flag.

America's verdict is clear! There must be no foreign intervention. The Philadelphia Inquirer and other papers asked me by wire if I would favor active foreign intervention. My answer was: "I am absolutely opposed to active intervention in any foreign strife." We are not fools. We cannot be bought and sold like scraps of iron. Two hundred and fifty million tons this year. Not scraps of iron, but 250,000,000 tons of wrecked human bodies and scrapped human lives.

Let America speak and in stentorian tones cry, "Halt; about face! There'll be no war!"

We must embargo all munitions. We must stop scrap-iron profits. We must tell capital to look to foreign countries to protect its foreign investments. And let flappers expect a kick in the pants if they go where they have no business, and another from America when they get home.

If need be, we must boycott all belligerents. I am sure that England and others will join us. It can be, perhaps, that we can't isolate ourselves but we can ostracize and isolate any nations at war. Surely America is awake to the truth and surely America wants no war. It is ours to command and let that command be ringing clear. "Halt; about face!"

Our Agricultural Problem

EXTENSION OF REMARKS
OF
HON. NEWT V. MILLS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, November 18, 1937

Mr. MILLS. Mr. Speaker, the Lord recognized man would be clamoring an overproduction of raw products; therefore, he gave the remedy to solve the problem as found in the twenty-fifth chapter of Leviticus, third, fourth, and fifth verses:

Third: "Six years thou shalt sow thy field, and six years thou shalt prune thy vineyard, and gather in the fruit thereof."

Fourth: "But in the seventh year shall be a sabbath of rest unto the land, a sabbath for the Lord; thou shalt neither sow thy field, nor prune thy vineyard."

Fifth: "That which groweth of its own accord of thy harvest thou shalt not reap, neither gather the grapes of thy vine undressed, for it is a year of rest unto the land."

My colleagues, as you know, agriculture is our greatest and basic industry. The records show that our country has never been on a sound or prosperous basis unless agriculture was prosperous. Today our farmers are receiving a meager income. It is estimated that they receive around 10 cents per hour. How is it possible for us to have any semblance of sound recovery when the man who feeds and clothes us receives such a pittance of income and when our greatest and basic industry is in such an unsound condition?

No wonder our farmers are clamoring for equity. No wonder our laborers and farmers are on Government relief. Mr. Speaker, I have advocated and I am now undertaking to point out to this Congress our problem is not one of overproduction, but rather one of underconsumption and maldistribution. How can we justify ourselves before the American people by hiding behind a cloak of disguise, by stating we have an overproduction, when the President himself, as well as the country, knows that about 40 percent of our people are not properly fed, clothed, or sheltered?

This Congress must realize the procedure to a sound agriculture recovery program lies within the increasing of the purchasing power as well as the recovering of America's foreign lost markets.

The possible key objective to a sound agriculture recovery lies within the power of this Congress and I beseech this honorable body to adopt legislation that in the end will restore purchasing power as well as the recovery of our foreign lost markets.

Mr. Speaker, to make commodities and necessities of life scarce in order to make them high when our people are suffering from lack of purchasing power, cannot solve our economic trouble. This was tried under the A. A. A. and proved to be economically unsound, and for a similar reason if the N. R. A. had not been declared unconstitutional by 9 to 0 it would not have solved our labor and economic troubles nor can we borrow, spend, or tax our way into prosperity. It was such an unsound policy during administrations previous to this one that brought on depression, and I am now calling upon this Congress to avoid the same error.

Now, ladies and gentlemen, to solve America's economic ills we must come to realize taxes and America's present money system will continue to defeat agriculture and prosperity. Mr. Speaker, I am well informed the present tax burden is equivalent to 3 months' salary annually from every citizen, which amounts to more than $15,000,000,000, and at this point it might be mentioned that our annual interest on the Federal debt is almost $1,000,000,000. Why, this is more than the value of the entire cotton crop or wheat crop. This is equivalent to having the thousands of cotton, corn,

and wheat farmers working only to pay the interest. As we know, the rich man is supposed to be heavily taxed, yet only a small portion falls upon him as his wealth is invested in tax-exempt Government bonds; therefore, in the end this heavy tax burden falls on the laborer, businessman, and farmer which ultimately retards purchasing power.

Mr. Speaker, we all well know, the value of the dollar controls the general price level. When the dollar rises in value, naturally prices fall, and when the value of the dollar falls prices must rise. So it is essential to the prosperity of agriculture that we have a Federal Monetary Authority that will maintain a currency system that will give our farmers equitable prices. Furthermore, a sound currency system insures a more equitable distribution that will insure a greater consumption of manufactured goods that in the end labor and the businessman is helped. The bill, S. 3013, of Senator THOMAS of Oklahoma, proposes to create a Federal Monetary Authority out of the members of the Federal Reserve Board, giving the Federal Monetary Authority the power to maintain an adequate sound currency best suited for national economic welfare.

Mr. Speaker, I consider this step, if enacted into law, will be the most constructive step for a sound economic agriculture adjustment since the foundation of the Republic, although, in the event of an overproduction, the Creator's method will keep overproduction of commodities and consumption balanced.

Mr. Speaker, this philosophy is not a new philosophy. It is opposed, I believe, because of its simplicity. I have advocated, and now advocate, in a land of too much to eat there should be none to starve. I have advocated that in a land of too much to wear there should be none naked. I propose that in the land of too many houses none should be without homes; I therefore have proposed that we should return to the basic and fundamental laws of our Creator and Constitution; that we should so amend our trend of legislation; that we should gain the support of our Government from the big fortunes on the top, and not oppress the small businessman, farmer, and laborer on the bottom in order to carry on, and not create a state of social unrest, but a protected and civilized Government.

The commodity and general price level can be quickly restored by a constructive currency system with a controlled expansion and not inflation. If gold is to function as a medium of exchange, this principle must be adopted now, thereby allowing the purchasing power of this Nation to expand equally in proportion to the production. Surely, Mr. Speaker, the only practical solution is to restore purchasing power, and this can be done permanently only by constructive monetary control where the farmer can receive economically an equitable price for his commodities and work. This means wheat should be $1.25 per bushel, corn $1 per bushel, and cotton 20 cents per pound, if this Congress proposes to solve our economic condition and allow our farmers and laborers to have any chance of a livelihood.

Too, Mr. Speaker, we propose in addition, an agricultural program that the farmers of our Nation may share in the national income during the 6 productive years, based upon the following fundamental principles:

First. An expansion of the soil-conservation program, thereby increasing Government benefit payments allowing the landowner, the sharecropper, and renter to share proportionately in the subsidy in proportion to the interest in the crop.

Second. Allowing all farmers an average baleage, thereby taking care of the new ground man and the farmer without an average, thereby protecting the farmer against the consequences of drought, floods, and pestilence.

Third. An ever-normal-granary feature to protect the farmers against a price collapse due to bumper yields resulting in production beyond all domestic and foreign need.

Other constructive amendments naturally must be written into an agriculture bill to be of the most good, but the Congress must anchor upon sound basic principles and especially include the fundamental principles as listed above, inasmuch as they were omitted in the A. A. A. cotton program and that seemed to be in part the objectionable features.

Mr. Speaker, we are the richest nation in the world. We have more than one-half the world's gold and the largest producer of raw materials. Yet, in a land of too much for all, we have millions hungry, physically suffering for the necessities of life as a result of favored laws allowing wealth to accumulate into the hands of a few money masters.

Mr. Speaker, to solve the unemployment question and expand the agriculture soil-conservation program permanently so all may enjoy prosperity, millions of dollars will be required; therefore, the Congress must secure the money either by the tariff procession tax or a currency system that will give our farmers equitable prices. I therefore advocate a currency system, that is, Congress making available an adequate supply of sound money to adequately supply the demands and needs of the people as vested in Congress by article I, paragraph 5, of section 8, of the Constitution.

Mr. Speaker, in order for me to explain what I mean, I will make this statement: In 1921 the American dollar, based upon commodity values, was worth about 60 cents. In 1927 and 1928 the American dollar, based upon commodity values, was worth $1. In 1932 and 1933, the American dollar, based upon commodity values, was worth $1.60. That means that a man who borrowed a dollar in Louisiana in 1921 worth 60 cents, in 1933 had to pay back that dollar worth $1.60—more than 2½ for 1. Mr. Speaker, this broke down the purchasing power of the Nation; it wrecked economic adjustment of the country; it crippled the farmer, who is still suffering, and as a result a paralysis existed in America's business.

In addition, Mr. Speaker, for further proof that stabilization of agriculture and commodity prices can be guaranteed only through the regulation and stabilization of the value of the dollar, I call your attention to March 1933; wheat was selling for approximately 50 cents per bushel and cotton for 6 cents per pound; and if you recall our country went off the gold standard of $20.67 per ounce, and within 3 months corn advanced to 65 cents and cotton 11½ cents per pound. Now, Mr. Speaker, this well shows this Congress should adopt a constructive currency system, thereby preventing an unbalanced relation between consumption and production and at the same time make available an adequate supply of sound money.

My colleagues, millions face hunger and cold these coming winter months; farmers were not able to pick their cotton, as the cotton market did not justify. Throughout the entire Cotton and Corn Belts corn and cotton producers are not able to pay the interest on their obligation, to say nothing of their taxes or any of the principal on their indebtedness; yet the first session of the Seventy-fifth Congress sat idle and allowed the country's major crops—corn and cotton—to sell far below the actual cost of production. I warned the Congress such would happen before adjournment in August if permanent agriculture legislation was not adopted before adjournment, August 21; therefore, I hope this Congress seeks a permanent program, not losing sight of the necessity of increasing buying power by adopting the basic fundamental principles of the Creator and the Constitution.

Further, Mr. Speaker, the underprivileged millions throuhout this great land of too much for all is expecting this Congress to carry out the true philosophy of government and that is to do the greatest good to the greatest number. That represents my theory of good government. We are not doing the greatest good to the greatest number when we allow unchallenged wealth to be concentrated and poverty to spread, and that is exactly what this

Government has allowed to happen among our agricultural people the last 90 days. We are not doing the greatest good to the greatest number when we let the few dominate us in government, finance, and industry, and allow the great masses of our people to become the political serfs and industrial slaves of super lords of finance.

The laws of all civilized countries are originally founded upon the common law propounded by the Lord. Now by turning to Leviticus from the 24th to the 27th chapters, inclusive, you will find it set forth in certain terms that the Nation must keep its people from being burdened with debt; therefore, Mr. Speaker, the balancing of the Nation's agriculture books for the year 1937 find the Nation's agriculture farms deeper in debt. Mr. Speaker, if this Congress does not lose sight of the small farmer, the producer, or the tiller of the soil and includes amendments in the proposed agriculture bill that will assure the producer an equity price at all times through the Creator and constitutional method, we then can hope to restore prosperity, restoring purchasing power, thereby balancing production with consumption.

The Lord commanded this law as necessary for the existence of the race, and with His command, He uttered both a promise and a warning. The promise was that if the statutes were kept the nation and race would live and thrive forever.

The warning was, however, that to the nation and to the people who did not keep the promise, the nation could not survive. Now, it may be said that that was the old Scriptures, but when Christ was on earth, He asked about these laws propounded by Moses and He said: "It is easier for the heavens and the earth to fail than for one tittle of the law to fail."

Since this proposed agriculture method is an old philosophy based upon fundamental principles, if adopted we will in part largely eliminate different farm-price situations; as we generally find noted. If the ever-normal cotton feature is included in the new agriculture bill, such terms as "high versus low prices," "long downward versus upward swing," "precipitous booms and depressions," "different price levels between counties," "short-time fluctuations" will be abandoned in dealing with our agriculture situation and in lieu our producer will be able to receive a livelihood wage for his raw products. The so-called cotton feature will assure a price level; that is, stabilized farm prices for the farmer over a long period of years, prevent precipitous or up-and-down price movements, enabling the business world to operate upon a sounder foundation, raise farm income, thereby restoring purchasing power, prohibit a change level between counties, prevent fluctuations in response to minor events, and will assure the consuming public an ample supply of raw materials in case of a crop failure at a level based upon their income under the existing economic condition.

The farmers of this Nation simply ask Congress to provide the proper management of currency. We do not take the position that "Agriculture is always asking for something and is never satisfied." Agriculture is always the first victim of major depression. Farmers of the United States lost $22,000,000,000 of their normal income in the last 6 years, a levy of destruction upon one group of our citizens equivalent to the total national debt of 1933. The business world realizes that we can have no real recovery until agriculture's power to buy from industries is restored. In the interest of this entire Nation we appeal to Congress to give painstaking study to an agricultural program worked out in relation to a constructive currency system.

We believe that Congress should rise to its constitutional duty to regulate the value of money. We believe that depression and unemployment in all periods of history is caused primarily by the abnormal buying power of gold, brought about by world conditions. We believe the United States in the future should escape abnormal business conditions and can if Congress will take proper steps toward our currency management.

Mr. Speaker, I feel that we should consider and adopt in large part the Creator's and the constitutional method of solving our agricultural problem.

H. R. 4721—Instructions to the Jury—The Right of the Court to Comment on the Weight of Evidence

EXTENSION OF REMARKS

OF

HON. ROBERT L. RAMSAY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 18, 1937

Mr. RAMSAY. Mr. Speaker, at the last session of Congress the House of Representatives passed House bill 4721, which had for its purpose that in all cases, civil and criminal, Federal courts, in the granting and giving instructions to the jury, shall be governed by the law and practice in the State courts in which such trial may be had.

This question has long occupied the time and study of the American bar. It first appeared as a real live subject in the State of North Carolina in the year 1796, where three judges had been appointed, one of them having served his trade and calling as a carpenter; another had been a storekeeper; the other had studied law but never practiced it as a profession. At the same time many learned and able lawyers were at the bar, some of them having studied in the Inns of Court in London.

The judges appointed, knowing nothing of law or the arts of practice and pleading, became very arrogant and arbitrary, practically driving the States' learned lawyers from their practice, by their expressions of opinion as to the kind and character of verdicts the jury should render.

Finally, in 1796, the legislature—in an effort to restore and provide for the real functions of courts and juries, passed an act of legislature, which, for the first time in the United States, prevented the judges of its courts from trespassing upon the prerogatives of the jury, and denied to such judges the right to express in the form of instruction or otherwise, their opinion upon the evidence introduced in the trial of criminal or civil cases.

During the same year, the State of Tennessee was admitted to the Union, and it adopted into its constitution the North Carolina statute aforementioned. Since that time, seven States have adopted a like provision: Arkansas, Delaware, Nevada, South Carolina, Tennessee, and Washington.

Sixteen States have statutes to the same effect: Alabama, Florida, Georgia, Illinois, Iowa, Louisiana, Maine, Massachusetts, Michigan, Mississippi, North Carolina, North Dakota, New Mexico, Oregon, South Dakota, and Texas.

In 18 other States, the same result has been reached by way of judicial decisions, including: Colorado, Indiana, Kansas, Kentucky, Ohio, Oklahoma, Maryland, Montana, Missouri, Nebraska, Virginia, West Virginia, Wyoming, and Wisconsin, making a total of 41 States that do not permit their judges in the State courts to comment on instructions upon the weight of evidence to the jury.

The outstanding feature of the American courts, differentiating them from the courts of the motherland, is that 17 courts of appeals of the various States named above have decided that the common-law rule, permitting judges of the trial court to comment to the jury upon the weight of the evidence, does not apply to trials in this country and is no part of the American common law.

The jury system used in the trial of civil cases is the answer of a thousand years of experience of law enforcement by the Anglo-Saxons.

To exalt the powers and duty of the trial judge to determine not only the law of the case but the facts as well, destroys the usefulness and advantages of jury trials.

Why undertake to deceive ourselves on this question? Why maintain the useless, unnecessary expense of furnishing jurors, if they are to be forced or seduced to return verdicts upon the expressed opinion by the court upon the worth of evidence?

Those of us who have practiced law for a lifetime, know full well that the Jeffreys of the bench did not all vanish with his humiliation and death.

Some judges do know the rules of evidence. The great percentage of reversed cases, upon submission of evidence, proves that some do not. But there is no experience in the enforcement of law that proves or adds weight to a theory that the judges are better qualified to give a better weight or balance to the evidence than 12 good businessmen or farmers, who usually constitute the makeup of Federal juries.

Even in the State of Pennsylvania, which I have not quoted as one among the 41 States that have taken positive action against the court's expression of opinion in trial cases, the Supreme Court of Pennsylvania, discussing this subject (*Shaver* v. *McCarthy*, 110 Pa. St. 339), said:

> If evidence has been received which is competent and material, the court must never instruct the jury to disregard it.

And a charge to a jury calculated to control the verdict for one of the parties was by the Pennsylvania courts set aside (*Burke* v. *Maxwell*, 81 Pa. St. 139).

In the State of New York also, the court of appeals in the case of *Vedder* v. *Fellows* (20 N. Y. 120), doubted the propriety of courts expressing their opinions upon the evidence introduced in jury trials, and other State courts not mentioned have taken a like position. So we really have 43 States of the Union who have changed or frowned upon the old common-law rule.

In the year 1872, Congress by act, title 28, section 724, Code of Laws of the United States, enacted a statute of procedure and practice of civil and criminal causes in the Federal courts, which provides—

> That the practice, pleadings, and forms and modes of proceedings in civil causes in the circuit and district courts shall conform as near as may be to the same things existing at the time in the courts of record of the State within which such district courts are held.

It was thought by the sponsors of this bill, as well as a great majority of the lawyers of America, that this act would not only bring about a uniformity in the law of procedure but the practice of granting instructions to juries as well. But to the great surprise and astonishment of the authors of the bill and the American bar, the Supreme Court of the United States in the case of *Nudd v. Burrows* (91 U. S. sp. 426; 23 L. ed. 286) held that "the granting of instructions is the mere personal conduct of the judge and is neither practice, pleading, nor a form, nor mode of proceeding." So this most astounding decision, bereft of all legal reasoning, reserved for the use of the judges of the inferior Federal courts the arbitrary right of requesting verdicts from juries, by the expression of their opinion that can be freighted with ignorance of law and facts, bias, prejudice, or any other vagary or caprice of the court, without avail of appeal or error, so long as the judge buttresses his request by the assurance that it is only his opinion and the jury may disregard it if they (dare) choose.

It is not true, as alleged by those who oppose this bill, that it will exclude every comment of the judge upon the weight of evidence, because in most of these States that have by constitutional provision, by statute, or judicial decision precluded the judge from expressing his opinion of the evidence to the jury, the very contrary is true.

The court may state the testimony without color or emphasis. The judge cannot, however, employ any language or artifice from which the jury may know that he gives more credence to one part of the testimony than to another. The statement must be free from bias, as would the reading of the same by a stenographer from his notes. So long as the judge merely states or reviews the evidence as a whole, or repeats that bearing on some particular question, he does not give his opinion nor furnish any ground for exception.

The judge may also refer to particular evidence as tending to prove the fact in dispute, but he must not say that such evidence shows the existence of any fact, nor proceed any further than merely to indicate that the evidence is relevant as tending to establish some proposition involved in the controversy.

Prohibitions against charging juries upon matters of fact are obviously designed to prevent courts from becoming participants in the settlement of controverted questions of facts; and if at the trial it turns out that there is no controversy upon some or all of the issues, there is no reason for the prohibition and no occasion for its enforcement. Therefore, if there are undisputed facts, or facts in relation to which there is no conflict in the evidence, the judge in his charge may properly assume the existence of those facts.

It is the duty of the trial judge to instruct the jury as to the law of the case, and such duty should never be surrendered or evaded, but where the evidence to make out the supposed case, however inadequate in the opinion of the court, or however little weight the judge may deem it entitled, it is the best and safest rule to give only instructions that propound the law correctly, and leave to the jury the duty to find whether or not the evidence is sufficient to establish the fact it was introduced to prove.

The model instruction of the court to a jury is a simple, impartial, clear, concise statement of the law, applicable to the evidence in the case then on trial. Such instructions aid juries in reaching right conclusions, while many others, which unfortunately have had the approval of the judges of our Federal courts, are couched in technical language of doubtful meaning, with expression of the personal opinion of the judge which only serves to confuse, mystify, and mislead jurors from their real duty as jurors—to judge and weigh the evidence, and likewise furnish unnecessary and unprofitable exercise for the trial judge.

In the case of *Hicks* v. *United States* (150 U. S. 443, 37 L. ed. 1137) the Court held:

> It is obvious that under any system of jury trials the influence of the trial judge on the jury is necessarily and properly of great weight, and that his slightest word or intimation is received with deference and may prove controlling.

May I again repeat as a trial lawyer of long standing that the opinions so expressed are always controlling; and if this be true, how can any judge express an opinion in any case upon the weight of evidence without influencing the jury to render a verdict in such case? And if this be true, is not such a statement of opinion equal to a directed verdict? And if such an opinion be equal to a directed verdict, why the distinction between this and a directed verdict on the grounds for an appeal?

Our Supreme Court, in the case of *Lovejoy* v. *United States* (128 U. S. 171, 32 L. ed. 389), held—

> A court of the United States in submitting a case to a jury may express its opinion upon the facts, and such opinion is not reviewable error so long as no rule of law is incorrectly stated.

This opinion clearly overlooks and destroys the same Court's fine and undoubtedly correct statement in the Hicks case, supra, that—

> The jury necessarily and properly gives great weight to the court's slightest intimation or opinion and may prove controlling.

Personally I cannot harmonize these two conflicting holdings. If either is right, the other must be wrong.

Following the opinion of the Lovejoy case our inferior Federal courts have held that "expressions of opinion of guilt of a defendant by the trial judge in controverted cases, if followed by the statement of the court, the jury are the sole judges of the evidence" is no ground for review by appeal or error.

Some of the cases so holding, the Court may express opinion of guilt of defendant are: *Endleman* v. *United States* (86 Fed. 463); *Breise* v. *United States* (106 Fed. 686); *Carroll* v. *United States* (154 Fed. 430); *Foster* v. *United States* (188 Fed. 307); *Oppenheim* v. *United States* (228 Fed. 227). Also see *Joyce* v. *Charleston I. C. Co.* (50 Fed. 374).

This bill, as expected, has aroused not only the ire of the Federal judges, who delight in swerving juries by the expression of their opinion, and the bold statement that they as judges believe from the evidence that the jury cannot honestly render any other verdict than the one suggested by such opinion, but every lawyer who entirely depends upon the court for aid and comfort.

Also Judge Otis, who like another Chase, has "come to judgment" and has exclaimed "that the archangels of Paradise do not have a record one-half so good" as he and the other Federal judges who express opinions as to the weight and character of evidence. Even the judicial council have declared that "many decisions of the United States Supreme Court, as well as the courts of appeals, have carefully laid down such limits as are necessary to prevent any encroachment upon the province of the jury by a judge in his charge, and such limitations are carefully enforced."

I believe that a reading of such decisions rendered by our Supreme Court will leave the average lawyer's mind unconvinced. The rule laid down by our Court in the Lovejoy case has never been departed from by the courts.

It is true that our Supreme Court has refused to follow the common-law rule laid down by the English case of *Davidson* v. *Stanley* (3 Scott. N. R. 49), "That even if the court's opinion is based upon a misapprehension of the facts in the case, it would still not be sufficient to warrant a review." Yet, if we are to follow the common law on this subject, why not follow the decisions that formed and created such law? Our Court, in two leading cases, has laid down certain rules to govern the court in expression of opinion on evidence. One of these cases is *Starr* v. *United States* (625, 38 L. ed. 845). Here the Court declared: "The judge was angry when he delivered his charge to the jury." Therefore, the court overruled the verdict and remanded the case for a new trial. But this case can only leave you with the impression that if the judge had delivered his charge to the jury in a calm and judicial manner, the verdict would not have been set aside.

The other leading case is that of *Querica* v. *United States* (289 U. S. 466, 77 L. ed. 1321), where the trial judge instructed the jury "that wiping one's hands while testifying, was almost always an indication of lying," and further repudiated all of the defendant's evidence as lies and unworthy of belief. The Supreme Court set aside the verdict in this case, because the trial court had failed to analyze the testimony, but "had added to it." In other words, the court was willing to testify in the case without first having been duly sworn.

I do not believe it can be said that these cases "have carefully laid down such limits as are necessary to prevent encroachments upon the province of the jury by a judge in his charge," because they still leave the judge free and untrammeled to express his opinion on the evidence; denounce any portion of evidence he may desire, and, by implication at least, request the jury to return such verdict as he may request, without recourse of appeal or writ of error.

Judge Otis, in an effort to bolster his "Paradise statement," says:

> Summing up both civil and criminal cases, it was discovered that during the period from November 1, 1924, to January 1, 1937, of 5,606 cases tried by juries and appealed, in only 104 was there complaint made that the judge abused the power to advise the jury as to the facts. In 60 cases out of this number the charge was approved by the appellate court, held reversible error in 41, criticized in 2.

To me this seems an appalling mortality to be inflicted upon the judgment and wisdom of men whose judgment we are assured exceeds that of the "archangels of heaven."

Under the rule laid down by our Supreme Court in the Lovejoy case, supra, I fail to discern any reason or cause why there should be even one.

I surely believe that the average lawyer—even without being an "archangel"—under such a rule could charge juries in any number of cases all his life and never be reversed, because the door is wide open for him to discuss or argue the evidence as he jolly well pleases.

In an effort to secure support for his argument upon expression of judicial opinion on evidence by the judge, Judge Otis wrote 100 lawyers of Missouri, no doubt all of whom had practiced before him, in order to learn their view of this bill. It must have been quite a shock to the good judge when he received 84 answers to his questionnaire and learned that 58 of them heartily approved of this bill, while 24 were against and 2 noncommittal.

After Judge Otis made his attack against this bill I wrote to the active lawyers and law firms of my State relative to the same. So far I have received 237 replies. Two hundred and five have answered, strongly supporting the same and giving their reasons for so doing, while only 32 have replied they were against it and concur in the opinion of Judge Otis and the judicial council.

Of course, if we are to believe that those States are entirely wrong, who have enacted a constitutional provision against the common-law rule of expression of opinion by the judge as to the weight of evidence; that those States who have legislated against it are at fault; that the supreme courts of the States who have declared it to be no province of the judge to interfere with the right of the jury to solely consider the evidence are ignorant of the law; that Judge Otis is right when he charges those lawyers with untruth who argue that juries are competent to reach intelligent verdicts without expression of opinion by the court; that Judge Otis is again right when he exultantly exclaims "the archangels of Paradise do not have a record one-half so good as the judges of our Federal courts in commenting on the evidence in trial cases," then you can only believe this bill is wholly and entirely wrong. But if you believe with me that this citadel of arrogant judicial power has no place in our American jurisprudence; that it is the last vestige of British feudalism in our Republic, and should be driven from practice and procedure of our Federal courts, then you will join with us who have supported the enactment of this bill through the House of Representatives, in our further efforts to complete the final enactment of this much-desired law.

We Must Husband Our Resources

EXTENSION OF REMARKS

OF

HON. EDWARD T. TAYLOR

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Friday, November 19, 1937

RADIO ADDRESS OF HON. HAROLD L. ICKES, SECRETARY OF THE INTERIOR, NOVEMBER 1, 1937

Mr. TAYLOR of Colorado. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following address of Hon. Harold L. Ickes, Secretary of the Interior, delivered over the National Broadcasting Co. on November 1, 1937, on the importance of conserving our natural resources, and more particularly upon the conservation of our public domain, forests, water, minerals, and wildlife:

> To conquer Nature man broke down the gates of the Garden of Eden and came forth to meet the challenge of an unordered world.
>
> These are the words of a former Secretary of the Interior, the late Franklin K. Lane.
>
> Ruthlessly, man has continued on his way through the ages. In the struggle for self-preservation and for economic security he has conquered the wild beasts and the physical phenomena of the earth, utilizing its flora and fauna for food and clothing and shelter and delving under its crust for minerals to provide warmth and materials and power for his machines. As man became bolder and more experienced he enlarged his ability to exploit and by travel and exploration discovered ever new fields for his enterprise until the time came when he had conquered everything but himself.
>
> It was not long after the settlement of America before our ancestors began to ravage forests and land and streams with no thought of the future. In fact, the principle of conserving natural resources was unknown among these early newcomers because there was no occasion for its exercise. The new colonies, and subsequently the Federal Government, could offer seemingly inexhaustible quantities of land amply supplied with water, minerals, forests, and wildlife, which were the basis of the pioneer economy. Further exploitation of our natural resources threatens our present national economy and casts a heavy cloud upon the future of our country.

When are we going to constitute an agency of government which is willing and able to undertake the task of checking the prodigal waste for which we have been notorious and be responsible for the result?

In days gone by our ancestors sold our patrimony for less cash than was obtained for the traditional mess of pottage. They even allowed them to be taken without compensation. They permitted our heritage to be despoiled; the land to be raped. They gave away the country's water and broad acres. They proclaimed and carried out a policy of "come and get it." To those who clamored loudest went the biggest share of the country's forests; of its oil and mineral resources.

We must not continue to squander our resources the same way today, for there is little left to sell or give away. The cupboard may not be bare, as was the case with Old Mother Hubbard, but at the rate we have been going it will soon be in that condition. Now, we must ask those who have received immoderate special benefits from the Nation to do a bit in helping us to improve our national economy. From those who got a thousand feet of lumber perhaps we are asking a splinter as taxes in return; from those who got a square mile of rich land we may request enough to preserve an acre for posterity; from those who got a barrel of oil we may ask for a teacupful back—and already the shrieks of anguish from the greedy are heard throughout the land. At this time, and properly so, we are concerned with the annual cash Budget; that of the dollars and cents that we must take in in order to meet our outgo. But we have not yet projected our vision to encompass the larger question of our national assets. The fact is that we are guarding our coin purse and leaving our billfold open to be rifled by any and all.

Why is it that this country can so easily run a fever over the Budget and at the same time fail to realize that we have squandered and are squandering our priceless heritage of resources, which we could never replace? Why is it that we become hysterical over wasting crumbs on the dining-room table and allow loaves to be purloined from the pantry shelf?

The reason is that there never has been, and there is not today, in the United States any one agency of government responsible for conserving our natural resources. There is no central agency of government charged with this task.

This condition should not endure. Fortunately, President Roosevelt, while engaged in balancing the Budget, is looking ahead. He is concerned about the national wealth that is locked up in our natural resources. He envisions a government which will guard those resources which are the storehouse and depository of the Nation's future welfare.

When the President laid the cornerstone of the new Interior Department Building in Washington in April 1936, he enunciated a policy of conservation of our natural resources that, if the people will get behind it, is destined to guarantee the prudent use and development of our remaining resources for the benefit of all Americans, both present and future. He declared that he was dedicated to the cause of conservation.

As a lifelong believer in the principles of conservation and of the prudent use of our topsoil, forests, water supplies, and minerals, I was greatly heartened by what the President said. I was encouraged not only because the President voiced his confidence in the Department of the Interior as the conservation arm of the Government on that occasion but because here was a President of the United States declaring that the vast national domain and the other natural resources of the country belonged to all of the people. They were not the property of any class.

It is, therefore, with a sense of satisfaction and pride that I am able to say to the people of America tonight that the administration now in Washington has begun to reverse the one-time national policy of exploitation and waste and is undertaking a conservation program which is predicated upon the sound philosophy that our resources are to be guarded and used for the greatest good of the greatest number of our citizens.

There is ample evidence of this new direction of the popular will. An increasingly large number of persons today have a better understanding of the purposes of conservation and a keener appreciation of what the Federal Government is doing to protect our natural resources. At last the people themselves are beginning to recognize the importance of conservation in our national life, both economically and socially. There are many instances of this.

In point is the acclaim that has been accorded the splendid work that is being accomplished by the Civilian Conservation Corps.

Among the many other approved steps which have been taken by the Government since 1933 and which have given force and effect to conservation, I might mention the program of soil conservation and erosion control. There is now a general acceptance of the fact that soil erosion can be prevented and that its effects can be overcome in many instances.

I need mention only Grand Coulee Dam and the Bonneville project on the Columbia River and the Fort Peck Dam at the headwaters of the Missouri River as steps in the greatest flood control, navigation, and irrigation programs ever undertaken by any government anywhere. Boulder Dam, which harnesses the Colorado River, has been completed and put into operation ahead of schedule, and completion of the significant Tennessee Valley development is proceeding rapidly.

Theodore Roosevelt in his autobiography says that the first work he took up when he became President was that of reclamation. Prior to the Reclamation Act all irrigation was under private auspices, but from 1902 the Federal Government has taken the leadership in this major field of conservation through the Department of the Interior. The successful conquering of the desert by husbanding for it life-giving water has given birth to a specialized agriculture which has made possible homes and a livelihood for many thousands of our population.

The Guffey Coal Act setting up the Bituminous Coal Commission is an effort of this administration to conserve our supply of coal and to protect our miners.

Under the Taylor Grazing Control Act we have made progress far beyond our earlier expectations toward saving what remains of the public range, with the result that stabilization of the livestock industry is in sight at last. This act, administered by the Department of the Interior, is one of the most important single conservation measures ever enacted by the Congress.

The interest of our people in the enlargement and development of our national park system has shown a tremendous growth during the past 5 years. Attesting this is the fact that during the past year more than 15,000,000 persons, or about one person in every eight of our population, visited our national parks and monuments.

The production and sale of "hot" oil in our largest field in east Texas has been virtually stopped as a result of cooperation between the Department of the Interior and the State of Texas, and it is my observation that our people, including those in the oil industry, are rapidly coming to the conclusion that petroleum is an irreplaceable resource that should be conserved at all costs.

It is not by mere chance that it has remained for the Department of the Interior to take the lead in the present-day conservation movement. This Department does not consider conservation the mere hoarding of our resources. While the Interior Department is fully alive to the imperative necessity of protecting and preserving all of our natural resources, it does not hold that conservation is incompatible with a continued growth of the country. Just the opposite is the fact. We believe that conservation will make for a greater enhancement of our country in the future than would a policy of continued exploitation. It will provide substitute fertile lands for the acres of the Dust Bowl which are the result of improvident farming. It will permit decentralization and the breaking up of our congested areas, so that we may free ourselves from those areas which, because of overcrowding, breed sickness and crime.

The Department of the Interior holds that we must rephrase the philosophy of the past with respect to the handling of our natural resources. We must inculcate as a fundamental tenet of Americanism the belief that the proper development of our form of government carries with it the obligation to use Nature's gifts prudently so that all the people may benefit—not only those of today but those of tomorrow and the day after. I think it is time that in our schools, both grammar and secondary, and in our colleges as well, we should inculcate more vigorously an understanding of the magnitude and the importance of the problem of proper husbandry of soil and water and minerals.

None of the gains for conservation that have been cited have been won without a stiff fight against special privilege. And what has been true in the past is true today. No administration or President may advocate a change of policy curtailing special privilege without inciting the trained seals of that privilege to shrill barks. Professional viewers-with-alarm in our country are a hardy, perennial crop. And usually the alarm that is aroused and proclaimed bears a direct relationship to the stake involved, which, in the case of what remains of our natural resources, still runs into the billions of dollars.

What other Presidents were confronted with in the past when they engaged the exploiters in behalf of the people President Roosevelt is experiencing today. As part of his well-conceived and well worth-while plan to reorganize the executive departments in the interest of efficiency and economy, he has proposed that the name of the Department of the Interior be changed to that of Department of Conservation. Such a change would mean that for the first time in our history the conservation of our national resources would be made the responsibility of a major department of the Government. Naturally we find this proposal bitterly opposed by those who have been given special privileges in the past with respect to our lands and forests and mines; those who want to continue to exploit these and other resources for their personal enrichment.

It would not help their cause if those who fell the forests, exhaust the oils and minerals, or covet for power and irrigation such water as they have not already seized stood out in the open to fight President Roosevelt's conservation plans. They find it better to work by indirection; to make use of a sincere but misguided zealot. Let us see how the exploiters operate and, seeing, admire their cleverness.

There was a figure prominently associated with Theodore Roosevelt in establishing his conservation policies. I refer to Gifford Pinchot, once head of the Forest Service and more recently Senator-reject of Pennsylvania. He did excellent service over a quarter of a century ago, but for many years, because of his political proclivities, he has not had much time to devote to the thing that brought him fame. In fact, he has become the Lot's wife of the conservation movement. He has not looked ahead for 20 years. And yet Mr. Pinchot, despite his lack of vision, still serves some use in the conservation movement. We need guideposts, even if they lead

many miles back into the past. But a man can hardly be regarded as a crusader merely because a quarter of a century ago he followed a Peter the Hermit. Now Mr. Pinchot is again astride his old hobbyhorse, but he is facing the tail instead of the head of the horse. In truth, Pinchot is not a Lancelot but only a Don Quixote.

That Pinchot's role in the conservation movement is purely that of one who looks through a rear-view mirror is attested by the bitter attacks that he makes upon anyone whom he regards as threatening the position he asserts as of right to be regarded as the self-annointed Messiah of conservation. This attitude of his has never been so well exemplified as at the annual convention of the Izaak Walton League which was held in Chicago last spring. The speech that he made on that occasion was purely political, the good taste of which might well be questioned by any member of an organization that, in theory at least, is above political controversy.

Mr. Pinchot has been busy jittering his way about the country declaring that if the President's reorganization bill passes, as it should pass in the interest of a more efficient administration of the Government's business, the national forests might be transferred to the new Department of Conservation. I have not the slightest notion whether the President would do this; but if he should make the shift, the entire personnel of the Forest Service would be sent to the new department. It happens that the Forest Service is under civil service, and it would continue to function as a unit manned by civil-service personnel as in the past. I know that even in his excitement Mr. Pinchot did not mean to imply that the able and honorable employees of the Forest Service in the Department of Agriculture would be any less able and honorable in the Department of Conservation. I think that Mr. Pinchot will concede that I have upheld the principle of civil service since I became Secretary of the Interior, even in making appointments that lay outside of this law in which I so firmly believe.

In his Izaak Walton League speech, Mr. Pinchot "temperately and judiciously" made this statement:

"I call to your attention the fact that, with a possible exception of the national parks—and I underline the word 'possible'—the Interior Department has never had control of a single publicly owned natural resource that it has not devastated, wasted, and defiled."

I do not care to bandy unexpurgated epithets with my old friend. He has specialized so long in calling names that he has become an outstanding expert in this art. All that I care to say is that the people of this country have had too many contacts with the various bureaus and divisions of the Department of the Interior for those bureaus and divisions to need any defense from me.

It seems to me so obvious as not to require argument that conservation would be greatly advanced if it is made a major responsibility of the great Department of the National Government. Gifford Pinchot—and in this, interestingly enough, he has the active cooperation of Col. William B. Greeley and the great lumber interests of the country—supports the bizarre theory that in disunion there is strength. For some reason that I cannot understand he wants to keep the conservation activities of the Government separate, disunited, and antagonistic. His is an ardent advocacy of overlapping and inefficiency, with its consequent waste and exploitation.

In a speech before the American Forestry Association some months ago Mr. Pinchot delivered another tirade against the President's reorganization plan and made slurring references to me. He referred to the proposed Department of Conservation as "Ickes' folly." He misrepresents me as a despoiler of the Department of Agriculture, the national forests, and the public range, and miscredits me with a bump of acquisitiveness and greed for power even greater than his own. This in the face of the following inscription to me in his book Just Fishing Talk, which he sent to me in July 1936:

"To Harold Ickes, whose courage, conscience, and common sense have made him one of the most outstanding public servants of his time, with the affection and admiration of his friend Gifford Pinchot."

Do you wonder that some question the sincerity of this man who can abandon during political campaigns his interest in conservation; who yesterday fought the great lumber interests, charging them with ruthless exploitation, and today walks down Pennsylvania Avenue arm in arm with them; who proclaims his interest in the farmer and the workingman and at the same time plots for political control of Pennsylvania with Joseph R. Grundy, the greatest lobbyist of them all for the biggest interests? I suppose now that Mr. Pinchot is preparing to run again for the governorship of Pennsylvania, or for an even higher office. There will be less and less criticism of the Department of the Interior from him as his campaign develops, except as it may serve his political interests.

May I conclude by saying that there is nothing startling in the President's proposal for a United States Department of Conservation, in which there might be concentrated existing Federal activities for the prudent use and preservation of our natural resources? Some 24 States already have conservation departments or commissions, and their business of government apparently goes on tranquilly and efficiently. Once the feud of over a quarter of a century ago, which is kept alive by such men as Pinchot, is rightly recognized for the false obstacle that it is to good government and sound sense in handling our remaining natural assets, the way will be cleared for beneficial legislation. Then the horizon of a decent and comfortable existence in America will be extended by thousands of years. And man, who has already conquered Nature, will have conquered himself.

Birthright of Natural-Born Citizens of the United States

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, November 19 (legislative day of Tuesday, November 16), 1937

DECISION OF THE DISTRICT COURT OF THE UNITED STATES FOR THE DISTRICT OF COLUMBIA IN THE CASE OF MARIE ELIZABETH ELG AGAINST FRANCES PERKINS, SECRETARY OF LABOR

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a recent decision of the District Court of the United States for the District of Columbia, as appearing in the Washington Law Reporter of November 12, 1937, with a statement of the case prepared by the editors of the Law Reporter. This decision is in conformity with legislation now pending before the Senate Immigration Committee which I introduced last session—S. 1169—protecting the inviolable birthright of natural-born citizens of the United States. Therefore I believe the decision to be of interest to all Members of Congress.

There being no objection, the statement and decision were ordered to be printed in the RECORD, as follows:

In *Marie Elizabeth Elg* v. *Frances Perkins, Secretary of Labor, et al.*, Equity No. 63408, in the District Court of the United States for the District of Columbia, a bill was filed for a declaratory judgment that the plaintiff is a native-born citizen of the United States, for an injunction against the Secretary of Labor and the Acting Commissioner of Immigration and Naturalization restraining them from taking any action to deport the plaintiff, and for an injunction restraining the Secretary of State from making any statement to the effect that the plaintiff is not a citizen and from refusing the plaintiff a passport on that ground.

The bill alleged that the plaintiff was born in New York State in 1907; that during all her life she has been a citizen; that she never married and had never committed any act of expatriation; that in 1928, before plaintiff was 21 years of age, and while residing with her parents in Sweden, where she was taken by her parents when she was 4 years old, she had inquired of the proper authorities as to the course to pursue in order to return to this country; that she was advised by the vice consul of the United States that if she returned before she was 21 years of age her birth certificate and identification papers were all the evidence required for reentry, but if she wanted to return after she became of age, she should apply for a passport; that she applied for a passport, which was issued on July 22, 1929.

The bill further alleged that after she received this passport plaintiff came to the United States and was admitted; that on April 8, 1935, she received a notice from the Department of Labor advising her that she was illegally remaining in the United States because she was not a citizen thereof, and since that date had been threatened with deportation.

The defendants moved to dismiss the bill, and this motion was heard by Mr. Justice Bailey, who, on November 1, 1937, filed the following memorandum dismissing the bill as to the Secretary of State and overruling the motion as to the other defendants:

MEMORANDUM OF OPINION

"The motion to dismiss will be sustained as to the defendant Hull for the reason that the court will not undertake by mandamus to compel the issuance of a passport, nor to control by means of a declaratory judgment the action of one whose function it is to consider and decide whether or not a passport should issue.

"According to the allegations of the bill, the Department of Labor has notified the plaintiff that she is illegally within the United States and has required her to leave the United States, and in case of her not going she would be deported as an alien. Her only recourse would be to submit to arrest and then seek the issuance of a writ of habeas corpus. I think that this belongs to a class of cases for which a declaratory judgment is eminently suited. It is immaterial whether the court could enjoin the action of the Department of Labor. 'Where there is such a concrete case admitting of an immediate and definite determination of the legal rights of the parties in an adversary proceeding upon the facts alleged, the judicial function may be appropriately exercised, although the adjudication of the rights of the litigants may not require the award of process or the payment of damages' (*Aetna Life Ins. Co.* v. *Haworth*, U. S. Sup. Ct., Mar. 1, 1937).

"The bill alleges that she was born in the United States, was taken during her minority by her parents to Sweden. Within a year after her attaining her majority and without having renounced her allegiance to this country she came to this country. I do not think that the fact that her father may have become a

citizen of Sweden can deprive her of her rights as a native-born citizen of the United States, even though under the laws of Sweden she may be treated in that country as a citizen of it.

"The motion to dismiss will therefore be sustained as to the defendant Hull; in other respects overruled."

Independent Courts or Dictatorship

EXTENSION OF REMARKS

OF

HON. SAMUEL B. PETTENGILL

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, November 15, 1937

Mr. PETTENGILL. Mr. Speaker, "Vargas Abolishes All Federal Courts in Brazil." Such is the headline in last night's paper. The Associated Press dispatch from Rio de Janeiro, dated November 18, goes on to say:

President Getulio Vargas tightened his grip on Brazil today through a decree abolishing Federal courts in the nation's 20 States. * * * The new Brazilian constitution abolished State and National legislatures and gave Vargas supreme administrative powers At the same time, a national political party that would make Brazil a one-party State, under the leadership of President Vargas, was reported being formed to support his new regime.

Fascism has come to America.

It came as it came in Europe, by destroying courts and parliamentary government. All this is present fact in what was once the second largest Republic in the Western Hemisphere.

Today's headlines may be more eloquent than the arguments of last spring in telling what the Supreme Court fight was all about.

Or shall I say "what the fight is about"? For the fight is still ahead of us. The struggle is not ended. It will take some new form, but the objective will be the same—to destroy the independence of the courts—and that is to destroy the Constitution itself. Recent speeches by men in high place in and out of public service show plainly that what we have now is an armistice only.

For those who still believe in constitutional government, Democrat or Republican, there is but one practical weapon for its defense—to give a vote of confidence in the elections next year to those Senators and Congressmen who resisted the first assault.

If they come back, the Constitution stays; if they are defeated, our children, if not ourselves, will read other headlines like those from Brazil, but closer home.

"Fenager" Dickmann, or Second Jefferson Memorial, St. Louis

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, November 19, 1937

Mr. LAMBERTSON. Mr. Speaker, on Monday under an extension of remarks, I placed in the RECORD a plea to the President to cancel the executive order of December 21, 1935, allocating $6,750,000 toward the construction of the proposed $30,000,000 second memorial to Thomas Jefferson in St. Louis, Mo.

This memorial proposition is so rotten it stinks to the heavens. Like buzzards hovering over the decaying carcass of a dead animal, there are still people who are trying to speed up the building of this useless project.

Within the last few days the mayor of the city of St. Louis, Bernard Dickmann, accompanied by his city counselor, Edgar H. Wayman, has arrived in Washington to confer with Federal officials in the National Park Service and the Department of Justice in order to find new ways and means to proceed with a project against which there are suits pending in the Federal courts and which I am firmly convinced is both an unlawful and unconstitutional undertaking as presently set up.

It is surprising, to say the least, to find the mayor of St. Louis and the city counselor still willing to play the game of the memorial promoters, still willing to force many businessmen and taxpayers of St. Louis into insolvency, that this proposal, permeated with fraud, graft, and corruption, may be rushed to completion.

According to late advices I am informed that besides the visit of the mayor and the city counselor to Washington, the United States district attorney in St. Louis, Mr. Blanton, is also on the way here to try his hand in unscrambling the legal tangles which confound the memorial promoters at this time.

Mr. Speaker, the unusual circumstances which surround this whole memorial matter prompts me to coin a new word to fit the situation. That word is "fenager." The word is from two much-used words, "fenagler" and "reneger." The colloquialism being "fenager." Now, a "fenager" is one who would help in creating a situation costly to others, but which the creator would be personally unwilling to support financially were he called on so to do.

This about describes the activities of the mayor of St. Louis and his city counselor in behalf of the memorial promoters.

St. Louis has other far more important problems than the building of memorials to solve. The most important problem that confronts St. Louis today is a restoration of its own citizens' confidence and respect for its courts of justice.

Then, too, St. Louis is facing an acute relief situation for the coming winter. This should demand the mayor's immediate attention. For more than 2 years the people of St. Louis who cry for work and bread have been baited with the promise of putting 5,000 men to work on the river front, which the promoters know is an impossibility, for the money now available for the scheme would barely be enough to purchase the ground alone. Thus have they abused public confidence and offered the man who cries for a loaf of bread a stone.

Mr. Speaker, two distinguished and honorable Members of the House of Representatives are members of the United States Territorial Expansion Memorial Commission, which was created by a joint resolution of the Seventy-third Congress to formulate plans for the St. Louis memorial. To these distinguished gentlemen I commend my remarks on various occasions during the first session of the present Congress. After acquainting themselves with all the elements of fraud, graft, and corruption in connection with the memorial promotion and the attendant bond issue election of September 10, 1935, in St. Louis, Mo., if either of these gentlemen are not thoroughly convinced that this promotion should be investigated by Congress, then I will submit to them a full record of the manipulations of the courts of St. Louis and the grand jury rigging which has taken place, so that those who committed crimes against the people of Missouri and the United States of America can walk the streets of St. Louis as unreachable examples of those who as members of a corrupt political dynasty flaunt the law with impunity.

Mr. Speaker, the time has come for action on the resolution introduced by me at the last session.

Dedication of the James Wilson and Seaman A. Knapp Memorial Arches

EXTENSION OF REMARKS

OF

HON. GEORGE H. MAHON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, November 19, 1937

ADDRESS BY A. FRANK LEVER ON NOVEMBER 17, 1937

Mr. MAHON of Texas. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following

address of A. Frank Lever at the dedication of the James Wilson and Seaman A. Knapp Memorial Arches, Department of Agriculture, Washington, D. C., on November 17, 1937:

Mr. Chairman, Mr. Secretary Wallace, distinguished guests, we have come to dedicate the James Wilson and Seaman A. Knapp Memorial Arches, impressive tributes to the work of the men whose names they bear.

Our Capital City is dotted with memorials and monuments to commemorate the services of our military and naval heroes, our statesmen, poets, artists, leaders, men and women, of every calling.

This day is significant in that it marks the first distinctive national recognition of agricultural leadership in this country, and that, in this field, there may be developed that high degree of service worthy of a nation's acclaim.

We do not think of the saintly William McKinley as having contributed anything out of the ordinary to the rural life of America. Rather, we think of him as a godly man, who, as head of the Nation, broke forever the cruel power of Spain in the Western Hemisphere, and who, more than any individual in our history, healed the gaping wounds of our unnecessary and unfortunate fratricidal strife of three-quarters of a century ago.

And yet, one of the very first acts of his administration, measured by the chain of events that has followed, must be regarded as epoch-making in the annals of American agriculture and rural life.

He appointed James Wilson as Secretary of Agriculture in his Cabinet.

That fact brought together James Wilson and Seaman A. Knapp as colaborers on a national scale in the scientific, sociological, and economic field of agriculture, and thus unconsciously set in motion currents that even yet have not run their courses, and are so strong as to defy the checkmating efforts of small and overcautious minds. He linked together in service names as inseparable in the history of agriculture as is Webster's characterization, "A Union of inseparable States." No roll call of agricultural statesmanship can omit the names James Wilson and Seaman A. Knapp or separate them. They stand toweringly among its brightest luminaries and they stand together, complementary of each other, each greater by the other's association.

There is remarkable similarity in the life histories of these men. Each had his baptism of "agricultural fire" in the State of Iowa, prolific contributor to agricultural leadership and of unafraid thinking.

Their preparation began in the open furrow and followed almost identical paths through all the processes of equipment for the final and supreme tasks to which each was called. They were moved by impulses singularly alike, focusing ultimately and always upon the common objective—an enriched rural life. Each, too, strangely enough, began the building of his cathedral in the lengthening shadows of life—Wilson at 62, Knapp at 70.

Wilson became the organizer, inspirer, and director; in fact, the real architect of the United States Department of Agriculture; Knapp, the conceiver of a system of adult education and fashioner of a method of teaching it, designed to meet the everyday problems of the average farm, the average farmer, and the average farm home under the environment of each. For Wilson as surely blew the breath of life into the organic act creating the Department of Agriculture as did Sir Christopher Wren build St. Paul's Cathedral; and Knapp as certainly founded the Extension Service as did Thomas Jefferson, in his charter for the University of Virginia, win from history the distinction of being the first American statesman to associate agriculture and scientific education.

They began their work each with a well-defined philosophy, predicated upon the formula that "he serves his country best who best serves its rural life." That fundamental is the Bethlehem Star of their every thought and undertaking.

Wilson sought to serve agriculture by building for it "the greatest agricultural research institution in the world" and by putting its agencies and discoveries within the reach of every man and woman of the farm. He said:

"The agricultural scientist is working by the side of the toiler in the field, teaching him the laws of Nature that must be understood before the best results can be reached. There is not a department of the farm that is not being enlivened by this research."

Knapp used his own new method of carrying his kind of education and his mode of teaching it out to the farms and into the homes of the farm families of the Nation. His objective in fundamentals were, as he says:

"To develop the resources, increase the harvests, improve the landscapes; brighten the homes and flood the people with knowledge of helpful things, and to readjust agriculture, to reconstruct the country home, and to put rural life upon a higher plane."

To them the mechanics of the farm was important only as incidental in the enrichment of the lives of the men and women, boys and girls, engaged in it. Their first concern was with broad humanities—people. That this should be so is not difficult of understanding. They were of the soil by birth, training, and actual living; they were farmers and knew farm life and believed in farm people. It was always first the farm man and the farm woman.

They believed in the inherent dignity and importance of agriculture as a calling. They wanted farmers to believe in it. They agreed that before anything worth while could come of their efforts they would have to devise a program that would spur agriculture to know itself; to appraise its economic and sociological relationships; to substitute pride in itself for its age-old, deadening, "inferiority complex." They knew they had to sell agriculture to itself before they could sell to it the things they were projecting for its betterment. They believed in the right of farm men and women to have the things that belonged to them and to exercise in the affairs of the Nation power commensurate with their contributions to it, and they wanted farm men and women to believe it.

Both subscribed unreservedly to the underlying thesis of the first Morrill Act that "the people of the land must receive an education adapted to their purposes." They believed, however, in a broader democratization of its principle to include the doctrine that science and education should be brought as nearly as possible onto every farm and into every home and into all the lives of those engaged in every sort of agricultural enterprise. Knapp sold Wilson his idea of objective teaching so completely that Wilson thereafter backed him unqualifiedly.

Out of this began another and different era in agricultural thinking and leadership. A new field of exploration lay ahead.

They had no lamp of experience to guide them, but what of it? They were pathfinders, unorthodox in their thinking, pioneers in their undertakings, crusaders in their methods. Frowning fronts of uncharted courses brought no trepidation to their hearts.

Genius is lured by the unbeaten path. The wilderness intrigues it, the unknown fascinates it. Genius is explorative, restless, always alert, always unsatisfied. Smugness, complacency, static, are antitheses of it. Genius is a moving force, affirmative, aggressive, virile. It's bugler has never learned to sound the notes of "Halt" or "Retreat." It is always "Forward!" This was Wilson and Knapp. They proposed and projected major reformations in the Nation's basic industry, and time is only now beginning to unfold the epic of their achievements and to recognize the fact that their work has gone into every agricultural home and community in America and made them happier and better places to live in.

The motivating philosophies that shaped the lives and activities of Wilson and Knapp are most suggestive of the deep currents that lay beneath the philosophies and activities of that most unfathomable of all American statesmen. The moving impulse of Lincoln's life was his faith in the common man, his love for the lowly and humble, and his passionate struggle to help them. "God must love the poor, because he made so many of them." Greatness has seemed always to feed upon and to grow out of the passion for service for the inarticulate masses of the people, whose welfare and happiness have constituted and will continue to constitute the surest guaranty of the stability and perpetuation of basic democracies.

Wilson said: "I am endeavoring to build up a Department of Agriculture that will benefit all men who work in the field"; and, "We need an entirely new education now for the millions who toil in the field."

We know that Knapp's supreme contribution to American rural life was planned to meet the needs of the common man of the farm, to do it in a common-sense way, and in the way of thinking and living of that man.

Wilson and Knapp not only believed in the high calling of agriculture, but they know that labor is the only road to true happiness. Wilson said:

"No work degrades. We can ennoble whatever we do. Paul, the Apostle, was a tentmaker; Robert Burns was a plowman; Franklin was a printer. Our civilization will never lift humanity above labor."

Knapp said:

"What a man hears he may doubt, what he sees he may also doubt, but what he does he cannot doubt."

It is the "what he does" that counts in his axiom.

Again, he said of a certain foreign people: "From constant labor they are a happy people."

These men were natural leaders, master psychologists, and developers of men. They made their choice of men and then gave them free rein to do their own thinking and planning, reinforcing them with their encouragement, sympathy, and counsel. Wilson had unlimited faith and pride in his scientists and backed them on all occasions with the force of his rugged nature. "They are a grand lot of men; finest aggregation of scientists ever brought together to do the work for the common man."

Knapp was just as proud of and loyal to his coworkers. His relationship to them was paternal. He inspired them with the spiritual value of their work and kept before them always as fundamental, "Your value lies not in what you can do but in what you can get the other people to do."

But if they were strong in their loyalties to their colaborers, they were even stronger in their loyalties to each other. Never a tinge of jealousy or envy marred their long and fruitful association. From the beginning to the end of it the arch of friendship held unbroken.

They saw agriculture in the light of the Nation's welfare. Wherever the problem, there would be found their interest and work. We of the South who labored with them in the days of their daring pioneering are happy to bear emphatic testimony to their broad nationalism.

It is heartening to us of the faith that these greatest leaders of their generation of those who labored in the lap of Nature were devout followers of Nature's God. Both were deeply religious men. Wilson remarked:

"Dr. Knapp did not boast nor intrude unseemingly his religion but quietly practiced it."

He was, in fact, an ordained local Methodist minister.

Wilson said of himself:

"I got my early religious training from my father. I had to commit the Psalms to memory. * * * I thought it a hardship then, but I regard the acquirement as a great comfort now."

Both were close students of the Bible, for their public addresses and writings are strongly flavored with the pure diction of the most remarkable of all books. They drank copiously, too, of the poets and the classics. They were scholarly, cultured men, untrammeled by either. Both were tremendously effective before public audiences, Wilson as a speaker, Knapp as an orator. Wilson's style was choppy, epigrammatic, rough and ready, rich in homely illustrations, and delivered in a drawl peculiarly his own.

Knapp was an orator, superb, moving, persuasive, sweeping audiences into the channels of his thinking and sympathy. He was evangelistic in manner, his style poetic, rhythmic, his English perfect, his voice sonorous, his appeal always to the better, purer, deeper instincts. As the great Spurgeon sounded the depths of a nation's emotion, so Knapp stirred the soul of a nation's agriculture. Wilson was capable of a classic in hard-fisted presentation, Knapp could have been the author of a Cotter's Saturday Night or An Elegy in a Country Churchyard.

Wilson left to us his great Department of Agriculture with its scientists; Knapp his county and home demonstration agents, together representing the greatest, most efficient, cohesive, organization of scientific agricultural leadership the world has ever seen.

And if there be those who would know the work of Wilson and Knapp, we can but say, "If thou seek his monument, look about thee."

But, my friends, agriculture remains the least rewarded of the avocations of men. Their cathedrals are unfinished. In earnest humility and reverence of spirit we rededicate ourselves to their completion, and reconsecrate ourselves, in paraphrase, to the service of our fellows in imitation of their great example—the great example of them who deserve from us these memorials of appreciation.

The Peace Outlook

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, November 19, 1937

RADIO ADDRESS BY HON. CAROLINE O'DAY, OF NEW YORK, ON NOVEMBER 11, 1937

Mr. LUDLOW. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address delivered over the radio on Armistice Day by the gentlewoman from New York [Mrs. O'DAY]:

Today is the anniversary of the signing of the armistice. Twenty years ago civilized nations rejoiced that the hideous savagery of a war to end war had come to a close. Peace was, for all times, established.

Civilization from the beginning has been built on force. As far back as history goes we find the fighting male streaming across Europe in warring hordes, conquering and overwhelming weaker tribes, taking possession of their lands, their riches, their peoples. We have as our heritage drawn from those pagans who survived through superior force a civilization built on force and the concept of force.

This concept has carried the spirit of war into every phase of our present life and society, its most terrific manifestation being the World War with its aftermath of despair, hatred, and further preparation for wars.

Two thousand years ago a religion was founded which is the negation of that reliance on force by which men had been living. For 2,000 years this reliance on force has been resisting and retarding the spread of the religion of peace. Two thousand years may be an infinitesimal span of time in the evolution of the world, but to those striving for world peace it is just about 1,000 years too long. What can be done to hasten the realization of this ideal of world peace?

It has been proven for all time that war to end war is a desperate and tragic failure and that in sowing the wind of the World War we have reaped the whirlwind which is engulfing the world today.

That war cost the United States a staggering sum in dollars and cents. Its direct cost was twenty-two billion. War debts, twelve billion; interest on war debts, nine billion five hundred millions. Veterans' adjusted pay, hospitalization, and rehabilitation, cost the Federal Government eleven thousand two hundred and fifty million and State governments five hundred million. Total cost, approximately fifty-four billion two hundred and fifty million.

These figures computed more than a year ago are as nothing compared with the human cost of the World War to the United States alone, and remember, we were the last to enter.

One hundred and twenty-three thousand six hundred and fifty-four Americans killed.

One hundred and eighty-two thousand six hundred and seventy-four wounded.

Nearly 124,000 precious lives sacrificed in the shambles of Europe—so many mothers' sons! So many young bodies brought into the world only to be mangled on foreign battlefields.

I am reminding you of these tragic facts and asking you to keep them in your memory because we are today facing a crisis and we may soon be called upon to make a decision which will mean life or death to the youth of America. And who will make that decision?

Will it be the President who has declared "I hate war" and who, with the cooperation of our Secretary of State is striving to avert a second world war? Will it be Congress that is invested by our Constitution with the power to declare war?

Will it be the citizens of our country, the mothers, the wives, the man in the street who later becomes the man at the front?

Surely, they are the ones to make the decision. A national referendum on war today is not only practicable, but possible. A resolution calling for such a referendum lies on the Speaker's desk at the Capitol in Washington and lacks but 38 congressional signatures to bring it out of the Rules Committee. Understand, of course, a referendum would not apply in case of invasion.

If you who are listening in feel that all the people of the country should act on a declaration of war, write your Representative and direct him to sign the petition introduced by Representative LUDLOW, of Indiana, so that it may be discussed and voted upon as a constitutional amendment which would make America in a more actual sense "a government of the people, by the people, for the people."

Taking the profits out of war would be a tremendous factor in preventing war, as was proven by the shocking facts unearthed by the Senate committee's investigation of munitions industries.

To be effective, however, it must be done by constitutional amendment; not by statute, for statute can be repealed overnight.

Our present neutrality law, if invoked, would not necessarily keep us out of war, and many of us realized that when we voted for it. It was the best that could be passed at the time. In the light of present world conditions, we realize how inadequate it is as a national policy; yet it has helped to serve notice on other nations of our intention to keep out of their quarrels.

Can we keep out of them in any way other than by the will of the people?

The late Sir Basil Zaharoff said, "Let enough people talk peace, think peace, and dream peace, and there will be peace on earth." But he and his fellow munitions makers saw to it that nations of the world were kept thinking in terms of war.

What can be done to create a will to peace and to strengthen the will that already exists here in America?

What can the church do? Field Marshal Haig once said, "The business of churches is to make my business impossible."

Suppose every denomination of Protestant churches, every Jewish temple, every Catholic church combined in a constructive, aggressive plan for creating and preserving world peace. Could they give greater service to God and to humanity?

What can the rank and file of voters do?

Suppose every voter before casting a ballot for Congressman or Senator informed himself as to the candidate's views on peace and war and, regardless of party politics, put into office the man who pledged himself to oppose the sending of American soldiers to fight on foreign soil.

What can women do toward creating the will to peace?

"Through the ages it is women who have produced, at an enormous cost, the primal munition of war, without which no other would exist."

It is women who have the training and education of our children in their hands. They can lay the foundation of a cultural heritage of peace, and this is of greatest importance, for "there is not an existing institution in the world of civilized humanity which cannot be profoundly modified or altered or abolished in a generation."

What can our Government do in the future and at present to strengthen the Nation's will to peace?

Suppose, instead of a Secretary of War, there was in the Cabinet a Secretary of Defense, under whom the Army and Navy would jointly function; a planning board to which civilians would also be appointed which could determine the appropriations adequate for safety against invasion and also to guard us against the ever-present danger of building up so large a force that our militarists be tempted to foment a war of aggression. The Budget for next year carries a military appropriation of almost a billion and a half dollars, some of which will be used for the improvement of rivers and harbors, and in cooperation with flood-control agencies. The appropriation for the State Department, the instrument through which we work for peace, was $19,000,000, of which six million goes for routine expenses that have little or no bearing on its official activities.

In 1922 there was signed in Washington a nine-power pact guaranteeing the territorial integrity of China.

That country is now suffering the horrors of a war of invasion by a neighbor nation.

In Brussels today a conference is being held, called by the original signatories of that pact, and other powers are in attendance. Our "roving ambassador" has said there, "The Government of the United States is prepared to share in the common effort to devise a means of finding a pacific solution for terminating hostilities in the Far East."

Of the nations represented at this conference the majority are still at peace. Suppose they agreed among themselves to impose sanctions upon the three that are now imperiling the peace of the

world. Agreed to sever all trade, economic, and diplomatic relations with them. Suppose, moreover, the United States said, "We, of all the world, are most safe from attack or invasion. We, of all nations, are most nearly self-sustaining. We will take the lead in this step that involves no bloodshed. The financial losses we incur, the sacrifices our people will have to make are the price we will gladly pay for world peace." Our President has declared, "If we face the choice of profits or peace, the Nation will answer—must answer—we choose peace."

Is the will for peace of our United States powerful enough to sustain us in such a program of sacrifice? If it is not strong enough today, God grant that it become so before another generation of youth has been sacrificed to the madness of nations and before civilization is destroyed by this sum of all iniquities—war.

Armistice Day Address

EXTENSION OF REMARKS
OF
HON. EDWARD W. CREAL
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, November 18, 1937

ADDRESS BY HON. EDWARD W. CREAL, OF KENTUCKY, ON NOVEMBER 11, 1937

Mr. CREAL. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include my address before American Legion at Elizabethtown, Ky., November 11, 1937:

Nineteen years ago today all the citizen-subjects under the Stars and Stripes went on holiday and merry-making because the greatest of all wars that the world had seen was over.

I hope you boys don't feel old in being reminded that since that day that babies born are now 19 years old and another generation is old enough for military service.

That day 19 years ago is so vivid in your memory that it seems but yesterday. Today, in commemoration of the efforts of you boys, we meet in parade and assembly to rededicate our minds and hearts to the task of preserving as far as we can the fruits of that victory and paying our respects to fallen comrades.

We are in better position to be still thankful for that victory which you boys made possible than our former allies, who today are trembling with fear of a repetition of the dark days of 1916–17.

Since then we are none the less sympathetic with the oppressed or the underdog, but we have grown older and wiser. Charity begins at home. Self-preservation is the first law of nature. To the most charitable there is an end of endurance of charity. It will take more than an imaginary reflection on national honor to cause us to unsheathe the sword. It will take more than a few thousand dollars in foreign invested capital to cause us to spend thousands of American lives of boys who have no stocks nor bonds to save. This new crop of eligible soldiers were not raised for cannon fodder. If the stock market weakens, wavers, or collapses by reason of the slump in foreign securities, it will not be restored at the cost of blood of American youths who are now your sons or kid brothers. I expect to use every ounce of energy at my command to prevent such.

This year saw the greatest expenditure by our Government ever made in peacetime for preparedness. Preparedness is essential to prevent being molested. Ethiopia and China are shining examples of what total unpreparedness may expect.

We have no thought or inclination of aggression toward any country in the world. We want no other country's land.

We fully demonstrated this in the Spanish-American War and further evidenced by recent action for ultimate complete independence of the Philippines.

Since the war the Legionnaires have performed valuable services in combatting disloyalty to the flag, communism, and radicalism. It will take the united effort of school, church, Legionnaires, and the press to keep communism, fascism, and other un-American ideas from obtaining growth in our midst.

They work like the termites, wood ants, by gnawing while you sleep. Such has honeycombed the governments of Europe until they have threatened the foundations. There is work yet to do, and the high ideals voiced by the American Legion is worthy of respectful cooperation by all citizens.

As the days grow older, America more fully appreciates the work of you boys in service and out of service. In my own personal appreciation of that service I have taken great pride and comfort in supporting each and every veteran bill sponsored by the American Legion. That has been my position for many years before having the opportunity to aid in a substantial way.

We must finish paying our just debts to veterans and finish collecting debts due us before either making new obligations to new veterans or lending aid to those who do not repay.

We are opposed to rendering service or lending one dollar aid to those who so soon forget our benevolence.

Drastic changes in our neutrality law will aid us in keeping from being drawn into the next European war.

Americans must travel on belligerent ships at their own risk and not at my risk and yours. American shipping going into mine-laden seas must go at their own peril. Come and get it and haul it back if you want it. Yes; this is some degree of surrender of former principles, but what man is foolish enough in this town to insist on his right to walk down the middle of the street when neighbors on each side of the street are in a deadly pistol duel? Discretion is the better part of valor. Some capitalists with international stockholders doing business under the American flag want to chase a dollar into the brink of hell and want the Government to guarantee that they will not scorch their fingers or that the live coals will not burn them.

There is another part of today's programs in America that is painful to observe. In spite of our efforts at cheerfulness it is underlying and ever present.

That is the solemn duty of paying our respects to the boys who were not in the parade today. The boys who went away with the same spirit you had but who never came back. They never knew how the war ended and never saw any armistice program.

In paying our respects to your comrades who crossed the barrier from which no traveler ever returns and whom no bugle call arouses we resolve in our minds to lend our efforts to prevent the sons and brothers of these fallen comrades ever being subjected to the necessity of following their unhappy path. I am glad to be in a position to oppose war that now threatens to engulf us again, with all its horrors.

We fear nobody. We want no trouble. We prepare in demonstrating that we want to be left in peace, but that our desire for peace is not so blinded that we are yet willing to be caught unawares and by our very helplessness thus invite attack.

The war in which you fought is over, but the spirit of 1918 is needed at this hour in America to preserve American ideals.

You are not using bayonets or bombs today, but you are using just as effective weapons in helping the country hold fast to the principles which made America the greatest place in all the world in which to live. We are proud of our history of yesterday. May we be equally proud of it tomorrow.

I am pleased to address the Legionnaires of Hardin and adjoining counties. I regret that I can have no military funeral and cannot be draped in the country's flag and that no escort or military salute will be fired. But it would be a source of pleasure to know that as future armistice programs are held and cemeteries visited some day some old veteran whom I had helped would wander over to my last abode and say, "Here lies ED CREAL; he, too, was a friend of the veteran."

It fell my lot during the war to take care of a wife and babies, to help every war aid organization, to fill out questionnaires and file appeals without compensation, to write letters for parents who couldn't write to their boys in the trenches, to help raise tobacco funds for the boys, to send them the county paper, to operate in my small field to help keep up the morale of the people, and many other such things, just as others did who played that minor but necessary role of service.

There are yet many inequalities in the treatment of veterans that should and could be remedied. The most glaring one I have come in contact with in my past 2 years of aiding all veterans without regard to politics, race, or creed is where a veteran was regularly treated at hospital while in service and the Army doctor never entered on his record what he treated him for. This prevents many a veteran from establishing service-connected disability.

An Army doctor should be allowed, where he has memory of such cases, to fill his record now. But this is not permitted. An individual or a government must be just before generous. For that reason I repeat that the first duty of this Government is full equity to present soldiers before making new ones.

Europe would also do well toward following this program before drafting the sons of veterans whose just dues they never recognized. There are three rulers today who are walking breaches of the peace, and all know them without my naming them. With them "might is right" and their threat to world peace grows by the day. On the other hand, the world stands by, burning with righteous indignation at the helpless wails of those attacked innocents, like the same feeling that comes over a man who witnesses a man unnecessarily beating a child.

Then there are those who say we are our brother's keeper, similar to the spirit that moved us to liberate Cuba in 1898.

But we have played the part of the big brother enough for the present. I do not believe that the divine Creator expects us to undertake all His work in that direction, and it may be that He has a plan of his own in eventually working out the problems of His people. I repeat that charity begins at home, and we have plenty of it here to engage our attention to its utmost capacity.

We are not going into the next European mix-up, whether it happens tomorrow or in the next few years. History is full of examples where nations remained neutral, and much nearer the conflict. We will furnish them with another such example.

In closing, may I thank you for this invitation to address the boys who write me so many letters about so many things.

More power to your great patriotic organization, the American Legion. I hope that you may all live to celebrate many more armistice programs; that your high ideals will never be lowered. We need you today just as in 1918, for "Peace hath her victories, no less renowned than War." I hope that Armistice Day may become as much of a fixture in history and holiday as July Fourth.

Having performed the greatest service to your country of any set of men in your generation, may your laurels never grow dimmer. You have reached the midway post in life; and as you wend your way toward the setting sun may the evening time be quiet and serene with the consciousness of duty well done, so that after life's fitful fever you may sleep well. I thank you.

Armistice Day Address

EXTENSION OF REMARKS

OF

HON. PETER J. DEMUTH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, November 19, 1937

RADIO ADDRESS OF HON. PETER J. DEMUTH, OF PENNSYLVANIA

Mr. DEMUTH. Mr. Speaker, under leave granted to extend my remarks in the RECORD I include the following radio address delivered by me under the auspices of the Women's Auxiliary of the American Legion:

Nineteen years ago tomorrow, November 11, 1918, the war ended, and there was celebrated on that day—one of the happiest days for every person who took part in the war or contributed thereto in any manner—an armistice that was celebrated throughout the world. Many of the soldiers could not believe that the war had ended until it was definitely decided that there was to be no more fighting, at least by the men engaged in that awful conflict commonly known as the World War. The wholesale killing stopped. In due time soldiers were returned to their homes, some of them crippled for life, some of them hardier and stronger, their bodies having been strengthened by Army training, some of them left buried in Flanders' field.

Each year on November 11 there is celebrated at Pittsburgh an Armistice Day program the like of which is unequaled throughout the United States. Although many people consider Armistice Day as a day of sadness, yet to the ordinary soldier that survived the World War it is a day of happiness and rejoicing. Many of the soldier organizations celebrate Armistice Day by holding reunions and various social functions. What a day it is when these old buddies get together and relate their experiences of 19 years ago. Armistice Day will be celebrated for many years to come, at least as long as the present soldier generation lives.

The World War taught us many virtues, the greatest of which was tolerance with one another. Out of the World War grew the American Legion, now serving in over 11,000 communities. The greatest and largest patriotic organization serving the American people today with the same fidelity as they did some 19 years ago. Banded together with the American Legion is the American Legion Auxiliary, consisting of the wives, mothers, and sisters of the American Legion members. What a picture the soldiers make as they proudly marched through the streets of Pittsburgh. What a contrast as compared with the first Armistice Day celebrated some 19 years ago. The boys are growing older, some less agile on the march than they were in the trying days of the World War, but nevertheless most of them are serving this country in peacetimes with the same spirit as they did in war.

The World War was said to be a war fought to end wars. Some of us thought that the noble purpose had been accomplished with the signing of the armistice on November 11, 1918. It was hoped to end militarism, and it was the intention to establish right over might. It was hoped that peace and good will and understanding would be reestablished among men and nations. That governments or rulers for many years to come would fear and hesitate to even attempt to force militarism on their peoples. Let us this day rededicate our lives to the end that peace, good will among men and nations will be reestablished and that war shall be outlawed forever.

Although many of us today are celebrating the joys of Armistice Day, yet we are mindful of the plight of our buddies who have become physical wrecks from the ravages of the war and who are today lying in the veterans' hospitals and other institutions throughout the United States. We wish them well and to them we pay our homage and sincere respect. We wish to pay our respects to Dr. Robert C. Cook, manager of the veterans' hospital at Aspinwall, his assistant, Dr. Butskie, and their able staff and nurses for the good work they are doing for the veterans at the Aspinwall hospital. The devotion to their work and the service they are giving to the unfortunate war veterans is most commendable and is truly patriotic peacetime service.

The American Legion and the American Legion Auxiliary, both of whom are sponsoring this program, are dedicated to the principles:

"For God and country, we associate ourselves together for the following purposes:

"To uphold and defend the Constitution of the United States of America.

"To maintain law and order.

"To foster and perpetuate a 100-percent Americanism.

"To preserve the memories and incidents of our association in the Great War.

"To inculcate a sense of individual obligation to the community, State, and Nation.

"To combat the autocracy of both the classes and the masses.

"To make right the master of might.

"To promote peace and good will on earth.

"To safeguard and transmit to posterity the principles of justice, freedom, and democracy.

"To consecrate and sanctify our comradeship by our devotion to mutual helpfulness."

The American Legion is today engaged in the following activities:

Preservation of peace.

Community welfare.

Americanization work.

Care of the disabled soldiers and their widows and orphans.

National defense.

Child-welfare work.

The promotion of law and order.

The promotion of the Boy Scouts, a world-wide association. An organization of the youths of our country interested in developing character in men and peace and good will among nations.

Businessmen and Congress—Our Constitution and Some History—Some Comparisons With England

EXTENSION OF REMARKS

OF

HON. MAURY MAVERICK

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 18, 1937

SPEECH BY HON. MAURY MAVERICK, OF TEXAS, BEFORE FORT WORTH OPEN FORUM, FORT WORTH, TEX., OCTOBER 25, 1937

Mr. MAVERICK. Mr. Speaker, during our "vacation," if you can call it one, I did some traveling through Texas and the Southwest, and also talked to hundreds of people about their attitude concerning the Government and business affairs. I talked to farmers, workers, businessmen, clerks, and the unemployed, too.

Among other things, I made a few speeches, one of which was at Fort Worth, Tex., before the Open Forum on October 25, 1937, and which I include under unanimous consent.

Everywhere I saw the people alert and interested in governmental problems. Nowhere did I see any lessening in the popularity of the President of the United States, Mr. Roosevelt.

My address was as follows:

FUNDAMENTAL PROBLEMS NOT SOLVED

My friends, we have not solved our economic and social problems. If every one of our millions of unemployed would be returned to work today, it is believed that almost immediately 5,000,000 men would be thrown out of work by the release of inventions which have not yet been released. Whereas we can see some light, we are a bewildered people, and have made no fundamental solutions.

War, death, destruction, hatred, and fear march over the world. One seeking to tell the truth is likely to suffer anywhere. In Communist Russia, if you do not agree, you are a Fascist spy and must be shot. In Italy or Germany, if you have an original thought, you are a Communist and must be purged, which is another way of being shot. These countries are jittery and war crazy; their people are without ordinary liberty. But our record is not so good either, for anyone speaking out his mind in this country is branded both a Communist and a Fascist, and sometimes an anarchist along with it. They even tar and feather people, gouge out their eyes, and beat them up—within 30 miles of Fort Worth.

THE THEORY AND PRACTICE OF HUMAN LIBERTY

Liberty—human liberty—the freedom of the printed and spoken word, religion, conscience, and the right of assembly is precious to every American. For hundreds of years it was a theory in England. A hundred years before our Constitution Milton risked his life for it. Practically, however, and at varying periods throughout our history, liberty has ceased to exist, but the theory has always persisted.

With liberty already an American right, at least theoretically, it was acknowledged and made practical by being put in our Bill of Rights, which we adopted after the Constitution. As you know, it is found in the first amendment to our Constitution. It says:

"Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the

freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances."

The philosophy in connection with what I have just read I shall consider as accepted by all sensible Americans. And by liberty of speech, press, and religion we mean that it shall extend even to those persons who talk violently, piously, ignorantly, or all three—to the Liberty League, Chamber of Commerce, the Manufacturers Association, the Communist Party, the Sons and Daughters of I Will Arise, and others. Let us keep all this in our minds as basic to American Government and applying to all—Republican saints, Democratic devils, Communist villains, to truth tellers, and to the biggest liars on earth.

SHALL WE STOP TALKING ABOUT THE CONSTITUTION? NO!

Now, my friends, I am told we must all stop talking about the Constitution. Many believe that the Supreme Court Justices—at least eight of them—are the Constitution. I am told that in polite and genteel society the subject has been dropped. But, frankly, the subject of the Constitution can never be dropped, if we are to exist as a free and democratic government. Anyhow, I have just shown there is liberty of speech and will exercise it.

Before I finish I shall talk of legislation in the next session of Congress, but regarding an honest discussion of the Constitution important, I shall do that first. For, indeed, very likely no effective government can be carried on unless our constitutional questions are settled. If they are not, Congress can go on legislating and the Court can go on breaking down and declaring void the laws of Congress and refusing to enforce those laws. The result would be chaos.

It seems to me the recent controversy concerning the Court was rather vulgar; it does not make much difference to either side of the controversy the number of the judges. Unfortunately the Constitution has become in the minds of millions as something separate, which, with some sacred or majestic power, rules from on high. But the true concept of the Anglo-Saxon constitution is that a constitution is what the people say it is. It is their own constitution. Our judges, not elected by, nor representative of, the people, say and believe that the Constitution is what they, the judges, say it is, and this view has been accepted by millions of people themselves.

Let me mention the British Constitution, for ours proceeds from it. What is it? As you know, it is unwritten; roughly, it contains all the charters, such as the Magna Carta, the Petition and Bill of Rights, the common law, statutes enacted by Parliament, usages and decisions of the courts. The Constitution of England can be defined as that which is the considered and fair view of what is right and wrong, as judged by experience, and it is what the people think it is.

Now, what is the American Constitution? It is a written document adopted in 1787, with various amendments since; it is under a glass showcase in Washington. If you don't like what Congress does, you can hire a constitutional lawyer and break down the law; at least some people have that idea of it. In fact, we have developed in the minds of millions a showcase constitution, a sort of demiglace constitution, like a beefsteak or filet mignon demiglace. Some worship the paper of the Constitution, and they, knowingly or unknowingly, are idolators, worshipers of the golden calf.

I am now about to present a view which will cause our most respectable lawyers to throw fits. It is that the Constitution is not merely a written, showcase, demiglace document, like a dry bone to fight over, but is a living, vibrant thing which ought to be in the heart of every American, and that the Constitution is not what the judges say it is, but what the people of the United States say it is. I announce another doctrine which will horrify the lawyers: The Declaration of Independence is still vital and in effect for the people of the United States of America.

IS DECLARATION OF INDEPENDENCE PART OF CONSTITUTION?

Now, the Declaration of Independence complained of the King breaking down the law of the Colonies; and more than anything else, it complained of the violation of the constitution. The Constitution then was, and is now, that ineffable thing which I have already described as being in the hearts of the people.

When Jefferson used the word "constitution" in the Declaration it meant those usages and customs which ordinarily indicated the rights and privileges of free Englishmen up to that time, 1776.

By the Declaration the people merely changed their name from Englishmen to Americans, or to put it more accurately, from free Englishmen to free Americans. The constitution covered all British citizens, so the Declaration was merely a political separation establishing a new government which inherited all of the constitutional rights. Therefore, at the time of the Declaration of Independence there was already a constitution, and that the Declaration of Independence itself was a constitutional change, principally on one point: Separation from the mother country.

IF DECLARATION IS NOT IN EFFECT, WE ARE STILL PART OF BRITISH EMPIRE

But the point is made that the Declaration of Independence means nothing whatever now, because we have adopted a "Constitution." Well then, if the Declaration of Independence is not in effect, we are still a part of the British Empire. Then it is conceivable that the Declaration of Independence is a part of the American Constitution, and is at the very least its foundation stone.

We have the Articles of Confederation, which are now dead and forgotten, and which no one reads any more. But just as the Petition of Rights is a part of the British Constitution, or, at least, its constitutional history, so are the Articles of Confederation, which formed a stepping stone toward more unified action of the American people of the newly liberated Colonies or States. In fact, the articles were known as the constitution.

The articles were really known as the Articles of Confederation and Perpetual Union. The articles set out the constitutional rights principally in three points: First, there was a reaffirmation of the liberties of the people and their constitutional rights; second, there was established the principle of perpetual union; and, third, there was established the fact, to use the exact words, that the people had the right of "free ingress and regress to and from any other State," which in effect established the idea of a single nation, or the right of the citizens of the United States to travel over this single nation wherever they pleased.

These statements concerning the Articles of Confederation and Perpetual Union are important. Indeed, the concept of the Constitution of Benjamin Franklin, and most of our forefathers, was that the word "constitution" was synonymous with the word "government." Benjamin Franklin used the two words as meaning exactly the same thing.

FALSITIES ABOUT THE CONSTITUTION ADOPTED AT PHILADELPHIA

Then we have the Constitution itself, which was adopted by delegates of various States in 1787. And we might as well get rid of some of the false statements made about it time after time. On Constitution Day we are told that the reason for having a constitution was entirely to protect the liberties of the people and to preserve States' rights.

Both of these are historically and factually absolutely false.

That our forefathers tried to blot out liberty and the inherited constitutional rights of the people I do not believe. Their purpose was to stop the commercial anarchy of the times and to get business going. In any event, although liberty was mentioned in the Preamble, and habeas corpus was protected, there was no Bill of Rights in the original Constitution.

Likewise, far from protecting the rights of the States, it was quite the opposite, and for the purpose of having a strong centralized government and to develop a nation with Federal customhouses, no State tariff barriers, and to build up economically one single nation. That our forefathers assembled as a sacred group of men to save the liberties of the people and the rights of the States is simply nonsense. They were young, energetic men, able, businesslike, and they knew that things were not working. Times were bad. They wanted things to work. So they wrote a contract or document and called it the Constitution.

Entirely as an afterthought, and after the Constitution was adopted and in operation, the Bill of Rights was submitted to the various States by Congress. This Bill of Rights was presented only because the leaders thought the Constitution would not prove an effectual binding power, and that the new Nation would fall apart; and so the Bill of Rights was adopted.

Of course, the Bill of Rights, or the first 10 amendments, thereby became a mechanical part of the written Constitution. It was merely putting in written form what the people believed to be fundamental Anglo-Saxon constitutional rights. But even then, the adoption of the Bill of Rights did not mean a negation or blotting out of other constitutional rights which had been inherited through all the ages of the English Constitution, and through the Declaration of Independence and the Articles of Confederation and Perpetual Union.

CONSTITUTION CHANGES IMPERCEPTIBLE; EMANCIPATION PROCLAMATION

Again, I say, what is our American Constitution? Is it some piece of hard, cold steel which was originally melted, poured out, and then made solid for all the ages? Were we supposed to have exactly the same interpretation of the Constitution, and, of course, always a reactionary one, for all times to come? Let us think of the time of the adoption of our Constitution.

All of us know that our country was different then than now. Now we have congested cities, modern transportation, modern inventions; the actual needs of the people have changed. From a small Nation or a couple or 3,000,000 farmers we have grown into the mightiest Nation on earth; and during that process of change, imperceptibly, gradually, slowly, the hearts and minds of the people have changed, too, and with it the concepts of our Constitution.

For instance, the Emancipation Proclamation. It was not constitutional at the time—or then accepted—in fact, we Americans were just then killing each other off for the sake of the Dred Scott decision of the Supreme Court. But it can be truthfully said that this proclamation, though issued by no court, no Congress, no group, is a part of the Constitution; at least, we can say that it is an epoch, a landmark, a part of our constitutional history.

WHAT IS THE CONSTITUTION?—A SCHOLAR ANSWERS—ITS CONTENTS

Munro, in a textbook on European government, in making a comparison with American Government, says:

"The Constitution of the United States includes not only the original document of 81 sentences which were so laboriously put together in Philadelphia in 1787, but the vast mass of statutes, judicial decisions, precedents, and usages which have grown up around it. It is a live, growing organism which never stands still, and never can stand still."

So, to sum up, it might be advanced that the American Constitution is what the people think it is. It contains the precedents of justice and liberty of the English Constitution up to 1776, the concepts of the Declaration of Independence, the next governmental step of the Articles of Confederation, the written

Constitution itself, which was adopted at Philadelphia in 1787, most of our judicial decisions (not all, since dozens have been reversed), Lincoln's Emancipation Proclamation, our statutes, constitutional amendments, tested public opinions, usages, and statutes.

Take the Wagner Labor Relations Act as an example. It was not necessary in 1812, and very likely would not have been considered by the people as constitutional; but today it is constitutional, and not because the judges said so, but because the people gradually evolved the idea and accepted it in their daily lives. That law was constitutional even though 58 Liberty League lawyers said it was not and urged its violation. Moreover, according to any rule of logic or common sense, the law was constitutional while it was being violated and long before the judges finally said it was constitutional.

In speaking of the Constitution let us always think of it as a part of our everyday lives, and thereby of our fundamental law. Some of the critics of the President say he is breaking down the Constitution, trying to destroy the Supreme Court and be a dictator like Stalin, Mussolini, and Hitler, all in one. Let us follow what the President does. He suggests something to Congress. Immediately he is charged with being a dictator. Such a charge is nonsense, for the Constitution requires him to do this, and common sense requires him to be leader of his party. We might as well remember that Mr. Hoover was looked upon with contempt because he could not get along with Congress; that is why Mr. Hoover got beat—lack of confidence in him as a leader. So there is no logic in blaming Mr. Roosevelt for doing his constitutional duty and attempting to lead Congress.

WRITTEN POWERS OF THE SUPREME COURT OF THE UNITED STATES

As for the Supreme Court, let us discuss some of its actual written powers, since lawyers say that all power proceeds from the written Constitution. Merely making an observation, I picked up one of my children's civics books, American Government, by Magruder, used by millions of children, and here is what it says:

"The power of the courts to declare acts of Congress or acts of State legislatures unconstitutional according to the United States Constitution is not granted in the Constitution."

No one any longer claims that the Constitution says that the Supreme Court can declare an act of Congress unconstitutional. But the mere mention of the subject throws some of our Tories into a quiver, and they generally say something about the stability of business. So let us talk about this unlimited exercise of power by the Supreme Court in its relation to the actual stability of business.

SOME PRACTICAL CONSIDERATIONS FOR BUSINESS

Congress enacts a law. Then some group decides not to obey that law; they hire a half dozen John W. Davises and there is a running fight of injunctions, writs, appeals, court postponements, and other delays. During that time businessmen do not know which way to turn and they lose confidence. When the 58 Liberty League lawyers, whom I have just mentioned, said the Labor Relations Act was unconstitutional, and told their clients to violate the law, just such a thing happened. And as a result, eighty-odd injunctions were filed against the Labor Board to keep it from settling disputes. Then as a direct result of that, and for no other reason, came the sit-down strikes. While the lawyers were banging away at the law it was treated with contempt, and as a result there was business, labor, and industrial anarchy.

The whole argument on this Court business is based on the powers assumed by the Court to declare acts of Congress unconstitutional. The Court should not invade the field of legislation nor pass on the wisdom of the acts of Congress. The test of the constitutionality of a law is not and certainly should not be merely that judges do or do not like it.

SUPREME COURT INVADES THE FIELD OF LEGISLATION

What has happened is that the Supreme Court has invaded the field of legislation, and by the use of such magic phrases as "due process of law" they declare laws unconstitutional simply because five of the members of the Court do not like the particular law.

I suppose you are getting a little sick of the Constitution, but let me sum up as rapidly as I can. The point is the Court has knocked out such laws as the Guffey Coal Act, the Agricultural Adjustment Act, which invaded no one's liberty. Then, straining at what they call due process of law, which is just their opinion, the judges void a law.

In other words, the Court has entered the field of economics and legislative policy. From that field they must withdraw, and when the Court does, the discussion is over, because then we will have representative, democratic government, which we are supposed to have.

SUPREME COURT CONTROVERSY HAS DONE MUCH GOOD

Now, they say that a great deal of harm has been done by the recent Supreme Court controversy. This statement is not true, since, after all, we are supposed to have a democratic country, and discussions, free speech, knowledge, and education form the basis of our Government. The controversy has actually done an immense amount of good because—

First. The Supreme Court has reversed itself in several cases on numerous points of law which make it possible for the country to be governed.

Second. It has been discovered that all judges are human; that they play politics, go to church, get angry, and have all kinds of headaches. The education and information given to the people, although most of it was mis-education and misinformation, has been valuable. The hysteria about the taboo of the Supreme Court has at least been touched.

CONCEPTS IN RELATION TO CONSTITUTION

My friends, England has free and untrammeled courts, and it is worth while to observe them. Liberty is as well protected in England as it is in America. The high court of England, nor any of its courts, cannot declare an act of Parliament void and invalid—but still the liberties of the people are protected.

Why?

The British Constitution, as I have said before, is in the hearts and minds of the British people. I am sure that ours is too, but I hope that we will get rid of this showcase Constitution idea of hiring a lawyer to knock a law out because someone does not like it. I hope that we will develop representative government, democratic government, government of the people, and become a real democracy as we are supposed to be.

LET US MEND, NOT END, THE SUPREME COURT

My friends, we need not end the Supreme Court, but we might as well mend it or, they might mend themselves, by staying within their judicial functions. The business of courts is to protect the real liberties of the people, get them out of jail when they are wrongfully imprisoned, to settle disputes, and enforce, not break down, the laws of the people's representatives. The Supreme Court should settle conflicts of State and State, State and National laws, declare void State laws which violate the Federal Constitution, and for that matter, they should only declare acts of Congress unconstitutional when they actually invade the field of liberty, such as of the press, religion, speech, and trial by jury.

Here I should like to offer you an observation that the countries of Europe that had elastic, flexible constitutions, still enjoy democracy and free government. Some of them are England, France, Switzerland, Norway, Denmark, and Sweden. The countries which had inflexible governments and absolute laws still have absolute governments, and are generally considered worse and more absolute. They are Italy, Russia, and Germany.

THE SPECIAL SESSION, NOVEMBER 15—WHAT ABOUT IT?

Well, now, let's get to the next Congress. We will consider a maze of serious laws affecting your lives, and because of the international situation the people of the whole world. But more serious than the laws themselves is the situation of the Democratic Party and its internal cross currents.

I say this wholly without going into personalities and am doing this in the sense of an English politician who talks on principles of government. I am one southerner who believes that we should get rid of our southern complexes, that we should forget the Civil War, and realize that the South, after all, has the lowest wages, the lowest fertility of its soil, the worst housing, and generally the worst conditions of any other portion of the United States of America. We must get rid of our smelling magnolia blossoms for the purpose of government, and get down to the bare facts of the economic rights of all the American people, north, south, east, and west.

DEMOCRATIC PARTY—WE MUST HAVE COHESION

I am frank to say that it would not hurt the South if it had another political party. I don't necessarily mean a third party, but just plain old reactionary Republicans, if nothing else. In the South, if you are a Democrat, whatever you say or believe, you get elected. The result is that we have all kinds of southern Democrats—also big-city Democrats, like those from New York City, Kansas City, St. Louis, and Chicago; northwestern Democrats, who come out of the Farmer-Labor area; then we have the western Democrats. We Democrats need a binding force. So far it is Roosevelt, who is a real friend of the South. [Applause.]

During the last session of Congress the minimum-wages and maximum-hours bill failed of enactment, largely because of the southern delegation, of which I am a member. I do not criticize my colleagues but speak for myself. I was for the minimum-wages and maximum-hours bill because I believe that the South needs it more than any other section of the country. Southern Democrats kept the bill from coming on the floor.

Then it was suddenly realized that the crop estimate on cotton was going to make the price of cotton topple. We southerners demanded a cotton subsidy, but it looked as though the subsidy would be defeated. And so our leaders got on the floor and begged that the bill be passed. It was almost defeated by the northern and western Democrats.

What, then, is it that we of Congress and the American people need to do? It is not that we should be for this or that bill which some special-interest group favors or which is sectional in character, but that everyone must realize that America is one economic unit. More, we must abandon our ideas of governing in the past and quibbling over what used to be and govern for the present and the future. In other words, we must be intelligently and thoughtfully progressive. If we follow that rule we can pretty near know how to vote on any bill.

Let us get permanently in our minds, my friends, that we cannot have a separate unit of underprivileged areas, as the South is at the present time, and that there must be other areas which have superior privileges to ourselves, and vice versa. We must have certain minimum privileges for all the people of the United States of America.

PROGRESS ALWAYS DENOUNCED AS DESTRUCTION BY REACTIONARIES

Take the minimum-wage law, the Social Security Act, and National Labor Relations Act. Every law that concerns human progress or the rights of humanity is always denounced as something

that will bankrupt business, and recently more particularly that these laws will bankrupt the South especially, because we have such cheap labor it cannot be paid the miserably low standards hoped for.

These kinds of statements were made by the big shots of England when public opinion wanted to stop children 7 years old from working 14 hours a day in the mills of Manchester; it was said again when people wanted to abolish child labor in America; it was said by Judge Gary that the Steel Trust would go broke if it worked the men before their open furnaces and hearths any less than 12 hours a day.

My friends, business has not gone bankrupt, and as cultural and social advances are made in society, business has been more humane, and just as profitable. Therefore it seems to me that the intelligent thing for us to do is to stand for progress and laws which are for social and human betterment.

Besides the minimum-wage and maximum-hour bill, Congress will consider an agricultural bill. I do not even know what bill is going to be presented. But the purpose is to protect agriculture and labor—that is, the American people. And the point is not the specific legislation but the idea that we must no longer submit to blind economic forces and leave the American people afloat in a sea of exploitation and monopoly pirates. In this we must recognize the principle of the responsibility of the people to the Government and the Government to the people, for both are the same.

And as for the minimum wages and agriculture bills, one thing is certain, they should be enacted together, so that all groups will get a square deal.

WE MUST GET OUR HEADS OUT OF THE SAND

Should we wish to consider something really important, we might as well get our heads out of the sand and study unemployment, for, as I said in the very beginning, we have not solved our serious problems. In the closing days of the last Congress we passed a bill which is supposed to be an unemployment census. Everybody who is unemployed is supposed to fill out a blank that he hasn't a job.

In my opinion, this whole affair is worthless, useless, and another case of our sticking our heads in the sand like silly ostriches so we can't see the truth. I hope it will be successful, but seriously doubt it. The unemployed, well knowing filling out a blank won't get them jobs, won't sign up, and because of the haphazard character of the set-up the job will be done inefficiently, and when finished will undoubtedly mean absolutely nothing.

In the last session of Congress I introduced—and so did several other Members of Congress—a bill to provide for an unemployment commission, to make a real study of the unemployment problem, in order to determine the causes of unemployment, the economic background of our present situation, and to further report on the problems of youth and old age. All of this is intended to be handled with a view to really solving something. Just to find out is one of our problems; we haven't even done that. So, if you really want to be for something basic, be for the establishment of an unemployment commission.

THERE HAS BEEN A REVOLUTION—NOT BLOODY, BUT NEVERTHELESS A REVOLUTION

The most important thing for us all to do is to realize that there has been a revolution, just as our first one, and just as the French Revolution; the only difference is that this revolution has not been bloody. Many of our people cannot see this, some of them refuse to see it. Some are like the old French aristocrats, who died, not being able to comprehend what had happened. And that human stupidity lasts on forever, there are still people in France who still claim to be aristocrats, and still call themselves princes, dukes, and counts.

Our change or revolution has already occurred! The 130,000,000 Americans who live here are not going to go back to the old order. We could not go back if we wanted to, but the people have no intention of doing it anyway.

At this very moment, my fellow Texans, the big boys of Wall Street, the big chambers of commerce, the National Manufacturers' Association, and the noisy rich are beating tin pans of false despair, and are telling you that the Government is really going to hell. There is a great gush of propaganda, supposed to induce fear in the minds of the American people, being shot through every phase of our life; in our newspaper headlines, in articles, in special columns, and in vicious and malicious cartoons. And, truthfully, as I am speaking, there has been what we might call a "business recession", but as for there being any real or honest excuse of any depression, there is none. I have not the time to discuss it here, but there is one thing sure: Hoover and Mellon tried to settle all our problems by letting the stock market go wild, with the big taxpayers being freed of their surtaxes and with the burdens on the people generally. They killed their own golden goose. The result was the greatest crash in history. Certainly we cannot go back to anything like that.

If I am any judge of the American people this kind of propaganda is going to fall flat. It may cause discomfort for a time, but the American people have bit on this propaganda enough so that I do not think they will do it again. All of these people who are now wrapping themselves in the flag and moaning about the Constitution when they really mean something else, are not going to be able to halt the march of progress of the American people—at least, not with the consent of the American people. [Applause.]

It is fortunate that we can afford to laugh at their asininities, and let them roar in the kept press and free air of a free country; no longer is it either sensible or necessary to spill blood, but we can accomplish everything by using our own heads, and voting intelligently.

Yes; we ordinary people are going to have to save this country, just as ordinary people have done in the past. [Applause.] But if we do, we must not be afraid of ridicule from the "smug-mugs," of being called horrid names.

We must march ahead courageously, using our headpieces instead of our fowling pieces; and just as the farmer boys at Lexington and Concord caused the shot that rang around the world, we can do the same, and make this a decent country in which to live. [Applause.]

Mr. Speaker, following the speech which I have just inserted, various questions were asked, which were also taken down by a court reporter. These questions indicate what people are thinking about:

LEAGUE OF NATIONS—JAPAN AND CHINA—NEUTRALITY

Question. Mr. MAVERICK, at the present time Japan is invading with the greatest brutality the peaceful nation of China. (Question largely eliminated because of long discussion of the League of Nations.) Mr. MAVERICK, do you not believe that we should cooperate with the rest of the nations to keep peace in the world?

Answer. I am frankly bewildered as to what should be done. I am not afraid to answer that question, but merely cannot. However, I will set down this premise. I will not vote for war unless we are actually attacked [applause]——

Questioner (interjecting). Very well, Mr. MAVERICK, you have said numerous times that we loaned money in Europe and kept on lending it, and went to war, to a certain extent, to collect the money. Do you not think that if we could by the use of sanctions, boycott, or whatever you want to call it, prevent the extension of credit to the various nations, that we could keep ourselves out of this war?

Answer by MAVERICK. Without reference to any particular foreign nations, we should invoke our own embargoes on the supplies against any at war. We should observe neutrality. [Applause.] We should not extend credit to any; we should stay out of it.

ANTILYNCHING BILL FOR ALL CITIZENS

Question. Mr. MAVERICK, you were the only southerner who voted for the antilynching bill. Will you explain that bill and tell me the attitude of other southerners and why they did not vote for it?

Answer. Your question is somewhat embarrassing. Indeed, those who voted against the bill were quite as conscientious as I am. In voting for the bill I was not thinking only of the colored people, but was thinking about American citizens, white or black, and the protection of their lives from mobs. [Applause.] We must not forget that they lynch people out in California—white men—and the then Governor of California indirectly approved—and was bitterly criticized by President Roosevelt.

But as a matter of fact, I am not the only person from the South who voted for the antilynching bill. Several scattered through the States of Oklahoma, Kentucky, Tennessee, and Maryland voted for it.

In speaking of the South it might be said that Texas is really not a part of what is generally known as the South. Texas is southwestern and has a different psychology. Florida, even, has had such a heavy migration from the North that I am told that it is no longer southern in that sense. The same applies, more or less, to some other Southern States.

My personal opinion is that all of us must stop voting and thinking from a sectional viewpoint. There is a difference between regionalism and sectionalism. Certain regions, because of geographical, climatic, or other reasons, are entitled to certain appropriate treatment, but sectionalism consists of special privileges, favors, or discriminations. There is a great deal of difference between regionalism and sectionalism.

THE SUPREME COURT AND CONSIDERED PUBLIC OPINION

Question. Mr. MAVERICK, you say the Supreme Court has exceeded its power?

Answer. Sure.

Question. * * * And I would like to know how are you going to stop the Supreme Court? How are you going to decide?

Answer. Well, that is very difficult to answer. My idea is, as I said in the main speech, the Supreme Court should confine itself to protecting what are really the liberties of the people. They have dragged out "due process of law" and have made an entirely new baby of it. They have him in clothes he was never intended to wear.

As you know, "due process of law" is contained in the fourteenth amendment—it referred to "persons, born or naturalized"—that they should have due process of law. The amendment was written entirely on account of the liberation of the slaves after the Civil War and was intended to be for the preservation of their rights and the rights of persons, and for no other reason whatever.

But the Supreme Court came along, and they said that "person" meant "corporation." This interpretation caused the greatest destruction of natural resources and violation of the rights of the States that you can imagine. It was a license to loot the States. This has all been accomplished through the Supreme Court. In doing this the Supreme Court assumed legislative powers and changed the economic face of the Nation.

A lot of people talk about preserving "States' rights" with capital letters. The truth of the matter is that the Supreme Court has not preserved States' rights, but have preserved the rights

of great corporations. They have permitted the great corporations to cross State lines and have kept the States from properly regulating them by numerous decisions. My idea is that the Supreme Court should withdraw from the economic and legislative fields and should confine itself to the protection of the liberties of the people.

Question. How is that to be accomplished, Mr. MAVERICK, since they have the power to declare acts of Congress unconstitutional?

POWER OF THE SUPREME COURT

Answer. They have the power, you say?

Question. Of course.

CONGRESSMAN HILL OF WASHINGTON OFFERS $100,000 PRIZE TO ANYONE FINDING POWER OF COURT IN CONSTITUTION

Answer. Well, now, suppose I admit that they have the power; still there is no written authority for such power in the Constitution, which, of course, everyone admits. One of my colleagues, Mr. KNUTE HILL, of Washington, says that he used to teach school, and that he would give any student $100 who could show that the Constitution says the Supreme Court has that power. He says that he now has it up to $100,000. [Laughter.]

In any event, the Constitution does not grant such power to the Supreme Court. How do they get it? The answer is, they got it by public opinion making no objection. They first exercised the power in the case of Marbury against Madison, when it did not make any difference; and even then Chief Justice Marshall said that it would be better for Congress to veto any declaration of unconstitutionality, rather than that the judges be impeached by Congress, which power, he said, they had, and which, of course, everyone knows they had.

As public opinion becomes more informed it will look with scorn on the Supreme Court assuming powers, which neither in common sense nor democratic government they are entitled to have. When the public comes to understand that the Constitution does not even say the Court has the power to declare acts of Congress unconstitutional, they will then demand that the Court confine itself to the protection of the liberties of the citizen and not interfere in legislation.

MINIMUM-WAGE BILL—FARMERS—APPLICATION TO SOUTH

Question. Mr. MAVERICK, you say you voted for the minimum-wage and maximum-hour bill, and that you were——

Mr. MAVERICK (interjecting). I did not say I voted for it, because I never had the opportunity. However, I will vote for it if I get a chance. [Applause.]

Questioner (continuing). All right, that is all the same; you say you will vote for it. But what about the farmers, the ranchers, who toil and work? What about cotton pickers? You have a bill which protects the people in the cities but does not protect the farmers and the ranchers. What are you going to do about the farmers and the ranchers?

Answer by Mr. MAVERICK. Well, when you vote for a law it cannot be perfect in the first place. The Social Security Act is by no means perfect, but I voted for it, and it covered certain groups of people. I hope that it can be extended as time goes on. But specifically answering your question on the minimum-wage and maximum-hours bill, I know one thing—when wages are high in the cities farmers have good business. When were they dumping milk but back in the Hoover administration, at the time there was great unemployment and the prevalence of low wages? Sure.

The farmers are getting along much better now, and that is because the people in industrial occupations are getting somewhat better wages. Then why shouldn't we have minimum wages for people in cities? In my own city it is known that pecan shellers have gotten an average wage of $1.29 a week, which, I believe, is about the lowest wage in America. You have girls here in Fort Worth working for three, four, and five dollars a week. The answer is that if we can make certain protections for these people they can buy more, they can get organized, and they can be better citizens, and it will be better for business, and society in general.

Yes; they can get better organized and therefore protect their economic and political rights. Then, when you get down to brass tacks, there is many a kid who leaves the farm and goes to town. It is estimated that from 30 to 40 percent of the population of the cities are from the country. But certainly those people who live in the country and whose relatives go to town want those relatives to be protected. Moreover, my friend, there is a difference between agricultural and industrial labor. Some men who live in the country get very low wages indeed, but they have the rent of houses and sometimes other privileges, such as the use of wood, heat, light, and fuel, and their wages are really higher than they seem. Yes; I will vote for the minimum-wage and maximum-hour bill, and I think that I will be benefiting everybody. [Applause.]

ARE JUDGES BETTER BECAUSE THEY HAVE JOBS FOR LIFE?

Question. Do you not think that the Supreme Court is better fitted to judge what is good for the people because they are naturally unbiased and since they have good jobs for life?

Answer. Why should jobs for life fit a man for being a better judge of life, when his life is assured and other people's are not? No! No! If that is true, double my salary and give me a job for life. [Laughter.]

The truth of the matter is that there is a question in my mind whether or not judges should have their jobs for life. Any man who gets a job for life and who does not have to concern himself about anybody else's affairs is likely not to understand them. How many judges take the trouble to really understand the various and sundry problems of humanity? Many of them take the attitude that they should not associate with other people because they might be considered as being either undignified or biased in their decisions. For instance, Justice Roberts, the swing man of the Court, who goes back and forth on all decisions, associates very little with the average American. And not to belittle or to spread any scandal, for it made no particular difference, nevertheless, Mr. Roberts went to the McLean party, where some several thousand dollars were spent for champagne and liquor. This is no reflection; he behaved like a gentleman. I only mention it to show that he is more familiar with champagne and dress suits than with overalls and beer. He had his picture taken, all dressed up in a dress suit, at this swell affair. Mr. Roberts is no doubt a good man, but I doubt if he knows anything at all about ordinary, average men.

And since one may think it necessary to have public officials good men because they get $20,000 a year, jobs for life, and no responsibility, why not do that for Congress? The truth is a man may be less fitted to decide human questions if he is frozen in a job for life. But, at that, a judge is human and can make mistakes.

SHOULD A KU KLUXER BE ON THE BENCH?

Question. Say, Mr. MAVERICK, do you think a Ku Kluxer ought to be on the Bench? What about this fellow Black?

Answer. I knew that was coming up, all right. [Laughter.] Well, we people down here in Texas better not be too choosey about Ku Kluxers. I was a bitter opponent of the Klan and fought it from the time it started. I know some Ku Kluxers who still think the Pope's Navy is on the way to the United States, and some of them who still refer to "Catholics, niggers, and Jews" all in the same breath, and all as people who ought to be gotten rid of. I know a man back home who is a Ku Kluxer and would still like to burn down a Catholic Church, or lynch a colored man, or run a Jew out of town if he had a chance, who made the remark that I made a fool out of myself by saying Black was a good man, because I would never forgive him—I mean the Kluxer back home. My answer was that this particular fellow was not fit to even join the Klan. [Laughter.]

KU KLUXER, CORPORATION LAWYERS, ENGLISHMAN ON SUPREME BENCH

But, getting down to the point, I know Black personally, and he is a good, honest man. He is on the square. His wife is a fine lady. Both of them have studied hard; he has been a student, and he is right on social and human issues. He is for the improvement of the human race; he believes in better labor conditions; he believes that people ought to live in good houses, be educated, and have decent living conditions.

I do not think that his Klan affiliation will affect him as a Justice in any way, and I believe that he will make an excellent one. [Applause.]

And I want to make an important observation: Black, unconsciously, has done a great deal of good, just by getting criticized. For it has been found out that other judges are human, too. There is Justice Sutherland, born in England, and who never fails to visit his native country at every chance. If Black is to be denounced as a Ku Kluxer, some narrow-minded person may refer to Sutherland as an Englishman, and as not knowing so much of the United States. Someone else may refer to former corporate connections of other Justices, and their opinions which are favorable to corporations.

The really important thing is for every American to realize that the judges are human, prejudiced, biased, and have extreme views, one way or the other, just like us. They are not perfect, they are not saints. And if the people make mistakes, it is better to make them themselves rather than a few who have jobs for life. Think that over.

THE C. I. O. AND THE A. F. L.—WILL THEY GET TOGETHER?

Question. Mr. MAVERICK, do you think the C. I. O. and the A. F. of L. will get together, and which organization do you like the best?

Answer. Lordy, Lordy, I knew that I'd get a question at the very last that would take an hour and a half to answer. First of all, I don't like either one the best, but I like all organizations which are for the purpose of bettering humanity. The C. I. O., the A. F. of L., the rail brotherhoods, and any other labor organizations should, in my opinion, be supported by public opinion.

But answering your question directly as to whether the C. I. O. and the A. F. of L. will get together, I don't know. [Laughter.] But discussing the questions involved, which is the most important, the C. I. O. stands for industrial unionism—you know what I mean, to cover such big industries as automobiles, mines, textiles, and such as that, and in which case they will have only one union covering a given industry. The American Federation of Labor is based on craft unionism, which means that they have, we will say, stationary engine operators, plasterers—then, for instance, in the printing trades, pressmen, lithographers, photoengravers, printers, stereotypers, and so on. That's the set-up.

If we have big industries, we must have big industrial unions. In the building trades, no doubt, the idea of craft unionism is the thing—in any event, there is little likelihood of the break-up of the building trades in the matter of crafts. My personal opinion is that there is a place for both industrial and craft unionism. Further, the rank and file of the American people do not like this fighting; neither are any of the people who belong either to the C. I. O. or the A. F. of L. mad at each other. [Applause.] And my idea is that within a couple of years they will be forced by their own members and by intelligent public opinion to get together.

The reason is that industrial unionism has established itself, and the A. F. of L. cannot stop it. The American Federation of Labor and the public must indeed recognize industrial unionism because it is an accomplished fact. But the C. I. O. cannot wholly dominate the field, which they know. There is a place for both, and I think that they will get together sooner or later, or, at least, they better get together, if they know what is good for labor.

Well, now, I have about talked you down [laughter] and it is about time that everybody go home and go to bed. I have enjoyed making my speech, trying to answer your questions, and I hope to come to Fort Worth again some time and talk to you. This is one of the nicest audiences that I ever talked to—no kidding—and I notice that a majority of the audience are youngsters. Look down there—I see a bunch of girls who run between fifteen and twenty-one—and there, over in the corner, I see a bunch of boys who go to Texas Christian University, whom I met on the way in. Yes, sir; I have had a good time, and I hope that you have not been bored quite to death. Good night, and I will see you again. I am going up to Washington and vote progressive, which is best for Texas and the Nation. [Applause.]

Address On War

EXTENSION OF REMARKS

OF

HON. JOSEPH B. SHANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, November 22, 1937

ADDRESS BY ALEXANDER CAMPBELL, DELIVERED AT WHEELING, VA., IN 1848

Mr. SHANNON. Mr. Speaker, I ask unanimous consent to extend my remarks and to include an Address on War made in 1848 by that great Christian and scholar Alexander Campbell. It is the most eloquent discourse I have ever read on that subject. His arguments against war are as tenable today as they were when advanced by him in 1848.

The address is as follows:

Ladies and gentlemen, has one Christian nation a right to wage war against another Christian nation?

On propounding to myself, and much more to you, my respected auditors, this momentous questions so affecting the reputation and involving the destiny of our own country and that of the Christian world, I confess that I rather shrink from its investigation than approach it with full confidence in my ability to examine it with that intelligence and composure so indispensable to a satisfactory decision. With your indulgence, however, I will attempt, if not to decide the question, at least to assist those who, like myself, have often and with intense interest reflected on the desolations and horrors of war, as indicated in the sacrifice of human life, the agonies of surviving relatives, the immense expenditures of a people's wealth, and the inevitable deterioration of public morals invariably attendant on its existence and career. If with Dr. Dick, of Scotland, we should put down its slain victims to the minimum of 14,000,000,000; or with Burke, of Ireland, at the maximum of 35,000,000,000; or take the mean of 24,500,000,000, what imagination could picture all the miseries and agonies inflicted upon the slain and upon their surviving relatives and friends? And who could compute the wealth expended in the support of those immense armies whose butchered millions can never be exactly computed? If Great Britain alone, from the revolution in 1688 to the overthrow of Napoleon in 1815, during her 7 years' wars, occupying 65 years of 127, expended the sum of £2,023,000,000—more than $10,100,000,000—a sum much more easily expressed than comprehended by even the most accomplished financier—how can we compute the aggregate expenditures of all the battles fought and wars carried on during a period of some 5,000 years? Yet these millions slain and these millions expended are the least items in its desolations to the mind of an enlightened Christian philanthropist. When we attempt to reflect upon one human being in the amplitude and magnitude of his whole destiny in a world that has no limit and also survey the capacities and susceptibilities of his nature according to the Christian revelation, how insignificant are the temporal and passing results of any course of action compared with those which know neither measure nor end. How important, then, it is that in investigating a subject whose bearings on society arithmetic cannot compute nor language express we approach it with a candid and unprejudiced temper and examine it with a profound and concentrated devotion of our minds to all that history records, philosophy teaches, and religion enjoins.

But, before entering upon the proper examination of this question, it may be of much importance to a satisfactory issue that we examine the terms in which it is expressed. More than half the discussions and controversies of every age are mere logomachies, verbose wranglings about the terminology of the respective combatants; and more than half the remainder might be compressed into a very diminutive size, if, in the beginning, the parties would agree on the real issue, on the proper terms to express and define them.

As public faith or commercial credit, founded upon an equivocal currency, on its exposure suddenly shrinks into ruinous dimensions, at once blighting the hopes and annihilating the fortune of many a bold adventurer, so many a false and dangerous position, couched in ambiguous terms, when pruned of its luxuriant verbiage, divested of its captivating but delusive elocution, and presented in an intelligible, definite, and familiar attitude, is at once reprobated as unworthy of our reception and regard.

On comparing the literature and science of the current age with those of former times we readily discover how much we owe to a more rigid analysis and a more scrupulous adoption of the technical terms and phrases of the old schools, to which the whole world at one time looked up as the only fountains of wisdom and learning. When submitted to the test of a more enlightened criticism many of their most popular and somewhat cabalistic terms and phrases have been demonstrated to be words without just or appropriate ideas, and have been "nailed to the counter" as spurious coin; others, however, like pure metal in antique forms, have been sent to the mint, recast, and made to receive the impress of a more enlightened and accomplished age.

The rapid progress and advancement of modern science is, I presume, owing to a more rational and philosophical nomenclature and to the more general use of the inductive system of reasoning, rather than to any superior talent or more aspiring genius possessed either by our contemporaries or our immediate predecessors.

Politics, morals, and religion—the most deservedly engrossing themes of every age—are, in this respect, unfortunately, behind the other sciences and arts cultivated at the present day. We are, however, pleased to see a growing conviction of the necessity of a more apposite, perspicuous, and philosophical verbal apparatus in several departments of science, and especially to witness some recent efforts to introduce a more improved terminology in the sciences of government, morality, and religion.

To apply these preliminary remarks to the question of this evening, it is important to note with particular attention the popular terms in which we have expressed it, viz:

"Has one Christian nation a right to wage war against another Christian nation?"

We have prefixed no epithet to war or to right, while we have to the word "nation." We have not defined the war as offensive or defensive. We have not defined the right as human or divine. But we have chosen, from the custom of the age, to prefix Christian to nation. The reasons for this selection and arrangement of terms shall appear as we proceed.

First, then, had we prefixed the word "offensive" to the word war, we would, on proving that a Christian nation had no right to wage an offensive war, be obliged to institute another question, and to ask, "Can a Christian nation wage a defensive war against another Christian nation?" thereby implying that one Christian nation might be the aggressor and another the aggrieved. But we cannot without great difficulty imagine such a thing as a Christian nation carrying on an aggressive war. We, therefore, simplify the discussion by placing in the proposition the naked term "war." Nor shall we spend our time in discussing the political right of one nation to wage war against another nation, and then ask whether they have a divine right. Indeed, the latter generally implies the former; for, if a nation have a divine right, it either has or may have a political or moral right to do so.

But we must inquire into the appropriateness of the term "Christian" prefixed to nation—for popular use has so arranged these terms—and the controversy, either expressly or impliedly, as nowadays occasionally conducted in this country, is, Has one Christian nation a right to wage war against another Christian nation? But, as we assume nothing, we must ask the grave and somewhat startling question: Is there a Christian nation in the world, or have we a definite idea of a Christian nation? We have, indeed, had, for many centuries past, many nations called Christian nations; but we must fearlessly ask, at what font were they baptized? Who were their godfathers? In what record are their sponsors registered? Aye, these, indeed, are preliminary questions that demand a grave and profound consideration. That there are many nations that have Christian communities in them is a proposition which we most cheerfully and thankfully admit. By a common figure of speech, we also give to that which contains anything the name of the thing contained in it. Thus, rhetorically, we call one edifice a college; another, a bank, a third, a church; not because the brick and mortar, the plank and nails, constitute a college, a bank, a church, but because these buildings contain these institutions. So we have—if anyone contend for the name—as many Christian nations as we have Christian communities in different nations, and as many Jewish nations as we have nations with Jewish synagogues in them, and as many Mohammedan nations as we have nations containing mosques in them. But, according to this rhetorical figure, we may have a Christian and a Jewish nation, or a Christian and a Mohammedan nation, in one and the same nation, as we sometimes find both a Jewish and a Christian synagogue in the same nation. But a rhetorical Christian nation and a proper and unfigurative Christian nation are very different entities. A proper literal Christian nation is not found in any country under the whole heavens. There is, indeed, one Christian nation, composed of all the Christian communities and individuals in the whole earth.

The Apostle Peter, in one letter addressed to all the Christians scattered throughout Pontus, Galatia, Cappadocia, Asia, and Bithynia, though "strangers" or aliens in these respective nations, calls them collectively "a holy nation, a royal priesthood, a peculiar people." In strict logical and grammatical truth there is not, of all the nations of the earth, one properly called a Christian nation. Therefore, we have never had as yet one Christian nation waging war against another Christian nation. Before anyone, then, no matter what his learning or talents may be, can answer the great interrogatory now in discussion, he must form a clear and well defined conception of what constitutes a nation and what constitutes a Christian.

We have very high Roman authority for defining a nation, from nascor. Pardon me for quoting it: "Genus hominum qui non aliunde venerunt, sed ibi nati sunt"; which, in our vernacular, means a race or tribe of men who have not come from abroad but live where they were born. Being a Roman word, derived from natural birth, a Roman author has the best right to define it. Now, a Christion is not one born where he lives; he is born from above, as all Christians of all parties admit. Therefore, no nation, as such, as respects either its natural birth or its constitution, can with any show of truth or reason be called a Christian nation. When anyone produces the annals of a nation whose constitution was given by Jesus Christ, and whose citizens are all born of God spiritually, as well as of man physically, I will at once call it, in good faith, without a figure, a true, proper, and literal Christian nation.

Now, although we have this advantage, which no one can take from us, and conceded, too, by all the literary and Christian authorities in Christendom, we will not build on it alone, nor at all. We will not have it said that we carry our definition by a grammatical or rhetorical decision of the great question. We appeal to all our public documents, without regard to party. We appeal to all our elementary and most profound writers on the subject of nationality. Nay, we appeal to the common views of this whole community. Have we not a church and a state in every State in the Union and in every European nation? Do not all belong to the state or nation, and a part only, and that often a small part, to the church? Is not the bond of political union blood, or naturalization? Is not the bond of union in the Christian kingdom faith, or the new birth? What nation is there whose citizens, or a majority of them, are Christians. Not one, even in profession.

But there is a reflex light of Christianity, a moralizing and a civilizing influence as well as a direct and soul-redeeming radiance, which imparts to those nations that have the oracles of God a higher standard of moral excellence, a more discriminating conscientiousness, and a more elevated national character; which, in contrast with pagan nations, obtains for them the honorary distinction of Christian nation. Still, as nations, or states, the spirit and character of the nation are anti-Christian. A community of Jews is New York or New Orleans, even were they naturalized citizens of the United States, would not impart to those cities an American or Gentile spirit, nor would they impart to our Nation a Jewish spirit or character. They would still be Jews and we Americans.

The American Nation as a nation is no more in spirit Christian than were Greece and Rome when the apostle planted churches in Corinth, Athens, or in the metropolis of the empire, with Caesar's household in it. Roman policy, valor, bravery, gallantry, chivalry are of as much praise, admiration, and glory in Washington and London as they were in the very center of the pagan world in the days of Julius or Augustus Caesar. We worship our heroes because of their martial and Roman virtue. Virtue in the Roman language was only a name for bravery or courage. Such was its literal meaning. With a Roman it was queen of all the graces and of all moral excellencies. It raised from plebeian to patrician rank and created military tribunes, decemvirs, triumvirs, dictators, consuls, kings, emperors. With us it cannot make a king, but may, perhaps, a third time make for us a President. If, indeed, it does not yet make for us a king we shall blame the soil, not the culture. Kings cannot grow in America. But under our free and liberal institutions we can impart more than kingly power under a less offensive name.

But a Christian community is, by the highest authority, called a kingdom. He, however, who gave it this name said to Caesar's representative, "My kingdom is not of this world. Had My kingdom been of this world, My servants would have fought, and I should not have been delivered to the Jews. But now is My kingdom not from hence." It is, then, decided, first, that we have no Christian nation or kingdom in the world, but that Christ has one grand kingdom composed of all the Christian communities in the world, of which He is Himself the proper sovereign, lawgiver, and king.

Having, then, no Christian nation to wage war against another Christian nation, the question is reduced to a more rational and simple form, and I trust it will be still more intelligible and acceptable in this form, viz: Can Christ's kingdom or church in one nation wage war against His kingdom or church in another nation? With this simple view of the subject, where is the man so ignorant of the letter and spirit of Christianity as to answer this question in the affirmative? Is there a man of ordinary Bible education in this city or Commonwealth who will affirm that Christ's church in England may of right wage war against Christ's church in America?

But I will be told that this form of the question does not meet the exact state of the case as now impinging the conscience of very many good men. While they will with an emphatic "no" negative the question as thus stated, they will in another form propound their peculiar difficulty:

"Suppose," say they, "England proclaims war against our Nation, or that our Nation proclaims war against England: Have we a right, as Christian men, to volunteer, or enlist, or, if drafted, to fight against England? Ought our motto to be, 'Our country, right or wrong'? Or has our Government a right to compel us to take up arms?"

This form of the question makes it important that we should have as clear and definite conceptions of the word "right" as of any other word in the question before us. We must, then, have a little more definition. For the doctrine of right and wrong, so frequently spoken of by elementary political writers, I cannot say that I entertain a very high regard. Men without religious faith, being without an infallible guide, are peculiarly fond of abstractions. Led by imagination more than by reason, authority, or experience, they pride themselves in striking out for themselves and others a new path, rather than to walk in the old and long-frequented ways. They have a theory of man in society with political rights, and of man out of society with natural rights; but as they cannot agree as to the word "natural" prefixed to "right"—whether nature be a divinity or the cause of things—I will not now debate with them the question of natural rights, but will take the surer and well-established ground of a divine warrant, or a right founded on a divine annunciation.

Much, in all cases of any importance, depends on beginning right; and in a question upon right itself, everything depends upon that ultimate tribunal to which we make our appeal. In all questions involving the moral destinies of the world, we require more than hypothetical or abstract reasoning from principles merely assumed or conceded. We need demonstration, or, what in this case of moral reasoning is the only substitute for it, oracular authority. All questions on morals and religion, all questions on the origin, relations, obligations, and destiny of man, can be satisfactorily decided only by an appeal to an infallible standard. I need not say that we all, I mean the civilized world, the great, the wise, the good of human kind, concede to the Bible this oracular authority; and, therefore, constitute it the ultimate reason and authority for each and every question of this sort. What, then, says the Bible on the subject of war?

It certainly commended and authorized war among the Jews. God had given to man, ever since the flood, the right of taking away the life of man for one specified cause. Hence murderers, ever since the flood, were put to death by express divine authority. "He that sheds man's blood, by man shall his blood be shed." He gave authority only, however, to one family or nation, whose God and King He assumed to be. As soon as that family was developed into a nation, He placed it under His own special direction and authority. Its government has been properly called by Josephus, a distinguished Jew, a theocracy. It was not a republican, an aristocratical, or monarchical, but a theocratical government, and that, indeed, of the most absolute character, for certain high ends and purposes in the destinies of mankind—temporal, spiritual, and eternal. God was, therefore, in person the king, lawgiver, and judge of the Jewish nation.

It was not simply for desiring a king that God was at one time displeased with them. It was for asking a king like those of other nations, and thereby refusing God Himself and God alone as their king. Still, He never made their kings any more than viceroys. He, for many centuries, down to the end of Old Testament history, held in His own hand the sovereignty of the nation. Hence the kings ruled for Him, and the high priest, or some special prophet, was the Lord's mouth to them. Their kings were, therefore, unlike other kings. They truly, and only they, of all the kings on earth, were "the Lord's anointed." The Jewish kingdom was emphatically a typical institution, prospective of a kingdom not of this world, to be instituted in future times and to be placed under the special government of His only Son and Heir. Hence it came to pass that the enemies of Israel became typical of the enemies of Jesus Christ; and hence the temporal judgments inflicted on them were but shadows through which to set forth the spiritual and eternal judgments to be inflicted on the enemies of the Messiah's reign and kingdom. Whether, therefore, the enemies of the Jews fell in battle, or by any of the angels of death, it was God that slew them. Hence their kings and God's angels were but mere sheriffs, executing, as it were, the mandates of high heaven.

It is, however, important to reiterate that God gave to Noah, and through him to all his sons and successors in government, a right to take away, in civil justice, the life of a murderer. As the world of the ungodly, antecedent to the Deluge, during the first 500 years of Noah's life, was given to violence and outrage against each other, it became expedient to prevent the same violence and bloodshed after the flood; and for this purpose God gave to man, or the human race in Noah's family, the right to exact blood for blood from him who had deliberately and maliciously taken away the life of his fellow. Had not this been first ordained, no war, without a special divine commission, could have been sanctioned as lawful and right even under the Old Testament institution. Hence we may say that wars were first allowed by God against those who had first waged war against their fellows, and consequently, as viewed by God Himself, they were murderers. The first and second wars reported in the annals of the world were begun by the enemies of God and His people, and hence the reprisals made by Abraham and Moses are distinctly stated to have been occasioned by the enemies of God and His people.

But what is most important here and apposite to the occasion is that these wars waged by God's people in their typical character were waged under and in pursuance of a special divine commission. They were, therefore, right. For a divine precept authorizing anything to be done makes it right absolutely and forever. The Judge of all the earth can do only that, or command that to be done, which is right.

Let those, then, who now plead a jus divinum, a special divine warrant or right for carrying on war by the authority of the Lord Jesus Christ, produce a warrant from the present Monarch of the universe. What the God of Abraham did by Abraham, by Jacob, or by any of his sons, as the moral Governor of the world, before He gave up the scepter and the crown to His Son, Jesus Christ, is of no binding authority now. This is a point of much more importance than we can at present develop, and one which has been, so far as known to me, wholly slurred over in this great investigation. The very basis of the Christian religion is that Jesus Christ is now the Lord and King of both earth and heaven, and that His Father and our God no longer assumes to be either the lawgiver, judge, or king of the world. It is positively declared by Him that all legislative, judiciary, and executive power is now committed into the hands of One who is both our kinsman and God's only begotten Son. Two grand declarations that ought to revolutionize our whole views of civil government as respects its ultimate authority, and change some of our forms of legal justice, are wholly overlooked so far as they are of any practical value and importance. The first was announced by the Messiah immediately before His ascension into heaven; the other was publicly propounded by an embassy from heaven immediately after His ascension. The former declares that "all authority" (exousia), all legislative, judiciary, and regal authority in heaven and earth is given to Jesus Christ; the other affirms that God has made Jesus, Lord and Christ, or annointed Him sovereign of the universe. Kings of the earth and courts of high judicature are all under Him, but they do not really acknowledge it; few of them, perhaps, know or believe the fact that Jesus Christ has been on the throne of the universe for more than 1,800 years. Hence, the courts of England and America, the two most enlightened nations in the world, are yet deistical in form, rather than Christian. In every place where they have the phrase, "In the name of God," they ought to have, "In the name of the Lord." This is the gist of the whole controversy between the friends and the enemies of war, on the part of the subjects of Christ's kingdom. The coronation of Jesus Christ in heaven as Lord of all, His investiture with all authority in heaven and earth, legislative, judiciary, and executive, is the annunciation, on the belief and public acknowledgment of which the first Christian church was founded in Jerusalem, where the throne of David was, in the month of June, 1,814 years ago, A. D. 34.

God the Father, in propria persona, now neither judges nor punishes any person or nation, but has committed all judgment to His Son, now constituted head of the universe and judge of the living and the dead. This simplifies the question and levels it to the judgment of all. It is this: Has the author and founder of the Christian religion enacted war or has He made it lawful and right for the subjects of His government to go to war against one another? Or, has He made it right for them to go to war aganist any nation, or for any national object, at the bidding of the present existent political authorities of any nation in Christendom?

The question is not Whether, under the new administration of the universe, Christian communities have a right to wage war, in its common technical sense, against other communities—as the house of Judah against the house of Israel, both of the same religion, language, and blood. This is already, by almost universal consent, decided in the negative, probably only one society of professed Christians excepted. But the question is, May a Christian community, or the members of it, in their individual capacities, take up arms at all, whether aggressively or defensively, in any national conflict? We might, as before alleged, dispense with the words "aggressive" and "defensive"; for a mere grammatical, logical, or legal quibble will make any war either aggressive or defensive, just as the whim, caprice, or interest of an individual pleases. Napoleon, on his deathbed, declared that he had never engaged, during his whole career, in an aggressive war—that all his wars were defensive. Yet all Europe regarded him as the most aggressive warrior of any age.

But the great question is: Can an individual, not a public functionary, morally do that in obedience to his government which he cannot do in his own case? Suppose the master of an apprenticed youth, or the master of a number of hired or even bond servants, should fall out with one of his neighbors about one of the lines of his plantation, because, as he imagined, his neighbor had trespassed upon his freehold in clearing or cultivating his lands. His neighbor refuses to retire within the precincts insisted on by the complainant; in consequence of which the master calls together his servants and proceeds to avenge himself or, as he alleges, to defend his property. As the controversy waxes hot, he commands his servants not only to burn and destroy the improvements made on the disputed territory but to fire upon his neighbor, his sons, and servants. They obey orders, and kill several of them. They are, however, finally taken into custody and brought to trial. An attorney for the servants pleads that those servants were bound to obey their master, and quotes these words from the Good Book: "Servants, obey in all things your masters according to the flesh." But, on the other side, it is shown that the "all things" enjoined are only "all things lawful." For this obedience is to be rendered "as to Christ"; and, again, "as the servants of Christ, doing the will of God from the heart." No judge or jury could do otherwise than condemn as guilty of murder servants thus acting. Now, as we all, in our political relations to the Government of our country, occupy positions at least inferior to that which a bond servant holds toward his master, we cannot of right as Christian men obey the powers that be in anything not in itself justifiable by the written law of the great King—our liege Lord and Master, Jesus Christ. Indeed, we may advance in all safety one step further, if it were necessary, and affirm that a Christian man can never of right be compelled to do that for the state, in defense of state rights, which he cannot of right do for himself in defense of his personal rights. No Christian man is commanded to love or serve his neighbor, his king, or sovereign more than he loves or serves himself. If this is conceded, unless a Christian man can go to war for himself, he cannot for the state.

We have already observed that the Jews were placed under a theocracy, that their kings were only vicegerents, and that they were a symbolic or typical nation adumbrative of a new relation and institution to be set up in "the fullness of time" under an administration of grace. In consequence of this arrangement, God was first revealed as the God of Abraham; and afterward, when He was about to make Himself known in all the earth, in contrast with the idols of the nations, He chose by Moses to call Himself the God of the Hebrews. As the custom then was, all nations had their gods, and by their wars judged and decided the claims and pretensions of their respective divinities. Esteeming the reputation and pretensions of their gods according to their success in war, that nation's god was the greatest and most to be venerated whose people were most successful and triumphant in battle. God, therefore, chose this method to reveal Himself as the God of the Hebrews. Hence He first poured out 10 plagues upon the gods of Egypt. The Egyptians worshipped everything from the Nile and its tenantry to the meanest insect in the land. He first, then, plagued their gods. Afterward, by causing the Jews to fight and destroy many nations in a miraculous manner, from the victory over Amalek to the fall of the cities and kings of ancient Palestine, He established His claims as supreme over all. Proceeding in this way, He fully manifested the folly of their idolatries and the omnipotence, greatness, and majesty of the God of the Jews.

The wars of pagan nations were, indeed, much more rational than those of our miscalled Christian nations. No two of these nations acknowledged the same dynasties of gods; and, therefore, having different gods, they could with much propriety test their claims by invoking them in battle. But two Christian nations both pray to one and the same God to decide their respective quarrels and yet will not abide by the decision; for success in war is not by any of them regarded as an end of all strife as to the right or justice of the demands of the victorious party. Did our present belligerent nations regard victory and triumph as a proof of the justice of their respective claims, they would in the manner of carrying on their wars prove themselves to be very great simpletons indeed; for why sacrifice their hundred millions of dollars and their fifty thousand lives in 1 or 2 years, when they could save these millions of men and money by selecting each one of their genuine simon-pure patriots and heroes and having them voluntarily to meet in single combat before a competent number of witnesses and encounter each other till one of them triumphed—and thus award, from heaven's own court of infallible rectitude, to the nation of the survivor the glory of a great national triumph both in heroism and justice? But this they dare not do, for these Christian nations are quite skeptical so far as faith in the justice of their own cause or in the right decision of their claims in the providence and moral government of God is concerned. To what purpose, we therefore ask, do they both appeal to the same God, when neither of them feels any obligation to abide His decision?

But as we are neither under a Jewish nor a pagan government, but professedly, at least, under a Christian dispensation, we ought to hear what the present King of the Universe has enacted on this subject. The maxims of the Great Teacher and Supreme Philanthropist are, one would think, to be final and decisive on this great question. The Great Lawgiver addresses His followers in two very distinct respects: First, in reference to their duties to Him and their own profession, and then in reference to their civil rights, duties, and obligations.

So far as any indignity was offered to them or any punishment inflicted upon them as His followers, or for His name's sake, they were in no way to resent it. But in their civil rights He allows them the advantages of the protection of civil law, and for this cause enjoins upon them the payment of all their political dues, and to be subject to every ordinance of man of a purely civil nature, not interfering with their obligations to Him.

"If a heathen man, or persecutor, smite you on one cheek, turn to him the other also. If he compel you to go with him 1 mile, go 2. If he sue thee at law, and take away thy coat, let him have thy mantle also," etc. These and whatever else of evil treatment they might receive, as Disciples of Christ, they must, for His sake, endure without resistance or resentment. But if in their citizen character or civil relations they are defrauded, maligned, or prosecuted, they might, and they did, appeal to Caesar. They paid tribute to civil magistrates that they might protect them; and therefore they migh rightfully claim their protection. In this view of the matter, civil magistrates were God's ministers to the Christian "for good." And also, as God's ministers, they were revengers to execute wrath on those who did evil. Therefore, Christians are in duty bound to render to Caesar what is Caesar's, and to God what is God's—to reverence, honor, and support the civil magistrate, and, when necessary, to claim his protection.

But as respects the life peculiar to a soldier, or the prosecution of a political war, they had no commandment. On the contrary, they were to live peaceably with all men to the full extent of their power. Their sovereign Lord, the King of Nations, is called "The Prince of Peace." How, then, could a Christian soldier, whose "shield" was faith, whose "helmet" was the hope of salvation,

whose "breastplate' was righteousness, whose "girdle" was truth, whose "feet were shod with the preparation of the gospel of peace," and whose "sword" was that fabricated by the Holy Spirit, even "the word of God"—I say, how could such a one enlist to fight the battles of a Caesar, a Hannibal, a Tamerlane, a Napoleon, or even a Victoria?

Jesus said, "All that take the sword shall perish by the sword." An awful warning! All that take it to support religion, it is confessed, have fallen by it; but it may be feared that it is not simply confined to that; for may I not ask the pages of universal history, have not all the nations created by the sword finally fallen by it? Should anyone say, "Some few of them yet stand," we respond, "All that have fallen also stood for a time; and are not those that now stand tottering just at this moment to their overthrow?" We have no doubt, it will prove in the end that nations and states founded by the sword shall fall by the sword.

When the Saviour, in His sententious and figurative style, indicating the trials just coming upon His friends, said, "You had better sell your outside garments and buy a sword," one present, understanding him literally, as some of the friends of war still do, immediately responded, "Lord, here are two swords." What did he say? "It is enough." Two swords for 12 apostles! Truly, they are dull scholars who thence infer that He meant they should literally use two swords to fight with! When asked by Pilate whether He was a king, He responded that He was born to be a king, but not a king of worldly type or character. Had He been such a king, his servants would, indeed, have used the sword. But His kingdom neither came nor stands by the sword. When first announced as a king by the Jewish prophets, more than seven centuries before He was born, the Spirit said of His reign, "He shall judge among the nations, and decide among many people. And they shall beat their swords into plowshares, and their spears into pruning hooks: nation shall not lift up sword against nation, neither shall they learn war any more." (Isaiah 2: 2–4.) Two prophets describe it in almost the same words. Micah, as well as Isaiah, says:

"Out of Zion shall go forth the law,
And the word of Jehovah from Jerusalem;
And He shall judge among many people.
And decide among strong nations afar off;
And they shall beat their swords into plowshares,
And their spears into pruning-hooks;
Neither shall they any longer learn war;
But they shall sit every man under his vine,
And under his fig-tree, and none shall make him afraid;
For the mouth of Jehovah of hosts hath spoken it."

Such was, according to prophecy, such is, according to fact, the native influence and tendency of the Christian institution. The spirit of Christianity, then, is essentially pacific.

There is often a multiplication of testimony for display rather than for effect. And, indeed, the accumulation of evidence does not always increase its moral momentum. Nor is it very expedient on other considerations to labor a point which is generally, if not universally, admitted. That the genius and spirit of Christianity, as well as the letter of it, are admitted, on all hands, to be decidedly "peace on earth, and good will among men," needs no proof to anyone that has ever read the volume that contains it.

But if anyone desires to place in contrast the gospel of Christ and the genius of war, let him suppose the chaplain of an army addressing the soldiers on the eve of a great battle, on performing faithfully their duty, from such passages as the following: "Love your enemies; bless them that curse you; do good to them that hate you, and pray for them that despitefully use you and persecute you, that you may be the children of your Father in Heaven, who makes his sun to rise upon the evil and the good, and sends his rain upon the just and the unjust."

Again, in our civil relations: "Recompense to no man evil for evil." "As much as lieth in you, live peaceably with all men." "Dearly beloved, avenge not yourselves; but rather give place to wrath." "If thine enemy hunger, feed him; if he thirst, give him drink." "Be not overcome of evil; but overcome evil with good." Would anyone suppose that he had selected a text suitable to the occasion? How would the commander in chief have listened to him? With what spirit would his audience have immediately entered upon an engagement? These are questions which every man must answer for himself, and which everyone can feel much better than express.

But a Christian man cannot conscientiously enter upon any business, nor lend his energies to any cause, which he does not approve; and in order to approve he must understand the nature and object of the undertaking. Now, how does this dictate of discretion, religion, and morality bear upon the case before us?

Nothing, it is alleged, more tends to weaken the courage of a conscientious soldier than to reflect upon the originating causes of wars and the objects for which they are prosecuted. These, indeed, are not always easily comprehended. Many wars have been prosecuted, and some have been terminated after long and protracted efforts, before the great majority of the soldiers themselves, on either side, distinctly understood what they were fighting for. Even in our country, a case of this sort has, it is alleged, very recently occurred. If, it is presumed, the true and proper causes of most wars were clearly understood and the real design for which they are prosecuted could be clearly and distinctly apprehended, they would, in most instances, miscarry for the want of efficient means of a successful prosecution.

A conviction of this sort, some years ago, occasioned an elaborate investigation of the real causes for which the wars of Christendom had been undertaken from the time of Constantine the Great down to the present century. From the results furnished the Peace Society of Massachusetts it appeared that, after subtracting a number of petty wars long since carried on and those waged by Christian nations with tribes of savages, the wars of real magnitude amounted in all to 286.

The origin of these wars, on a severe analysis, appeared to have been as follows: 22 for plunder and tribute; 44 for the extension of territory; 24 for revenge or retaliation; 6 for disputed boundaries; 8 respecting points of honor or prerogative; 6 for the protection or extension of commerce; 55 civil wars; 41 about contested titles to crowns; 30 under pretense of assisting allies; 23 for mere jealousy of rival greatness; 28 religious wars, including the Crusades. Not one for defense alone, and certainly not one that an enlightened Christian man could have given one cent for, in a voluntary way, much less have volunteered his services or enlisted into its ranks.

If the end alone justifies the means, what shall we think of the wisdom or the justice of war, or of the authors and prominent actors of these scenes? A conscientious mind will ask, Did these 286 wars redress the wrongs, real or feigned, complained of? Did they in all cases, in a majority of the cases, or in a single case, necessarily determine the right side of the controversy? Did they punish the guilty, or the more guilty, in the ratio of their respective demerits? No one can, indeed, no one will, contend that the decision or termination of these wars naturally, necessarily, or even probably, decided the controversy so justly, so rationally, so satisfactorily as it could have been settled in any one case of the 286 by a third or neutral party.

War is not now, nor was it ever, a process of justice. It never was a test of truth—a criterion of right. It is either a mere game of chance or a violent outrage of the strong upon the weak. Need we any other proof that a Christian people can in no way whatever countenance a war as a proper means of redressing wrongs, of deciding justice, or of settling controversies among nations? On the common conception of the most superficial thinkers on this subject, not one of the 286 wars which have been carried on among the "Christian nations" during 1,500 years was such as that an enlightened Christian man could have taken any part in it, because, as admitted, not one of them was for defense alone; in other words, they were all aggressive wars.

But to the common mind, as it seems to me, the most convincing argument against a Christian becoming a soldier may be drawn from the fact that he fights against an innocent person—I say an innocent person, so far as the cause of the war is contemplated. The men that fight are not the men that make the war. Politicians, merchants, knaves, and princes cause or make the war, declare the war, and hire men to kill for them those that may be hired on the other side to thwart their schemes of personal and family aggrandizement.

The soldiers on either side have no enmity against the soldiers on the other side, because with them they have no quarrel. Had they met in any other field, in their citizen dress, other than in battle array, they would most probably have not only inquired after the welfare of each other, but would have tendered to each other their assistance if called for. But a red coat or a blue coat, a tricolored or a two-colored cockade, is their only introduction to each other, and the signal that they must kill or be killed! If they think at all, they must feel that there is no personal alienation, or wrong, or variance between them. But they are paid so much for the job; and they go to work, as the day laborer to earn his shilling. Need I ask, how could a Christian man thus volunteer his services, or hire himself out for so paltry a sum, or for any sum, to kill to order his brother man who never offended him in word or deed? What infatuation! What consummate folly and wickedness! Well did Napoleon say, "War is the trade of barbarians"; and his conqueror, Wellington, "Men of nice scruples about religion have no business in the army or navy." The horrors of war only enhance the guilt of it; and these, alas, no one can depict in all their hideous forms.

By the "horrors of war" I do not mean the lightning and the thunder of the battlefield, the blackness and darkness of those dismal clouds of smoke which, like death's own pall, shroud the encounter; it is not the continual roar of its cannon, nor the agonizing shrieks and groans of fallen battalions, of wounded and dying legions; nor is it, at the close of the day, the battlefield itself, covered with the gore and scattered limbs of butchered myriads, with here and there a pile, a mountain heap of slain heroes in the fatal pass, mingled with the wreck of broken arms, lances, helmets, swords, and shattered firearms, amidst the pavement of fallen balls that have completed the work of destruction, numerous as hailstones after the fury of the storm; nor, amidst these, the sight of the wounded lying upon one another, weltering in their blood, imploring assistance, importuning an end of their woes by the hand of a surviving soldier, invoking death as the only respite from excruciating torments. But this is not all; for the tidings are at length carried to their respective homes. Then come the bitter wail of widows and orphans, the screams and the anguish of mothers and sisters deprived forever of the consolations and hopes that clustered round the anticipated return of those so dear to them, that have perished in the conflict.

But even these are not the most fearful desolations of war. Where now are the 200,000 lost by England in our Revolutionary War; the 70,000 who fell at Waterloo and Quatre-Bras; the 80,000 at Borodino; the 300,000 at Arbela; or where the 15,000,000 Goths destroyed by Justinian in 20 years; the 32,000,000 by Genghis Khan in 41 years; the 60,000,000 slain by the Turks; the 80,000,000 by the Tartars, hurried away to judgment in a paroxysm of wrath,

amid the fury of the passions? What can we think of their eternal destiny? Besides all these, how many have died in captivity? How many an unfortunate exile or captive might, with a French prisoner, sing of woes like these, or even greater?—

"I dwelt upon the willowy banks of Loire;
I married one who from my boyish days
Had been my playmate. One morn—I'll ne'er forget—
While choosing out the fairest twigs
To warp a cradle for our child unborn,
We heard the tidings that the conscript lot
Had fallen on me. It came like a death knell!
The mother perish'd; but the babe survived;
And, ere my parting day, his rocking couch
I made complete, and saw him sleeping, smile—
The smile that play'd erst on the cheek of her
Who lay clay cold. Alas! the hour soon came
That forced my fetter'd arms to quit my child!
And whether now he lives to deck with flowers
The sod upon his mother's grave, or lies
Beneath it by her side, I ne'er could learn.
I think he's gone; and now I only wish
For liberty and home, that I may see,
And stretch myself and die upon their grave!"

But these, multiplied by myriads, are but specimens of the countless millions slain, the solitary exiles, the lonely captives. They tell the least portion of the miseries of war. Yet even these say to the Christian, "How can you become a soldier? How countenance and aid this horrible work of death?"

For my own part, and I am not alone in this opinion, I think that the moral desolations of war surpass even its horrors. And amongst these I do not assign the highest place to the vulgar profanity, brutality, and debauchery of the mere soldier, the professional and licensed butcher of mankind, who, for his $8 a month or his 10 sous per day, hires himself to lay waste a country, to pillage, burn, and destroy the peaceful hamlet, the cheerful village, or the magnificent city, and to harass, wound, and destroy his fellow man, for no other consideration than his paltry wages, his daily rations, and the infernal pleasure of doing it, anticipating hereafter "the stupid stares and loud huzzas" of monsters as inhuman and heartless as himself. And were it not for the infatuation of public opinion and popular applause, I would place him, as no less to be condemned, beside the vain and pompous volunteer, who for his country, "right or wrong," hastens to the theater of war for the mere plaudits of admiring multitudes, ready to cover himself with glory, because he has aided an aspirant to a throne or paved the way to his own election to reign over a humbled and degraded people.

I make great allowance for false education, for bad taste, for the contagion of vicious example; still, I cannot view those deluded by such sophistry, however good their motives, as deserving anything from contemporaries or posterity except compassion and forgiveness. Yet, behold its influence on mothers, sisters, and relatives; note its contagion, its corruption of public taste. See the softer sex allured, fascinated by the halo of false glory thrown around these worshipped heroes! See them gazing with admiration on the "tinselled trappings," the embroidered ensigns," of him whose profession it is to make widows and orphans by wholesale! Sometimes their hands are withdrawn from works of charity to decorate the warriors' banners and to cater to these false notions of human glory! Behold, too, the young mother arraying her proud boy "with cap and feather, toyed with a drum and sword, training him for the admired profession of a man killer."

This is not all. It is not only at home, in the nursery, and infant school that this false spirit is inspired. Our schools, our academies, our colleges echo and reecho with the fame of an Alexander, a Caesar, a Napoleon, a Wellington. Forensic eloquence is full of the fame of great heroes, of military chieftains, of patriotic deliverers whose memory must be kept forever verdant in the affections of a grateful posterity, redeemed by their patriotism or rescued from oppression by their valor.

The pulpit, too, must lend its aid in cherishing the delusion. There is not infrequently heard a eulogium on some fallen hero, some church service for the mighty dead, thus desecrating the religion of the Prince of Peace by causing it to minister as the handmaid of war. Not only are prayers offered up by pensioned chaplains on both sides of the field even amid the din of arms, but Sabbath after Sabbath, for years and years, have the pulpits on one side of a sea or river and those on the other side resounded with prayers for the success of rival armies, as if God could hear them both and make each triumphant over the other, guiding and commissioning swords and bullets to the heads and hearts of their respective enemies.

And not only this; but even the churches in the Old World, and sometimes in the new, are ornamented with the sculptured representations of more military heroes than of saints—generals, admirals, and captains who "gallantly fought" and "gloriously fell" in the service of their country. It is not only in Westminster Abbey or in St. Paul's that we read their eulogiums and see their statues, but even in some of our own cities we find St. Paul driven out of the church to make room for generals and commodores renowned in fight. And, last of all, in consummation of the moral desolation of war we sometimes have an illumination—even a thanksgiving—rejoicing that God has caused ten or twenty thousand of our enemies to be sent down to Tartarus and has permitted myriads of widows and orphans to be made at the bidding of some chieftain or of some aspirant to a throne.

But it would exhaust too much time to speak of the inconsistencies of the Christian world on this single subject of war, or to trace to their proper fountains the general misconceptions of the people on their political duties and that of their governments. This would be the work of volumes—not of a single address. The most enlightened of our ecclesiastic leaders seem to think that Jesus Christ governs the nations as God governed the Jews. They cannot separate, even in this land, the church and state. They still ask for a Christian national code.

If the world were under a politico-ecclesiastic king or president, it would, indeed, be hard to find a model for him in the New Testament. Suffice it to say that the church, and the church only, is under the special government and guardianship of our Christian King. The nations, not owning Jesus Christ, are disowned by him; He leaves them to themselves, to make their own institutions, as God anciently did all nations but the Jews. He holds them in abeyance, and as in providence, so in government, He makes all things work together for the good of His people, restrains the wrath of their enemies, turns the counsels and wishes of kings as He turns the rivers, but never condescends to legislate for the bodies of men, or their goods or chattels, who withhold from Him their consciences and their hearts. He announces the fact that it is by His permission, not always with His approbation, that kings reign and that princes decree justice, and commands his people politically to obey their rulers and to respect the ordinances of kings, that "they may lead quiet and peaceable lives in all godliness and honesty." And where the Gospel of Christ comes to kings and rulers, it addresses them as men in common with other men, commanding them to repent of their sins, to submit to His government and to discharge their relative duties according to the morality and piety inculcated in His code. If they do this, they are a blessing to His people as well as an honor to themselves. If they do not, He will hold them to a reckoning, as other men, from which there is neither escape nor appeal. What Shakespeare says is as true of kings as of their subjects:

"War is a game that, were their subjects wise,
Kings would not play at."

For, were both kings and people wise, wars would cease, and nations would learn war no more.

But how are all national disputes to be settled? Philosophy, history, the Bible, teach that all disputes, misunderstandings, alienations are to be settled, heard, tried, adjudicated by impartial—that is, by disinterested—umpires. No man is admitted to be a proper judge in his own case. Wars never make amicable settlements, and seldom, if ever, just decisions of points at issue. We are obliged to offer preliminaries of peace at last. Nations must meet by their representatives, stipulate and restipulate, hear and answer, compare and decide.

In modern times we terminate hostilities by a treaty of peace. We do not make peace with powder and lead. It is done by reason, reflection, and negotiation. Why not employ these at first? But it is alleged that war has long been, and must always be, the ultima ratio regum—the last argument of those in power. For ages a father inquisitor was the strong argument for orthodoxy; but light has gone abroad and he has lost his power. Illuminate the human mind on this subject also, create a more rational and humane public opinion, and wars will cease.

But, it is alleged, all will not yield to reason or justice. There must be compulsion. Is war then the only compulsory measure? Is there no legal compulsion? Must all personal misunderstandings be settled by the sword?

Why not have a bylaw-established umpire? Could not a united national court be made as feasible and as practicable as a United States court? Why not, as often proposed, and as eloquently, ably, and humanely argued, by the advocates of peace, have a congress of nations and a high court of nations for adjudicating and terminating all international misunderstandings and complaints, redressing and remedying all wrongs and grievances?

There is not, it appears to me, a physical or a rational difficulty in the way. But I do not now argue the case. I merely suggest this expedient, and will always vote correspondingly, for reasons as good and as relevant as I conceive them to be humane and beneficial.

To sum up the whole we argue:

(1) The right to take away the life of the murderer does not of itself warrant war, inasmuch as in that case none but the guilty suffer, whereas in war the innocent suffer not only with, but often without, the guilty. The guilty generally make war and the innocent suffer from its consequences.

(2) The right given to the Jews to wage war is not vouchsafed to any other nation, for they were under a theocracy, and were God's sheriff to punish nations; consequently no Christian can argue from the wars of the Jews in justification or in extenuation of the wars of Christendom. The Jews had a divine precept and authority; no existing nation can produce such a warrant.

(3) The prophecies clearly indicate that the Messiah himself would be "the Prince of Peace," and that under his reign "wars should cease" and "nations study it no more."

(4) The gospel, as first announced by the angels, is a message which results in producing "peace on earth and good will among men."

(5) The precepts of Christianity positively inhibit war—by showing that "wars and fightings come from men's lusts" and evil passions, and by commanding Christians to "follow peace with all men."

(6) The Beatitudes of Christ are not pronounced on patriots, heroes, and conquerors but on peacemakers, on whom is conferred the highest rank and title in the universe: "Blessed are the peacemakers, for they shall be called the sons of God."

(7) The folly of war is manifest in the following particulars:

First. It can never be the criterion of justice or a proof of right.

Second. It can never be a satisfactory end of the controversy.

Third. Peace is always the result of negotiation, and treaties are its guaranty and pledge.

(8) The wickedness of war is demonstrated in the following particulars:

First. Those who are engaged in killing their brethren, for the most part, have no personal cause of provocation whatever.

Second. They seldom, or never, comprehend the right or the wrong of the war. They, therefore, act without the approbation of conscience.

Third. In all wars the innocent are punished with the guilty.

Fourth. They constrain the soldier to do for the state that which, were he to do it for himself, would, by the law of the state, involve forfeiture of his life.

Fifth. They are the pioneers of all other evils to society, both moral and physical. In the language of Lord Brougham, "Peace, peace, peace! I abominate war as un-Christian. I hold it the greatest of human curses. I deem it to include all others—violence, blood, rapine, fraud, everything that can deform the character, alter the nature, and debase the name of man." Or with Joseph Bonaparte, "War is but organized barbarism—an inheritance of the savage state." With Franklin I, therefore, conclude, "There never was a good war, or a bad peace."

No wonder, then, that for two or three centuries after Christ all Christians refused to bear arms. So depose Justin Martyr, Tatian, Clement of Alexandria, Tertullian, Origen, and so forth.

In addition to all these considerations, I further say, were I not a Christian, as a political economist even, I would plead this cause. Apart from the mere claims of humanity, I would urge it on the ground of sound national policy.

Give me the money that has been spent in wars and I will clear up every acre of land in the world that ought to be cleared, drain every marsh, subdue every desert, fertilize every mountain and hill, and convert the whole earth into a continuous series of fruitful fields, verdant meadows, beautiful villas, hamlets, towns, cities, standing along smooth and comfortable highways and canals, or in the midst of luxuriant and fruitful orchards, vineyards, and gardens, full of fruits and flowers, redolent with all that pleases the eye and regales the senses of man. I would found, furnish, and endow as many schools, academies, and colleges as would educate the whole human race, would build meeting houses, public halls, lyceums, and furnish them with libraries adequate to the wants of a thousand millions of human beings.

Beat your swords into plowshares, your spears into pruning hooks, convert your warships into missionary packets, your arsenals and munitions of war into Bibles, school books, and all the appliances of literature, science, and art, and then ask, "What would be wanting on the part of man to 'make the wilderness and solitary place glad,' to cause 'the desert to rejoice and blossom as the rose,' to make our hills 'like Carmel and Sharon,' and our valleys as 'the garden of God'?" All this being done, I would doubtless have a surplus for some new enterprise.

On reviewing the subject in the few points only that I have made and with the comparatively few facts I have collected, I must confess that I both wonder at myself and am ashamed to think that I have never before spoken out my views, nor even written an essay on this subject. True, I had, indeed, no apprehension of ever again seeing or even hearing of a war in the United States. It came upon me so suddenly, and it so soon became a party question, that, preserving, as I do, a strict neutrality between party politics, both in my oral and written addresses on all subjects, I could not for a time decide whether to speak out or be silent. I finally determined not to touch the subject till the war was over. Presuming that time to have arrived, and having resolved that my first essay from my regular course, at any foreign point should be on this subject, I feel that I need offer no excuse, ladies and gentlemen, for having called your attention to the matter in hand. I am sorry to think—very sorry indeed to be only of the opinion—that probably even this much published by me some 3 years or even 2 years ago, might have saved some lives that have since been thrown away in the desert—some hot-brained youths—

"Whose limbs, unburied on the shore,
Devouring dogs or hungry vultures tore."

We have all a deep interest in the question; we can all do something to solve it; and it is everyone's duty to do all the good he can. We must create a public opinion on this subject. We should inspire a pacific spirit and urge on all proper occasions the chief objections to war. In the language of the eloquent Grimke, we must show that "the great objection to war is not so much the number of lives and the amount of property it destroys, as its moral influence on nations and individuals. It creates and perpetuates national jealousy, fear, hatred, and envy. It arrogates to itself the prerogative of the Creator alone—to involve the innocent multitude in the punishment of the guilty few. It corrupts the moral taste and hardens the heart; cherishes and strengthens the base and violent passions; destroys the distinguishing features of Christian charity—its universality and its love of enemies; turns into mockery and contempt the best virtue of Christians—humility; weakens the sense of moral obligation; banishes the spirit of improvement, usefulness, and benevolence; and inculcates the horrible maxim that murder and robbery are matters of state expediency."

Let everyone, then, who fears God and loves man put his hand to the work; and the time will not be far distant when—

"No longer hosts encountering hosts
Shall crowds of slain deplore:
They'll hang the trumpet in the hall,
And study war no more."

Agriculture and the Trade-Agreements Program

EXTENSION OF REMARKS

OF

HON. F. RYAN DUFFY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, November 22 (legislative day of Tuesday, November 16), 1937

ADDRESS BY HON. FRANCIS B. SAYRE, ASSISTANT SECRETARY OF STATE, AT THE STATE CONVENTION OF THE WISCONSIN FARMERS' UNION, AT MADISON, WIS., ON NOVEMBER 3, 1937

Mr. DUFFY. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Hon. Francis B. Sayre, Assistant Secretary of State, at the State convention of the Wisconsin Farmers' Union at Madison, Wis., on November 3, 1937, on the subject Agriculture and the Trade-Agreements Program.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a great pleasure to visit Wisconsin and to have this opportunity to participate in the State convention of the Farmers' Union in response to the invitation so generously extended through Governor La Follette. It is all the more a pleasure when one recalls the high place which Wisconsin has long held among our States as a forum for the intelligent discussion of great public issues of the day.

I welcome this occasion for discussing with a representative gathering of Wisconsin farmers an issue which so vitally affects their interests. I refer to the trade-agreements program.

In June 1934 Congress enacted for a period of 3 years the Trade Agreements Act, and last winter it renewed the act for another 3 years. At the time the act was first passed our export trade had well-nigh collapsed. Our exports had shrunk from $5,157,000,000 in 1929 to $1,647,000,000 in 1933. The resulting loss of our foreign markets threatened disaster to our home producers—both to farmers and to wage earners.

Largely as a consequence of this appalling shrinkage of trade millions of our people were without work and facing privation. Both industry and agriculture were prostrate. That was the stark picture which confronted the Government when it undertook the unspectacular and grinding task of rebuilding our foreign commerce upon secure foundations.

In the 3½ years during which the trade-agreements program has been in operation solid progress has been made. Trade agreements have been negotiated with 16 countries which normally account for nearly two-fifths of our total foreign trade. Concessions of great value have been obtained for both farm and factory products. Other agreements are in process of negotiation; and, as the impediments to negotiations with still other countries are gradually cleared away, the benefits of the program will be extended over a widening segment of our foreign trade.

If there is one class or group of American producers whose welfare is peculiarly dependent upon the maintenance and increase of foreign markets, it is our farmers. If our surplus cotton and tobacco and hog products cannot be sold abroad, these surpluses are thrown back onto glutted home markets, where they force down farm prices and work widespread havoc. At the same time, if American industrial producers lose foreign markets, our city workers are stripped of the purchasing power necessary to buy dairy products, vegetables, and meat, such as you produce in Wisconsin. In other words, increased foreign markets for industrial producers spell increased domestic purchasing power and hence increased domestic markets for farm products. There is no escape from that. The economic welfare of farmers is directly dependent upon foreign trade unimpeded and unhindered by excessive barriers. And such increase of foreign trade, mark you, is the precise objective of the American trade-agreements program.

The farm problem cannot be solved by increased tariffs for staple agricultural commodities, because farmers must sell their staples in world markets. In fact, increased tariffs work positive harm to farmers because higher tariffs mean increased prices for many of the things which farmers must buy, and they also mean lessened foreign and domestic purchasing power with which to buy farm products.

There can be no doubt that expansion of market outlets both at home and abroad is absolutely vital if we are to find a sound solution of the farm problem; and this is exactly what we are trying to do through the American trade-agreements program.

I believe the farmer has more to gain through a vigorous pushing forward of this program than any other group. It is his real salvation. And yet the irony of it is that for partisan or other reasons men have gone up and down the country throughout the Farm Belt making wild charges that the administration, through the trade-agreements program, is selling the farmers "down the river"—charges made at the very time when we are trying to clear the river of the debris, the agricultural wreckage, with which it has been strewn ever since the passage of the Smoot-Hawley Tariff Act.

What is the gist of these preposterous charges? Chiefly, that through trade agreements and the lowering of tariffs our country is being flooded with foreign agricultural goods to the ruin of our farmers. Substantial increases of agricultural imports during 1935 and 1936 are cited to prove the point.

I, for one, have confidence in the intelligence and sound common sense of individual farmers, when they know the facts. The trouble is that politicians and lobbyists have so often sown misrepresentation among them that frequently they have been led to vote against their own best interests. So let's get at the facts. Have farm imports during 1935 and 1936 substantially increased?

Yes, they have. Agricultural imports increased from $821,147,000 in 1934 to $1,071,000,000 in 1935 and to $1,241,808,000 in 1936. But this is only part of the story.

The truth is that since the low point of 1933 our whole foreign trade has been increasing, both exports and imports, to the immense advantage of American farmers and factory workers.

It is charged, however, in the first place, that trade agreements were responsible for increases in agricultural imports and, in the second place, that these increases are ruinous to farmers. Again, what are the actual facts?

Have the increased imports of corn, of meats, of wheat, of wool, been due in sober fact to trade agreements? The answer is clear. In not a single trade agreement has the general duty on any one of these been reduced.

In fact, in the comparatively few agricultural items which have been touched in trade agreements the reductions have been so very moderate, so painstakingly safeguarded with restrictions and limitations, that these constitute almost a negligible factor in causing increased competitive agricultural imports. For example, a calculation made with reference to the increase in imports of foodstuffs between the first half of 1935 and the same period of 1937 indicates that imports of dutiable foodstuffs not subjected to duty cuts increased by 77 percent, whereas imports of foodstuffs on which duty reductions were made increased by less than 40 percent.

The chief reasons for the increased imports were not trade agreements but drought and economic recovery. The disastrous and unprecedented droughts of 1934 and 1936 burnt up our crops, caused severe shortages, and necessitated large imports of important commodities such as corn, wheat, fodders and feeds, meat products, barley, and tallow, products which we ordinarily produce in sufficient quantities not only to supply our domestic needs but also, in most cases, to furnish large surpluses for export. Had we not imported these our farmers would have faced famine prices and there would have been an even more serious shortage of feeds for livestock and poultry on our farms. As crop conditions return to normal, however, imports of such products are bound to fall off.

The second reason—economic recovery—meant increased consumption, increased need of raw materials for processing, and increased prices. The resulting increased value of imports was a mark of returning prosperity and should be a cause of real rejoicing—not of despair.

It is beyond dispute, therefore, that not trade agreements but the unprecedented droughts and returning economic recovery were the preponderant cause of the substantial recent increases in agricultural imports.

Next, is it true that farmers have suffered actual injury by increased agricultural imports during the past 2 years? Is there anything sinister about these imports? Again, let us examine the facts.

During the year ending June 30, 1937, agricultural imports were $699,000,000 greater than in the like period of 1933–34, the last year before any trade agreements came into operation. That, of course, is an impressive figure, and one which can easily be used for alarmist purposes. But when you come to analyze it, this is what you find:

Out of a total increase of $699,000,000 in agricultural imports in the 3-year period 1933–34 to 1936–37, $255,000,000—over a third of the total—is accounted for by wholly noncompetitive imports, such as coffee, tea, rubber, and silk. Does any farmer complain about that? A further $141,000,000—roughly, a fifth—is composed of major items affected by the droughts of 1934 and 1936. Certainly no one believes that trade agreements caused the droughts. These imports were of commodities needed by farmers and were brought in mostly over high tariffs for his benefit—not to his injury. A further $45,000,000 is accounted for by sugar. But imports of sugar are regulated by quota in such manner as to reserve for domestic producers at least as much of our market as they can supply at reasonable prices. As a matter of fact, most of this increase in the value of sugar imports is due to higher prices rather than larger quantities admitted to our shores. A further $178,000,000 is made up of important agricultural products that we regularly import in large quantities in spite of high tariffs. These include articles such as long-staple cotton, dutiable types of wool, hides and skins, and wrapper tobacco—products that we cannot produce in sufficient quantities at reasonable costs to supply our domestic requirements. That leaves only $83,000,000 remaining out of the total increase of $699,000,000. And when one carefully examines this remaining $83,000,000, one finds that it is divided among a large number of small items which properly fall in one or another of the foregoing groups.

What the whole matter boils down to is this: If the increases in imports be analyzed, one finds that reduced duties through trade agreements have played but an insignificant part. The increase in imports, except as it was due to drought shortages, was the result very largely of economic recovery—something for which all of us should be thankful. Nobody has been "sold down the river."

Let me go further. Not only has there been no injury to farmers through trade agreements, they have brought to him positive help, help in the form of substantial concessions secured abroad for the farm surpluses which he must sell and help in the form of increased foreign purchasing power for American exports. Of our total agricultural exports to trade-agreement countries, we have secured duty and tax reductions and liberalization of import quotas on about one-third (to use the 1929 figures), and have bound existing duties against increase on almost another third. Canada, which, contrary to the general impression, is a large importer of farm products from the United States, reduced her duties on about 125 agricultural and horticultural products. The concessions obtained in this and other agreements have already resulted in increased exports of many farm products and have opened the way for other increases when crop conditions return to normal and surpluses are available for export.

But the concessions which we obtain from foreign countries in the form of lowered tariff and other import restrictions on farm products are only a part of the picture. The enlarged domestic markets which result from the program are of the utmost importance. Many American farmers, for instance, have been able to sell more meat and more dairy products to American consumers because of increased pay rolls and increased business in those industries for which we secured industrial concessions in the Canadian trade agreement. The increase in exports of manufactured products that result from the operation of the trade-agreements program are inevitably reflected in a better market at home for products of farm and factory. And this is often very substantial. Can there be any doubt that the decline of over two and a half billion dollars in our industrial exports between 1929 and 1933 contributed heavily to the collapse of the domestic market for farm products?

Up to this point I have been speaking in terms of agriculture as a whole. Now let me come a little closer to home by pausing to consider what this trade program means to Wisconsin.

Wisconsin has a very real stake in the restoration of foreign markets. The figures are rather startling. It is estimated that between 1929 and 1932 there was a decline in exports of Wisconsin products from $125,000,000 to $14,000,000. To this striking loss must be added the decline in Wisconsin's sales to other States resulting from the loss of export outlet suffered by these other States. We have been winning back some of these export outlets. We have obtained numerous concessions reopening markets for industrial products, some of which are of distinct interest to Wisconsin; items such as automobile parts; tractors and other agricultural machinery and implements; paper products; batteries; calculating machines; cash registers; electric motors; metal furniture; various types of mining, manufacturing, and other machinery; leather and leather products; paints and varnishes; refrigerators; and so on. Our reports indicate that Milwaukee and other industrial centers have definitely benefited from the revival in exports of various of these products and that trade agreements have been a contributing factor. And, as I have already said, increased pay rolls in industrial centers inevitably result in increased purchases of farm products and, therefore, increased farm income.

But I realize full well that the all-important element in Wisconsin's economy is the dairy industry. Has the trade-agreements program injured the dairy industry?

Our critics have loudly claimed that it has. They have pointed to the increase of imports in 1936 following the coming into force of the Canadian trade agreement in January of that year and the decline in Cheddar prices during the ensuing winter.

I can think of no better example than Cheddar cheese to illustrate the ease with which farmers may be led astray on this question of trade agreements through statements that neglect all-important facts. What our critics did not point out was that imports of Cheddar even after 1936 have amounted to only 1 or 2 percent of our production and consequently are not, and never have been, large enough to have any appreciable effect on prices. The decline in price which they seized upon in 1936 was purely seasonal; after May the price began going up, reaching 17.6 in August and never again falling to the May 1936 level. For the entire year 1936 it averaged 15.3 cents. Contrast this with 1932 when the price averaged around 10 cents a pound. Meanwhile, our domestic production of Cheddar in 1936 reached an all-time high of 494,000,000 pounds.

Of course the dairyman sells milk, not cheese. And when you come to consider the effect of Cheddar imports upon the price of milk, their significance becomes infinitesimal. The whole national milk-price structure is closely interrelated, and only 4 or 5 percent

of our milk goes into cheese. Obviously, any decrease in milk prices caused by a slight increase of cheese imports would be too microscopic to be seen even with a magnifying glass.

What really matters to the dairyman and to the farmer is not the amount of imports coming into the country, but the amount of income which he receives. In 1932, when the Smoot-Hawley Tariff Act had shut out almost every pound of Cheddar, when producers enjoyed 99.84 percent of the domestic market, Cheddar was selling for only 10 cents a pound and the gross income of the industry was but $37,000,000. In 1936, Cheddar prices averaged 15.3 cents, and the gross income of the industry was over $75,000,000. This year it is running even higher.

Similarly, in 1933 total farm income throughout the country was $6,128,000,000 exclusive of benefit payments. Last year it was $9,050,000,000. That is what tells the story. Do any farmers want to go back to the days of 1932?

Prosperity for the farmer depends, not on the share of the domestic market which he enjoys, but on the price of farm products and how much of these he can sell. He is far more prosperous with a substantial share, say 80 or 90 percent, of a large market than with 100 percent of a shrunken market.

An embargo on all imports is not the way to prosperity. High prices do not come through stagnation of trade. Prices are high when trade is brisk and when increased pay rolls make possible increased purchases of the products of farm and factory. Indeed, few industries are so sensitive to upswings and downswings of consumer buying power as the dairy industry. It is a well-known fact that for years the movement of butterfat prices and industrial pay rolls has been in striking unison.

What most profits the farmer and the dairyman is a general rise in standards of living for the masses of the people, particularly those in the lowest income groups. And such a general rise in standards of living comes with increased foreign markets for the sale of our farm and factory surpluses, with increased foreign-purchasing power, with increased production on both sides of the ocean. That is the objective of trade agreements.

Before I close I want to say one word about a matter of infinite importance to farmers, to factory workers, to mill owners, to every American citizen. If we are to have prosperity we must have peace. And we will never be secure in peace unless and until sound economic foundations are built for it.

If trade barriers grow to impassable heights and ordinary processes of trade break down how can nations secure the foodstuffs and raw materials necessary for their economic life and for the lives of their people? How can national populations sell their surplus products and thereby gain the wherewithal to live? Men will fight before they starve. Uneconomic trade barriers forge the thunderbolts of war.

The trade-agreements program is important because it means building secure foundations for the prosperity of the farmer and the factory worker. But its true significance is much more profound. It means building secure foundations for peace.

United States trade with countries with which trade agreements were in operation all or part of 1936 and all of the first 9 months of 1937, as compared with trade with nonagreement countries

[Source: Compilation from official statistics, Bureau of Foreign and Domestic Commerce, U. S. Department of Commerce, Washington, D. C.]

	Exports, including reexports			General imports			Total trade		
	1935	1936	Percent increase in 1936 over 1935	1935	1936	Percent increase in 1936 over 1935	1935	1936	Percent increase in 1936 over 1935
Total, 14 trade-agreement countries	$776,790,000	$886,582,000	14.1	$839,178,000	$1,022,874,000	21.9	$1,615,968,000	$1,909,456,000	18.2
Total, all other countries	1,506,084,000	1,566,905,000	4.0	1,208,307,000	1,396,355,000	15.6	2,714,391,000	2,963,260,000	9.2
	First 9 months 1936	First 9 months 1937	Percent increase in 1937 over 1936	First 9 months 1936	First 9 months 1937	Percent increase in 1937 over 1936	First 9 months 1936	First 9 months 1937	Percent increase in 1937 over 1936
Total, 14 trade-agreement countries	$622,743,000	$899,567,000	44.5	$741,506,000	$944,439,000	27.4	$1,364,249,000	$1,844,006,000	35.2
Total, all other countries	1,112,121,000	1,479,578,000	33.0	1,026,833,000	1,483,152,000	44.4	2,138,954,000	2,962,730,000	38.5

NOTE.—In connection with the above statistics it should be borne in mind that (1) only part of the products exported to and imported from the trade-agreement countries are affected by reductions in duty and lessening of other restrictions in the trade agreements and (2) other factors—such as the droughts of 1934 and 1936 in the United States, the increasing demand for raw material and foodstuffs in the United States and other countries, and price changes—exerted an important and in some cases a dominant influence upon the course of trade.

Importation of Shoes Under Reciprocal-Trade Agreements

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, November 22 (legislative day of Tuesday, November 16), 1937

ARTICLE FROM BOSTON SUNDAY ADVERTISER

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the RECORD an article from the Boston Sunday Advertiser of November 14, 1937.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Boston Sunday Advertiser of November 14, 1937]

WORKERS TELL OF PLIGHT—BLAME HULL TRADE PACTS AS SHOE PLANTS SHUT—THOUSANDS OF SHOE WORKERS IDLE, PLEAD FOR UNITED STATES ACTION—HAVERHILL FACTORIES ARE CLOSING—HIGH TARIFF IS ASKED TO SAVE JOBS

(By Ann Marsters, Boston Sunday Advertiser Staff Writer)

A little, watchful man sat in his office in the big shoe factory which he owned. The factory was silent, and the man was watching a few stray workers come and go.

They, the workers, wouldn't be needed today, nor the next day, nor the next. For it was Saturday morning in Haverhill; Mr. Morris Greenstein had shut down the Green-Bell Shoe Co., and all he could do was sit helplessly in his office and watch the workers come and go.

So a few more hundred shoe workers join the already enormous list of unemployed in Haverhill. There ought to be more than 8,000 men and women on the pay rolls of these shoe factories. But now there are fewer than 1,000—and those working only part time.

THE ANSWER IS PLAIN

Everyone knows the answer. The workers know it, the manufacturers know it—and so does Washington. Everyone knows that the answer is this:

The New England shoe industry cannot compete with the low-priced Czechoslovakian shoes which are pouring into the American market.

And everyone knows—the workers and the manufacturers—that the Washington administration's and Secretary of State Hull's policy of letting down foreign-trade barriers means absolute ruin to our shoe industry.

So the factories curl up and die one by one.

In Haverhill the industry is drawing its last breath.

Never before in the history of that city, in all the lean years of the past, has there been such a bleak and desperate situation.

GIVE FACTORIES A CHANCE

Ask any worker, and he can talk pretty intelligently about the cause of it all. He can tell you about the Czechoslovakian shoes; about the low wage scale in the Czech factories; about the low tariff which makes it possible for those shoes to be exported to the United States and sold for a price that makes it impossible for American factories to compete.

They all have the same question to ask: "Why doesn't Washington raise the tariff and give our factories a chance?"

They don't, as a whole, know much about Mr. Hull's "reciprocal trade treaty" with Czechoslovakia. They see the problem as it affects their livelihood, and their reasoning sounds the only sensible reasoning to their ears.

"Why," they ask, "should Washington deliberately destroy an American industry? Why should the administration not lift a hand to save it?"

It doesn't seem as though they'll get an answer to those questions in the near future, what with Mr. Hull going right ahead with his trade treaty, which will mean an even greater flood of Czechoslovakian shoes and even more closed factories here.

But meanwhile there is the vital, personal questions:

"How are we going to exist?"

We talked with a number of unemployed shoe workers in Haverhill yesterday and they all struck the same note of hopelessness.

Two young women, Marie Davis, of Becker Street, and Mariette Jalbert, of Grove Street, have been out of work, off and on, for the past 6 weeks.

NO SIGN OF WORK

Today they were informed that there wouldn't be even an occasional day's work for "an indefinite period."

"I just collected my last week's pay," said Marie, who is an expert stitcher. "It was 84 cents. I have hardly any money laid aside—and I have to support my mother. It's a mystery to me how we're all going to get through the winter. After all, the city can afford only so much relief, and there won't be enough to go around.

"I should think," she went on, rationally, "that it would be of more benefit to the country to keep its own workers employed, than to send thousands of dollars of American money over to Czechoslovakia. As it is, Washington seems to be trying to put us out of work—and they've certainly succeeded in Haverhill."

"Well," said Mariette, with a cheerful smile, "we're all in the same boat."

Being in the same boat appears to be the thing that is keeping the Haverhill workers cheerful, for the present. They can say "if one of us starves, we'll all starve"—and they can smile about it.

John Amara, of Grove Street, and Joseph Patnaude, of Coral Street, were employed by the Grand Shoe Co., which closed 3 weeks ago.

Joseph has been a shoe worker in Haverhill for 47 years. He said: "In all my years here, I have never seen anything like this situation. It is worse than anyone could have imagined—and if Washington doesn't do something about it pretty soon, it'll be too late. This will be a dead city, and we'll all starve to death.

"I suppose I and my family can live on credit for awhile—but not forever. The whole town's living on credit right now. But that's not going to pay the taxes on our homes—and if we can't pay taxes, where's the city going to get the money to shovel out relief?"

WELFARE LIST SWELLS

Certainly Joseph doesn't know, and neither does Mr. Amara. Amara plans to get through the winter by cashing his insurance policy.

At the headquarters of the Boot and Shoe Workers' Union, we talked with Mrs. Lillian Murphy, agent of the Stitchers' Union. She spoke of the immense swelling in the welfare list.

"Last Tuesday," she said, "190 families applied for relief. Up until Friday of this week, there was an increase of 450 applications. And the city's relief quota is already used up."

Mrs. Murphy is very much against the idea of the workers taking a cut in wages during the present crisis—and the majority of workers are against it, too.

The manufacturers, however (those few that are still trying to limp along), feel that some sort of agreement should be made whereby wages would be cut temporarily—until Washington throws a life line to the industry. But there appears to be no hope of any such agreement—and no hope of a life line, either.

ALL THREE SHOPS CLOSED

Little Mr. Greenstein, sitting in his silent, almost empty factory, is representative of the manufacturer. Not long ago he had two other factories, besides the Green-Bell, going full blast—the Phillip Shoe Co. and the Morrison Wood Heel Co. He has had to close all three—because of those Czechoslovakian shoes. He has had to put 800 men and women out of work.

Mr. Greenstein showed us a petition which is being signed by the workers in Haverhill. It reads:

"To the Honorable GEORGE J. BATES, Sixth Congressional District, Massachusetts, Congress of the United States, Washington, D. C.:

"We the undersigned shoe workers and other workers of Haverhill, Mass., all directly dependent upon the industry for our livelihood, protest against the reciprocal-trade agreement with Czechoslovakia and we earnestly urge that barriers be increased, to the end that the shoe industry be preserved from certain destruction."

Mr. Greenstein sadly shrugged his shoulders and said, "I don't think it will do any good."

The Antilynching Bill

EXTENSION OF REMARKS

OF

HON. JOSIAH W. BAILEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, November 22 (legislative day of Tuesday, November 16), 1937

ARTICLE BY HUGH S. JOHNSON

Mr. BAILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article headed "One Man's Opinion," by Gen. Hugh S. Johnson, published in the Washington Daily News of Monday, November 22, 1937.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of November 22, 1937]

ONE MAN'S OPINION

(By Hugh S. Johnson)

I have spoken analyzing the main objections to the antilynching bill, and Mr. Mark Sullivan has written on it very clearly. But there has been a considerable request that it be discussed again here, so, at the risk of repetition, here goes.

The public thinks this is a bill to make lynching a Federal crime. The principal poll of public opinion, which is frequently cited as showing a 70-percent majority, asked, "Do you favor making lynching a Federal crime?" This bill does no such thing.

It defines lynching as three or more people taking and injuring or killing a person charged with, suspected, or convicted of a crime. When this happens, the responsible State or municipal cop who willfully neglected his duty or failed to arrest lynchers, can be tried by a Federal court and, if convicted, sent to the penitentiary as a felon. Also, in behalf of any person so injured or killed, the United States Attorney General, using Federal funds, can bring a civil suit against any town where such a thing occurred and collect damages up to $10,000.

Only once before during the life of our Constitution was it believed that the Federal Government could supervise the execution of State laws or officers or discipline local governments and officers. That once was the ravishment of the South by carpetbag tyranny after the Civil War in the tragic reconstruction era; the most disgraceful period in our history.

This antilynching bill is now attempted under the fourteenth amendment. That was one of three amendments that freed the slaves, gave them citizenship and the right to vote, and guaranteed them equal protection of the laws. Under these provisions also the new radical Republicans, after 1865, sought to send Federal officers into the South, enfranchise the whole Negro race as Republicans, and, since they were, and still are, in the majority in many States, install Negro State governments and use their inexperience to treat the white State populations as "conquered provinces." It partly succeeded for 20 years until better elements within the Republican Party became disgusted, the courts invalidated most of the legislation like this, and the South was again free. The experiment failed, but it made the whole Negro race Republican up to 1933.

Lynching and mob violence are a particularly dangerous and despicable crime. Few statesmen dare go against what the public has been ballyhooed into believing is an antilynching bill, no matter how bad and dangerous it is on other grounds. Due to State action, lynching has almost disappeared—from hundreds of cases years ago, mostly in the North, to nine last year. This, besides being a bad issue, is a fake issue. Why is it raised?

The Negro vote in the four pivotal States of greatest electoral votes is now large enough to swing any close election there, and some of those States are large enough to be necessary in any national election. Negroes are all now New Dealers. Third New Dealers believe that this bill will keep them so permanently, and they care not a hoot for the objections of people who think our system of dual State and National Government should be preserved. They don't want it preserved. They want a modified Fascist front in a Federal dictatorship based on discontents of all kinds. They want to break up the old Democracy of the solid South and rebuild a new Third New Deal party of Negroes, the unemployed, aliens, and all those who claim a class grievance—to break down the States and constitutional guaranties and centralize all political power where they can control it. This is just their dish.

If this attempt stood alone it might be dismissed as unimportant. It does not stand alone. It is just one in a cluster of bills to centralize government and impair the constitutional power of both Congress and the States.

The Antilynching Bill

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, November 22 (legislative day of Tuesday, November 16), 1937

EDITORIAL FROM NEW YORK WORLD-TELEGRAM

Mr. CLARK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the New York World-Telegram of November 20, 1937, headed "Why Not Legislate?"

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York World-Telegram of November 20, 1937]

WHY NOT LEGISLATE?

Several southern Democratic Senators, including GEORGE, of Georgia; BAILEY, of North Carolina; and CONNALLY, of Texas, have been demanding that Congress quit wasting time and do something to help pull business out of the slump.

That is a sound idea. Business needs help, needs it badly. The jobs of millions depend upon business getting that help quickly. But the way these particular do-something-for-business Senators want Congress to "quit wasting time" is to debate the antilynching bill.

Inasmuch as antilynching legislation has already been debated in Congress for more than 15 years, the quickest and best way for the Senate to "quit wasting time" would be for Senators GEORGE, BAILEY, CONNALLY, et al. to stop their talk, take their seats, and vote.

After all, passage of the measure, if it did pass, would not hurt business, except the business of lynching, which, though it may be a lively industry in some States, certainly yields no dividends, pays no taxes, and provides no gainful employment.

In the House also the legislative process is being choked. The stranglers are five southern Democrats—COX, of Georgia; DRIVER, of Arkansas; SMITH of Virginia; CLARK of North Carolina; and DIES, of Texas—abetted by four Republicans—MARTIN of Massachusetts; MAPES, of Michigan; TAYLOR of Tennessee; and MCLEAN, of New Jersey. These nine constitute a majority on the House Rules Committee.

They don't like the Black-Connery wage-hour bill. And so, although the bill has been passed by the Senate and approved by the House Labor Committee, they have decided to use the peculiar autocratic power which a Rules Committee majority possesses and not permit the bill to come before the House. These nine men won't let the 424 other Representatives vote on the bill or even legislate on the subject in the way such measures customarily are debated, amended, and then rejected or approved.

We don't like the wage-hour bill as it is now written. We think it would be better for Congress to fix labor standards than to delegate that power to a commission. But so long as the bill is bottled up in the Rules Committee there can't be any wage-hour consideration at all. Thus far no Congressman whom we have heard of—certainly not one of these nine—has had the political courage to say publicly that there should be no legislation to stop the sweatshop exploitation that is undermining the living standards and buying power of the American wage earners.

Once it gets out on the House floor this bill can be amended and improved by the orderly democratic processes. But some elected "Representatives" of the people seem to be afraid to let representative government function.

Preservation of Natural Resources

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, November 22 (legislative day of Tuesday, November 16), 1937

RADIO ADDRESS BY HON. HAROLD L. ICKES, SECRETARY OF THE INTERIOR, ON NOVEMBER 1, 1937

Mr. GUFFEY. Mr. President, I ask leave to have printed in the Appendix of the RECORD an interesting radio address delivered on the 1st instant by Hon. Harold L. Ickes, Secretary of the Interior, entitled "We Must Husband Our Resources."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

"To conquer Nature, man broke down the gates of the Garden of Eden and came forth to meet the challenge of an unordered world."

These are the words of a former Secretary of the Interior, the late Franklin K. Lane.

Ruthlessly, man has continued on his way through the ages. In the struggle for self-preservation and for economic security he has conquered the world beasts and the physical phenomena of the earth, utilizing its flora and fauna for food and clothing and shelter and delving under its crust for minerals to provide warmth and materials and power for his machines. As man became bolder and more experienced he enlarged his ability to exploit, and by travel and exploration discovered ever new fields for his enterprise until the time came when he had conquered everything but himself.

It was not long after the settlement of America before our ancestors began to ravage forests and land and streams with no thought of the future. In fact, the principle of conserving natural resources was unknown among these early newcomers, because there was no occasion for its exercise. The new Colonies, and subsequently the Federal Government, could offer seemingly inexhaustible quantities of land amply supplied with water, minerals, forests, and wildlife, which were the basis of the pioneer economy. Further exploitation of our natural resources threatens our present national economy and casts a heavy cloud upon the future of our country.

When are we going to constitute an agency of government which is willing and able to undertake the task of checking the prodigal waste for which we have been notorious, and be responsible for the result?

In days gone by our ancestors sold our patrimony for less cash than was obtained for the traditional mess of pottage. They even allowed them to be taken without compensation. They permitted our heritage to be despoiled, the land to be raped. They gave away the country's water and broad acres. They proclaimed and carried out a policy of "come and get it." To those who clamored loudest went the biggest share of the country's forests, of its oil and mineral resources.

We must not continue to squander our resources the same way today, for there is little left to sell or give away. The cupboard may not be bare, as was the case with Old Mother Hubbard, but at the rate we have been going it will soon be in that condition. Now we must ask those who received immoderate special benefits from the Nation to do a bit in helping us to improve our national economy. From those who got a thousand feet of lumber, perhaps, we are asking a splinter as taxes in return; from those who got a square mile of rich land we may request enough to preserve an acre for posterity; from those who got a barrel of oil we may ask for a teacupful back—and already the shrieks of anguish from the greedy are heard throughout the land. At this time, and properly so, we are concerned with the annual cash Budget, that of the dollars and cents that we must take in in order to meet our outgo. But we have not yet projected our vision to encompass the larger question of our national assets. The fact is that we are guarding our coin purse and leaving our billfold open to be rifled by any and all.

NO AGENCY FOR CONSERVATION

Why is it that this country can so easily run a fever over the Budget and at the same time fail to realize that we have squandered and are squandering our priceless heritage of resources, which we could never replace? Why is it that we become hysterical over wasting crumbs on the dining-room table and allow loaves to be purloined from the pantry shelf?

The reason is that there never has been, and there is not today, in the United States any one agency of government responsible for conserving our natural resources. There is no central agency of government charged with this task.

This condition should not endure. Fortunately, President Roosevelt, while engaged in balancing the Budget, is looking ahead. He is concerned about the national wealth that is locked up in our natural resources. He envisions a government which will guard those resources which are the storehouse and depository of the Nation's future welfare.

When the President laid the cornerstone of the new Interior Department Building in Washington in April 1936 he enunciated a policy of conservation of our natural resources that, if the people will get behind it, is destined to guarantee the prudent use and development of our remaining resources for the benefit of all Americans, both present and future. He declared that he was dedicated to the cause of conservation.

As a lifelong believer in the principles of conservation and of the prudent use of our topsoil, forests, water supplies, and minerals, I was greatly heartened by what the President said. I was encouraged not only because the President voiced his confidence in the Department of the Interior as the conservation arm of the Government on that occasion but because here was a President of the United States declaring that the vast national domain and the other natural resources of the country belonged to all of the people. They were not the property of any class.

It is therefore with a sense of satisfaction and pride that I am able to say to the people of America that the administration now in Washington has begun to reverse the one-time national policy of exploitation and waste and is undertaking a conservation program which is predicated upon the sound philosophy that our resources are to be guarded and used for the greatest good of the greatest number of our citizens.

PEOPLE BEGINNING TO AWAKEN

There is ample evidence of this new direction of the popular will. An increasingly large number of persons today have a better understanding of the purposes of conservation and a keener appreciation of what the Federal Government is doing to protect our natural resources. At last the people themselves are beginning to recognize the importance of conservation in our national life, both economically and socially. There are many instances of this.

In point, is the acclaim that has been accorded the splendid work that is being accomplished by the Civilian Conservation Corps.

Among the many other approved steps which have been taken by the Government since 1933 and which have given force and effect to conservation I might mention the program of soil conservation and erosion control. There is now a general acceptance of the fact that soil erosion can be prevented and that its effects can be overcome in many instances.

I need mention only Grand Coulee Dam and the Bonneville project on the Columbia River and the Fort Peck Dam at the headwaters of the Missouri River as steps in the greatest flood control, navigation, and irrigation programs ever undertaken by any government anywhere. Boulder Dam, which harnesses the Colorado River, has been completed and put into operation ahead of schedule, and completion of the significant Tennessee Valley development is proceeding rapidly.

Theodore Roosevelt, in his autobiography, says that the first work he took up when he became President was that of reclamation. Prior to the Reclamation Act all irrigation was under private auspices, but from 1902 the Federal Government has taken the leadership in this major field of conservation through the Department of the Interior. The successful conquering of the desert by husbanding for it life-giving water has given birth to a specialized agriculture which has made possible homes and a livelihood for many thousands of our population.

The Guffey Coal Act, setting up the Bituminous Coal Commission, is an effort of this administration to conserve our supply of coal and to protect our miners.

PROGRESS UNDER GRAZING ACT

Under the Taylor Grazing Control Act we have made progress far beyond our earlier expectations toward saving what remains of the public range, with the result that stabilization of the livestock industry is in sight at last. This act, administered by the Department of the Interior, is one of the most important single conservation measures ever enacted by the Congress.

The interest of our people in the enlargement and development of our national-park system has shown a tremendous growth during the past 5 years. Attesting this is the fact that during the past year more than 15,000,000 persons, or about 1 person in every 8 of our population, visited our national parks and monuments.

The production and sale of "hot oil" in our largest field in east Texas has been virtually stopped as a result of cooperation between the Department of the Interior and the State of Texas, and it is my observation that our people, including those in the oil industry, are rapidly coming to the conclusion that petroleum is an irreplaceable resource that should be conserved at all costs.

It is not by mere chance that it has remained for the Department of the Interior to take the lead in the present-day conservation movement. This Department does not consider conservation the mere hoarding of our resources. While Interior is fully alive to the imperative necessity of protecting and preserving all of our natural resources, it does not hold that conservation is incompatible with a continued growth of the country. Just the opposite is the fact. We believe that conservation will make for a greater enhancement of our country in the future than would a policy of continued exploitation. It will provide substitute fertile lands for the acres of the Dust Bowl which are the result of improvident farming. It will permit decentralization and the breaking up of our congested areas so that we may free ourselves from those areas which, because of overcrowding, breed sickness and crime.

The Department of the Interior holds that we must rephrase the philosophy of the past with respect to the handling of our natural resources. We must inculcate as a fundamental tenet of Americanism the belief that the proper development of our form of government carries with it the obligation to use Nature's gifts prudently, so that all the people may benefit—not only those of today but those of tomorrow and the day after. I think it is time that in our schools, both grammar and secondary, and in our colleges as well, we should inculcate more vigorously an understanding of the magnitude and the importance of the problem of proper husbandry of soil and water and minerals.

None of the gains for conservation that have been cited have been won without a stiff fight against special privilege. And what has been true in the past is true today. No administration or President may advocate a change of policy curtailing special privilege without inciting the trained seals of that privilege to shrill barks. Professional viewers-with-alarm in our country are a hardy, perennial crop. And usually the alarm that is aroused and proclaimed bears a direct relationship to the stake involved, which, in the case of what remains of our national resources, still runs into the billions of dollars.

What other Presidents were confronted with in the past when they engaged the exploiters in behalf of the people, President Roosevelt is experiencing today. As part of his well-conceived and well-worth-while plan to reorganize the executive departments in the interest of efficiency and economy, he has proposed that the name of the Department of the Interior be changed to that of Department of Conservation. Such a change would mean that for the first time in our history the conservation of our natural resources would be made the responsibility of a major department of the Government. Naturally we find this proposal bitterly opposed by those who have been given special privileges in the past with respect to our lands and forests and mines—those who want to continue to exploit these and other resources for their personal enrichment.

WILL NOT FIGHT IN OPEN

It would not help their cause if those who fell the forests, exhaust the oils and minerals, or covet for power and irrigation such water as they have not already seized, stood out in the open to fight President Roosevelt's conservation plans. They find it better to work by indirection, to make use of a sincere but misguided zealot. Let us see how the exploiters operate, and, seeing, admire their cleverness.

There was a figure prominently associated with Theodore Roosevelt in establishing his conservation policies. I refer to Gifford Pinchot, once head of the Forest Service and more recently Senator-reject of Pennsylvania. He did excellent service over a quarter of a century ago, but for many years, because of his political proclivities, he has not had much time to devote to the thing that brought him fame. In fact, he has become the Lot's wife of the conservation movement. He has not looked ahead for 20 years. And yet Mr. Pinchot, despite his lack of vision, still serves some use in the conservation movement. We need guideposts, even if they lead many miles back into the past. But a man can hardly be regarded as a crusader merely because a quarter of a century ago he followed a Peter the Hermit. Now Mr. Pinchot is again astride his old hobby-horse, but he is facing the tail instead of the head of the horse. In truth, Pinchot is not a Lancelot but only a Don Quixote.

ROLE OF LOOKING BACK

That Pinchot's role in the conservation movement is purely that of one who looks through a rear-view mirror is attested by the bitter attacks that he makes upon anyone whom he regards as threatening the position he asserts as of right to be regarded as the self-annointed Messiah of conservation. This attitude of his has never been so well exemplified as at the annual convention of the Izaak Walton League, which was held in Chicago last spring. The speech that he made on that occasion was purely political, the good taste of which might well be questioned by any member of an organization that, in theory at least, is above political controversy.

Mr. Pinchot has been busy jittering his way about the country declaring that if the President's reorganization bill passes, as it should pass in the interest of a more efficient administration of the Government's business, the national forests might be transferred to the new Department of Conservation. I have not the slightest notion whether the President would do this, but if he should make the shift the entire personnel of the Forest Service would be sent to the new Department. It happens that the Forest Service is under civil service, and it would continue to function as a unit manned by civil-service personnel, as in the past. I know that even in his excitement Mr. Pinchot did not mean to imply that the able and honorable employees of the Forest Service in the Department of Agriculture would be any less able and honorable in the Department of Conservation. I think that Mr. Pinchot will concede that I have upheld the principle of civil service since I became Secretary of the Interior even in making appointments that lay outside of this law in which I so firmly believe.

In his Izaak Walton League speech Mr. Pinchot "temperately and judiciously" made this statement:

"I call to your attention the fact that, with a possible exception of the national parks—and I underline the word 'possible'—the Interior Department has never had control of a single publicly owned natural resource that it has not devastated, wasted, and defiled."

EXPERT AT CALLING NAMES

I do not care to bandy unexpurgated epithets with my old friend. He has specialized so long in calling names that he has become an outstanding expert in this art. All that I care to say is that the people of this country have had too many contacts with the various bureaus and divisions of the Department of the Interior for those bureaus and divisions to need any defense from me.

It seems to me so obvious as not to require argument that conservation would be greatly advanced if it is made a major responsibility of the great department of the National Government. Gifford Pinchot—and in this, interestingly enough, he has the active cooperation of Col. William B. Greeley and the great lumber interests of the country—supports the bizarre theory that in disunion there is strength. For some reason that I cannot understand, he wants to keep the conservation activities of the Government separate, disunited, and antagonistic. His is an ardent advocacy of overlapping and inefficiency, with its consequent waste and exploitation.

In a speech before the American Forestry Association some months ago Mr. Pinchot delivered another tirade against the President's reorganization plan and made slurring reference to the proposed Department of Conservation as "Ickes' folly." He misrepresented me as a despoiler of the Department of Agriculture, the national forests, and the public range, and miscredits me with a bump of acquisitiveness and greed for power even greater than his own. This in the face of the following inscription to me in his book, Just Fishing Talk, which he sent me in July 1936:

"To Harold Ickes, whose courage, conscience, and common sense have made him one of the most outstanding public servants of his time, with the affection and admiration of his friend, Gifford Pinchot."

PREPARING TO SEEK OFFICE

Do you wonder that some question the sincerity of this man, who can abandon during political campaigns his interest in conservation; who yesterday fought the great lumber interests, charging them with ruthless exploitation, and today walks down Pennsylvania Avenue arm in arm with them; who proclaims his interest in the farmer and the workingman and at the same time plots for political control of Pennsylvania with Joseph R. Grundy, the greatest lobbyist of them all for the biggest interests? I suppose now that Mr. Pinchot is preparing to run again for the governorship of Pennsylvania, or for an even higher office. There will be less and less criticism of the Department of the Interior from him as his campaign develops, except as it may serve his political interests.

May I conclude by saying that there is nothing startling in the President's proposal for a United States Department of Conservation, in which there might be concentrated existing Federal activities for the prudent use and preservation of our natural resources?

Some 24 States already have conservation departments or commissions, and their business of government apparently goes on tranquilly and efficiently. Once the feud of over a quarter of a century ago, which is kept alive by such men as Pinchot, is rightly recognized for the false obstacle that it is to good government and sound sense in handling our remaining natural assets, the way will be cleared for beneficial legislation. Then the horizon of a decent and comfortable existence in America will be extended by thousands of years. And man, who has already conquered Nature, will have conquered himself.

Main Street Talks to Pennsylvania Avenue

EXTENSION OF REMARKS

OF

HON. SAMUEL B. PETTENGILL

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, November 22, 1937

Mr. PETTENGILL. Mr. Speaker, the small businessmen of the country have been supporters of the administration. Today, however, they are beginning to doubt whether regulation from Washington is not being carried too far. Their point of view is entitled to consideration.

It is for this reason that I attach a letter received from a responsible businessman from a typical little town of the Midwest—Nappanee, Ind. The writer of the letter is a lifelong Democrat, a respected citizen, and former mayor.

I do not understand that Mr. Uline objects to voluntary organization and collective bargaining for labor. It is manifest, however, that the labor problem of the small factory, where management and men know each other by their first names, is vastly different from what it is in the great industrial centers. Any law or administrative policy which seems to widen rather than close the gap between management and men, which appears to make "the employer powerless to discuss the situation" cannot in the long run be good for the owners, the men themselves, the community, or the Nation.

Those who have the responsibility of producing goods at prices which the buyer will pay are entitled to a hearing. The letter follows:

NAPPANEE LUMBER & MANUFACTURING CO.,
Nappanee, Ind., November 11, 1937.

Hon. SAMUEL B. PETTENGILL, M. C.,
Washington, D. C.

MY DEAR MR. PETTENGILL: It has not been often that I have written you but at the present time I feel that a few words from one who has been one of the leaders in the Democratic Party in this section will not come amiss. It seems to me that the present session of Congress has a big job on their hands if they are to enact legislation which will be beneficial to the country and if they are to modify legislation which has proven to be detrimental to our progress.

I am not unmindful of the many good things and necessary things which already have been done to stimulate business. On the other hand, in the eagerness of some of the Democrats to change the whole system, some legislation has been passed which is very detrimental to business. Some of this legislation affects big business and some of it affects small business. What I am interested in is the legislation which adversely affected small business.

Hanging on the wall in my office is a picture of a group of laboring men, the first which it has been my pleasure to employ. There were an even dozen of these men and the picture was taken in 1890—47 years ago. Since that time I have always employed men, and the dozen has grown to nearly 100. During that time I knew every man by his first name and never was unmindful of his needs, and in the hour of his needs either I or my company were always at his service. Forty-seven years of a relation like this without any noticeable friction.

During all of this time I have been a Democrat. I have believed in democracy and thought I believed in Democratic principles. I believe you know me well enough to realize that my influence has had some weight in the community and what I am writing to you as a Democrat I feel sure that I am voicing the opinion of small manufacturers all over the country. The word has gone out from Washington repeatedly that nothing should be done to disturb the small manufacturer. Yet for the first time in our history there is friction among our laborers due to the passing and the upholding of the Labor Act. Labor has organized in Nappanee.

I am writing you at length because I feel that the details of the effect of labor organizations in small institutions should be known to Democrats generally, and that such unfavorable conditions must be corrected if the Democratic Party hopes to carry on indefinitely. The pendulum is definitely swinging the other way. It is not too late to stop this swing, yet if it is continued much longer the momentum will be so great that nothing can stop it.

Last night I read in the paper where labor is picketing a plant in Goshen, one of our competitors. For the last 3 or 4 weeks the men in our factory have been inclined to get together in groups of two's and three's and some weeks our production was away below normal due to this unrest.

Labor is organized. The employer is powerless to discuss the situation with them for fear of the results should the National Labor Relations Board be called into the picture. Last week I read where some firm in Wisconsin was required to take back into its plant 27 men who had been discharged. Such a condition is not good for the employer, neither does it leave the employee in a frame of mind where he can be of the most good to his employer.

Now, here's the situation in our own factory: Our own men organized. More than 75 percent of the men signed union cards giving the American Federation of Labor full bargaining power for them for 1 year. Immediately we began to retrench. That is to say, we quit buying raw material except in quantities sufficient to last us not more than 2 weeks. Besides this we began a movement to curtail sales expense, all because there is no way of telling what we may expect in the future. This will reflect one of the causes why business is on the decline at the present time. Such a stand as this is not taken only by our institution, but the other factories in Nappanee have adopted the same policy and I am satisfied that all other institutions which are meeting a similar condition are doing likewise.

A careful scrutiny of the wording of the Labor Act leads me to believe that freedom of speech is denied the employer and that therefore we are no longer a free country.

When professional labor organizers are encouraged to step into a harmonious labor situation and void contracts with satisfied employees, our laws permitting the employer no voice, then the situation does no one any good, and freedom of contract ceases, as labor cannot serve two masters at once.

I am writing you in this manner because I feel that I can come to you as a friend. Your work will be harder this coming season than it has ever been before, but in the end right must prevail and I personally urge you to continue to fight for what you believe to be right. Your decisions in the past have met with the approval largely of the thinking people whom you serve.

Thanking you for your indulgence in hearing this appeal and assuring you that unless something is done to restore true democratic principles, the Democratic Party will awaken to find many of the influential Democrats who have carried the heat and burden of the day no longer active. I beg to remain,

Yours very truly,

WALTER C. ULINE.

Third Term for President

EXTENSION OF REMARKS

OF

HON. H. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, November 22 (legislative day of Tuesday, November 16), 1937

ARTICLES FROM THE NEW YORK HERALD TRIBUNE

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two articles dealing with a Presidential third term, published in the New York Herald Tribune of Sunday, October 31, 1937, and Saturday, November 13, 1937.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of October 31, 1937]

SIX ROOSEVELT PARTY CHIEFS VETO THIRD TERM—FLORIDA CHAIRMAN THINKS REFERENDUM MIGHT EVEN CONDEMN SECOND TERM; COMMITTEE HALTS POLL

(By Albert L. Warner)

WASHINGTON, October 30.—The Democratic chairmen of six States advise against a third-term nomination for President Roosevelt, according to a private poll, the results of which were revealed today, along with the considered answers of these Democratic leaders.

One of them, J. B. Hodges, chairman of the Democratic State Executive Committee of Florida, breaks completely with the President and his administration. Attacking the President with a sharpness which no Republican has surpassed, this Democratic leader charges Mr. Roosevelt with making "unconstitutional" proposals, "encouraging" sit-down strikes, breaking his Budget-balancing promises, and spreading lack of confidence. He

suggests that, instead of an inquiry as to a third term, an investigation should determine whether the people want "the completion of the President's second term."

Finally, a member of the President's own family, Franklin D. Roosevelt, Jr., now at the University of Virginia, enters the third-term discussion to leave the door open because "what we feel today may have to be revised 2 years from now in the light of circumstances beyond our control, such as the foreign situation."

UNWRITTEN LAW

The Minnesota Democratic chairman declared the two-term rule was an unwritten part of the Constitution. The South Dakota chairman said he had already informed members of the Cabinet that the voters of his State positively were against a third term for anyone. The Kansas chairman said it would be a "bad precedent." The Alabama chairman asserted a third-term candidate would sound the "death knell" of the party sponsoring him, and Alabama would go Republican for the first time in history if he were a Democrat. According to the chairman for Mississippi, "the people as a whole would look with disfavor upon a third term."

The poll which produced these results was taken by Joseph Leib, formerly of South Bend, Ind., young political writer who organized the first Roosevelt-for-President club in 1930 and was an eager member of the young Democratic movement in 1932. A persistent letter writer, he polled the Democratic State chairmen in 1935 and gave out the answers showing that the overwhelming majority of the delegates to the 1936 convention would carry instructions to vote for Mr. Roosevelt.

COMMITTEE HALTS POLL

The poll this year was cut short because the Democratic National Committee stepped in to halt it. Lawrence W. Robert, Jr., secretary of the committee, was informed by Charles Reid, Georgia State chairman, of the letter he had received asking his views on a third term. Robert advised Leib to stop. Subsequently, and presumably on advice from national headquarters, no more chairmen sent in their views. All six who replied thought that a third term would be distinctly unwise.

The 7-page letter from Mr. Hodges, the Florida State chairman, upon which he said by telephone later he was willing to stand publicly, was described on Capitol Hill today as a southern political development of the first order. Mr. Hodges had been a public critic of the President's Supreme Court plan and an insurgent on some other matters, but today he leads a Florida insurrection against Mr. Roosevelt personally and his whole conduct of affairs.

The more or less private views of these State chairmen are in striking contrast to public comments of several Democrats in public office who may be seeking to ingratiate themselves at the White House. Gov. George H. Earle, of Pennsylvania, is one of those who have been talking up the third-term idea.

This was the letter sent out to the State chairmen:

"I am trying to find out how the people feel about a third term for the President.

"So much has already been said about the matter. Of course no one knows what will happen by 1940—but what do you hear and how do things look?

"Thanks and regards."

The following replies were received from State Democratic chairmen:

Herbert Holmes, chairman Mississippi State Democratic executive committee:

"Of course, it is impossible for me to know how all the people of our State regard a third term for the President, but from what I can learn from those with whom I have talked, the people as a whole would look with disfavor upon a third term.

"Those who are receiving employment or bounty from the Government, whom I have contacted, are very much in favor of his nomination for a third term, but this does not represent a very large voting strength."

C. M. Fitzwilliam, Kansas State committee chairman:

"President Roosevelt is strong as ever in Kansas, and though Kansans are not for a third term, I think he would carry the State. Personally, I think it would be a bad precedent."

A. W. Powell, South Dakota State chairman:

"Tom Berry served two terms as the most popular Governor that South Dakota ever had. He balanced the budget, reduced bonded indebtedness several million dollars, and operated the State without a levy on real estate or personal property.

"In 1936 we thought he was our strongest candidate for Governor, and he ran for the third term and was defeated by over 10,000 votes when every constitutional officer won.

"Mr. Roosevelt lost over 30,000 votes in 1936, and I know it would be fatal to ask the people of South Dakota to reelect him for the third term.

"Out here there is the feeling that these things should be passed around, and the ballots are marked accordingly.

"Personally I would vote for Franklin D. for the third term as an expression of sheer gratitude for the improvement in my situation as brought about by his program, but the 300,000 other voters in South Dakota, I am very positive, feel otherwise, and I have so informed some members of the Cabinet."

John D. McQueen, chairman, State Democratic executive committee, of Alabama:

"Replying thereto, I beg to advise that it is my candid opinion that the nomination by any party of anyone, regardless of who he might be, as a candidate for election to a third term as President of the United States would sound the death knell of the party responsible for such nomination.

"I do not believe the people of the United States would ever elect the same man as President of the United States for a third term, and it is my candid belief that if the Democratic Party does so nominate it will mean that the party will not only go down to defeat, but that it will be so torn by internal strife as to destroy any possibility of the party ever again being the dominant party.

"So far as Alabama is concerned, it is my opinion that such action on the part of the national convention would mean that this State, for the first time since its staunch Democrats redeemed the State from the ignominious rule of the carpetbaggers, which was inflicted upon us following the War between the States, would fail to be found in the Democratic column."

John F. D. Meighen, Minnesota chairman: "My opinion is that the two-term rule is part of our unwritten Constitution, just as much as the right of the Federal Government to purchase new Alaskas. Save in grave emergency, I do not think the voters will overlook the two-term rule."

J. B. Hodges, chairman of the State Democratic executive committee of Florida (excerpts): "You have asked a very frank question, addressing me on the envelope in which your letter came, as Democratic State chairman, and I presume you desire a frank answer, and I am making one.

"There has been much said, and a great deal of speculation has been indulged in, by the people and the press of the Nation in regard to a possible third term for President Roosevelt, and he has nowhere, at any time, so far as I know, made any definite statement relative thereto, preferring to dismiss inquiries in regard to that matter lightly, with statements that may be interpreted as having two meanings, apparently trying to follow in the footsteps of another President of the United States, but his statements and actions are not nearly as clever as the tart reply of such other President, to wit: 'I do not choose to run.' * * *

"In fact, propaganda is already abroad in the Nation by way of reference to the refusal of President Washington to accept a third term, such propaganda pointing out that there is now no law or statute against it; that it is not mentioned by the Constitution; that other Presidents have been besought to seek third terms; that they did not refuse because of Washington's refusal, but because of some illness or the infirmity of age, and with the propaganda set-up in the several alphabetical departments of the New Deal government, the idea of a third term can be, and is being, propagated at the expense of the American taxpayer. * * *

"It would be more profitable to the New Deal * * * to ascertain from the American people whether they are now agreeable to the completion of the President's second term instead of undertaking to ascertain whether or not the people desire the President for a third term.

"I am a Democrat—a liberal Democrat—and I expect to remain a Democrat—a liberal Democrat—as long as I live, but the platform of the Democratic Party adopted at Philadelphia last year was not prepared and written by the delegates to the convention, but was prepared and written somewhere else, and is prepared in such a clever manner that many of the planks therein are capable of more than one construction, very much like the tart statements of the President heretofore made about a third term."

Hodges' 7-page reply charged the President with disregarding platform pledges "to solve its legislative problems within the Constitution" by proposing the "amazing" Supreme Court reorganization bill. He charged the President with making other "unconstitutional" proposals, "encouraging" sit-down strikes and the C. I. O., and with promising to balance the Budget so many times that "the people of the Nation have no confidence in any such promise."

Hodges said that lack of confidence in the President "is now growing to an alarming extent," that the people see no necessity for a special session of Congress, and that "they do not intend to allow the Government of the United States to be operated on catch phrases."

"Our objections are now inaudible," Hodges' letter said. "We have learned that we can only make changes in general-election years, so our people tolerate these things, knowing that there can be no change until 1940, when they hope to select some other Democrat who will reflect the actual thoughts and desires of the rank and file of the Democratic Party."

Hodges' advice on a third time for the President was: "Don't do it! The people are against it."

A letter signed by Franklin D. Roosevelt, jr., from Charlottesville, Va., dated October 24, said:

"Thank you very much for your recent letter, but I am afraid I cannot give you the answer you desire. In the first place, I think it is not my position to make any statement concerning a third term for my father; and, furthermore, the necessity for deciding such an issue has not as yet arisen, since what we feel today may have to be revised 2 years from now in the light of circumstances beyond our control, such as the foreign situation.

"However, many thanks for your letter, and I would appreciate it very much if you would let me know the result of your inquiry."

[From the New York Herald Tribune of November 13, 1937]

FOUR MORE PARTY HEADS JOIN FIGHT AGAINST THIRD TERM FOR ROOSEVELT—TWO DEMOCRATIC STATE CHAIRMEN AND TWO GOVERNORS WARN OF ADVERSE SENTIMENT; THREE SENATORS ALSO CAUTION AGAINST TRADITION-SMASHING ATTEMPT

WASHINGTON, November 12.—Two chairmen of Democratic State committees and two Democratic Governors today cautioned against a third-term nomination for President Roosevelt, joining the six Democratic State chairmen who 2 weeks ago were recorded as either actively opposing or warning against breaking tradition.

Also comment written by three Democratic Senators, variously dated from July to October, but made public today, showed that

they were either fearful of a third term or felt sure Mr. Roosevelt would not want to run again.

The Democratic State chairman of Arizona, Junior Gibbons, declared that Arizona Democrats feared that if Mr. Roosevelt broke precedent the result might be "disastrous" at some future time. The Democratic State chairman of Vermont, Park H. Pollard, promised to support anyone nominated by the Democratic National Convention, but found many of his party in his own State "not favorable" to a third term.

The Governors of Rhode Island and Virginia, Robert E. Quinn and George C. Peery, both declared that sentiment in their States would be against a third term for anyone.

Previously the Democratic State chairmen of Florida, Minnesota, South Dakota, Kansas, Alabama, and Mississippi had asserted opposition or warning. Their comment had included a direct attack on the President by the State chairman of Florida, J. B. Hodges, and a warning from the Alabama chairman, John D. McQueen, that a third-term nomination would be a "death knell" for the party.

The poll which brought today's additions to the symposium was taken by Joseph Leib, of South Bend, Ind., who organized the first Roosevelt-for-President Club in 1930. He asked the reaction to the proposal of a third term.

The comments today follow:

Robert E. Quinn, Governor of Rhode Island: "Personally, I am an admirer and supporter of President Roosevelt. I do think, however, that sentiment in Rhode Island would be against a third term for any man."

Gov. George C. Peery, of Virginia: "I think the majority of the people in Virginia are pro-Roosevelt. However, I believe there is a strong sentiment in Virginia against the President's being elected for a third term."

Junius Gibbons, chairman of the Democratic State Central Committee of Arizona: "I have made it my business to inquire quite thoroughly into the sentiment here. To date I have not found one Democrat who has not been thoroughly in accord with President Roosevelt and the policies which he has been trying to inaugurate, but many are afraid that should we break the precedents set by previous Presidents for only a second term, it might prove disastrous at some future time, and that none of them are skeptical of the motives of President Roosevelt; but once a precedent is broken it might easily be broken at some subsequent time and someone would be elected to the Presidency who might have ulterior motives and disastrous results might come of it."

Park H. Pollard, chairman of the Vermont Democratic Committee: "If the President is a candidate for a third term I should expect a delegation favorable could be secured in Vermont. Among the rank and file I find many not favorable to a third term. I am a Democrat and would support anyone the National Convention saw fit to nominate."

Senator MORRIS SHEPPARD, of Texas: "The President has indicated that he will not run a third time. He has thus killed that issue himself."

Senator WALTER F. GEORGE, of Georgia: "I am not in a position to discuss the third term suggested, but in my opinion we have nothing to fear. I do not know that the President has fully intended to announce himself for a third term."

Senator M. M. LOGAN, of Kentucky: "I am not for the President for a third term."

Senator ALBEN W. BARKLEY, of Kentucky, majority leader of the Senate: "I am not in a position to make any statement or prediction concerning this matter."

Charles Michelson, director of publicity for the Democratic national committee, in a leaflet issued Saturday discussed the matter of a third term, referring to it as an "old bogy" trotted out by Mr. Roosevelt's critics. He intimated the President was looking ahead with longing to retirement in 1941, but that, after all, conditions "3 years hence" were uncertain and "obviously, the President cannot in advance decline renomination that may never be offered him." Also "just as obviously, with the world in such a turmoil as it is today outside of this continent, it cannot be forecasted whether the American people would permit him to lay down his burdens in view of possible eventualities."

American Businessman. The Constitution, National Stability, Labor Relations, Progress, Cooperation

---

EXTENSION OF REMARKS

OF

HON. MAURY MAVERICK

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, November 22, 1937

ADDRESS BY HON. MAURY MAVERICK, OF TEXAS, BEFORE THE KIWANIS CLUB OF SAN ANTONIO, TEX., OCTOBER 1, 1937

STUDY OF CONSTITUTION BY BUSINESSMEN

Mr. MAVERICK. Mr. Speaker, by unanimous consent I am including herein a speech I delivered before the Kiwanis Club of San Antonio, Tex., October 1, 1937. Having made some research on the British Constitution, with its Cabinet and Parliament, I made certain comparisons. I presume the American businessmen are like the businessmen of any first-rate country, only ours have the reputation of greater energy and efficiency. Whether the average American businessman is as well informed on the Government and on his Constitution as a British businessman is on his Government and his constitution is another question.

It has been said that this country grew so rapidly out of its natural resources and the energy of its people that many business leaders have not had the same intimate contact with government as, for instance, the British businessman. I am told that in some of the English families that certain men who come out of the business families have as many as three occupations: (1) They work in the family business or industry; (2) they are sometimes members of Parliament; and (3) some of them are even college professors without it being considered a common disgrace. Thus the business, educational, and governmental worlds are closer together. Whether this is actually true or not, I do not know.

During the time that I left the last session and came to this one I have talked to a great many businessmen and have attempted to get their viewpoints. I, naturally, have tried to give them my viewpoint, too. Wholly aside from any particular viewpoint that I may have on economics or government, I believe one thing is essential, and that is that the power of Congress must not be decreased, but increased, and when that is understood few will oppose the idea, because it means that the American people will have more power themselves.

PHASES OF SELF-GOVERNMENT—CONFIDENCE

When I tell people that the British courts cannot declare an act of Parliament unconstitutional, and that there is no such thing as judicial review in England, I have been told literally hundreds of times that, of course, we Americans are not as capable of self-government as the English. I think I understand the meaning of that, and if I am any judge of history at all, that is a taboo which is in the nature of a colonial concept. There seem to be hundreds of thousands of fellow Americans who somehow have inherited an idea that we Americans are not capable of self-government; that our representatives cannot be trusted; and that we must have some authority on high to review what these representatives do.

Does this mean that the American people have not confidence in themselves? Indeed, it is easy enough to vote representatives out if they do not vote in conformity with the will of the people. That seems to be the answer. I merely make these suggestions for study.

The address that I made is as follows:

POLITICS! WHY NOT SO SPEAK AT A NOONDAY CLUB?

My friends, it is a pleasure to speak to you, and I shall speak of some of our most recent trends. Necessarily, my speech will be political. Why not? Many clubs, especially noonday lunch clubs, indulge in the illusion that they never permit political speeches. Most of the time a speech is considered nonpolitical if it is against the President, the present administration, and the Democratic Party. But it is generally out of order if made "for." Frankly, one in my position can hardly make a speech about any other subject, and I see no reason why I should. Politics is my profession, and it is an honorable one.

But I will not make a partisan political speech in the sense of attempting to get you to vote one way or the other. I shall merely make observations which may or may not be of value, and you naturally do not have to agree with what I say.

You know that as a Representative of the United States I must represent what I believe to be the economic, social, and political welfare of all the people of the United States. All! Of course, I am a practical man and look out for San Antonio. But, on the whole, I can only think of my job in the terms of all the people, if I follow my moral and constitutional duty.

REPEAL ALL THOSE NEW-DEAL LAWS—AND GET ANARCHY

Now, I am told that if we abolish relief and the W. P. A., "stop spending all that money," "repeal all those New Deal laws," "balance the Budget," "let business alone," and for all Congressmen to stay at home, leaving everything to the wisdom of the Supreme Court, that everything will work itself out—by a miracle, I suppose.

If this were really done, the truth is we would have anarchy, no government at all; and business would quickly go into bankruptcy throughout the United States. We forget what has happened in the last few years, even few weeks. Just lately the South San Antonio Bank went broke. There was no crying of widows,

no excitement. The money was paid off, a new bank organized at once. If that bank had been allowed to go bankrupt in the old way, it might have started a financial toboggan that would have ruined our city and southwest Texas. Such things, I must remind you, have happened before—I mean before Roosevelt.

This is only one of a few things that have been done by the Roosevelt administration. There are literally dozens of laws passed by the Roosevelt administration which no sensible or good businessman would like to see repealed. But if we read the papers and believe what they say, all the businessmen of America must be denouncing the President in the strongest terms.

BIG-SHOT LAWYERS AND BIG-SHOT BUSINESSMEN

Now, let us discuss this; let us consider the position of the businessman in this country. It is factually true, without expressing any emotion whatever, that the "big shot" lawyers and the "big shot" businessmen have less influence in America today than ever before in their history. I am not saying this for the purpose of denouncing them, but merely as a statement of fact.

The proof is in the pudding. With that group bitterly opposed to the President, backed by 87 percent of the newspapers and many powerful organizations, the President was overwhelmingly reelected.

Why?

I think it worth while to go into a little of the history of this. In the past the "big shot" lawyers gained influence through their connections with the big corporations. This was during the rise of big business in the last 50 years, and especially in the recent inflationary period preceding the collapse of the stock market in 1929. When the depression came the "big shot" lawyers lost their influence, and that, of course, was because big business lost it. In any event, the old-time groups were repudiated, not once, but many times. Strangely enough, most of this group cannot realize that the hearts and minds of 130,000,000 people have changed and are determined not to go back. Some of our former "big shots" are like the aristocrats after the French Revolution who could never see the change nor realize that the old order was gone forever.

SUPPOSE THE BIG-BUSINESS MEN WOULD COOPERATE?

They are continuously denouncing the President, the Congress, the Government of the United States, and at the same time talking about Communists wanting to overthrow the Government. It would be a good thing for them to look into themselves and into their own hearts, consider their own, and see whether their acts are either patriotic or intelligent.

Suppose the big-business men of this country would attempt to cooperate with the Government instead of being against everything that was proposed. That's just a suggestion.

VIOLENT CRITICISM OF PRESIDENT QUITE FASHIONABLE

Some of this violent criticism of the President, at least from good men, seems to be, more than anything else, a sort of fashionable practice. I have been around groups of men where there was a lot of big talk and hatred against the President. Afterward, I have had nearly all of them tell me privately that they thought the President was all right.

It is apparently unfashionable or not the socially proper thing to do to speak well of the President of our country.

For 5 solid years the "big shot" lawyers, both individually and through control of the American Bar Association, have bitterly denounced the President. After this 5 solid years' yammering, crying, and bitter denunciation they get ready for another convention, with nearly all their prepared speeches with more denunciation of the President.

So the President finally mentions them.

And then these men gather and put up a squeal that can be heard all over the Nation that the President is persecuting them. If I were not talking to so dignified a group of gentlemen and I were not a Congressman, I would say "Nuts!"

The National Chamber of Commerce, the National Manufacturers' Association, and various other national organizations, representing the "big shot" lawyers and "big shot" businessmen, have opposed every single move for progress that has been proposed by the Government in the past 20 years.

They even did it when Hoover was in there!

NATIONAL ORGANIZATIONS OPPOSED TO INTERESTS OF LOCAL PEOPLE

Now, one point is very important for us to realize, and this applies to all of the average businessmen, lawyers, doctors, citizens all over the United States of America: These "big shot" organizations and these "big shot" leaders are opposed to the interests of the average man. The National Chamber of Commerce is detrimental to the local chambers of commerce over the United States. The National Manufacturers' Association is detrimental to the local manufacturers over the United States. The Liberty League is detrimental to local liberty all over the United States.

Their real philosophy is based on big business running little business out of operation. These "big shot" organizations, by superior propaganda, organization, and the hiring of intelligent minds, by control of the radio, the press, national advertising, attempt to jam their opinions into the heads of the people of the United States.

ATTACKS ON PRESIDENT SOMETIMES INDECENT AND UNFAIR

Now, under our Constitution anyone can criticize anybody they please. I believe that the President should be criticized and at times deserves it. But the noisy holocaust of criticism against the President has frequently been indecent, unfair, and has in some cases been of such a nature that it cannot even be repeated by any self-respecting man.

I would not favor a law to stop people from saying what they please about the President or anyone else. We must preserve liberty of speech and press at all costs; but certainly some people should exercise a little restraint, and public opinion should not favor brutal and unfair attacks on the person of the President and his family.

But, my friends, you are told the President is trying to destroy the Constitution and the Supreme Court; to break down our liberties and be a dictator. The President suggests something to Congress, and immediately up goes the cry of "dictator." But we seem to forget that when Mr. Hoover was there, he lost his job because he could not lead Congress. As for the President being a dictator because he suggests a law, that is nonsense, because the Constitution makes it his duty to go before Congress from time to time to make suggestions. But again, one says, the President is trying to destroy our Supreme Court.

EVERY CHILD IN AMERICA KNOWS SUPREME COURT IS NOT GIVEN POWER TO DECLARE ACTS OF CONGRESS UNCONSTITUTIONAL IN THE CONSTITUTION

So we might look into the actual written powers of the Supreme Court, since our "constitutional lawyers" say all power proceeds from the writing of the Constitution. Merely making an observation, I picked up one of my children's school books the other day, used by millions of children, and here is what it says:

"The power of the courts to declare acts of Congress, or acts of State legislatures, unconstitutional according to the United States Constitution, is not granted in the Constitution."—American Government. (Magruder.)

Of course, I am sure you have all read the Constitution many times and already know this is true.

Let me make another observation, something for businessmen to think about: Congress, as representatives of the people, enact a law. For several years there is a running fight in the courts—injunctions, delays, and appeals. During that time businessmen do not know what to do; they lose money, and, worse, lose confidence. Let me give an instance: All the "big shot" Liberty League lawyers said the National Labor Relations Act was unconstitutional. These 58 Liberty Leaguers told their clients to violate the law merely by asserting, before the Supreme Court had acted, that in their opinion the act did not follow the Constitution. And so, at their suggestion, the law was violated all over the United States. Also, as a result, 85 injunctions were granted to prohibit the settlement of labor disputes. Then, as a direct result of that, came the sit-down strikes and a disrespect for the law of the Nation.

WAGNER LABOR ACT CONSTITUTIONAL BEFORE COURT SAID SO

But to the surprise of the lawyers, the Supreme Court finally declared the act constitutional. My friends, the law had been constitutional all the time. Yet, in the meantime, for about 2 years, the law had been treated with contempt, and as a result there was business, labor, and industrial anarchy.

The whole argument on this Court business is based on the powers assumed by the Court to declare acts of Congress unconstitutional. The Court should not invade the field of legislation nor pass on the wisdom of the acts of Congress. The test of the constitutionality of a law is not that judges do or do not like it.

The Supreme Court has simply invaded the field of legislation and by the use of such phrases as "due process of law" have declared laws unconstitutional for no other reason than five of the members of the Court do not like the particular law.

Take the Guffey coal case. The coal States believed the law constitutional and wanted it declared constitutional; no coal miner wanted it knocked out, but on a suit framed by one relative against another the court said the act violated due process of law and that it was against States' rights and violated the right of contract; it was held a mere local matter, although it involved the interstate shipment of coal across 48 State lines! The Guffey Coal Act violated no liberty of the American people. But the Supreme Court didn't like it, so they kicked it out.

Since that time the Supreme Court has reversed itself numerous times in regard to the Constitution. Does this bring stability? So I repeat my point: It is that in matters of legislative policy the Court should stay out.

SUPREME COURT CONTROVERSY HAS BEEN GREAT BENEFIT

It has been said that great harm has been done by the recent Supreme Court controversy. That is not true, since this is a democratic country and discussion is the basis of our Government.

The controversy has actually done a great deal of good: First, the Supreme Court has reversed itself in several cases and in numerous points of law, making it possible for the country to be governed; and, second, it has been discovered that judges are human and that they play politics, go to church, get angry, and are just like us; and, third, some taboos have been knocked over. The education and information to the people was valuable, notwithstanding most of it was hysterical misinformation and the wrangling over false symbols.

It goes without saying that any man with an ounce of brains knows we must have courts, and, as far as that is concerned, free and independent courts. England has free and untrammeled courts. Let's take a look at them. They operate under the British Constitution, which is "unwritten"; but liberty is protected in England quite as well as in America. And yet the high court of England cannot declare an act of Parliament void, and still the liberties of the people are protected.

Why?

The British Constitution is in the hearts and minds of the British people and members of Parliament protect the constitutional rights of the people as their direct representatives. The trouble is some of our good Americans believe our Constitution just a document set up in a glass showcase, and that if you do not want to obey a law to hire a "constitutional" lawyer and get it knocked out because of a glass-showcase Constitution.

WHAT ARE COURTS FOR? ANSWER: LIBERTY AND ENFORCEMENT

I think it is worth while, since we are making observations, to consider what courts are for. They are first for the enforcement of the law, the enforcement of private rights, but also the protection of the liberties of the people. Mind you, courts were not created for the purpose of breaking down laws and refusing to enforce them, which in effect is declaring a law unconstitutional.

Now, if the Supreme Court will follow such functions and also settle conflicts of laws and declare State laws unconstitutional when they violate the Federal Constitution, they will have plenty to do. The only time they should attempt to exercise the power to declare an act unconstitutional is when some act of Congress actually violates liberty and the Constitution, such as of the press, religion, right of assembly, or right of trial by jury. They should never declare the acts of representatives of the people unconstitutional simply because the Court didn't like the way the representatives of the people voted and enacted into law for the people.

EUROPE—CONSTITUTIONS FLEXIBLE AND OTHERWISE—DICTATORSHIPS

Here I should like to offer you an observation that the countries of Europe that had elastic, flexible constitutions, still enjoy democracy and free government. Some of them are England, France, Switzerland, Norway, Denmark, and Sweden. The countries which had inflexible governments and absolute laws still have absolute governments and are generally considered worse and more absolute. They are Italy, Russia, and Germany.

There are other things which are of great importance to the businessmen from a common-sense viewpoint, and that is the preservation of constitutional civil liberties. Some one says, Why should we protect a damned radical? The answer is, that political leaders and businessmen did not protect freedom of expression in Italy and Germany, and all citizens, including businessmen, are now without rights.

The only way we can preserve democracy is by actually preserving the civil liberties granted us under the Constitution. That is of as much fundamental importance to the businessman as to any other citizen.

But let us look at the next session of Congress and see what is coming up. Without discussing the merits, the minimum-wage and maximum-hour bill will surely be enacted. So why not cooperate in getting a good law passed? Moreover, if this law is enacted it should be enforced by the courts, and again the Supreme Court should not enter the field of legislation. If the law is bad it can be amended or repealed by the people themselves through their own representatives in Congress.

Of course, every law that concerns labor or human progress is always denounced as something that will bankrupt business, and concerning minimum wages and maximum hours it is said that it will bankrupt the South especially. The "big shots" of England said that when public opinion wanted to stop children 7 years old from working 13 hours a day in the mills of Manchester; it was said again when people wanted to abolish child labor in America; it was said by Judge Gary that the Steel Trust would go broke if they worked their men any less hours than 12 a day.

My friends, business has not gone bankrupt, and as the advances are made in society, business has been more humane and has gotten along better. Therefore I appeal to the intelligent public opinion of America not to get completely aside from the subject by spending time denouncing the President and Congress, but to cooperate for the common good. We will then have well-considered laws which will be fair to both business and labor alike.

SOCIAL SECURITY ACT—LET'S BUILD IT UP

And, speaking of the Constitution, the Social Security Act has been declared constitutional, as you know. That law is here to stay. If this law is made to apply to everyone, to have few exceptions, and to be made universal, it will be an aid to business in the matter of stability and of the maintenance of purchasing power.

In addition to that, we hope that some day strikes will be obsolete and unnecessary. In the meantime, no employer and no employee should be forced into compulsory arbitration, as is done in Nazi Germany. But if strikes are eventually to be eliminated the National Labor Relations law, which gives the right of collective bargaining, should be maintained. In this way we will have better industrial relations.

FRENCH ARISTOCRATS—AMERICAN DIEHARDS—BLOOD AND BALLOT REVOLUTIONS

As I have observed, the aristocrats of France never reconciled themselves to the French Republic. And if you will look at history clearly, you will see that the same thing that happened in France has happened to America, only we have not had a violent revolution. But just as certainly as in France, there is a new order and a change in the minds of 130,000,000 American people.

Therefore the sensible businessmen will see these changes and will do all they can not only to preserve their country, but, by using their heads, preserve themselves. This can be accomplished by a real study of soil-conservation, social security, old-age pension, farm, labor, wage and hour, housing, banking, and other important legislation.

WORKINGMAN OWES RESPONSIBILITY TO BUSINESS, TOO

If this is done, industry and business will find the American workingmen ready to cooperate. Indeed, wherever I have gone talking to labor groups, I have always told them they owe responsibility, skill, and hard work to business; more, that if capital has too great burdens or is destroyed, they will be destroyed, too. I have never had any laboring man doubt that. I believe the American who works fully understands that.

In speaking to you I have tried to show you the change of the times; nor have I tried to persuade you. Neither have I made what is commonly called a "labor speech." I have merely told you what has happened and is happening in this country, and I hope that we can all consider the signs of the times, cooperate, and go ahead together. [Applause.]

The Wage and Hour Bill

EXTENSION OF REMARKS

OF

HON. THOMAS F. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, November 22, 1937

Mr. FORD of California. Mr. Speaker, my distinguished friend Mr. DIES, of Texas, arose in this House last week and in an address that reached a high point in eloquence and frankness defended the Rules Committee for its refusal to permit the wage and hour bill to reach the floor of this House.

Now, my friends, the eloquent and distinguished gentleman from Texas says, with a force and vigor and sincerity that cannot be questioned, "We all want to help the underprivileged in order that they may have something of the abundant life."

But, my eloquent and distinguished friend is fearful that a bill attempting to grant to the underprivileged a 40-hour week and a 40-cent per hour minimum wage is un-American.

May I ask my distinguished friend just what is un-American about a 40-hour week, or a 40-cent per hour minimum wage?

Oh, but my distinguished friend is also fearful of bureaucracy. The Interstate Commerce Commission is a bureaucracy. I suppose the Federal Trade Commission is a bureaucracy. I am sure the Post Office Department is a bureaucracy. Would my distinguished friend abolish these?

What my distinguished friend fears mostly is that the great majority of workers who up to date have not been organized in labor groups, will so organize, and when so organized will be sufficiently powerful to deal with their masters and insist on a wage in excess of from $3 to $8 per week, the prevailing wage, according to Collier's Weekly, a good Liberty League magazine, in certain parts of the Nation.

What he professes to fear is the bureaucracy of a new commission. If that is all he fears, why not bring this bill to the floor and lend the weight of his personal eloquence and logic to placing the administration of this law in hands other than a commission, or in the hands of an existing commission, or in no commission at all.

Now it may be true that there are some Members of this body who do not wish to vote on this measure and who hope it never reaches the floor, I know of no such Members. It may also be true and, if my distinguished friend says it is, I believe him, that Members of this body have asked his committee to kill certain bills. The object being to enable them to avoid voting on the measures. Thank God, I personally have never had any such scruples. I have voted, yes or no, on every measure that came to this body—the more controversial the measure proved, the more emphatic my vote for or against, as I saw it was good or bad.

I am personally as much perturbed about this measure as my distinguished friend from Texas. But unlike him, I am anxious that it come before this body for full and free discussion. I signed the petition to withdraw it from the committee, not because I consider it a perfect measure, but because I am in complete sympathy with its objectives and

hope, when it reaches the floor, that the House in its wisdom will decide on the best method of administration.

But I do want my distinguished friend to say, in his usual bold and unequivocal way, do you, or do you not, believe that a 40-hour week is a fair minimum workweek and that 40 cents per hour is a fair minimum hourly rate of pay?

Furthermore, is it your fear of bureaucracy only, or is it your opposition to these minimum schedules of wages and hours, that prompts your opposition to the so-called minimum hour and wage bill?

I welcome my distinguished and eloquent and forceful friend's reply.

The Special Session of Congress

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, November 22, 1937

RADIO ADDRESS OF HON. HAMILTON FISH, OF NEW YORK, ON NOVEMBER 19, 1937

Mr. FISH. Mr. Speaker, under leave granted to extend my remarks in the RECORD I include my address over the National Broadcasting Co. network on Friday, November 19, 1937, as follows:

I have asked the National Broadcasting Co. for time this week in order to make some observations in connection with the special session of Congress that met in Washington on November 15 at the call of President Roosevelt. I was compelled to ask for radio time because no Republican Member was permitted to speak on the first 2 days of the session and every effort was made by the administration leaders to adjourn the House of Representatives for a whole week. I shall discuss this situation more in detail later on in my remarks.

No one knows why the President insisted on calling an extra session of Congress, and if he knows himself, he probably regrets his mistake. That it was a gigantic blunder not even his closest followers in Congress will deny. The idea was unsound and unnecessary, and without reason or logic from the beginning. If the President wanted to expedite certain legislation, all he had to do was to arrange to have the Committees on Labor, Agriculture, Foreign Affairs, and Ways and Means begin holding hearings so as to have legislation ready for Congress when it convened in regular session the first week in January.

The special session will be filled with political dynamite concerning our foreign policy, the Roosevelt depression, the failure of the New Deal economic theories, the unbalanced Budget, tax revision, and increasing unemployment. All of these issues, and many more, will be openly discussed in Congress and the facts presented to the American people for their determination.

When the Congress is not in session the President has the stage, more or less, to himself, and by means of the radio and fireside chats to millions of people can influence their sentiments by his honeyed words. When Congress is in session the opposition has a public forum, in a limited degree, that can offset the tremendous propaganda of the New Deal administration and hold the fantastic New Deal policies and costly experiments up to pitiless publicity and deserved ridicule.

I have known for some time that we were in the midst of a government of confusion, bewilderment, and reprisal, and that not even the President or his advisers knew what direction we were going. But if there was any doubt of this fact in the mind of any fair-minded person all that was necessary to confirm it was the total collapse of the huge Democratic controlled Congress that met on November 15.

The last session of Congress, on its ineffective, futile, and do-nothing record, won the unanimous condemnation of the press as a "bare bones" Congress and as the most incompetent in a great many years. The present special session apparently will even transcend the follies and blunders of the last, both through inaction and sheer confusion and incompetency of leadership.

On Monday the President's message was read to the Congress by a reading clerk. It was merely an attempt to alibi the New Deal depression by attempting to place the blame on private industry and business. President Roosevelt is solely responsible for the business depression which is the direct result of his economic and financial policies and experiments. He did, however, make some passing reference to the need of tax revision, a concession to business that ought to be immediately followed up by Congress in the modification or repeal of destructive business taxes such as the undivided surplus tax and the capital-gains taxes.

For a moment it looked as if the retreat from Moscow collectivism and bureaucratic control had begun. But no such luck. Speaker BANKHEAD and Senator BARKLEY, the majority leader in the Senate, predicted that a revision of taxes would have to wait on other legislation. In other words, while Rome burned the Congress continued to fiddle in the utmost confusion without any legislative program or any business to consider. In all fairness, a large share of the blame must rest on the President for he insisted on the extra session against the will of most Members of Congress.

We are now confronted with a depression; we are actually in a serious depression. Thirty billions of dollars worth or value of securities on the stock exchange were wiped out in the last 2 months. Another $30,000,000,000 has been wiped out in the value of unlisted securities, in real estate, mortgages, and so on. This does not mean simply that the rich man has lost half of his fortune or half of his security values or that the middle class have lost half of their security values. It means the beginning of a vicious circle. It means that the rich man will stop his activities, that he will curtail his expenditures, and stop putting money into business ventures. It means that the man of moderate means will cease buying automobiles.

The man who is really hit hardest, the one who suffers most, is the wage earner. He loses his job in the steel mills, which today are operating at only 35 percent of production capacity. He loses his job, or is put on part time, or his pay is reduced. The wage earner is the main sufferer. It is not those in the higher brackets of income taxes but the wage earners whose very livelihood and that of their families that are endangered.

This is a Roosevelt depression. The last depression was brought about by overspeculation, but not so this depression. This has been brought about by unsound and uneconomic laws, and by radical and socialistic laws which have been rushed through Congress that have destroyed business confidence.

There is nothing wrong with this country of ours. It is still the best country in the world in which to live. The only single thing that is wrong is that confidence has been deliberately destroyed by the New Deal administration, which has brought on this depression just as chickens come home to roost. The administration is reaping the whirlwind of unsound economics, of unsound laws, of collectivism, and of socialism. I pray to God that we are on the retreat today from Moscow, collectivism, and class hatred. The frightened New Dealers are beginning to realize that confidence and employment by business enterprise is one and inseparable.

The first thing Congress did on reconvening in extraordinary session was to notify the President that it was ready to proceed with business; but, lo and behold, there was no business to proceed with, except a discussion of the President's message. That was the last thing the Democrats wanted. Whereupon the Democratic majority sought to adjourn the House for 3 days and only by most strenuous efforts the handful of Republicans succeeded in compelling the House to meet the next day. Again the same procedure was attempted, and no Republican was permitted to speak or even to discuss the President's message or anything else.

The House of Representatives, a great deliberative body, was turned into a kind of Fascist Congress and the opposition was gagged and muzzled by every parliamentary device. I deplore such arrogant and un-American practices. The only rights and privileges left to the minority members is the right of free discussion, free debate, and free speech. But even these fundamental minority rights were ignored, and all requests to speak were denied, and again an attempt was made to adjourn the House for 3 days and again the minority refused to consent to more than a 1-day adjournment. It was for this reason that I asked for time from the National Broadcasting Co., which was generously granted, so that the public might know the facts.

The attitude of the Republicans was simply that we are ready to transact business and to debate the issues, but if there is no business to consider, let us adjourn and go home. On the third day, however, under relentless criticism from the press and including many Democratic Members of Congress, the administration leaders recanted and graciously permitted the Republicans to take the floor to denounce the failure of the administration to put into effect the neutrality bill and comply with the law of the land and the will of Congress and the American people.

The neutrality law was to go into effect whenever a state of war existed between foreign nations, and if the President has not yet been notified by Secretary of State Hull that a state of war exists in China he had better get a new Secretary.

If the President, by repudiating and nullifying an act of Congress, permits arms, ammunition, and implements of war to be carried on American ships to Canton, China, and these ships are seized by Japanese warships, our honor will be impugned and we might be forced into war with Japan. If such an incident should arise, because of the failure of the President to carry out the law of the land, a dangerous species of fascism, and we become involved in a war with Japan, then President Roosevelt would be solely responsible and ought to be impeached for causing war with Japan through the violation of an act of Congress and a mandate from the American people. So much for international issues.

Among the issues I propose to study and discuss in Congress is the misuse of the funds paid by wage earners for social security, and by home owners for mutual mortgage insurance, which the administration has been appropriating for current running expenses of the Government. I am inclined to the viewpoint that

American wage earners and home owners are being "gypped" and that the Congress should immediate legislate to safeguard their payments for both social security and mortgage insurance.

I also propose to study the question of reducing the interest payments by home owners to the Government from 5 to 3 percent. It obviously does not cost the Government as much as 3 percent to borrow money. This is highly important, and I know of nothing that is more vital than to keep American citizens in their own homes, as that is the best way to curb radicalism, socialism, and communism. For that reason, I urge a building program backed by the Government but carried out by private industry to build a million homes for wage earners, not to exceed $5,000, in the vicinity of the big centers of population.

One of the first things the Congress should do is to safeguard the payments made by American wage earners for social security, home mortgage insurance, and railroad pensions, which are now being diverted to pay for New Deal projects. I offer the following constructive program to restore confidence and stop the depression before it gets worse:

(1) Balance the Budget by putting our financial house in order.
(2) Repeal or modify the undistributed-profits tax.
(3) Repeal or modify the capital-gains tax.
(4) Reduce rather than increase taxes by practicing national economy.
(5) Restore the American markets to the products of American farms and factories.
(6) Stop inciting class hatred, promoting collectivism, and governmental competition with private business.
(7) Encourage by a few words and by manifest acts American business to make reasonable profits, to expand, and to help put American wage earners back to work.

The first concern of the administration should be to put our financial house in order. Nothing could accomplish more to restore business confidence, encourage new enterprise, and provide a sound foundation for recovery and prosperity. If this is not done, nothing can save the ship of state from the inevitable shoals of inflation, repudiation, bankruptcy, and financial chaos, and bring about further unemployment.

After all these years of depression the people are entitled to go forward to better times and break all records of economic well-being and prosperity. This can be done if only the heavy hand of our bureaucratic Government at Washington is withdrawn from the throat of business. Surely confidence would soon be restored and the birthright of every able-bodied American to permanent employment would be realized and our wage earners, scorning relief, would be able to adequately provide for their own families and give them the opportunities of life to which all American citizens are entitled.

Program of the Special Session

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, November 22 (legislative day of Tuesday, November 16), 1937

RADIO ADDRESS OF HON. ALBEN W. BARKLEY, OF KENTUCKY, MADE DURING THE NATIONAL RADIO FORUM ARRANGED BY THE WASHINGTON STAR ON NOVEMBER 15, 1937

Mr. BARKLEY. Mr. President, on last Monday night I delivered over the network of the National Broadcasting Co. a short address on the prospective work of the extra session. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, I have been asked to speak briefly this evening on the work of the extra session of Congress which has met today to consider the program for which the President called it into extraordinary session. It is always hazardous to predict what Congress may or may not do within any given time. Unlike the extraordinary sessions of most State legislatures, which are limited to the consideration of subjects set out by the Governor in the call for an extra session, Congress is as free to take up in an extra session any matter not included in the President's program as it would be in a regular session.

However, there is no reason to assume that Congress will not at once begin to consider the program outlined by the President, subject to special exceptions as may have been previously ordered by one or the other of the two branches of the Congress.

I think it may be assumed that the preeminent question which actuated the call for this special session was the necessity for farm legislation.

We recognize the fact that agriculture is the fundamental occupation not only of this Nation but of practically all the nations of the world. There is scarcely an industry or an activity in which the people of America or of the world engage that does not basicly depend upon the production of things that come from the ground either in the form of crops of various kinds or in the form of mineral or other deposits which must come from Mother Earth. I think it may be conceded that without a sound agriculture that offers its rewards to those engaged in farming and the toil which they put forth in agricultural pursuits, there cannot be any genuine or permanent prosperity in the Nation.

I need not recount the condition of American agriculture in 1932 or 1933, nor the efforts put forth by this administration to make agencies of the Government available to the farmer in guiding him to a more solid foundation and greater satisfaction with the result of his efforts. That the policies adopted by this administration were enormously beneficial to the farmer as a whole no one can dispute. It is unnecessary to claim that the great advance in the price of farm products and in the increase in the farmer's income has been solely due to the policies of this administration. But that they have contributed materially to the advancement of the farmer's welfare is beyond reasonable dispute.

In 1933 the condition of the whole country from an agricultural, industrial, economic, social, and financial welfare was so precarious that many emergency measures were necessary in order that the process of rebuilding might be immediately begun. As a result, for more than 4 years we saw a gradual recovery from the depths of the depression, and we saw a very large measure of rehabilitation in agriculture and industry.

Because of the increase in the farmer's income he enjoyed greater purchasing power which was reflected in major industrial production. Unsalable surpluses were reduced by the policy of crop regulation and control, which automatically brought the prices of farm products within reasonable reach of a point where the farmer could afford to produce his crops. The question of farm legislation is not political in a partisan sense. For many years both Democrat and Republican Parties have declared the farm problem to be national and have promised to deal with it as a national problem, and in looking for means by which to deal with it they have both promised to inaugurate a permanent policy of crop regulation and control so as to gage production more in proportion to consumption at home and salability in the markets of the world.

Every student of agriculture recognizes the fact that it is folly deliberately and consistently to produce more agricultural products than we can consume or sell.

When surpluses are produced that can neither be consumed nor sold, there are only two alternatives. We must either curtail the production of surpluses or run the risk, after assuming the certainty that by dumping these surpluses on the home market, we will depress the prices to the farmer to such a low point that he cannot produce them at a profit. This situation depresses agriculture, discourages the farmer, results in a larger indebtedness, and the foreclosure of mortgages on the scale which we witnessed from 1929 to 1933.

It is in order to avoid this situation that the last session of Congress, both the House and Senate, passed resolutions committing them to the enactment of permanent farm legislation, whether we were called into extra session or waited for the convening of the regular session in January.

In view of the fact that in some sections of the country the farmers are already beginning to prepare their soil for next year's crops, and in view of the necessity that whatever machinery set up shall be geared to operate on the production and distribution of next year's crops, the President has seen fit in his wisdom to call us into extraordinary session to deal with this subject.

We all admit that this is the most important question before the extraordinary session. It is a subject that required most careful examination and investigation, and the most intense and thoughtful consideration in order that we may approach the subject in wisdom and candor with full realization of the enormity of the problem which faces us.

During lean years, when nature is unkind to agriculture and either by a poor season or for other reasons the yield of the soil is curtailed the necessity for Federal action in the way of legislation is proportionately lessened. But in dealing with agriculture as a national problem, we must deal with it over a period of years and not according to the particular phase that may attend the growth of a single crop. But when nature turns out to be most bounteous and generous in the yield per acre so that a given number of acres in 1 year may produce an exceptional yield so as to increase beyond expectation the production of any specific crop such as cotton, corn, wheat, tobacco, and other specific productions, we are at once faced with the necessity of so working out our agricultural economy as to make it necessary for the farmer to suffer unduly because of either too small or too great a production of the crops necessary to sustain the life of our people.

It so happens that during the current year, there has been an unusually favorable crop season. There has been a greater yield per acre than has occurred in a number of years, and while we cannot assume that this unusual bounty on the part of nature will continue from year to year, we are compelled to assume the obligation to which we have heretofore committed ourselves, of enacting legislation that will guide American agriculture in the process of attempting to lift the standards of prices and of profit to a level that will enable the farmer to feel reasonably sure that he will prosper over a period of years in the production of his crops. The situation which confronts us today is the result in part of overproduction in many of the basic crops of the farm. We will harvest the largest crop of cotton in the history of the

Nation. The production of wheat for 1937 was nearly 300,000,000 bushels greater than the average production for the last 4 or 5 years. The production of corn, tobacco, rice, and other basic crops has been in like proportion.

No individual farmer can regulate this situation. No county nor State alone can attempt this regulation because no cotton-growing State or tobacco-growing State, or wheat-growing State, or corn-growing State, would be willing to attempt any control or curtailment unless it had the assurance that every other State legislature producing the same crops would do the same. No such assurances can be obtained. Therefore the only agency of the people capable of dealing with these problems as a whole is the National Government.

We have met in extraordinary session to attempt to deal with that problem before the Christmas holidays. The Committee on Agriculture in both House and Senate have been at work for weeks upon legislation fulfilling this obligation. It is not an easy thing to write such a measure, because there are many complications in the attempt to set up the machinery or the policy for the effective control of agricultural production so as to guarantee the fulfillment of the objectives and at the same time avoid the pitfalls which sometimes beset the congressional pathway.

I have no doubt that within the next few days in both the House and Senate the appropriate committees will bring forth a comprehensive and constructive measure that will eliminate the hazardous fluctuations in the prices of farm products resulting from the haphazard and uneconomic conditions which have surrounded agriculture for a long period of time.

GOVERNMENT REORGANIZATION

One of the important questions for which the President called this extraordinary session is the reorganization of the Government departments.

From time immemorial Congress has created new bureaus, commissions, and agencies for the accomplishment of some specific purpose made necessary by the rapidly developing complexity of American social and industrial life. Frequently these boards, bureaus, and commissions have been set up as independent agencies free from the control or supervision of any existing Department. Theoretically they were supposed to be directly responsible to the President. There are more than 130 of these independent and more or less irresponsible agencies floating around like Haley's kite, with more tail than head. Congress did not realize when each one of them was created that it was setting up almost as large and complicated an assortment of Federal agencies outside the jurisdiction of departments as actually existed within the departments. As a result there is great duplication of effort among many of them and much waste of time and money due to the lack of coordination. As a result of the President's message to Congress in its last session special committees were created in both Houses to consider governmental reorganization. Long and thoughtful consideration in both open and executive sessions were held, and as a result the House has already passed two measures and has two others on its calendar encompassing the reforms suggested by the President. The Senate committee reported an omnibus reorganization bill covering the whole field, and that measure is now on the calendar ready for action when taken up by the Senate. That this measure will be speedily considered and passed before the end of the extra session I have every reason to believe, and it will be our duty to urge the speedy consideration of this measure not only in the interest of greater efficiency and considerable economy in operating the Government itself but in setting an example to private enterprise which will be helpful in the coordination of those functions where Government and private enterprise will operate in harmony and in cooperation.

LABOR

One of the important purposes for which the President called us into extra session is the question of labor as involved in the so-called wage and hour legislation now pending in the House of Representatives.

This measure passed the Senate at its last session and will not again come before the Senate for action until it has been passed by the House with such amendments as the House may see fit to adopt.

Four years ago there were nearly 15,000,000 unemployed men in the United States. This number has been reduced by both private industry and Government assistance to something like 7,000,000 men. But even this reduced number is entirely too large to constitute anything other than an unwholesome condition in the social and economic life of the Nation. It is not my function to attempt to assess the reasons for this continued unemployment. We are naturally grateful for whatever contribution the Government has been able to make toward the reemployment of the millions of people who were out of work and are still out of work. We have glorified the inventor. We have sung praises to and have erected monuments in honor of the man who could invent some device by which human labor might be eliminated in the production of the articles necessary for the enjoyment of human life. And in this process we have perhaps forgotten the fate of the millions who were displaced by labor-saving machinery. I do not decry the machine age, nor would I attempt to turn back the hands of time to reinstate the primitive methods of another generation. But if the inventive genius of the American people and the labor-saving machinery which it has produced has been a benefit to organized society, then organized society must find a way to do justice to those who have been displaced by affording them an opportunity to work in order that they may support themselves and their families according to decent standards of living.

It may be that we have reached the time when we must find a way by which fair distribution among those available for work, whatever work is necessary in the production and distribution of the great bulk of luxuries and necessities which are regarded as essential to the enjoyment of life, must be made. And we must find a way to employ these people at a wage sufficiently high to enable them to live according to decent American standards.

The Black-Connery wage and hour bill which passed the Senate at its last session and is now pending in the House of Representatives with a favorable report from the Committee on Labor is designed in part to accomplish this result. It would be superhuman to expect that a perfect piece of legislation can be evolved in view of all the difficulties. But that it is a step in the right direction I am thoroughly convinced, and I sincerely trust that it may be, in its essential provisions, enacted before the end of this extraordinary session.

ANTILYNCHING BILL

While it was not one of the subjects specifically mentioned in the President's call for an extra session, probably because the House had already passed the bill and the Senate had made it a special order for the next session, whether it be extraordinary or regular session, the antilynching bill will beyond any question of doubt be considered and in all probability enacted before the end of the present session that has just begun.

The subject of lynching has for generations been one of the questions to which our Nation has given most thoughtful attention, and various efforts have been made to curb this national blot upon our escutcheon. While men may differ as to the formula of any remedy proposed, no one can deny the effects of this unfortunate disregard for the orderly processes of government in the prosecution of crime. At the last session of Congress the House overwhelmingly adopted a measure designed to curb the unlawful lynching of persons charged with or suspected of crime, and by a special order entered in the Senate at the last session this measure automatically follows farm legislation and will undoubtedly be passed in the Senate when voted upon by a large majority. I assume the responsibility of saying that there will be not only no effort to escape the obligation which the Senate voluntarily took upon itself to consider this measure, but I think I am justified in assuring all those interested in it that every effort will be made to keep this obligation on the part of the Senate before the conclusion of the extra session just begun.

REGIONAL PLANNING

The subject of regional planning for the conservation of our natural resources is one which for a long time has given serious concern to far-sighted men and women.

We have great natural resources in soil and timber and in the streams which drain our country. And we have been compelled to look with dismay upon the wasteful destruction of the fertility of our soil, and the decimation of our forests as well as the lack of any coordinated system by which to utilize the flowing water of our streams and make them serviceable to the people of the Nation. The President has recommended the creation of seven regions covering the whole country and encompassing the most important of our navigable streams and watersheds in order that a long-term program may be worked out by which the forces of nature may be harnessed and preserved not only for the service and enjoyment of the present generation, but in order that we may hand this heritage of ours down to future generations not impoverished but enriched so that increasing populations may find it possible to live upon it in happiness and comfort. These proposals have not yet been acted upon by the committees of the House and Senate in charge of this legislation. But I have every reason to believe and expect that immediate consideration will be given to this subject by the committees of both Houses and that Congress will promptly enact legislation creating the necessary machinery and surveying conditions within each region and recommending to the President and to Congress what ought to be done to accomplish the great purposes which are outlined in the President's message upon this subject.

TAXATION

Another subject which will receive consideration but which in my judgment cannot be finally acted upon by this extra session of Congress is that of taxation.

Our Federal tax laws are intricate. They are the result of periodic and sometimes sporadic amendments enacted from time to time to meet general conditions with respect to public revenue brought about as a result of the depression through which we have gone. Congress cannot revamp the tax laws in the period of a week or a month. Hasty tax legislation might create more difficulties than it cures. The President discussed this subject in his message today, and I call attention to the fact that for several weeks the Committee on Ways and Means of the House of Representatives has been giving earnest consideration to this question and has held hearings upon it seeking both expert and lay advice with reference to it. Under the Constitution the House of Representatives must originate all taxation laws enacted by Congress. Until the House has reported and passed a bill and has sent it to the Senate, the Senate has no constitutional power to initiate revenue legislation, and it cannot be expected that the House Ways and Means Committee or the House itself would report or pass a bill that had not received the most careful study and consideration involving every phase of the subject. I think I can give reasonable assurance that at an early date the question of remedial tax legislation designed to eliminate injustices and to encour-

age additional investment in industrial enterprises and to afford necessary relief to small and average-sized corporations actually engaged in industrial production and in the employment of wage earners will be enacted by Congress. But I would not be frank if I did not say that in my opinion this cannot be done within 5 weeks, which, in all possibility will be the length of the present extraordinary session. If we can enact the legislation recommended to us by the President, while at the same time through the appropriate committees making the necessary investigation and obtaining the necessary information upon the complicated subject of Federal taxation so as to be ready to consider tax legislation early in the January session, we will have made a long stride toward the accomplishment of the ends which every sincere lover of his country is anxious to accomplish. No one desires to avoid or to postpone unnecessarily the readjustments of some of the provisions of our tax laws. The House Committee on Ways and Means has been proceeding carefully and intelligently to consider this whole subject, and it accomplishes nothing for business or the Government to attempt to throw haphazard legislation into this extra session, when every man who is familiar with the processes of legislation knows that a hasty tax bill passed simply in order to say that a tax bill had been passed would in all probability do more harm than good.

Many other subjects may come up for discussion during the present session, but I think it well to admonish the country that this extra session will have to conclude its work before the beginning of the new year. That means that about 5 weeks will constitute the length of the session. We hope to accomplish the enactment of the President's recommended program so that we may return in January.

Rescue the Home Owner

EXTENSION OF REMARKS

OF

HON. HENRY ELLENBOGEN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, November 22, 1937

RADIO ADDRESS BY HON. HENRY ELLENBOGEN, OF PENNSYLVANIA, ON NOVEMBER 19, 1937

Mr. ELLENBOGEN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include my speech over the Columbia Broadcasting System national hookup, on November 19, 1937, as follows:

The special session of Congress must consider many problems of supreme importance to the well-being of every citizen of the United States. No problem is more important nor can be more important than the welfare and the security of 6,000,000 home owners. Foreclosure of the homes of our people must stop.

TWENTY THOUSAND FORECLOSURES EXPECTED

If a private insurance company would announce that it was planning to foreclose on 200,000 homes in the United States, an outraged citizenry would demand an immediate halt. This is what is happening today, except that the foreclosures are being made not by a private money lender, not by an insurance company, but by the Home Owners' Loan Corporation—an agency of our Government.

Just think of it; the very agency which Congress established to save the home owner from foreclosure is now closing in on him.

Every fifth home owner who obtained a loan from the Home Owners' Loan Corporation has either been foreclosed or is in danger of being foreclosed.

LET US LOOK AT THE RECORD

Here is the record—an amazing record of a steadily increasing number, a steadily accelerated rate of foreclosure:

As of December 31, 1935, there were 4,470 foreclosures, totaling $19,689,499.

As of June 30, 1936, there were 27,651 foreclosures, totaling $117,121,222.

As of December 31, 1936, there were 67,735 foreclosures, totaling $270,319,661.

As of July 31, 1937, there were 105,986 foreclosures, totaling $410,679,043.

And September 30, 1937, there were 114,402 foreclosures, totaling $443,574,915.

THE BUSINESS RECESSION WILL GREATLY ACCELERATE DEFAULTS

Since then a business recession has developed. Thousands of home owners have been furloughed from their jobs, their income has been reduced, or has entirely stopped. They will be unable to meet their payments on their home-loan mortgage. Does the board of directors of the Home Owners' Loan Corporation intend to increase foreclosures even more and put these jobless citizens out of their homes?

A WAVE OF FORECLOSURES CAUSED THE ESTABLISHMENT OF THE HOME OWNERS' LOAN CORPORATION

I have always believed it to be the purpose of the Home Owners' Loan Corporation to rescue the home owners permanently and not to let them linger for a while and then administer the death blow.

Let me remind the management of the Home Owners' Loan Corporation that it was created as a rescue agency. It is not a private money-lending agency but a public institution, a home-saving institution.

In 1932 a wave of foreclosures swept this Nation. Thousands of distressed home owners were either being foreclosed or threatened with foreclosure. A million or more home owners faced eviction, their savings wiped out, their home only a memory, their dream of home ownership shattered, probably forever.

As a result of these mass foreclosures land values were steadily falling, the security of money invested in mortgages was threatened, building and loan associations, insurance companies, and other financial institutions which had a large part of their funds invested in such mortgages were faced with disaster. In this desperate situation Congress stepped in and created the Home Owners' Loan Corporation.

CONGRESS INTENDED PERMANENT RELIEF

The intent of Congress was to set up a long-time program which would gradually reduce the mortgage debt and ultimately assure homes free and clear of the mortgage. The intent of Congress was to set up a program for the permanent rescue of the home owner and not just to tide him over the emergency.

It now seems necessary to rededicate the Home Owners' Loan Corporation to the purposes for which it was created. It now seems necessary to emphasize that it was created to save and rescue the home owners. Let the Home Loan Board remember its mission and act for the benefit of the people.

I gladly pay tribute to the achievements of the Home Owners' Loan Corporation. I acknowledge that it has saved 1,021,817 homes from foreclosure. But to save the home owners in 1933, in 1934, and in 1935 only to take their homes away in 1936 and in 1937 defeats the intent of Congress.

I want the Home Owners' Loan Corporation to remain a rescue agency and silence the sheriff's hammer.

H. R. 6092, THE ELLENBOGEN BILL TO AMEND THE HOME-LOAN LAWS

On June 16, 1935, I introduced a bill to reduce the rate of interest on home-loan mortgages from 5 percent and 6 percent, now being charged, to 3½ percent and to spread the payment of installments of principal and interest over a period of 25 years instead of the 10 and 15 years now provided. I introduced the same bill in the first session of the present Congress, and it is now known as H. R. 6092. The events of the last 2 years have vindicated my action. They have shown that the passage of the Ellenbogen bill is not only desirable but an absolute necessity.

When the original Home Loan Act was passed in June 1933 the Home Owners' Loan Corporation had to pay a rate of interest of 4 percent on its bonds. It was estimated that a margin of 1 percent was necessary to absorb the loss and to pay administrative expenses. Therefore the rate of interest to the Home Owners' Loan Corporation was fixed at 5 percent.

THE H. O. L. C. PAYS AN AVERAGE RATE OF INTEREST OF 2.5 PERCENT

On April 27, 1934, the Home Loan Act was amended by Congress to provide that the bonds should be guaranteed by the Government both as to interest and principal. This enabled the sale of these bonds at a much lower rate of interest. As a matter of fact only $323,381,000 of Home Loan bonds were issued with an interest rate of 4 percent. The balance of the Home Loan bonds carry a much lower rate of interest.

The average rate of interest of all Home Loan bonds is only slightly more than 2½ percent, or 2.624 percent to be exact.

Therefore the interest rate to the home owner should not exceed 3½ percent.

THE HOME OWNER SHOULD PAY ONLY 3.5 PERCENT INTEREST

That is the rate of interest which should in justice and fairness be charged to the home owner. If the present interest rate of 5 and 6 percent continues, the Home Owners' Loan Corporation will make a profit on the indebtedness of the individual home owner. That is not the purpose for which it was created. It is wrong to charge an excessive rate of interest which the home owner in most cases cannot afford to pay. The present rate of interest is dragging the home owner deeper and deeper into debt, has already resulted in a large number of foreclosures and, if continued, will result in further mass foreclosures.

This is contrary to the intent of the act. Congress set up a system to secure the home owner in his home permanently and not merely to tide him over for a year or two.

SPREAD INSTALLMENT PAYMENTS OVER 25 YEARS INSTEAD OF 15

A burdensome feature of home loans is the requirement that the principal amount of the home-loan mortgage must be paid off within 15 years—and in some cases within 10 years. In addition to paying taxes, insurance, and interest, and making necessary repairs the home owner must pay off the principal amount of his mortgage debt in monthly installments within 15 years. Very few owners can make these large monthly payments.

The Ellenbogen bill solves the difficulties of the home owner and saves the Government from loss. It reduces the rate of interest to 3½ percent and spreads the time of payment over a period of 25 years.

ELLENBOGEN BILL REDUCES MONTHLY PAYMENTS FROM $8 PER THOUSAND TO $5

Under the present home-loan plan, the home owner must pay nearly $8 per month for every $1,000 of his mortgage. Under my bill he will be required to pay only $5.01 per $1,000.

Let me give you an example: On a $4,000 mortgage the home owner is now required to pay monthly installments of about $32. Under my bill, this would amount to only $20, or a saving of $12 a month. This is an important saving for thousands of small-home owners.

A very large number of home owners are not able to pay $32 a month on a $4,000 mortgage, but they would be able to pay $20. In this way the home owners would be able to keep up their payments. Their homes would be saved from foreclosures, the Government would receive its money, and the Nation would be saved from the spectacle of mass foreclosure of home owners by a Government agency.

THE PASSAGE OF MY HOME-LOAN BILL WOULD NOT COST THE GOVERNMENT ANYTHING

The Home Owners' Loan Corporation pays about 2½ percent on its bonds. A rate of interest to the home owner of 3½ percent, which I propose, would leave it a margin of nearly 1 percent. This is and should be sufficient to pay losses and administrative expenses.

PASSAGE OF ELLENBOGEN BILL WILL SAVE MONEY FOR TAXPAYERS

The Ellenbogen bill will save money to the Home Owners' Loan Corporation in the following particulars:

(1) On most properties that have been foreclosed some payments were being regularly made. These payments will be lost and in many instances will not be replaced by the receipt of rent, because many foreclosed properties are not rented.

As of September 30 foreclosure was in process or had been completed on 114,402 dwellings, representing about 145,000 units. Of these only 40,295 units are rented. Eighty thousand dwellings have been foreclosed or are in the process of being foreclosed but are not rented. On these dwellings all payments to the Home Owners' Loan Corporation have been stopped because of the foreclosure. These homes bring no income whatever to the H. O. L. C. but they do necessitate large expenditures.

The H. O. L. C. must pay about $8,000,000 a year in taxes on these unrented dwellings.

(2) In order to foreclose, the Home Owners' Loan Corporation had to pay lawyer's fees, court costs, sheriff, and other legal expenses. An average of $160 for each foreclosure is a moderate figure. The foreclosures of the 114,000 homes cost the Home Owners' Loan Corporation at least $18,000,000, and foreclosures of the 80,000 homes that still are unrented and on which no income is received cost the Home Owners' Loan Corporation at least $12,000,000.

(3) Properties that are foreclosed and remain unrented and unoccupied necessarily deteriorate. The cost of supervising them, insuring them, and keeping them in repair is high. It runs into millions of dollars on the 80,000 foreclosed and unrented properties.

PASSAGE OF THE ELLENBOGEN BILL WILL SAVE TENS OF MILLIONS OF DOLLARS

Let me summarize for you the result of the foreclosure of these 114,000 properties, 80,000 of which are still unrented, representing a steady, continuing, and ever-mounting loss to the Home Owners' Loan Corporation, and thus to the Government and the taxpayer.

Instead of easing the payments and permitting home owners to save their homes, the Board of Directors of the Home Owners' Loan Corporation decided to foreclose. As a result, it has spent millions of dollars in foreclosure costs, and in payment of taxes. To this must be added further millions of dollars for loss of interest on the investment or for loss of rental on these properties, millions of dollars for supervision, and millions of dollars for repairs and insurance.

I say to you with all the emphasis at my command, and I believe you will agree with me, that it would be much better and cheaper to pass the Ellenbogen bill which will permit the home owner to retain his home and which will not cost the Government one single cent. Not only would it not cost the Goverment anything, but it would save the Government tens of millions of dollars every year.

WHO WILL BENEFIT BY THE ELLENBOGEN BILL?

(1) The Ellenbogen bill will bring relief to 1,000,000 home owners who carry home-loan mortgages and whose monthly payments would be reduced. It would permit them to remain self-respecting and self-sustaining home owners.

(2) The passage of the Ellenbogen bill will increase the value of the home of every home owner. The reduction of the rate of interest and the spread of payment of installments over 25 years will make these properties easier to sell.

(3) The passage of the Ellenbogen bill will increase the value of every home in the United States, because it will prevent the demoralization of real-estate values by preventing the wholesale dumping of distress properties by the Home Owners' Loan Corporation.

(4) The passage of the Ellenbogen bill is in the interest of the entire Nation because it preserves the home ownership of tens of thousands of good and thrifty home owners.

LET MR. JONES TAKE NOTICE

On October 23, 1937, Mr. Charles A. Jones, the general manager of the Home Owners' Loan Corporation, issued a release opposing the passage of all bills which aim to reduce the rate of interest of home-loan mortgages and extend their period of amortization.

This release ignored a number of very pertinent facts and was misleading in many respects. Its basis, its premise, and its conclusions were incorrect.

I desire to raise another point in connection with the statement of Mr. Jones. I want to say to him and to the other employees of the Home Owners' Loan Corporation that it is for Congress and not for them to determine the policy of this Government in regard to home-loan mortgages. If they desire to submit facts for the information of the Congress or of the public, let them do so, but let them refrain from making misleading propaganda against bills introduced by Members of Congress. Mr. Jones is employed to manage the affairs of the Home Owners' Loan Corporation and not to use his office to kill bills which aim to improve the Corporation's service to the people.

Ladies and gentlemen, this matter concerns every one of you. If you have a home-loan mortgage you are directly interested. If you own a home which is subject to a private mortgage or free of debt you are just as much interested, because mass foreclosure of home-loan mortgages will depreciate the value of your own home.

The Ellenbogen bill is being pickled in the Committee on Banking and Currency of the House of Representatives. A petition is pending, discharge petition No. 26, which will discharge the Committee on Banking and Currency and the Rules Committee and will free this bill from the grip of a congressional committee which is preventing relief to the home owners. Ladies and gentlemen, you know who your Congressman is. Ask him to sign discharge petition No. 26. Ask him to help to pass the Ellenbogen bill.

Every Member of Congress who favors relief for home owners should sign this petition, so that we may have a chance to debate the bill and act upon it on the floor of the House. Amendments may then be offered and the bill can be passed in a form agreeable to a majority of the Members of the House.

Help to rescue the home owner. Give him a chance to save his home.

The Unemployment Census

EXTENSION OF REMARKS

OF

HON. WILLIAM R. THOM

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, November 22, 1937

RADIO ADDRESS BY HON. W. R. THOM, OF OHIO, ON NOVEMBER 12, 1937

Mr. THOM. Mr. Speaker, under the leave to extend my remarks in the RECORD, I am reprinting herewith my address delivered over the Canton, Ohio, radio station on the subject of the "Unemployment Census":

The census of the unemployed is of peculiar interest to me for the reason that the determination to use the post office as the agency in making the census is in line with my suggestion made in a speech in the House of Representatives on February 18, 1937. Having long felt that the postal employees, with their high intelligence and their wide familiarity with the people on their routes, constituted the one organized body that could do this job in the shortest possible time and with accuracy as well, I wait eagerly to see the justification of my faith in these men.

A few days ago I talked to the letter carriers and clerks of the Canton, Ohio, post office at a meeting called to discuss the regulations governing the census, and at its conclusion I asked the hundred or more men if they could do the task. They roared back, "Yes." My own idea is that a group of men who distributed and collected the thousands of N. R. A. contracts, carried the soldier bonus checks to the recipients, and listed over 30,000,000 workmen as applicants for old-age pensions can count the unemployed with little or no difficulty. When Mr. John Biggers, in charge of the census job, asked the post office whether it could deliver over 30,000,000 registration cards in 2 days, the postal authorities calmly replied they could do it in a single day.

All the time during the last few years that a census of the unemployed has been urged, I have been advocating the use of the Post Office facilities. When I was in Europe a number of years ago, I learned that the policemen of the city of London make the census of population. The regulations provide that householders shall remain indoors between certain hours on a Sunday morning, until the London bobbies have a chance to list them. In Turkey the enumeration of the inhabitants is taken by the school teachers.

When, however, I began to sponsor the idea that the post-office employees in this country should be entrusted with the unemployed census, I found officials, from the Cabinet on down skeptical. The Secretary of Commerce, back in December 1936, gave the opinion that the proposal was unworkable. In June 1937, I rapped at the door of the W. P. A. Administrator, Mr. Harry Hopkins. He likewise

threw cold water on the plan, but his reasons were not so sweeping. His chief fear was that it would be impossible for carriers in the larger cities who have great tenement districts to obtain a full return from the persons unemployed.

Well, I stuck to the idea, and as I looked around I found more reasons why the Post Office could do the job adequately. Here was a set of men each assigned to a particular route and who were well acquainted with many of the persons on that route. The carriers have known for years who of their clients were on relief. They likewise meet and talk with scores of people each day, and naturally they have a most intimate knowledge of what is going on in their families. Furthermore, I knew something of the spirit of the postal employees, and I knew that they have a pride of service that would not permit them to make a failure of any such great undertaking. So on the last day I was in Washington after the adjournment of the last session of Congress, I decided that I would interview Postmaster General Farley. Action by Congress for the taking of the census had been completed. I met Postmaster General Farley in his office and laid before him the letter which I had previously written Mr. Hopkins setting forth in detail the plan I had in mind. Farley, in his good-natured way, said, as soon as he had read the plan, that the Post Office Department could perform the job. The Postmaster General the next day placed my letter before the President, and it wasn't long until I had the very cheering message from Mr. Farley that the plan in large part as I had sketched it would be adopted.

Now, the chief opportunity for failure in this program is possibly a lack of knowledge on the part of the unemployed as to what they are to do and how they are to do it. Care must be taken by registrants in answering the questions on the card each one will receive. If these inquiries are not accurately answered, then, of course, the total results of the census will be of no avail. It is therefore incumbent upon registrants to study closely the card and then listen to the instructions for filling it out as given over the radio. Defective cards will make it necessary for the letter carriers personally to contact the makers in order to get full replies. Manifestly, too much negligence will mean many demands on the part of postmen, and consequently delay in the census results.

As I understand it, school teachers are going to be asked to explain to their pupils the questions on the card. This will be in the hope that the children will carry the message home, and particularly will help their fathers who may not be so well versed in the English language. This cooperation of the teachers is especially needed. In my office, reading as I do hundreds of letters received from my district—for not a letter comes into my office that I do not personally read—I note that many of them are written by youthful hands and signed by their fathers and mothers.

What will be gained by the census? First of all, notwithstanding all of the jibes at the W. P. A., it is a fact that the more than one and a half million persons now benefited by it could not get jobs in the midst of a season of heavy production. There was not at any time a scarcity of labor except in skilled trades, and W. P. A. skilled men are few and far between. The fact that there was no labor scarcity shows that W. P. A. men were not in any large numbers refusing to go from W. P. A. to private employment. Of course, there were exceptions. Also, there were men who had a W. P. A. job that promised to be steady for a year or so who would not quit for a job that would last a week or so. So the census will help us not a bit so far as the W. P. A. employees are concerned. We know much about this class, and careful studies of their plight have been made.

When it comes to the unemployed in addition to W. P. A. workers, we have had no accurate idea of their number, their age, or their occupation. These are the people with some savings, some source of support that kept them from becoming relief workers. Many there were whose pride restrained them from taking even a W. P. A. job. It is this class we particularly wish to reach in this enumeration. We shall also have to count those recently laid off in shops that are waiting orders from automobile concerns that soon will go into production of new automobile models, but these men will shortly return to work, and they are not a problem.

We shall find, I feel sure, that the bulk of unemployment lies with the class of men over 45 years of age, against whom a bar to employment has been raised in many localities. It is interesting in this connection to know that W. P. A. surveys of men in its employ show that the men around 45, by actual observation and grading, are the best of all the workers on the W. P. A. projects. How to handle this class of men is a puzzle that requires thinking and planning. The doctrine of rugged individualism does not help those victims of the machine age.

There is another distinctive class of unemployed that has my special interest. They are those physically handicapped. Perhaps it is a man who drew accident compensation from the State of Ohio whose income from this source has stopped and who just can't be placed because he is physically impaired. He may have lost an eye or a leg or a hand. The door to employment is pretty tightly closed to him. He comes to my office, and I listen to his story, but I am helpless even to suggest that something can be done for him.

We have, too, a larger class of men who are without skill, who have handled shovels and picks in the past. Their type of labor is now done by steam shovels, trench-digging machines, and the like. Whether at their age they can be trained to a definite trade or calling is doubtful. At any rate, their plight has already borne in upon us the need of training for the hands—something that has been missing in our schools. The new Timken Technical High School just announced for Canton is a local answer. In every other part of the country technical education in the trades will have to be promoted. At the moment we are told that a building boom would find us short of carpenters, bricklayers, and other building artisans. We must meet that situation by proper extension of our educational system.

Some men there are who have made their own way into economic security, and who look out on the world and say it is a pretty good world. They don't like the doctrine that we are our brother's keeper. Eventually, however, those who take this attitude will find that unemployment, sooner or later, will imperil their financial security. The less buying power, whether it be among farmers or laboring men, will soon topple down the whole economic structure.

This census, if it does nothing more, will arouse public sentiment as to the depth and breadth of the problem and provoke, I hope, a desire to so plan that we may reach the goal where every man who wants to work can find a job. Nothing short of such a condition will satisfy my idea of a successful democracy.

The American Navy

EXTENSION OF REMARKS

OF

HON. BRENT SPENCE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, November 22, 1937

RADIO ADDRESS BY HON. BRENT SPENCE, OF KENTUCKY, ON OCTOBER 27, 1937

Mr. SPENCE. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address which I delivered over the radio on Navy Day, October 27, 1937:

Today we celebrate Navy Day of the United States. It is appropriate upon this occasion to not only recall with pride the great achievements of our Navy in the past and the illustrious names with which it has illumined the pages of the history of our country, but we should also give earnest thought to the purposes for which our Navy was established and its future maintenance, and the national policy that should prevail in regard to it.

The Navy contributed in no small degree to the success of our arms in the war by which we obtained our independence and became a nation. The glorious achievements of John Paul Jones in that conflict is an inspiration to every schoolboy and schoolgirl in America. The account of the battle between the *Bonhomme Richard* and the *Serapis* will always be one of the brightest pages in American history. We contemplate with pride that Jones, when asked by the commander of the *Serapis* if he surrendered his sinking ship replied, "I have not begun to fight"; and how when the battle was going against him, he lashed his badly damaged ship to the *Serapis* and boarded and captured her. How, on the way to France, as the *Bonhomme Richard* sank, Jones transferred his prisoners and crew from the sinking ship to the *Serapis* and came into port in the ship of the enemy. This is said to be the only incident in history where the victor lost his ship and was forced to return to port with the vessel which he captured. Jones spent his last years in France, where he died in 1792. It is said Napoleon remarked after the French defeat at Trafalgar, "Had Jones lived to this day France might have had an admiral."

The history of the War of 1812 was made illustrious by the names of Stephen Decatur, Isaac Hull, and James Lawrence and others, and the heroism of the American sailors. Lawrence, mortally wounded, when in command of the American ship *Chesapeake*, in the engagement with the British ship *Shannon*, and being carried below, gave voice to that immortal phrase, "Don't give up the ship."

During the Civil War that high daring and splendid seamanship which has distinguished the sailors of the American Navy throughout history was again demonstrated by both sides. Amongst the illustrious names of that conflict are Admiral Farragut, Captain Winslow, and Captain Semmes.

In the War with Spain the victory of the American fleet under Admiral Dewey at Manila Bay on May 1, 1898, is one of the most splendid and inspiring in all history. We recall the coolness of the commander, who held his fire for almost half an hour after he had passed through the narrow entrance of the bay, when the Spanish ships opened fire at long range, and until he had gotten his ships in the formation he desired, when he turned to the captain of the *Olympia* and uttered the phrase which has sounded around the world, "You may fire when ready, Gridley."

We recall with pride the Battle of Santiago, in which the American fleet commanded by Admiral Sampson destroyed the Spanish fleet, and the sinking of the *Merrimac* under command of Captain Hobson for the purpose of bottling up the Spanish fleet of Admiral Cervera in the harbor of Santiago, which all add to the glory of the courage and achievements of the Navy. The accomplishments of the American Navy in the World War

were most remarkable. The transporting of our immense Army to foreign shores over an ocean infested with mines and submarines was a marvelous achievement and was the deciding factor in the Allies winning the war.

These are but a few of the high lights in the glorious history of our Navy. Time does not permit me to continue the recital of the annals of our ships and our sailors, officers, and men.

The Constitution of the United States wisely provides that Congress shall have the power to provide for and maintain a navy and make rules for the government of the naval forces; that the President shall be the Commander in Chief of the Navy of the United States; and that no State, without the consent of Congress, shall keep troops or ships of war in times of peace or declare war unless actually invaded or in such imminent danger as will not admit of delay. The wise founders of our Government saw the immediate necessity for a navy if our rights were to be regarded and our future made secure.

America built her first fleet following the Revolutionary War. She has engaged in the following foreign wars: The French in 1798, the Barbary Pirates from 1801 to 1806, the British from 1812 to 1815, the Spanish-American War in 1898, and the World War in 1917–18. In all the engagements those in command of the American ships displayed a high order of ability, seamanship, and courage, which has proclaimed to the world the American sailor has no superior.

Every nation in every age, unless it was satisfied to live in isolation and within itself, has seen the necessity of maintaining a navy. In the Old Testament we are told "King Solomon made a navy of ships on the shore of the Red Sea, and Hiram sent in the navy his servants, shipmen that had knowledge of the sea, with the servants of Solomon, and they came to Ophir and fetched from thence gold 420 talents and brought it to King Solomon." King Solomon, the wisest of men, knew he could have no domestic peace or foreign commerce without a navy. Time forbids me to pursue this thought, but sea power has always brought prosperity and world influence to the nation that possessed it; and when the sea power of a nation has declined, the nation has commenced to decay.

"The fundamental naval policy of the United States is to maintain the Navy in sufficient strength to support the national policies, commerce, and to guard the continental and overseas possessions." The hope of the American people that since our experience in the World War has become an obsession is that we may have peace. That we may maintain our neutrality in the disputes of other nations and in which we have no interest and out of which no possible benefits could come to us. Unless we have the power to protect our commerce, which we may place under reasonable regulations and restraints to effectuate this purpose when a state of war exists between foreign nations, and unless it is apparent to the nations of the world that we have the power to guard our commerce and our continental and overseas possessions, we cannot maintain our neutrality or make secure that peace which we so earnestly desire.

If we are so weak that we cannot preserve to ourselves the possessions we cherish when they are in danger, it is obvious we must make common cause with others to protect them. This will involve entangling alliances. We can only maintain our independence by strength. It has been said "rights of neutrality will only be respected when they are defended by an adequate power. A nation despicable by its weakness, forfeits even the privilege of being neutral." And when we cannot be assured of our neutrality being respected in this day of national envies and of racial and religious hates, when wars are raging in Europe and the Far East and when there is no stability anywhere in government or human relationships we can have no confidence that we will not be drawn into those awful conflicts.

Peace is not the offspring of weakness, peace is the offspring of power. When Washington urged the creation of a permanent Navy in 1796 he said "To secure respect to a neutral flag requires a naval force organized and ready to vindicate it from insults and aggressions. This may even prevent the necessity of going to war by discouraging belligerent powers from committing such violations of the rights of the neutral party as may first or last leave no other option."

The maintenance of an adequate Navy by the United States cannot endanger the possessions or the peace and happiness of any other nation. No nation has anything we desire and we can say with truth that the peace, prosperity, and happiness of the other nations of the world will inure to our lasting benefit and is one of our cherished objects. As a nation we have no interest in waging war and we must through legislation see that no American citizen shall have any interest in our waging war. We should make it possible not only to conscript men but the material resources of our people. The United States desires to be in the position of the strong and just man who says to his quarrelsome neighbors. "I want to stay out of your fights and I propose to stay out of them. If you persist in drawing me into them it will be to your own ill fortune and disaster."

The Navy not only exemplifies and teaches the art of naval warfare, it not only wields a power that if it is sufficiently strong will insure peace, it also cultivates those qualities in the individual which make for good citizenship, the qualities of fidelity, discipline, and obedience. They are not less necessary to make a good sailor and a good soldier than they are important in making good citizens. For we cannot have any stable government without discipline and obedience, for government is based upon obedience.

The inculcating into the youth of our land these qualities which are often neglected in the home and the stimulation of the stern virtues which are cultivated and enjoined in our land and naval forces make for a self-sacrificing patriotism which is as necessary in times of peace as in war.

While it is necessary that our Navy have adequate ships, officers, and men maintained in a high order of efficiency, we must not overlook the importance of creating and training an adequate Naval Reserve. When it is realized that more than twice as many officers and men of the Reserve are required upon mobilization as Regular officers and men, some idea of the importance of this problem may be realized. The mission of the Naval Reserve is "to procure, organize, and train the officers and men necessary in the event of war for the expansion and operation of the United States Fleet and naval transportation service."

Time allotted forbids me from describing, even in general terms, the various functions of the Navy, its great accomplishments in time of peace no less than in time of war. Its accomplishments in the field of science, navigation, hydrography, aviation, and radio. The moral force of our Government will always be exerted for the peace of the world. We have joined with the other nations to encourage the peaceful settlement of international disputes. We have declared and reaffirmed our opposition to war as an instrument of national policy. We have observed a true neutrality in the disputes of others, but we must be prepared not only to resist aggression but to securely guard our commerce and our possessions. The high seas belong to no nation, and no nation can, with self-respect, submit to be driven from them if its commerce is legitimate and its purposes peaceful and honorable. To make our position secure, we must not only take the profits out of war but guard against being drawn into war by international banking or political commitments or any personal interest of our own people.

We must be scrupulously just in our dealings with other nations but firm in the assertion of our just rights. Above all, we must realize that in our dealings with the nations their commitments are obligations of honor. There is no international police force. Treaties and international agreements are but scraps of paper so far as their enforcement is concerned, if the parties in interest are not prepared to compel their faithful execution. Let us not be misled by some of those who from the best of motives tell us we must disarm, and there are many who conscientiously believe this and think that peace will come when we beat our swords into plowshares and our spears into pruning hooks. They fail to see the obvious. Mankind has not yet reached that state of perfection that will permit us to disarm. They have not learned any lesson from the terrible conditions that prevail in the world today, of the destruction of defenseless cities, of the murder of noncombatants, and the ruthless killing of helpless women and children.

We have celebrated Flag Day to inspire in the hearts of our citizens respect and love for our flag. We have celebrated Constitution Day in order that our people may have a renewed appreciation of the inestimable privilege of living under that charter of individual rights and of self-government, and it is singularly appropriate that we should now celebrate Navy Day—for the power of the Navy will assure that our flag will fly over a people free from invasion or oppression by foreign foe, secure in their constitutional rights won by their forefathers on the field of battle, and preserved by the wisdom and the courage of the succeeding generations of our citizens.

Legislation Before the Special Session

EXTENSION OF REMARKS

OF

HON. JOHN TABER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, November 22, 1937

RADIO ADDRESS BY HON. JOHN TABER, OF NEW YORK, ON NOVEMBER 19, 1937

Mr. TABER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address which I delivered over the radio on November 19:

This Congress has met in special session called by the President to consider a type of legislation designed to carry out the policies which he enunciated in April and May 1933—the policies of regimentation of American labor; of regimentation of agriculture; policies leading to the destruction of small business and manufacturing; to the socialization of industry; to the destruction of the labor unions; to the end of the right of the employee to bargain with his employer for his wages; to the destruction of the auditing set-up in the Comptroller General's Office which protects the rights of the Congress over the appropriations of funds.

Let us consider the major bills that he proposes. Let us take the demoralized situation into which he has brought industry and farming and labor by use of improper governmental interference with business. Let us take the so-called wage and hour bill. Let us see some of the things it will do.

It is proposed to set up a board which shall determine the minimum wage that shall be paid to employees and the maximum hours

they shall work. This applies to every industry with the exception of agriculture and perhaps domestic servants. It applies to the small manufacturer. It applies to the large manufacturer. A large manufacturer employing thousands and thousands of men and women can and will be able to come to Washington and maintain representation before a wage board on the fixing of wages and hours, but the small manufacturer or the small merchant could not afford to keep such representation here. The working men and women of this country, numbering perhaps three-quarters of our working population, are not members of any organization which would represent them in this respect. Therefore, this wage board would fix the majority of the peoples' wages and hours without adequate representation on the part of the employer or the employee. Many a small merchant simply has a schoolboy in for Saturdays to help him. Many a small manufacturer or repair shop has a part-time employee whom it provides with a livelihood because of the opportunity it has to give employment to someone. Many a small employer provides work for those who are older in years or who are perhaps mentally not as alert as some of the others or who are perhaps physically defective at a wage differential. Every one of these employments are special instances requiring for their proper consideration a proper understanding of the personal relations between the employer and the employee. Throughout all the history of this country this type of employment has been general, especially in the smaller plants. Most of the employees who are so employed are able to earn their own living. Those who are not able to earn enough for their entire support earn the major part of their support.

The result of the passage of this bill means the dumping of this entire block of thousands and thousands of employees in the aggregate on the permanent relief rolls with no possibility of their maintaining their self-respect or earning a part of their livelihood themselves. Is it fair to these people, the so-called underprivileged, to deprive them entirely of their right to earn a living and their self-respect by creating a situation where without representation or without possibility of a hearing on the part of either themselves or their employer that they are placed permanently on the relief rolls of this country? Is it fair to the fittest that they be permanently burdened with the support of those who are underprivileged when the underprivileged are much better off doing something to earn at least part of their own living?

That is one aspect of this bill. A second aspect is this: If we are going to fix the minimum wages and the maximum hours, it is only one more step to fixing all hours of labor and all wages. To my mind private industry and private employment of labor from the standpoint of either the employer or the employee is impossible with either the minimum wage or the maximum hours fixed by a board in Washington or by that board going further and having absolute control over wages and hours. It means, first, the end of all liberties on the part of the workingman; the end of his right to get along; it means the end of the labor union because there can be no labor union in the situation that is created by such a board; it means the end of all private industry and the establishment of a dictatorship and socialism; it means the fixing of all wages and salaries and hours by a decree from a dictator because no other form of government is possible that can control that sort of thing.

This bill is not in the interests of labor but is being brought forward by those who are deceiving labor, who are trying to destroy private employment and make conditions such in this country that we must go backward instead of forward.

In 1933 under the N. R. A., we tried this kind of monkey work. It was rapidly destroying the small-business man, the small manufacturer. It was rapidly placing a burden upon the workingman and the employer which he was unable to bear. The Supreme Court came to the rescue of the people and wiped out the N. R. A., wiped out the governmental overlordship of industry and labor which the N. R. A. created, and then business and industry began to go ahead until there was set up the National Labor Relations Board with authority to muddle in and create antagonism between labor and capital.

In 1933, on the demand of the President, the A. A. A. was passed, giving the Secretary of Agriculture absolute control over major agricultural products. This control intensified the agricultural depression and made the situation of the farmer much worse than it had ever been, and this continued until about 1935 when the Supreme Court wiped out the A. A. A., and there then began a revival of prosperity for farming and business, which the operations of the National Labor Board, the threat of the so-called wage and hour bill, the reduction in tariff on agricultural products, and the threat of a new agricultural dictatorship has destroyed.

Only last winter at Houston, Tex., I saw five foreign ships, each loaded with at least 175,000 bushels of Argentine corn, a total of 875,000 bushels, which was being imported in to the great corn-growing State of Texas as a result of the reciprocal-trade policies of the Roosevelt administration. This is just a small sample of the manner in which we have seen the Roosevelt administration move to destroy agricultural prosperity. And now, when a surplus results largely because of the cumulative effect of the unnecessary foreign imports, we are asked to give the President dictatorial powers so that he can make the emergency permanent.

If you will take stock of those that you know and of their situation now and their situation 4 years ago back in your own home communities, you will realize that the workingman who works for a living is worse off than he ever was before. It is true that large funds have been handed out to those who never worked and never would work, but the real workingman who is the backbone of America and the real farmer who tries to make a success of his business by honest and fair planning are much worse off than they have ever been in their history.

Crazy schemes to destroy the liberty of the people and to establish a dictatorship will not help the situation but will make more acute the unemployment problem, destroy business and credit generally, and give us nothing with which to build.

In 4 years' time we have had $16,000,000,000 added to the national debt. I can say this to you: There is no evidence of any honest attempt yet to reduce expenses and balance the Federal Budget. It is rumored, although we do not know about it, that $208,000,000 has been impounded by the President out of this year's appropriations available for expenditure in 1938. What does that amount to out of $9,000,000,000 of funds available to the President for expenditure in the fiscal year 1938? What does that amount to with a deficit already existing in a little over 4 months of this fiscal year amounting to over $600,000,000, indicating a net deficit for the year of approximately $2,000,000,000, and this, we must consider, comes at a time when the Government income taxes and internal-revenue taxes as a result of this administration's created depression are bound to be lower on March 15 and June 15 next?

But these things that I have talked about are not the worst situation that the Government faces. There is the proposed reorganization plan. There is the bill to destroy the power of the Comptroller General to audit claims and fix the balances of the executive departments and independent agencies. In other words, an absolute power to see that funds are not expended for any purpose other than that authorized by law. The Comptroller General, under the bill that is pending before the House—H. R. 8276—would have no power except to report to Congress. The functions that are now exercised by the Comptroller General would be exercised by an auditor general, who would be a subordinate officer of the Treasury Department and who would be subject to every whim of the Executive. In the first battles for Anglo-Saxon liberty the Magna Charta was wrested from King John in England. One of the major principles set forth in that document was the right of Parliament, or the legislative body, to have control over appropriations. That same right was delegated to the Congress under the Constitution of the United States. Ever since the formation of our Government there has been an auditing officer of absolute independence. Since 1921 this official has been the Comptroller General. To destroy the power of the Comptroller General to audit and fix balances and vest that authority in a subordinate official of the Treasury Department simply destroys any control that Congress ever had over appropriations and their expenditure and all safeguards as to the proper expenditure of funds. Such an operation is cumulative. It is along the lines of the establishment in this country of a dictatorship and an autocracy, of the destruction of the liberty of the American people, of the destruction of any possible relief for labor, or farming, or industry.

This special session and the regular session that is to come in January are amongst the most important in American history, for if we give up our liberties under the Constitution now, and the passage of these bills means giving up our liberties and American freedom, under which we have established the greatest opportunity for the common man in the history of the world, they will have gone forever.

Let us stand up now and fight for the liberties of the American people, for the rights of labor, of farming, and of industry, and against those who would destroy them.

Making Pure Food and Drug Legislation Effective

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, November 22, 1937

RADIO ADDRESS BY HON. JOHN M. COFFEE OF WASHINGTON ON JULY 21, 1937

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks, I include a coast-to-coast radio address delivered by me over the Nation-wide network of 84 stations of the Columbia Broadcasting System, as follows:

WE ARE TOO EASILY IMPRESSED BY MISREPRESENTATION

One of the anomalies of our times is the inability or the unwillingness of the American people, through their Congress, to pass effective national pure food and drug legislation—to enact laws with teeth in them. As a Nation we love to be hoodwinked. We delight in mirages. We are dreamers of rosy dreams. We are gluttons for punishment. We repudiate the spothegm "the burned child fears the fire." After the tannic acid assuages the agony of the burn we return to the fire with carefree gayety. If a novel runs to 1,000 pages and we are told with sufficient frequency by fashionably well-placed people that it is a masterpiece we hypnotize ourselves into believing it also, and vie with each

other in praise of the volume. If, by persistent repetition, we are told that a certain movie is super-super ultra-ultra and the adjectives of the English language are exhausted in its encomiums, there are few of us who are willing to disagree. We join in the hallelujahs of approbation. Since it is fashionable to effect to have a musical appreciation, many of our neighbors whom we know don't know one note from another compete with each other in protesting their thrilling delight at certain discordant performances some of which we unhumorously call grand opera. We are color conscious and are intrigued by the exquisite lithography of certain stocks and bonds and seldom exercise sufficient caution to inquire into the bona fides of the sponsors. We believe what we read in the newspapers. We are a credulous and gullible Nation. Even the late P. T. Barnum arrived at that conclusion a half a century ago.

So it is with pure food and drug legislation. The patent-medicine racket continues with seemingly unabated vigor. Daily we purchase with naive faith patent cure-alls in our drug stores and canned foodstuffs, childishly confident that the product is what it purports to be.

THE CURRENT PURE FOOD AND DRUGS LAW IS OUTMODED

The Federal Pure Food and Drugs Law was enacted in 1906 after a 27-year fight led by Dr. Harvey Wiley. That law has now outgrown its usefulness. Its chief defects are that it applies neither to advertising nor to cosmetics, although it does forbid false claims on labels and prohibits adulteration of food or drugs. But that law contains a fatal joker. The law interdicts false or misleading claims on labels. By "misleading" is meant a statement, which, although technically true, in fact is misleading. The United States Supreme Court some years ago had before it an important test case. The Government contended that Dr. Johnson's combination treatment for cancer was falsely labeled. We would hardly assume today that there could be much difference of opinion as to whether a "combination treatment for cancer" was misbranded or not, but the Supreme Court thought differently. It decided that the prohibition against false or misleading claims applied only to the ingredients of a package and not to claims about its curative powers, and so it dismissed the prosecution. This decision shocked the country. Within a month President Taft sent a message to Congress asking it to undo the evil the Supreme Court decision had created. A bill was introduced to amend the law to make it apply to therapeutic claims on the labels of drugs. That bill became a law, but only after the lobbyists had inserted a joker which made the amendment worthless. The amendment as finally adopted forbade false and fraudulent therapeutic claims on the labels of patent medicines.

Therefore, when the Government started an action based on false therapeutic claims against the seller of patent medicines it had to prove not only that such claims were false but also that the person who made them knew they were false.

In other words, the more ignorant a drug vendor was and the less he knew of medicine the less likely he was to be convicted. The lobbyist most active in getting this joke enacted in the 1912 amendment was an executive of one of the largest so-called ethical drug manufacturers in America.

BANBAR

Here is an illustration of the difficulties of prosecuting under this provision: A former shirt salesman was selling a so-called diabetes cure known as Banbar and getting $12 a pint for it. The Food and Drug Administration of the Department of Agriculture analyzed Banbar and found it was essentially an extract of a common weed, "horse tail", frequently found growing along railroad tracks. A criminal prosecution was started. Experts testified Banbar was worthless. The manufacturer then introduced in evidence hundreds of testimonials praising Banbar and swearing it had cured their diabetes. The Government then proved that scores of these persons had actually died of diabetes. Yet a jury of 12 good men and true acquitted the manufacturer and the Government did not appeal, for the excellent reason that it could not. The Constitution forbids putting a person in double jeopardy for the same offense in a criminal action.

MARMOLA

Did you ever hear of Marmola, the well known antifat preparation? Its manufacturer previously had been selling lost-manhood cures by means of Police Gazette advertisements. This preparation depends for its effectiveness on thyroid extracts, which can, and do, seriously harm many persons. The Post Office has the power to deny the use of the mails to those using them to defraud. Under this power it issued an order against one of the drug firms connected with Marmola. The manufacturer blithely changed the name of his firm and continued doing business under another name. He was able to dodge the postal inspectors until 1914, when the Post Office prosecuted criminally, and he pleaded guilty, paying a $5,000 fine. Eventually he gave up his mail-order business but continued to sell Marmola to retail druggists and to advertise it nationally. The Post Office then had no jurisdiction and so it dropped the fight.

MARMOLA STILL PROSPERS DESPITE ITS EXPOSURE

The Food and Drug Administration was without power to proceed against Marmola, as it is technically not a drug, since obesity is not a disease. It is just a condition. This agency had jurisdiction over food and drugs only, and hence could do nothing. The Federal Trade Commission took up the battle. That body has the power to issue an order directing a manufacturer to cease false advertising, and did so in 1928, charging that Marmola was being advertised as safe, when in fact it was dangerous. The manufacturer promptly appealed to the United States Supreme Court, continuing to sell Marmola during the appeal, doing $600,000 worth of business a year. The Court decided that the Federal Trade Commission had jurisdiction only when a manufacturer's false advertising "injured its competitors", and ruled that the Commission had not proved that Marmola's practices were harmful to its competitors. Today Marmola, which the United States Supreme Court admitted was dangerous to use except under a doctor's care, continues to menace the health of uninformed women, and the manufacturer continues to corral the profit thereof.

PRESIDENT ROOSEVELT WANTS MERITORIOUS LEGISLATION

Many dangerous drugs are commonly used in patent medicines. Under the present law the presence of most of these drugs does not even have to be stated on the label. The consumer has no way of knowing when he is subjecting himself to the perils inherent in their use. President Roosevelt, in a message to Congress on March 22, 1935, said: "A measure is needed which will extend the control, formerly applicable only to labels, to advertising also; which will extend protection to the trade in cosmetics; which will provide for a cooperative system and method of setting standards and for a system of inspection and enforcement to reassure consumers, grown hesitant and doubtful. * * *"

DINITROPHENOL

Recently there has been an increasing list of persons killed by dinitrophenol. Countless people have sustained cataracts of the eyes as a result of its use. Complete blindness has frequently ensued. Last year the American Medical Association reported that there were 23 reducing preparations on the market which contained dinitrophenol. In many places these preparations can be purchased at the corner drug store and the purchaser can embark on a course of self-medication with a drug which, even when taken under expert medical supervision, has often caused death.

STRYCHNINE

Under the present law strychnine, a highly toxic drug, does not have to be declared as an ingredient. Scores of children have died because of strychnine poisoning, due to laxative and tonic pills. Parents assume such preparations to be innocuous. They have no way of knowing that the chocolate or sugar coating of these pills, so attractive to children, covers sufficient strychnine that six or eight tablets accidentally eaten may constitute a lethal dose of poison for a small child.

THE TUGWELL BILL

Under the Tugwell bill, proposed by the Roosevelt administration, an important provision was won which listed many incurable diseases, or those which can be safely treated only by a doctor. Among these were cancer, diabetes, diphtheria, appendicitis, tuberculosis, and venereal diseases. This section forbade outright any advertisement of medicines for such diseases. Half-way measures are not enough for quacks, who profit by raising false hopes in those suffering from incurable ailments. But the list of diseases was too long for the medicine industry, and the diseases were cut from 42 to 9. The present Copeland bill, now pending, does not even prohibit advertising of drugs for diabetes, although science knows of no cure. Even insulin will only keep the patient alive; it will not cure him.

The Tugwell bill required each patent medicine and cosmetic to list on its label all of its ingredients and their proportions. It might be difficult to sell cold cream at $5 a jar if the label showed merely a few inexpensive everyday ingredients in the jar. Sellers of hair tonic guaranteed to grow hair on billiard balls would be unable to operate this racket if the label disclosed that the preparation contained nothing but colored water and red pepper. The canners were up in arms about the grade-labeling proposal. Today the housewife, when buying canned foods, is buying a surprise package. The gaudy label on the outside of the can is about as descriptive of the contents as a circus-sideshow poster is of the freaks inside.

CANNERS FAVOR GAUDY ADJECTIVES

Canners protested that grade labels would confuse the ignorant housewife, that the poor would be ashamed to ask for the lower grade, that it was impossible to grade accurately. Isn't the housewife today confused by a canner's adjectives? If you are in any doubt just listen to those used in listing sizes, not quality, of olives: Small, medium, large, extra large, mammoth, giant, jumbo, colossal, and super colossal. Even Cecil B. DeMille, in his palmiest days, couldn't do better than a "super colossal olive."

But the committee in Congress refused to report the Tugwell bill. Its provisions have been emasculated. Its incisive teeth have been replaced by false molars. Substitute legislation is now pending, the principal one known as the Copeland bill. I contend that this act is a law weaker in some respects than the existing act. As it has passed the Senate the power to make multiple seizures has been seriously impaired, because under it the accused may demand trial in his home jurisdiction, whereas consumers are more likely to receive the kind of court action to which they are entitled in the districts where they lived and have been harmed than in that of a distant manufacturer who may have transgressed the law.

CRAZY CRYSTALS

Did you ever hear of Crazy Crystals? They have swept the West in popularity. In American Chamber of Horrors, by Ruth DeForest Lamb, the author declares these crystals are essentially Glauber's salt, a horse physic. Yet a package of these crystals retails for $1. The same amount of Glauber's salt can be purchased for a quarter. In elaborate business offices on the main streets of American cities these crystals have been advertised as a panacea for diseases ranging from constipation to Bright's disease.

H. R. 5286

Because I feel strongly about this matter, and because I believe pending bills do not meet the issue, as a Member of Congress I have introduced a bill, H. R. 5286, which I believe affords the protection so urgently demanded and needed by the public. This bill is sponsored by Consumers' Union of the United States, Inc., by housewives' groups, and by liberal organizations generally. The main features of the measure are the establishment of a consumers' bureau in the Public Health Service; the registration of proprietary products; informative labeling; prevention of false or misleading advertising; an adequate budget for enforcement; health education, publicity, and scientific research. If you want real and unafraid food and drug legislation, advise your Representatives in Congress to support actively and work for the enactment of my bill, H. R. 5286, the Consumers' Union measure.

Under my bill every manufacturer of a proprietary product must register his formula, file a statement of all claims to be made for it, and the name of the licensed pharmacist or chemist under whose supervision the product is manufactured. Thus a product harmful to health would be prevented from ever reaching the market, since a certificate of registration would be denied if the product contained dangerous ingredients. The preventive feature of my bill would benefit everybody. Money would be saved for Government and business alike. Long and expensive court cases would be eliminated. The soundness of preventing offenses rather than punishing them after they have been perpetrated is so obvious as to be incontrovertible.

FRAUDULENT NOSTRUMS ARE PREVALENT

An example of the cogent need of registering the name of the licensed chemist who actually makes the product can be cited. One gentleman with only a graduate and scales for equipment puts up in his own home a preparation for hay fever and asthma, the principal ingredient of the nostrum being potassium iodide, a drug which converts latent tuberculosis into an active form of the disease. This man has no scientific training, having left school at the eighth grade. This picture of an ignoramus dispensing medicine to the public detriment but for his private profit is an incongruous one in our country, where scientific training and skill are supposedly held in high esteem. It is a picture which would be blotted out were H. R. 5286 to become a law. A feature of my bill is the requirement that labels of food, drugs, and cosmetics shall tell what ingredients are present and in what proportion, only spices, flavorings, and perfuming agents being excepted. Such informative labeling has been demanded by consumer groups for years. The imperative need for it is patent. If a consumer is to use medicines intelligently, he must know what is in them. If he is to spend his food dollar wisely, he must know what he is purchasing. Under the Copeland Act this need is only partially met, because it requires that the label of preparations containing two or more drugs list the active ingredients, but it does not require that the proportions in which they are present be named, with a few rare exceptions.

ALKA-SELTZER

Of what help would that be to a consumer who buys, say, Alka-Seltzer? Under the Copeland Act he will learn that it is essentially a mixture of aspirin, baking soda, and citric acid. Since he has read advertising about the alkalizing effect of Alka-Seltzer, he would probably decide that an Alka-Seltzer tablet consists mainly of a dose of baking soda with a little aspirin thrown in, whereas it is actually just the reverse. Under my bill this fact could be readily ascertained by every purchaser. Every Alka-Seltzer tablet contains 5½ grains of aspirin—more than the amount in the usual aspirin tablet.

IT IS TIME TO DEMAND ACTION

How long, O Lord, how long will we gullible ones continue to be defrauded, duped, misled, and exploited without rebelling? How long will we meekly turn the other cheek? Shall we sacrifice life for private profit indefinitely? Let us awaken to our peril; rise up and act. The record of Congress the past 4 years in respect to food and drug legislation is one of which none of us can be proud. It will be a betrayal of our constituents' interests if we Members of Congress fail to pass a new law in the near future. It will be no less a betrayal if that new law is one which is little better, if any, than existing legislation, and even weaker in some respects—I mean the Copeland bill. For that reason, friends, I urge support of H. R. 5286, the Consumers' Union pure food and drug bill, a measure with a purpose, with real teeth in it, and which means what it says.

The Antilynching Bill

EXTENSION OF REMARKS

OF

HON. MARTIN DIES

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, November 22, 1937

Mr. DIES. Mr. Speaker, ladies and gentlemen of the House, one of the finest speeches ever delivered in the Senate was recently delivered by our distinguished Senator, TOM CONNALLY, on the antilynching bill. It was my pleasure to hear this masterful address and I was so deeply impressed with its convincing logic, its sparkling humor, and deep sincerity, that I decided to print a number of copies and send them to my friends in Texas. The speech contains valuable information that our citizenship needs, and I can think of no greater service that I can render to the cause of democracy and the preservation of State rights than to place this speech in the hands of as many people as I can.

It is seldom that we are able to appreciate a great man during his lifetime. It is usually after death that we are able to appreciate the qualities of truly great men. I fear that there are some in my State who lack a full appreciation of the sterling character, the undaunted courage, the deep sincerity, and the brilliant ability of Senator CONNALLY. Some Members of Congress and of the Senate are able to fool their constituents. Some of them, through cheap publicity, are able to deceive their constituents into believing that they occupy an important role in national affairs when, as a matter of fact, their influence is nil, and they neither have nor deserve the respect of their colleagues. But few Members of Congress have ever been able to fool their colleagues. We see them here at close quarters and are able to appraise their true worth.

The overwhelming majority of both Houses regard Senator CONNALLY as one of the outstanding Members of Congress and as a truly great man. When he speaks, Members of the House and of the Senate who seldom listen to speeches except delivered by themselves flock to the Senate floor to hear him.

We appreciate the fact that he is absolutely sincere and possesses a degree of courage which is rarely shown in modern politics.

Senator CONNALLY could have chosen the easy road and gone along with what appeared to be the popular tide, but he preferred to tread the rougher path of duty and honor. Like others, he could have trimmed his sails to catch the passing breeze, and "bowed the pregnant hinges of the knee that thrift might follow fawning," but he chose to follow the example of other great Senators that Texas has produced in the past—men who did not sacrifice their honest convictions to secure political preferment.

The thinking people of Texas are justly proud of Senator CONNALLY, and many of us believe that he will be reelected without opposition. He is fighting valiantly and courageously for the people of our State; and, while some may not agree with him upon some of his views, nevertheless we respect him for his courage in expressing those views. Of course, we cannot agree with anyone 100 percent, but it is better to have in the Halls of Congress a man who is courageous and sincere, even though we do not entirely agree with him, than to have a pussyfooting, weak-kneed, trembling, shaking politician who will barter away our liberties to secure an easy reelection. The people are today demanding that their Representatives and Senators exercise courage and do what they think is right. It is because Senator CONNALLY has done this that his friends are increasing rapidly throughout the Lone Star State.

As one who has closely watched his public career, not from a distance and not from newspapers but from first-hand observation, I express to him, in the name of my constituents, gratitude for the wonderful service he is rendering our State; and I hope that everyone will read this great speech, which I happen to know was delivered extemporaneously and came from the heart of a great man.

Wage and Hour Legislation as Viewed by New York State Industrial Commissioner

EXTENSION OF REMARKS

OF

HON. ALFRED F. BEITER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, November 22, 1937

Mr. BEITER. Mr. Speaker, I am submitting herewith for the information of the House a letter I have received from

Hon. Elmer F. Andrews, industrial commissioner of the State of New York, outlining certain recommendations with reference to the Black-Connery wage and hour bill. It will be noted that Commissioner Andrews, representing the Department of Labor of the State of New York, called a conference of labor and civic leaders in the State for the purpose of discussing the bill, and that the conference thus called went on record as favoring the bill with certain amendments. These suggested amendments are contained in the report of the conference meeting also submitted herewith:

STATE OF NEW YORK,
DEPARTMENT OF LABOR,
New York, November 20, 1937.

Representative ALFRED F. BEITER,
House of Representatives, Washington, D. C.

MY DEAR MR. BEITER: Because New York State's widespread industrialization makes it so extensively subject to the legal provisions which the Black-Connery bill would set up if it became law, I wish to present for your consideration certain conclusions and recommendations adopted by a conference of labor and civic organizations which met in my office on Wednesday, November 10, to consider its effects on our industrial welfare.

All of those present favor the establishment of decent minimum wage and hour standards as a matter of national policy. It was generally agreed that certain provisions of the bill providing for fact finding and for the machinery of administration are carefully thought out and, in our opinion, administratively workable. The bill should provide that the workers of the United States be paid at least enough wages to live on.

Our reservations and disapproval begin when we consider the effect on New York State's industries of freezing into law, as we believe the House version would, existing geographic, sectional, local, and racial differences. Instead of tending to draw the States and localities together in a more perfect union industrially, economically, and socially, it would split the United States industrially into many segments. It would mean the industrial Balkanization of the United States, due to the multiple standards on which a minimum must be based and the many exemptions, administrative circumlocutions, and restrictions set up.

We are deeply disturbed also by the apparent possibility of its again establishing a dual administrative system for the enforcement of legal labor standards. We urge that the administration of the wage and hour minima to be set up be in the hands of State labor departments which meet minimum standards of administration prescribed in the bill. Thus there would be a single source of authority to which employers subject to wage and hour standards would be responsible. Those most requiring supervision could not evade by quoting one administrator against the other. The knowledge of conditions, of people, and methods which the State labor departments have would be available for the enforcement of the new law. The cost of duplication would be avoided.

The effective and economical organization would be to make the State departments of labor responsible directly to the Federal Labor Department, the latter to coordinate the work of the State agencies and to be responsible for the machinery through which the national wage and hour standards are set up and enforced.

Specific recommendations and objectives are detailed in the enclosed memorandum together with a list of organization representatives who adopted them. May we urge you to give active support to the movement to get the bill onto the floor of the House for consideration and to support the amendments proposed herewith when it comes up.

Yours very truly,

ELMER F. ANDREWS,
Industrial Commissioner.

PERSONS WHO ATTENDED CONFERENCE ON FEDERAL WAGE AND HOUR BILL, NOVEMBER 10, 1937

Commissioner Elmer F. Andrews, industrial commissioner, New York State Department of Labor.

Miss Frieda S. Miller, director, Division of Women in Industry and Minimum Wage.

Paul Sifton, deputy industrial commissioner.

Miss Rose Schneiderman, secretary, New York State Department of Labor.

Mrs. George Backer, Women's Trade Union League.

Mrs. W. Russell Bowie, president, New York Consumers' League.

Rabbi Sidney Goldstein, Central Conference of American Rabbis.

Mrs. Allan K. Chalmers, Young Women's Christian Association.

Miss Josephine Goldmark.

George A. Hall, New York Child Labor Committee.

James H. Hubert, executive director, Urban League.

Mrs. Henry W. Louria, executive secretary, Consumers' League of New York.

Mrs. Emily S. Marconnier, Women's City Club.

Mrs. Ralph Morris, League of Women Voters.

Mrs. Anya Smith, Women's Trade Union League.

Arthur Suffern, Federal Council of the Churches of Christ in America.

Frederick F. Umhey, International Ladies' Garment Workers Union.

Miss Laura Rappaport, National Council of Jewish Women.

Mrs. Dorothy Bellanca, Amalgamated Clothing Workers of America.

Courtenay Dinwiddie, general secretary, National Child Labor Committee.

Miss Alice Disbrow, secretary to Representative CAROLINE O'DAY.

Rev. Wallace T. McAfee, associate general secretary, Greater New York Federation of Churches.

ACTION OF CONFERENCE OF LABOR AND CIVIC ORGANIZATIONS CALLED ON NOVEMBER 10, 1937, BY THE INDUSTRIAL COMMISSIONER OF NEW YORK STATE FOR THE PURPOSE OF CONSIDERING NEW YORK STATE'S INTEREST IN THE TERMS OF THE FEDERAL WAGE AND HOUR BILL, KNOWN AS THE BLACK-CONNERY FAIR LABOR-STANDARDS BILL, IN THE FORM REPORTED WITH AMENDMENTS AND COMMITTED TO THE COMMITTEE OF THE WHOLE HOUSE ON AUGUST 6, 1937. S. 2475 (REPT. NO. 1452)

I. This conference goes on record as opposed to the complex, cumbersome, and unworkable administrative machinery set up in the present form of the bill. Hoping, as we do, that decent national minimum standards of hours and wages will be developed as the result of this legislation, we urgently recommend that the machinery of the act be brought closely in line with the experience of State departments of labor in the effective administration of State minimum-wage laws. This can be done most effectively by delegating to State labor departments which meet the standards for administration set up in the bill, the authority for enforcement within their respective areas. Thus, there would be no setting up of duplicate organizations within the States which are costly, confusing, and irritating to employers.

We urgently recommend that for enforcement, for the coordination of the work of the State agencies, and for the setting up of the Federal standards administrative authority be placed directly within the Federal Department of Labor. In making this recommendation we should like to point out in this place that such assignment of duties would not give the Secretary of Labor the power to set wages. The bill would provide that minimum wages are to be set by wage boards; the Secretary may accept, reject, or return the recommended wage scales to the wage boards with a request for further study and new recommendations, but he may never amend the recommended wage scales on his own motion.

II. We regard as hampering to the purposes of the act and as quite unworkable in practice the long list of considerations which the board is required to give attention to in setting standards under section 4. They appear unduly time taking and severely separatist. We favor a policy that will minimize differentials between sections and racial or such other distinctions.

We believe that the minimum wage to be set should be considered on the basis of cost of living, of fair return for services rendered, and of wages established by collective agreements. It is administratively impossible and undesirable to consider the other "relevant circumstances" required in the present version of the bill, namely:

"(2) The relative cost of transporting goods.

"(3) Local economic conditions.

"(6) Wages paid for work of like or comparable character by employers who voluntarily maintain minimum-wage standards.

"(7) Differences in unit costs of manufacturing occasioned by varying local natural resources, operating conditions, or other factors entering into the cost of production."

The wage earners of this country have been promised and now expect the enactment of a law which will assure them at least enough wages to live on. The standards for determining minimum wages should be kept as close to this single measurement as is practicable, and certainly should not be modified by more than the two considerations recommended above.

III. Child labor: We would prefer to see the general child-labor provisions, which have been incorporated in the House version of the bill, maintained and brought together in one single section where child labor can be dealt with by itself. This position is based on our vigorous opposition to the plan set up in the original form of the bill resting the control of child labor upon the technique employed for the control of interstate shipment of prison-made goods. Such procedure could never be effectively applied to the much more widespread and shifting child-labor problem, and we, would, therefore, stubbornly resist any effort to return to that basis.

We want to see maintained in a child-labor section the definition of oppressive child labor which is now section 2, subdivision 10, except that this definition should be amended so that parents are not excluded as the employers of their children, since such an exception opens the way to easy evasion of the prohibitions intended to be set up. A separate definition of the industries and occupations for which oppressive child-labor standards may be set up should appear here in order to prevent, for example, the consequences of applying to child-labor sections such general provisions of the bill as the inclusion of forestry in the exemption set up for agriculture. This would allow children to go on working in turpentine camps despite the repugnances of all those familiar with them to that situation.

The section should further be amended to strike out the authority now given the Chief of the Children's Bureau to set up any exemption deemed by her not to constitute oppressive child labor. Into the section on child labor there should also go the provisions of section 15, subdivision (b), strengthened so as to make it mandatory that investigations and inspections relating to oppressive child labor shall be carried on through the Chief of the Children's Bureau, with authority to enter and inspect all places affected, and in conjunction with the State enforcement agencies to whom such power should be delegated under proper conditions and standards.

IV. We regard the provision in section 23, subdivisions a, b, and c, that penalties be only for willful error or omission or discharge of employees, as thoroughly vitiating the effectiveness of the proposed act. Enforcement of State labor legislation has long demonstrated the need for holding the employer responsible for acts which he permits in his factory or workshop. It is for this reason that State labor laws generally define "employed" as "permitted or suffered to work," and in interpreting that definition make the employer responsible for conditions of employment which he permits or suffers to exist in his place of business. If such responsibility is not put upon the employer labor standards cannot be maintained by way of effective law enforcement.

V. Section 10, "Hearings," as it now stands with the amendment that a hearing "shall be at a point as near the principal place of business of the employer involved as is practicable" and that "reasonable notice must be given to those involved by registered mail or by personal service" is unworkable and destructive of the purpose of the act and must be amended to stand in its original form. The requirement for hearings should be limited to notice by publication and in a place designated by the Board. The above provision, if it means that a board would be required to hold a hearing in the immediate vicinity of each and every manufacturing establishment in the United States, both large and small, urban and rural in location, is one of the weirdest, three-headed calves ever to come out of a legislative drafting chamber. We assume that its appearance was an oversight; it should be decently removed unless someone can guarantee a practical method of operation.

VI (sec. 8, subdivisions (c) and (d)). It is the belief of this conference that the provision in the sections dealing with the functions of the United States Tariff Commission in connection with this bill, include a burdensome and unworkable requirement when they call upon that Commission to investigate costs of living in foreign countries. We urge that this provision be stricken out.

VII. We urge that there be a clear, unmistakable provision incorporated in the bill that wage orders are intended to be set up and to become effective by industry and not by occupation. This recommendation is made because there appears to be, among well-informed and interested persons, a belief that the word "occupation" is used throughout the act in order to clear the way for setting wage rates for occupations rather than by industries, which we regard as an unworkable and undesirable alternative. We urge that a provision be inserted directing the administrator to set up a standard incorporating the items required for adequate maintenance and the protection of health of workers throughout the United States.

VIII. This conference believes that the present provision of the bill for setting hours standards as the result of investigation and the promulgation of orders is time taking, cumbersome, and costly beyond the benefits which would result from the flexibility of such a plan. We believe that much prompter and at the same time effective relief would be secured by setting a statutory limit of 40 hours and permitting variations with extra pay for overtime as the result of appeals and findings by a board, as now provided in the bill. We urge that careful consideration be given to the possibility of such an amendment.

IX. Because fair labor standards labels have proved to be among the most effective devices for assuring satisfactory conditions of work and pay, we urge the reinsertion of the section which was in the original bill, and that there be added provision for adequate means of putting this section into effect.

Let's Save the Infant Agricultural Industries!

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, November 22, 1937

Mr. MURDOCK of Arizona. Mr. Speaker, the keynote in proposed farm legislation seems now to be crop control and the cutting down of production. I am as anxious as any Member of this House to legislate so as to cause the farmer to prosper, and I should like to see him get fair prices for his produce and not be subjected to such common ruinous prices as in former years when he was required to sell his crops for less than the cost of production. If limitation of supply is the only way, or the best way, to give the American farmer a square deal, then I am for that policy, but I should like to say a word concerning the administration of that policy.

Obviously it would seem that in the production of those things which are not grown in sufficient quantity to meet the American demand and of which there is a considerable importation, there should not be any limitation of domestic supply nor any penalties imposed. I would have such farm products entirely exempt from restrictions. Take for instance a very long fiber cotton grown in Arizona known as Pima cotton or as American-Egyptian cotton. This particular variety is not grown any place else in the United States. The Arizona production is not at present sufficient for the American demand. The extra supply needed by our mills is obtained in Egypt. Certainly this long-fiber cotton should suffer no restrictions and no penalties and should be given every protection from foreign competition.

In all of our restrictive farm policy we should take into account the newer communities that are right now in a state of expansion. If it is just "to temper the wind to the shorn lamb," surely it is fair to those new communities that are now in the process of development to temper our restrictive measures to what they are able to bear. Some of the newly irrigated regions of the Southwest, for instance, during the past decade have been expanding in their agricultural production of cotton, and if restricted in their output as some of the older farming States are to be restricted, they will be absolutely strangled by such restrictions. In my State there are new communities springing up farmed by men from the Dust Bowl portions of the Middle West, and it is for these new communities that I plead today. I might add that the total amount of cotton they are now producing is negligible compared to the grand total of the entire country. However, the producing of it means life to them.

No doubt the Congress will feel that the best way to reduce production is to reduce it. That logic cannot be answered, but my contention is that reducing it uniformly all over the country will work a much greater hardship upon the newer communities of the West than upon the older communities. As illustration, I would cite the cotton farmer of the Southwest. In my own State of Arizona during the past decade a considerable advance has been made in the growing of short-staple cotton. A former law passed by this body placed a restriction upon the cotton farmer, basing its provisions upon the 5 years including and following 1928. That was the period during which this industry was getting started. All recognize that a base including those 5 years worked a hardship on these southwestern communities.

If I could have my way, which I cannot, I would have the crop year of 1937 serve now as the base. If an average is taken over the last 5 years, it will be slightly less satisfactory, as there has been a continuous development since 1933. If we must average 3, 4, or 5 years in establishing a base for our control, let it be not a specified period, such as 1933 to 1937, inclusive, but let it be a moving period including the last year's crop with each estimate. I am asking for a plan that will allow for some expansion for our communities.

An adult might wear a tight-fitting garment without pain; an adult foot accustomed to it might even wear a Chinese shoe; but a growing child would be agonized by the same sort of treatment. Cotton growing in Arizona is an infant development in a youthful community, and I am asking lawmakers to consider well the effects of all restrictive measures, so as not to make such restrictions as will be destructive in effects.

The Future of Free Enterprise

EXTENSION OF REMARKS

OF

HON. SAMUEL B. PETTENGILL

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, November 22, 1937

ADDRESS OF HON. SAMUEL B. PETTENGILL, OF INDIANA, BEFORE THE AMERICAN PETROLEUM INSTITUTE, NOVEMBER 11, 1936

Mr. PETTENGILL. Mr. Speaker, a year ago this month I spoke before the American Petroleum Institute on the subject The Future of Free Enterprise. After a year's reflection

I find that I have little to add to or subtract from that address. I attach it herewith as delivered November 11, 1936, at Chicago, Ill.

The evils of remote control over American life from the financial Capital of the Nation have been made obvious to all. It was the revolt against those evils that accounts in large part for the elections of 1932, 1934, and 1936.

There is, however, the law of the pendulum in public affairs. We are now swinging too far toward control of American life from the political Capitol of the Nation and toward the evils inherent and inescapable in a vast bureaucracy under partisan management.

The life of our people is stifled by remote control, whether financial or political. That stifling is apparent today. The country is suffering from legislative indigestion.

Big government is as great an evil as big business. In time they become one and the same.

Granting that the advance of science requires new controls, e. g., radio, I am nevertheless convinced that Jefferson is still right in all cases except where Hamilton is inevitable.

Responding to the pressures of the emergency, the Democratic Party shows signs of abandoning Thomas Jefferson for Alexander Hamilton. It will be a sad exchange of leaders.

The concentration of political power is as bad as the concentration of financial power. In fact, it is almost certain to be worse, as political control is not likely to long tolerate free speech, a free press, a free radio, or free courts in opposition to its program. Note Brazil today.

When government assumes the responsibility of economic guardianship, it also assumes censorship over the opinions of its wards. All history, past and present, proves the point. The monarchies of the past and the fascisms of the present have no room for an opposition, none for human freedom, and little for human progress.

All history proves, if it proves anything, that nations become prosperous only as a result of being free.

Remote control from either Wall Street or Washington is equally to be avoided, however much the second is made inevitable by the first. Concentration of power has never long contributed to the happiness of mankind. Concentrated political power is a poor exchange for concentrated financial power. The holding company in finance and the holding company in politics hold little promise for our children.

Where the meat hangs, there the wolves gather.

Abraham Lincoln once said of the spoilsman in politics:

There you see something which in the course of time will become a greater danger to the Republic than the war.

The address, The Future of Free Enterprise, suggests a middle course which I hope will be of interest to those who oppose the "old deal" as well as those who oppose the New Deal. It is as follows:

THE FUTURE OF FREE ENTERPRISE

(By SAMUEL B. PETTENGILL)

Let me say at once that I do not know the future of free enterprise, nor that it will have a future. This may well be the last generation of Americans to receive and cherish the legacy of liberty. This coming decade may bring the twilight of democracy right here in America. Another collapse such as we had in 1929, and who of you will give bond for the survival of freedom?

WHERE IS LIBERTY?

Before rejecting these forebodings as too pessimistic, let us make a brief but candid appraisal of the forces now loose in the world. In Asia you see China, the oldest of civilizations and a republic, slowly disintegrating before the concentrated power of Nippon. In Mexico, once a republic like ours, you have communism pure and simple, separated from us by the width of a river only.

In the United States state socialism is advancing rapidly, as witness the political platforms upon which parties have gone on to actual victory in Minnesota, Washington, and elsewhere. In addition you have Federal infiltration on a wide scale into fields once exclusively occupied by free enterprise—the latter taxed to support its governmental competitor.

Across the Atlantic the lamp of liberty has gone out in three-fourths of Europe. The swing toward the center daily gathers momentum. New barbarians march on ancient Romes and, in the name of "security," place Caesar's blood-rusted crown upon the fevered heads of those who call themselves the "saviors of the people."

Within a short distance of the place where the Prisoner of Chillon once appealed "from tyranny to God," machine guns and concentration camps do the debating when political arguments arise. And while the blood purge of June 1934 was on, a new messiah shouts, "During these 24 hours I am the supreme court."

Idealism is chained to Caesar's chariot, and the long thoughts of youth are poured and crystallized in the patterns of power, the idolatry of authority. Freedom to choose one's occupation, to move from country to city, or the reverse, is at an end. Government by debate, by discussion, by conciliation and toleration is trodden under the iron hoofs of the man on horseback.

Even England, the "mother of democracies," sees her authority challenged and her prestige weakened in the Mediterranean, in India, and hence throughout the world. And in that "tight little island" it was only 14 years ago when powerful groups appealed not to the franchise of free government, but to the brute force of a Nation-wide strike as their method to obtain a redress of grievances, a method repeated successfully this year in France.

Democracy is proclaimed a "rotton corpse," liberalism is spat upon, the authority of religion is spurned, the sanctity of private contract and public treaty is held for naught; the temple of international law, painfully built during five centuries of time, is overthrown, and all those immemorial decencies between man and the State—trial by jury, the independence of the courts, habeas corpus, the civil above the military power, freedom of petition, of election, of speech, of assembly, of worship, of the education of one's children, government by law and not by men, government which derives its "just powers" from the "consent of the governed," the restraint against spoliation and confiscation, the assurance that if a man sow he may also reap, the one driving force (other than the lash of the slave) which makes wealth to accumulate and the arts and sciences to flourish—all these precious things are tossed into the sewer as the synthetic parade follows the modern imperator who rattles his crimsoned sword and scans dark horizons for more worlds to conquer.

Here in America worshipers of the State (not the "States") grow in number. Bearing a banner with that strange device "special privileges for all" they come to Washington seeking alms. Members of church, labor, youth, and women's organizations are sponsoring the surrender of human destiny to politicians idealized as demigods.

I am not at all certain that the swing toward the center has not gathered momentum that nothing can check until a disillusioned people have once more had their fill of Caesar. It may be that we are fighting a rear-guard action. But if we must yield, we do so reluctantly and with a presumption in favor of freedom.

RISE OF DEMOCRACY

There is a long flow and ebb in the tides of human destiny. Consider the following facts: The Constitution of the United States was written in 1787. When signed, Gouverneur Morris said: "The whole human race will be affected by the proceedings of this convention." Never was prophecy better justified by time. For down to 1917, when Russians established the "dictatorship of the proletariat" in place of the dictatorship of the Romanoffs, a period of 130 years, there was scarcely a movement on this planet that was not toward democracy and freedom from concentrated authority. Our Constitution became the model of the world. In the States of our Union, in the countries of Latin America, in the Provinces of Canada, in New Zealand, in Australia, in South Africa, and elsewhere, not less than 400 constitutions were patterned by freedom-loving men upon the basic concepts of our own Magna Carta—1, the distribution rather than the concentration of power; and, 2, that the individual, because created by God, and in His image, has dignities and rights as a human soul which are beyond the powers of princes or the might of majorities.

DECLINE OF DEMOCRACY

But in 1917 the tide turned. From that time to this hour, except for the short-lived German republic, there has scarcely been a movement on this planet that has not been away from democracy toward the concentration of power and in favor of the doctrine that the individual has no rights which the state is bound to respect. Wearied and wasted by war, but with old loyalties dissolved by the disillusionment of mass murder, the house of want invades the house of have and demands bread even at the price of liberty.

Perhaps this swirling tide will break and turn before it reaches America. God grant it! But if in the perhaps not distant future free enterprise—and with it free government—should vanish from American life, an inquest is certain to be held. On that day, one of the saddest in history, many witnesses will be called. The question, Who killed Cock Robin? or permitted him to die will receive many answers. Some will blame Moscow; others, Tugwell; others, the failure to require the teacher's oath in the public schools; others, the failure to deport the Communists or to shout loudly enough "down with the reds;" still others, the vain but reckless pretensions of pulpit politicians "most ignorant of what they are most assured."

INDUSTRIAL STATESMANSHIP

All these may influence the verdict, but I believe the final judgment of the impartial historian will be that free enterprise died in the house of its friends, its death wound given by its beneficiaries, not by its foes.

In my little book, Hot Oil, I said:

"Can businessmen run business in the interest of the whole people? Can profits be harmonized with the needs of the Nation for today and for tomorrow? Must the States surrender their historic jurisdiction to the Nation? In a word, can we secure social objectives without regimentation, prosperity without paternalism?

Or, turning the question around, will paternalism produce prosperity? How much of liberty can we afford to pay for the promise of security? Or will bureaucracy, in destroying liberty, also destroy the efficiency in the production and distribution of wealth which alone makes security possible?

"If democracy fails, as so many in these difficult days seem even anxious to predict, it will be because it fails to meet the new problems of a new industrial world in which economic structures transcend State lines.

"What, then, is the true boundary between business and government, the States and the Nation, individual responsibility and public control, the line 'which shall combine that degree of liberty without which law is tyranny, with that degree of law without which liberty becomes license'?

"What are the proper limits of the functions and agencies of government? Those limits will be extended only as the failures of industry make the extension seem imperative. If business proves incapable of self-discipline in the interest of the millions, Government will occupy new ground. The millions will demand it, and they have the votes. They will fly 'to ills they know not of' rather than continue to embrace conditions that have become intolerable. No constitution, however revered and hallowed with the blood of the fathers, will long check their course.

"The fate of America is still in the hands of those who have the greatest stake in America—the leaders of enterprise and their shareholders. Will they, who have the most to lose, do most to serve?"

It is only because I know there are men in this audience who are keenly aware of the pressing need of industrial statesmanship of the highest order, it is only because I know that this and other trade organizations are hard at work to improve the standards of conduct of their numbers toward each other and the public, and thus to save free enterprise and free government to America, that I venture to speak today.

I am none the less your friend, even though I am unable to accept the easy alibi, so commonly held in business circles, that the push toward collectivism comes from without rather than from within those circles. The thought I have principally to offer for your consideration is that businessmen are largely, if not chiefly, responsible for the very trends they fulminate against.

INDUSTRIAL SELF-DISCIPLINE

If we are to save free enterprise, I am convinced that it will be done chiefly by industrial self-discipline placing limits on greed, recognizing the trusteeship of management—not for stockholders only, but for labor and the consumer—thus eradicating the evils of capitalism by self-surgery and making it function in the interest of the masses, without whose support it cannot function at all.

I recognize the difficulty, as did Edmund Burke, of indicting a nation or a system; but I do not see how we can approach this problem effectively without pitiless self-appraisal. I take courage because I see so many businessmen who are willing to face the facts and take their share of the responsibility and the blame. But I sometimes lose heart when I see others "passing the buck," looking for a "goat" and, blinded by partisanship and self-interest, charge the trend toward regimentation and collectivism to a "brain trust," a "rubber-stamp" Congress, and Rexford Guy Tugwell.

WHENCE COMES REGIMENTATION

Gentlemen, let us be honest with ourselves and with the truth. Without entering now upon the merits or demerits of N. R. A. or A. A. A., or the potato bill or other similar legislation, where did these bills find their origin? First, in the break-down of capitalism and, second, at the urging of capitalists.

Take N. R. A. I was present at its birth. I was in the Ways and Means Committee room when a representative, not of Karl Marx, but of American business, the president of the United States Chamber of Commerce, urged that legislation upon the Congress of the United States in behalf of the business interests of the country—a fact eloquently corroborated by Mr. W. T. Holliday in his testimony before the Cole committee.

Take A. A. A. Whence came the demand for and ready acquiescence in "regimentation" by the most individualistic and sturdy of all members of the capitalist class—the American farmer? What apparent necessity induced him to reverse the habits of centuries, to kill pigs before they matured, and to plow under cotton and wheat before it was ripe for the harvest? It was because the loss of foreign markets has caused unsalable surpluses to accumulate. And why did farm markets disappear? It was, in part at least, due to tariffs lobbied for by American capitalists which in turn provoked reprisals abroad, and thus farm surpluses and crop control and "regimentation" at home. For a decade American industry, in power at Washington, saw the free enterprise of farming slowly starve to the point of desperation.

If in the future there shall be a struggle for power in this country between the classes, industry would do well to have on its side the 30,000,000 Americans who live on the farms and in the county-seat towns and villages of America. The "farm problem" is your problem.

HAVE WE A FREE ECONOMY?

When it is said that free enterprise has failed, my answer is that we have not permitted it to work. We have impeded it with a tanglefoot of our own making.

Despite all this sudden talk of a "planned economy," the fact is that we have never had a wholly free economy in this country. A policy of protective tariffs, for example, is in itself a repeal of the law of supply and demand.

Everywhere we see businessmen seeking to sustain themselves and their prices by "controlling the market," by monopoly, by subsidies, by franchises, by licenses, by certificates of public interest and necessity, by patents, by trade-marks, by "pegging the dollar" to sustain credits, by devaluation to obtain advantages in international trade, by cheapening the dollar to pay debts through rising prices, by shifting the tax load to their competitors, by statutory price fixing, by retail-sales control; in other words, by "regimentation"—for the other fellow.

The protest against this sort of thing was, in my judgment, the highlight of the recent campaign.

In a notable paper 2 years ago Gustav Cassel, of Sweden, pointed out that the pressure of business interests upon government for special privileges for themselves or legislative handcuffs for their competitors leads inevitably to "planned economy" and, hence, to dictatorship.

No government can write tariffs, license importers and exporters, pay subsidies, impose quotas, increase production, restrict production, regulate rates of foreign exchange, secretly manipulate huge stabilization funds, enter upon competitive undervaluation of national currencies, extend or restrict credit, raise and lower interest rates, fix prices, issue embargoes, regulate division of earnings between spending and investment, etc., without making mistakes which require corrections leading to more mistakes, without calling forth claims for compensating measures, in the same way that tariffs for manufacturers led to the demand for a "farmer's tariff" or its equivalent; or, more recently, when the control of cotton production led to tobacco control, and from tobacco to peanuts to potatoes. Similarly, government-financed hydroelectric power plants, which compete with coal, increase the demand for subsidies for coal mines and for restriction of production.

Because government grants favors to capitalists it is appealed to to grant equalizing favors to workers.

Because it creates agencies to benefit producers it perforce must create other agencies to protect consumers—the consumers' bureau and the producers' bureau, each begging Congress for more money to checkmate the other!

BUREAUCRACY NOURISHED

And so government goes about grasping for more and more power to cope with the abuse of the privileges it has itself created.

If it be said: "Upon what meat doth this, our Cæsar, feed that he hath grown so great," the answer must be that the pressure of business interests forced the meat down the great man's throat.

Meantime, the invisible government is constantly at work behind the scenes to hog the cake and distribute the crusts of governmental favor. And all of this, let me repeat, is initiated not by pink young professors but by business interests seeking statutory refuges from the competitive struggle they praise so highly—on paper.

Meantime, members of legislative bodies are overworked with problems beyond their time, strength, and experience, and outside their proper jurisdiction. The inevitable tendency is to delegate their powers to a vast bureaucracy. What they themselves do is done poorly, and the resulting loss of confidence in the ability as well as the disinterestedness of parliamentary government calls for louder cries for stronger men, and hence for the strong man himself, who in turn makes his mistakes—of which Napoleon and the Kaiser are only two of many that sent whole nations to disaster.

Out of this tanglefoot that is throttling and discrediting free enterprise, there is an opportunity for an economic Abraham Lincoln, who will free businessmen from the shackles wrought by themselves.

DANGERS IN PATERNALISM

Whatever may be said in justification of any one of these governmental favors to a particular group, considered by itself, yet in their total aspect it is almost certain that the pocket of some American is impoverished by the exact amount by which another pocket is legislatively enriched; that the total wealth and purchasing power of the Nation as a whole is not increased a nickel. On the contrary, it is almost equally certain that our people have been denied the almost limitless potentialities of our science and technology by these policies which hold the umbrella of paternalism over inefficiency and senility. In proof of this, is it not true that the enterprises which are in the van of recovery today—notably automobiles and petroleum—are those which are the farthest from bureaucratic control, the freest of the favors and subsidies and protection of government, and the most subject to the competitive stresses of free enterprise?

I would listen long and attentively to an argument that the future of free enterprise requires the abandonment, step by step, of all these immunities and privileges and the gradual restoration of competition in all things save theft, fraud, and the exploitation of human beings.

It cannot be denied that the same government that fixes prices for commodities, rents, and interest can with equal logic fix wages, either up or down, and shorten or lengthen hours of work. It all depends on who controls the government. In Germany and other countries today industrial workers are reported to be required to carry a "work card", which easily becomes the European equivalent of the hated black list. Take it or leave it. Is this to be the reward of the American workman for rushing to Washington for the solution of his troubles? If so, "planned economy" will have a sour taste for his children.

INTERNATIONAL THREATS

In their international aspect this Chinese maze of trade restrictions might as well be recognized for what it is—the economic and monetary equivalent of war, with Armageddon only a step away.

The future of free enterprise goes far deeper than "is dreamed of in our philosophy." It not only involves the future of free government, but the future of civilization—any kind of civilization.

It is one thing when business competes on its own hook for international markets. But when government itself becomes the active partner of businessmen in throttling their international competitors, the latter rush to their governments to make political and military answers to economic arguments.

Thus the struggle is broadened and intensified. Is not the whole effort for national security rapidly increasing national insecurity? And is not every supposed trade gain offset a thousand times by the weight of armament and the cost of war—actual and potential? The world, it seems, can have trade and peace—or trade stoppage and war.

LEGISLATION SOLICITED

Coming nearer home, what bill in recent years had more of the essence of collectivism, the destruction of States' rights, the regimentation of enterprise, than the Thomas-Disney bill which would, if enacted, give an official at Washington the power to fix the daily production of petroleum from every well in America and therefore, indirectly, the income of the owner and the price paid by the buyer.

Again, without discussing the merits or necessity of the bill, it is the simple truth that it was the representatives of the industry itself who rushed to Washington crying, "O, beneficient bureaucrats, uncontaminated as you are with any knowledge of the problem of petroleum, and with that high detachment and objective viewpoint—resulting from never having seen an oil well—save us ere we perish, save us from ourselves!"

CAUSE-AND-EFFECT LEGISLATION

From my conning tower at Washington I saw another great industry, not rushing to the Capitol, but dragged there to stand trial for its own misdeeds. I heard the astonishing story of a dark jungle of holding companies pyramided 10 stories high upon each other—the hiding place of financial freebooters. I saw the leaders of that industry, with ashen faces, unable to defend themselves. Some were personally vulnerable, and those who were not felt forced by a spurious fraternalism to keep the door shut upon the skeletons in the closets of their industry rather than clean house. I said to some of these men that it passed my understanding how they could do such a marvelous job on their physical plants and equipment—a miracle of science—and be so utterly dumb and deaf and blind on their public relations. I said to them: "What you need is a Kenesaw Mountain Landis, a czar of your own choosing, whose sole function shall be to call foul balls, and whose contract shall expire the instant he ever says 'strike one.'"

Industrial self-discipline. I saw the stock exchanges and banks finance the bubble of speculation until it finally burst in ruin in 1929 with a shrinkage in values of stocks and bonds alone—to say nothing of commodities and real estate, rural and urban—of $91,729,000,000, or three times the amount of the World War debt. And then, with little help and much opposition, my committee wrote the Stock Exchange Act of 1934.

I heard the story of stock split-ups, the watering of capital structures, the sale in interstate commerce of worthless Peruvian and European bonds and domestic stocks in which $25,000,000,000 of the savings of thrift and toil were lost beyond recall, and my committee wrote the Securities Act of 1933.

Industrial self-discipline. In times called prosperous I saw 11,000 banks, nearly a third of the Nation's total, close their doors with $5,000,000,000 of hard-won savings dissipated to the four winds of heaven, and under the very dome of the Nation's Capitol I heard an old man say: "To hell with the Constitution. It did not save my savings."

Industrial self-discipline. A few years earlier I saw the legitimate wine, beer, and liquor industry—through illegitimate practices winked at by themselves—write their own ticket to exile and heard them pronounce the death sentence on their own hundreds of millions of investment.

I pick up the Statistical Abstract of the United States, and read that, in 1928, 511 men had net taxable realized incomes of a million dollars or more, averaging $2,270,000 each, or $7,000 a day apiece, and totalling altogether $1,108,862,000—only 2 percent of which, let it be noted, represented compensation for services actually rendered—a total net income to 511 men greater than the gross income of all the wheat and cotton farmers of the Nation, aggregating, with wives and children, some 10,000,000 Americans.

"Ill fares the land, to hastening ills a prey
"Where wealth accumulates, and men decay."

And then, a little later, I saw this capitalistic system collapse, stabbed in the house of its friends, its blood sucked by its beneficiaries, and 15,000,000 idle men dependent upon private charity or public dole—an army which, placed in single column 2 feet apart, would reach across the continent and back—America's question mark to free enterprise.

INDUSTRIAL INERTIA

In 1933 I spent a year as a member of a committee on Government competition with private enterprise. We developed the facts. We showed socialism coming through the back door, but except their own ox was gored, we got practically no support from either businessmen or political leaders.

This year I saw Members of Congress—so often referred to as cowards or rubber stamps—risk their political lives to defeat a bill that would have opened the floodgates of inflation to the destruction of $108,000,000,000 of life insurance, and then in the election this fall go up against the radio guns of a Fascist in cloth, all without a word of thanks or an ounce of support from the presidents of the great life-insurance companies, who are, if they are anything, the trustees of the helpless aged, the future widows and orphans on 64,000,000 policies.

Gentlemen, I ask one intensely serious question: If the leaders and owners of the American system are too lazy to wash their dirty dishes, too selfish to be intelligent, and too timid to stick their necks out in defense of free enterprise and constitutional government, who will defend it?

I see businessmen economize down to the last 2 inches of the lead pencils of their clerks, and themselves sweat and slave for 20 or 30 years to achieve a competency for the evening of life, and then, when the periodic crash comes, but with youth behind them and the old push and drive no longer theirs, I see them with sublime courage start to weave anew the pattern of their hopes, but apparently with no thought whatever to softening the downward curve of the next collapse or to the survival of the system itself to which they have given all their strength.

ORGANIZED PUBLIC RELATIONS

I have no thought to be unjust. The average businessman is so engrossed with the daily task, so harassed with making out reports to Government bureaucrats, that he has to keep his nose to the grindstone from dawn to dark. As an individual, he is practically helpless. But it does seem to me that trade associations generally, as well as many of the larger companies, could well afford to have on their boards a man whose sole responsibility is public relations in the broadest sense, a man of unimpeachable integrity, to act as a tribune for the people, whose constant care it shall be that the priceless ingredient of character and fair dealing with worker and customer and people and government shall be woven into the fabric of free enterprise. Such a man would not alone sell his industry to the public but would be equally diligent to sell the public to his industry. And then, to pursue the idea further, suppose the public-relations members of each of the 500 and more existing trade associations (and you are to imagine them as containing men of the standing and character of former President Eliot of Harvard, or Justice Hughes of the United States Supreme Court) were to organize, informally, a Supreme Council of American Enterprise, endowed with sufficient funds to conduct inquiries and report from time to time on "the state of the Union." Let me italicize the word *"Union."*

Certainly, it is becoming plain that the profession of public relations requires experience and training as specialized as that of sales manager or of laboratory technician.

Perhaps this suggestion is wholly impracticable; but, as I reconnoiter the field, it seems desirable, if not imperative, that some means be found to mobilize the conscience and enlightened self-interest—not of one division alone but of the entire army of American industry, business, agriculture, and finance. Such a mobilization would be for both offense and defense. It would be the sharp critic and ruthless surgeon of evil practices on the one hand and on the other the stout champion of the American system, minus its crooks and its hogs.

I know there are those who will sneer at what they would call my naive assumption that there is a conscience in American business and will use against me the articles of indictment which I myself drew a few minutes ago.

Gentlemen, I know better. I know the average businessman is just as anxious to deal justly with his men and with the public as the average politician. I would rather have the judgment and conscience of the man who is close to his men and the public than the ipse dixit of the intelligentsia who would rule the universe from their garrets or their thrones.

The fault, or rather failure, of business executives, as I see it, is not that they are soulless and selfish but rather that they are, or have been, too preoccupied with the daily problems of their business. It may be due also in part to the fact (as one of the executives of your industry informs me) that so many of the top men and members of executive committees have spent their previous years as specialists in a single branch of their industries and have never been under the necessity "to see life steadily and to see it whole."

But all this only explains, yet does not refute, my contention that industry's greatest weakness today is public relations.

Let me return to what I was saying about conscience in business.

INDUSTRIAL HEROISM

On Constitution Day in September I addressed the Daughters of the American Revolution. I told them this story, and it is a true story. The editor of a fine little newspaper in Indiana told me how he went through the depression. When advertising and subscribers fell off, he called in his men—60 in number—from the oldest pressman to the youngest cub reporter. He said to them, "Boys, we have got to retrench to keep this paper alive. But we will all go up or down together. This paper is in the red, but I do not intend any one of you to see red. I will show my good faith by taking the biggest cut, both in dollars and percent." They faced the music together. Not a man deserted the paper, and the paper did not desert a man. The editor said to me, "If St. Peter ever pins any medal on my bosom, it will be because all through the depression every man in my employ found something in his pay envelope every Saturday."

And I said to the D. A. R.'s, "That man did more to save the Constitution than all the editorials he might have written in its honor and glory after he had fired half his men."

There are thousands of such men who made similar sacrifices to keep their men employed, and who equally "deserve well of the Republic." Others had the desire to do so, but were forced to shut down by circumstances beyond their control. I am ready to go to bat for that kind of businessman.

But, unfortunately, there are many others who retrenched only in pay rolls, dumping their workers out on the streets to be taken care of by relief agencies—and now beef about the public debt incurred in keeping their former workers from starving.

It is a harsh thing to say—as harsh and as kind and as kindly meant as the surgeon who tells you an operation is imperative—but it is not the cold fact that businessmen generally have lost the confidence of their own workers? Is it not the fact that the businessman and the politician have been competing for the good-will of the worker, and the businessman has lost? Maybe it is not his fault. Maybe it is due to forces beyond his control—the war, the depression—but I think we would be more sure of the survival of free enterprise if we stopped looking for alibies and said: "Well, some of it is my fault, and all of it is my job."

INDUSTRIAL SHORTSIGHTEDNESS

Where did businessmen get within the past month with their attack on the Social Security Act? They got the Bronx cheer! That attack was the supreme blunder of the Republican campaign. The workers refused to believe that their employers wanted to improve an admittedly imperfect law. They were convinced that the attack was on the principle of the law itself.

How wrong were they? No answer, perhaps, can be given. But certainly the principle of "avoiding the appearance of evil" was so clearly indicated that I am surprised that persons who call themselves astute began throwing boomerangs so viciously—at themselves.

To wait until a law has been on the statute books for 14 months before suddenly notifying workers how terrible it is, was in itself an open advertisement that shoddy goods were being sold.

An objective viewpoint would have avoided a blunder like that. That is why free enterprise needs a lot of Judge Landises of public relations. Many sincere businessmen, busy as they are in the squirrel cage where losses constantly chase profits, had never even heard of the Social Security Act until a few weeks ago. But that again proves the very point I am trying to make—the need for a division of enterprise marked "industrial statesmanship."

FREE ENTERPRISE VERSUS FREE GOVERNMENT

Consider, as one among many, the problem of old age in this machine civilization of modern city life. The most amazing change in population trends is going on before our very eyes. There were 34 percent more people over 65 in 1930 than in 1910—only 20 years earlier. That proportion in the upper-age levels is almost certain to increase. In fact, actuaries for great life-insurance companies predict that by 1970—only 34 years from now—there will be more people over 50 than under 20; in other words, that the problem of the average man only a few years hence will be to take care of his parents rather than his children—the greatest shift in age groupings, probably, since the world began. It is due, of course, to two main factors: Fewer babies born per 1,000 of population; but of those which are born, because of the marvelous conquests of medicine—principally in the diseases of childhood, youth, and young manhood—more live into the upper-age levels.

But, as your average-age line moves up, the industrial deadline moves down. The two lines cross, and the point of their crossing marks one of the battlefields where free enterprise and free government is to be saved—if it is saved. For when the age line passes the industrial deadline, there is little point left in the old slogans of "rugged individualism" or "initiative" or "courage." These old virtues have then lost their meaning. The door to the "land of opportunity" in which these virtues can alone live and thrive has then been closed.

Combine all this with the passing of the free land of the West, the recurrence of "boom and bust," of depressions which wipe out banks and other institutions where the savings of thrift and toil are invested and, last, that other great shift to city life from rural life where, as in the "good old days" there were always useful chores for grandma and grandpa to do, and you have the challenge of Dr. Townsend, a challenge that cannot be laughed off.

When I speak of industrial statesmanship it is problems like this I have in mind. What are the leaders of our enterprise going to do about them?

If they do nothing—or little that is effective—free enterprise in the years just ahead is going to be subjected to a constantly increasing and irresistible pressure from these opportunityless groups to have the politicians take over the management, if not the ownership, of your business for their benefit.

HUMAN OBSOLESCENCE

Take unemployment. In terms of social ethics, where does the dollar derive a claim to being paid dividends during periods of depression superior to the claims of the laid-off worker to being paid unemployment reserves? Why are reserves justified for depreciation, depletion, and amortization of machinery and plant and reserves not justified for "human obsolescence"?

These are not the questions of a long-haired radical or soapbox orator. I quote the exact language of Charles Evans Hughes, Chief Justice of the United States Supreme Court, who wrote the minority opinion in the recent railroad pension case:

"What sound distinction from a constitutional viewpoint is there between compelling reasonable compensation for those injured without any fault of the employer (as in workmen's compensation acts) and requiring a fair allowance for those who practically gave their lives to the service and are incapacitated by the wear and tear of time, the attrition of the years? I can perceive no constitutional ground upon which the one can be upheld and the other condemned. The fundamental consideration which supports this type of legislation is that industry should take care of its human wastage, whether that is due to accident or age."

UNREGIMENTED SOCIAL SECURITY

If the Social Security Act is declared unconstitutional or is generally overhauled, I should like to see, first, permission to employers to set up their own retirement systems under the auspices of Government, so that the fund for workers will not be lost to creditors in event of bankruptcy; and, second, actual encouragement to set up these reserves by granting them special tax treatment such as we grant to contributions to charities under existing income and estate-tax law. I hate desperately to see the moral sense of responsibility between management and men diluted by transferring all functions to Washington.

On some other occasion I should like to discuss ways and means for securing "social objectives without regimentation, prosperity without paternalism." Some of the indicated avenues for exploration are: 1 further strengthening of trade organizations to conduct a constant warfare on those practices like price fixing, which are the very negation of free enterprise; 2, developing departments of public relations as already discussed; 3, interstate compacts; 4, uniform State legislation; 5, further powers to the Federal Trade Commission to approve voluntary arrangements in industry, such as those approved by the Supreme Court in the cases of *Appalachian Coals, Inc.*, and *Window Glass Manufacturers* v. *United States;* 6, the application of the principle stated in the recent opinion of the United States Supreme Court in *Whitfield* v. *State of Ohio* (56 Sup. Ct. Rep. 532), upholding the Hawes-Cooper Act of 1929, which took the protection of the interstate-commerce clause from prison-made goods offered for sale in violation of State law; 7, a similar principle as set forth in section 2 of the twenty-first amendment to the Constitution with reference to intoxicating liquors. All of these points could be widely extended to the strengthening of social legislation by the States and by informal rules self-imposed on industry, without the necessity of transferring all power to Washington—where it is bound to be an immense prize to be striven for by pressure groups, led by demagogues who compete in auctioning off the Treasury for votes, and in despoiling the worker to enrich the drone.

THE STATES SHOULD FUNCTION

There is no need for destroying the States and erecting a bureaucratic empire in America. Elihu Root pointed the way, as far back as 1908, when he said at a conference on the conservation of natural resources:

"The Nation cannot perform the functions of the State sovereignties. If it were to undertake to perform these functions, it would break down. The machinery would not be able to perform the duty. The pressure is already very heavy upon national machinery to do its present work.

"I feel deeply impressed, however, with the idea that the 46 sovereign States, in the performance of their duties of government, are lagging behind the stage of development which the other sovereignties of the earth have reached. As the population of our States increases, as the relations between the people of each State and other States grow more frequent, more complicated, more important, more intricate, what every State does become more important to the people of every other State. * * *

"Now the States in the exercise of their sovereignty, in the exercise of the powers reserved to them, rest under the same kind of duty, a duty that forbids any State to live unto itself alone.

"The Constitution of the United States prohibits the States from making any agreements with each other without the consent of Congress, but you can make any number of agreements with the consent of Congress. Why should not the powers that are reserved to the State sovereignties be exercised by those sovereignties with wise regard for the common interest, under a firm resolve to make it wholly unnecessary that this continued pressure to force the National Government into the performance of the duties that the States ought to perform should continue? It is high time that the sovereign States of the Union should begin to perform their duties with reference not only to their own local individual interests, but with reference to the common good."

And then, above all, we must recognize that our "need is not to emphasize our differences but, rather, to understand our interdependence," to quote Louis Taber, master of the National Grange. What is desperately needed in America right now is an era of good feeling and fair dealing between capital and labor, industry and government. With that—plus our technology, invention, and power—nothing is impossible. Without it anything is possible.

CAPITALISM AT ITS BEST

American industry has been built on the struggle for the consumer's dollar by offering most and best for least. That is competitive capitalism at its best. It becomes destructive when it is a competition of who will pay the least wages. The responsibility of industrial management to build a floor below which wages are not to go is tremendous. American industries must cooperate with each other and with government to find ways and means by which the masses who wish to work may live in decent comfort and security. The choice, as I see it, is between wages and taxes; between self-disciplined capitalism and state socialism; between

free government based on the consent of the governed and ancient tyrannies under modern masks.

Although I cannot demonstrate it on a blackboard, I have a feeling—as compelling as a religious conviction—that if industry will constantly pass on to the worker and the customer the savings of labor-saving machinery and invention, rather than siphon them off into the pools of watered securities, it will by that process keep distribution and production in balance and go as far toward Utopia as our poor human natures will go or be driven.

OUR HERITAGE

Gentlemen, what is this legacy of free enterprise which we received from our fathers? Even with its failures and shortcomings, it is the best in the world. We have 6 percent of the world's land area and 7 percent of its people. But that 7 percent has 32 percent of the world's railway mileage, 58 percent of its telephones, 36 percent of its developed water power, 76 percent of the world's automobiles—enough so that every man, woman, and child under the flag, 130,000,000 Americans, could climb into these cars and all ride on rubber at the same instant of time, a nation on wheels, a miracle of achievement in which bureaucrats played no part. The rubber that goes into the annual production of tires would make a tire that would go around the world and 6,000 miles to spare—a rubber-tired planet, if you please! When Stalin or Hitler or Mussolini do half so much, it will be twice as much as they have done.

This little 7 percent of the world's population has 44 percent of its radios; produces 60 percent of the world's petroleum, 48 percent of its copper, 43 percent of its pig iron, 47 percent of its steel, 58 percent of its corn, 56 percent of its cotton, 25 percent of its sugar, 33 percent of its coal. Of the commodities it does not produce, this little 7 percent of the world's population goes out into the world's markets and buys 50 percent of its rubber, 50 percent of its coffee, 75 percent of its silk.

This 7 percent of the world's population has 45 percent of the world's total wealth; and far more than half of all the wheels that turn on this planet, from locomotive drivers to the wheels in milady's wrist watch, turn on American soil. In the worst year of the worst depression of our history 30,000,000 out of 32,000,000 American boys and girls of school age stayed in public schools. And on the point of security for old age this little 7 percent has $108,000,000,000 of protection on the lives of 64,000,000 Americans, more security than all the rest of the world put together.

Gentlemen, I am a friend of the system which has done these things. With all its faults, follies, and crimes, it has produced and distributed more of the goods and comforts of living to more people over a greater territory and for a longer period of time than any other system in any other country since Adam walked out of the Garden of Eden. Neither of the princes of Babylon, the Pharaohs of Egypt, the emperors of Rome, the lords of feudalism, or the dictators of today ever served the common man one-half so well.

It is worth saving, gentlemen! But praise of its virtues alone will not save it. We must cure its defects, remedy its abuses. If we resolutely set our hands to this great task, we can be confident in the prophecy of Robert Burns that:

"A virtuous populace will rise the while,
And stand, a wall of fire, around their much loved isle."

Our Foreign Policy

EXTENSION OF REMARKS

OF

HON. WILLIAM B. BARRY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, November 22, 1937

Mr. BARRY. Mr. Speaker, there seems to be at the present time a feeling among some people in the United States and I have recently heard it expressed on the floor of the House of Representatives that we should do something to stop the spread of fascism, nazi-ism, and communism in other parts of the world. The advocates of this idea just take it for granted that sooner or later one of these political doctrines will be imposed upon us from without by force, if we just sit back and do nothing about the situation.

There is a persistent propaganda being spread to convince Americans that their only hope of salvation is to form a united front with other so-called democracies, like Great Britain and France, to fight the threatened shackles of foreign dictatorship. The writers and others who advocate the idea of a democratic alliance nearly always ridicule the idea of our remaining aloof from the rest of the world and remaining at peace. They point out, without going into detail, the dependence of the United States on the rest of the world and predict that we will inevitably be drawn into war if any good-sized fight in Europe or Asia gets under way.

I fear that widespread belief in this doctrine of inevitable war unless we make alliances with the powerful countries whose governments are more nearly like ours is a dangerous thing for our country, particularly when it seems to be shared by men in high places.

The argument that because other countries have assumed some form of dictatorship that we will eventually do likewise has never greatly impressed me. It is nothing more than a conclusion without any supporting proof. About 150 years ago we were the only republic in the world. We then had no fear of the monarchies gobbling us up if we could defend ourselves.

It is my contention that these countries who are trying to acquire or recover colonial possessions will have enough trouble at home and abroad without seeking conflict with us. All of them, however, will be anxious to be our friends or allies, and therein lies our real danger.

It is quite obvious from most correspondents' reports from Brussels that France and Great Britain are trying their best to have us get out in front in the Japanese-Chinese situation. When one compares the stakes that Great Britain has in China with those of the United States, it is ridiculous for us to even become involved, much less take the lead.

Aside from the sympathy that most Americans have for China in the present struggle, it seems quite absurd to me that France, with its colonial possessions, and England, with its vast empire, should assume a holier-than-thou attitude when Japan does the same thing that they have done many times in their history.

And when they talk about the sacredness of obligations and treaties I cannot help but think of the war debts, and ask myself if it is not the pot calling the kettle black.

I feel that we should continue our policy of isolation and should beware of being sucked into any kind of "united front" to preserve democracy. We have nothing to gain and everything to lose. We should not forget the costly lesson of the last war.

In the event of a great war in Europe or Asia, I believe that we should acquire now from abroad, and store up, those raw materials that we lack in the United States. In that way we can be self-sufficient for a number of years without depending on any other nation for help.

Let us concentrate our fight on the enemies of democracy at home and let the rest of the world settle its own problems which they in most cases created themselves.

Keep Us Out of War

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, November 22, 1937

Mr. MURDOCK of Arizona. Mr. Speaker, on leaving my home town recently, to come to Washington, a very earnest Christian woman said to me, "Whatever else you may do in Washington, Mr. MURDOCK, see to it that you always vote for and support any and all measures which will tend to keep us out of war." My reply was, "You may depend upon it that I shall endeavor to do as you say. However, I shall be greatly puzzled in many cases to know what will be the right action to keep this Nation out of war." No doubt, every Member of this House has the same inclination as I have to keep out of war and also the same bewilderment as to what is the correct step to be taken in each case, to minimize the chances of war.

I listened today to the very pleading voice of my friend and colleague, Mr. LUDLOW, of Ohio, as he begged us to sign his petition No. 11 to bring before this body a resolution to

submit a constitutional amendment to the States requiring a referendum before our participation in a foreign war. Several months ago I signed the Ludlow petition after giving it serious thought. I am almost as sincere as Congressman LUDLOW himself in my desire to save this Nation from the experience of 20 years ago.

Later this afternoon I also listened to the earnest presentation of my colleague from Maryland [Mr. LEWIS] in opposition to the Ludlow amendment. Perhaps he feels that in wise counsel of our leaders there is safety. Should we forget isolation and play a leading part in world affairs? Personally, I feel that in a matter so important as sending our boys abroad to fight and die, it ought to be left to those who have to "pay the price" for its ultimate determination.

It may seem that I am "blowing hot and cold" in the same breath, but I believe a way for us to keep out of foreign war and at the same time make it extremely unlikely that we shall ever be invaded is to see to it that we are always in that "defensive posture," of which George Washington spoke. In a war-torn world, such as this at present, we cannot afford to present a show of weakness. Therefore, while I am talking peace, hoping for peace, praying for peace, I want to see my country so thoroughly prepared for defensive war that nobody will want to pick a quarrel with us.

Although I recognize the force of the remark that "Europe exploded because she was loaded" in 1914, I do feel that it depends somewhat upon how a given nation is "loaded." I would have this Nation defensively loaded. I believe that if something like the Ludlow amendment should be adopted, and at the same time we spent funds adequately on all the modern effective means of defense, that those two things, apparently contradictory, would serve notice upon the world that we really mean peace, and that our motives could not be misunderstood. In my opinion, such a course would tend to keep us securely in peace.

Enfranchisement of District of Columbia Citizens

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, November 23 (legislative day of Tuesday, November 16), 1937

ADDRESS OF WILBUR S. FINCH, PRESIDENT OF THE DISTRICT OF COLUMBIA SUFFRAGE ASSOCIATION, AT A MEETING HELD ON NOVEMBER 20, 1937, IN THE AUDITORIUM OF THE DISTRICT OF COLUMBIA BUILDING

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the RECORD an able address delivered by Mr. Wilbur S. Finch, president of the District of Columbia Suffrage Association, at the meeting held on November 20, 1937, in the auditorium of the District of Columbia Building. The address has to do with the proposal to extend the right of suffrage to the citizens of the District of Columbia.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

During the past few years numerous plans have been suggested as a solution to the problem of enfranchising the voteless citizens of the District. There is not time to detail them here, but it is safe to say that all of them have merit and contain, as a whole, suggestions which, if legally adopted, would perhaps give full suffrage to all Americans resident in the District of Columbia who are now disfranchised. And that is the ultimate objective of this association.

But the District of Columbia stands in a peculiar position, both in relation to the Federal Government and to the separate States composing the Union. It is the seat of the National Government by constitutional mandate and therefore the interests of the National Government are and must remain of superior importance here. It is not a State by judicial interpretation of the Constitution and therefore its citizens cannot claim under the Constitution the same political privileges now enjoyed by citizens of the States by virtue of that instrument. Therefore, to seek the complete enfranchisement of District citizens at one stroke, while no doubt desirable and justified from every point of view, nevertheless, for the reasons stated, would bring us face to face with obstacles, both of a practical and constitutional nature, which would require years of labor and great expense to overcome. We would gladly welcome a Moses to lead us in one march out of the Egypt of complete political helplessness to the Sinai where full political liberty could be given us. But no such Moses has as yet appeared.

One type of suffrage for District citizens, an important element in any campaign for full suffrage, is that which has as its sole objective the securing of national representation for them, or the privilege of voting for President and Vice President of the United States, and for representation in the Senate and House. A campaign for putting this type of suffrage into effect in the District has received considerable support from many sources over a period of years and has, so far as we know, been the one type of suffrage receiving any considerable degree of prolonged and insistent support. Another revival of this campaign is now on foot, as has been evidenced by newspaper accounts of the past few weeks. Those who have been actively engaged in this campaign for national representation these many years have made great contributions and sacrifices to the cause of District suffrage and for that they have our sincere admiration and respect. And while extending them our appreciation for past performances, we should, at the same time, offer them our best wishes for success in the difficult tasks which still lie ahead of them to make their campaign successful. They must first secure the approval of two-thirds of both Houses of Congress of their proposed joint resolution to amend the United States Constitution; when that has been done, ratification of the amendment will have to be obtained from three-fourths, or 36, of the States of the Union; and, finally, when that has been done, Congress will have to be approached again to pass the necessary legislation granting national representation to District citizens which the proposed amendment empowers it to do. These are the tasks which present the most formidable obstacles to the granting of full suffrage to District citizens, and those persons who are willing to assume them as a first approach to the solution of the problem of District suffrage are certainly entitled to all the admiration and respect we can give them.

But the District of Columbia Suffrage Association has chosen to approach this problem through a method which seems to it to be not only more easy but perhaps more logical, and that is by first securing from Congress, in the exercise of its power of exclusive legislation over the District of Columbia, an enabling act by which District citizens will be given an official voice in the conduct of their local affairs. And it is not difficult to explain our reasons for this.

The right of local self-government was and is as much a part of the heritage which our English forebears brought with them to America as the right of trial by jury, the right to a writ of habeas corpus, and even the English language itself.

It was the cardinal principle of their colonial governments, as was affirmed by them in a resolution passed by their very first Continental Congress in 1774.

Interference by the British Crown with this right of local self-government by the colonists was one of the outstanding causes of the Revolutionary War, which made us an independent Nation, as will be perceived by a review of the Declaration of Independence.

The framers of the Constitution knew all of this, and the terrible sacrifices of blood and treasure which had been made to preserve this right of local self-government were fresh in their memory, when they met to draft a plan for a national government. And when they prescribed as the qualifications for voters in national elections the same qualifications prescribed by the individual States for voters in their respective local elections, they must have assumed that the right of local self-government would remain a cardinal principle of the local jurisdictions within the boundaries of the National Government. But they went still further than this assumption. They guaranteed that local self-government would not perish in America by inserting in the Constitution a provision whereby the Federal Government must guarantee to every State a republican form of government, described by the United States Supreme Court to be one in which the citizen has a share in the making of the laws to which he is subject and in the choice of the officers of the community in which he resides.

And the fact that the Constitution does give Congress the power of exclusive legislation over the seat of government does not mean that the residents here were to be arbitrarily cut off from this part of their inheritance. No evidence has or can be produced to show that such was the intention of the framers of the Constitution. Their sole purpose in giving Congress this power over the District was very clearly stated by James Madison, who explained the reasons therefor as follows:

"The indispensable necessity of complete authority at the seat of government carries its own evidence with it. It is a power exercised by every legislature of the Union—I might say of the world—by virtue of its general supremacy. Without it, not only the public authority might be insulted and its proceedings interrupted with impunity, but a dependence of the members of the general government on the State comprehending the seat of the government for protection in the exercise of their duty might bring on the national councils an imputation of awe or influence, equally dishonorable to the Government and dissatisfactory to the other members of the Confederacy. This consideration has the more weight, as the gradual accumulation of public improvements at the stationary residence of the Government would be both too great a public pledge to be left in the hands of a single

State, and would create so many obstacles to a removal of the Government as still further to abridge its necessary independence."

There you have the complete explanation of the congressional power of exclusive legislation over the seat of government. It was to be independent of any State jurisdiction as a protection for the members of the Federal Government and its property. Not a single word indicating even the slightest intention of depriving any of the American citizens residing at the seat of government of their inherited right of local self-government. On the contrary, Madison goes still further and states that a municipal legislature for local purposes, derived from their own suffrages, will, of course, be allowed the residents at the seat of government.

This opinion of Madison that the people here would be allowed municipal suffrage has since been substantiated by the opinions of Presidents of the United States who have had occasion to address Congress on the subject, by opinions of the Supreme Court of the United States in which that august tribunal has had occasion to pass upon the subject, and by the actions of Congress itself, which for almost three-quarters of a century did permit the exercise of the right of local suffrage in the District of Columbia.

We thus have ample authority and precedent in support of our effort to secure local suffrage first.

Furthermore, great States of our Union, which were once either colonies of the British Crown and territories under the exclusive control of Congress, had to go through a period of apprenticeship in local self-government before being permitted the full privileges of participation in the councils of the Nation. Our method of approach to the problem of enfranchising District citizens is consonant with the established policy of Congress in dealing with citizens in territories coming under its exclusive control.

And, finally, it must be remembered, that it is only through the casting of a ballot in local affairs that the individual citizen and taxpayer in the District can have that intimate relation which he should have to the problems immediately affecting him and can exercise that control over local executive officers which is necessary to make them truly representative of the community they are chosen to serve.

We do not wish to take away from Congress any of its prerogatives as the supreme authority of those things in the District which appertain to the maintenance and development of the city as the National Capital. But we do believe that there are many problems in the District of a purely local nature which are without the province of the general government and within the province of the American citizens here to control. Once we have shown our capabilities in handling our own affairs, we will then be in a position to branch out into participation in affairs of a national character.

Since, however, there is and can be no conflict between local suffrage and national representation, no one can raise any legitimate objection to campaigns for both being carried on simultaneously.

This is the case of the District of Columbia Suffrage Association. On it we stand. And we are ready to listen at any time to anyone who can show us that we are wrong in choosing our method of solving the problems of enfranchising ourselves as American citizens.

Where Do We Go From Here?

EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, November 23 (legislative day of Tuesday, November 16), 1937

RADIO ADDRESS BY HON. ARTHUR H. VANDENBERG, OF MICHIGAN, ON NOVEMBER 22, 1937

Mr. McNARY. Mr. President, last evening over the National Broadcasting Co. network the able Senator from Michigan [Mr. VANDENBERG] delivered an impressive and thoughtful address on the subject, Where Do We Go From Here? I ask unanimous consent that his address may be printed in the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I discuss the subject, Where Do We Go From Here? from an unpartisan standpoint, although obviously I cannot detach myself from classification with the opposition to the present administration. But I am prepared to go forward with any party—old, new, or fused—which promises liberalism with sanity, social-mindedness without socialism, and a restoration of those equitable economic fundamentals which shall give honest business a chance to create stable prosperity for 130,000,000 people. It is in this spirit that I proceed.

Business must not be permitted to run the Government; but unless it is permitted reasonable latitude to run itself—free from an ambitious collectivism, which creates more problems than it solves—prosperity will die on the vine. We must regulate business for the sake of the common welfare, but we must not kill the thing we regulate. If legitimate business does not have a chance to profitably survive, none of us has a chance to survive. There are no jobs in shut factories and no wage benefits in suspended pay rolls. Money must work before men can work. Wealth must be created before it can be shared. A life of abundance cannot be achieved by legislating for scarcity. You cannot get golden eggs from a dead goose. We must lift up the lower third. But we cannot do it by pulling the other two-thirds down.

The President stated last Monday that "there has been a marked recession in industry" and that this decline "is a matter of national concern." I agree.

The President also said that the new recovery depends more upon the policies of business than upon the policies of government. I disagree. The policies of government are responsible for what has happened, and only a change in the policies of government can correct the dangerous drift. On October 23, 1935, at Charleston, S. C., the President said:

"We are on the way back—not by mere chance. We are coming back more soundly than ever before because we planned it that way, and don't let anybody tell you differently."

I am not telling you "differently." I am still saying, as the President said at Charleston, that policies of government are responsible. Therefore, our immediate obligation is to examine into the governmental causes of this presidentially acknowledged depression.

First. The chief trouble with business today is a jittery state of mind. It is fear induced by a long series of governmental attacks by statutes and by epithets, which have aroused class hatreds heretofore unknown in our heretofore united country. You cannot call harsh names for 5 years and expect all to be forgotten because you suddenly sober and plead for "a contented society of good will." That's what we need, and we need it like a baby needs its mother. But the same week that this temperate appeal was made others, speaking for the administration, were still yelling about "crusted reactionaries" and "business buccaneers" and "pirate privileges." This is the same old crucifying hymn of hate which has riddled the national morale. Until the tune is convincingly changed, business cannot be expected to stop wondering which is "Jacob's voice" and which are "the hands of Esau." It is time to stop this bitterness—not to resume old abuses which have been properly corrected—but to acknowledge that 98 percent of business is honest and patriotic; to confess mistakes in a forthright manner; and to do actually what Secretary of the Treasury Morgenthau proposed in his recent speech when he said:

"The basic need today is to foster the full application of the driving force of private capital."

This sound objective has been frustrated for 5 years. We have been trying to do what Walter Lippmann describes as follows:

"We are trying to operate a capitalistic system under a government that dislikes the system and would, if it had the courage and the power, replace it with the collectivist system."

The first necessity, then, is to break this deadlock and to start going consistently in one sound direction. The first necessity is to reestablish wholehearted American confidence that the good-neighbor policy is now domestic as well as foreign.

Second. The prime legislative necessity is to proceed as rapidly as possible toward balancing the Federal Budget. Serial promises, on high authority, during recent years, in behalf of Budget balancing have so consistently failed that nothing will suffice to build national assurance until precept becomes performance. The private citizen faces bankruptcy when he lives beyond his means. The only difference with the Government is that the Government can stave off the evil day by such familiar devices as devaluing money and by printing its own bonds and virtually forcing them into its necessarily responsive banks. But this merely prolongs the agony. In the meantime, all citizens—whether they know it or not—pay in increased taxes, direct and indirect. They pay in higher living costs and in other repercussions from doubts of the soundness of the public credit when it is thus bled white. And let not this basic truth be overlooked: No persons in this country have so great a stake in a sound public credit as those who are on relief, because nothing but the public credit stands between them and disaster.

The Budget can be balanced—not at the expense of human suffering, but through sharp curtailment in needless spending. Even relief itself can save hundreds of millions of dollars if Federal management, with its duplicated overhead and its inevitably attendant wastes, is eliminated in favor of restored State responsibility for management and discipline on a matching basis with Federal funds. But it cannot be done if regular Federal pay rolls continue to go up, as they have to the tune of 300,000 in the last 5 years. It cannot be done if the Government persists in a lot of interesting but prodigal experiments in applied socialism which produce, for example, Government homesteads at $16,000 of tax money per unit, and 40-acre Government farms at $25,000 of tax money per farm. It cannot be done with Quoddys and Florida ship canals and multiple T. V. A.'s. It cannot be done by launching vast capital expenditures upon new Government projects which can well await a more solvent day. It cannot be done by more of what the Secretary of the Treasury has described as deliberate-

deficit spending. It certainly cannot be done by making a campaign chest out of the Public Treasury. But it can be done within a reasonable time if all concerned will tighten their belts and highly resolve that it shall be done, and Congress can presently make no greater contribution to America's mass welfare than to see that it is done. So-called "pump priming" will be a melancholy memory indeed if we run out of "priming" and the "pump" itself refuses longer to respond. I venture this further observation. Instead of passing a dozen different appropriation bills each session, Congress would do better to face its entire annual Budget in one single appropriation bill carrying the grand total of all the billions which the people must pay. I think that even some of our political philanthropists who are so liberal with other peoples' money might be sobered in the presence of such figures. One Budget appropriation—with an item veto in the hands of the President—would be of surpassing benefit to an American which wants to be rescued from wandering in fiscal chaos like Alice in Wonderland.

Third. This leads to a discussion of taxes. The paradox about taxes is that sometimes the bigger the collection, the greater the damage to the national welfare. That is precisely the verdict that has been earned, for example, by the new and vicious surplus-profits tax. Why? Because it kills thrift and prudence in industrial management. Because it makes plant improvement and plant expansion, out of earnings, impossible. Because it thus penalizes more business and more jobs. Because it deliberately defeats the accumulation of reserves which cushioned the last depression to the tune of $30,000,000,000. As for tax revenue, you kill off the larger revenue which would flow from these developments. It would be far more stimulating if the Government were to swing away from "punitive taxation" and proceed with "incentive taxation"—rewarding private capital with new exemptions when it is social-minded and courageously progressive. Meanwhile, if this Congress will amend or repeal the surplus-profits tax and the capital-gains tax, it will make a far more tangible contribution to a new business confidence than can possibly be made by all the pious platitudes which the most eloquent of lips may utter.

Fourth. The Social Security Act can be amended, to save the needless burden of an ultimate $47,000,000,000 reserve, every penny of which is wrung from industrial sweat and toil, half of it in a direct income tax on labor. Seventy of the leading life-insurance presidents of the country join me in saying that the "full reserve" is unnecessary in a government pension system. This change will leave social security just as solvent. But the change will permit larger and quicker benefit payments and still it will postpone the contemplated increase in pay-roll taxes. It will do still more. It will demonstrate that the Federal Government will not consciously go on with a potential fraud upon 30,000,000 workers whose pay-roll taxes are now actually being used to help pay the general operating deficits of the Government. It is an indefensible vice perpetrated upon industry and directly upon its workers. If a private corporation resorted to any such process, it would be put out of business overnight by the Securities and Exchange Commission. It is a needless drain upon the resources of commerce and labor. It depletes America's mass buying power by every unnecessary dollar which it wrings from its victims. In the long run, it is $47,000,000,000 worth of sheer jeopardy. The immediate effect of a realistic change in the law would be to encourage the essential belief that the administration will not persist in error when error is unmistakably demonstrated. This would be a refreshing phenomenon which the times sadly need.

Fifth. The Wagner Act can be amended consonant with labor's own best welfare. Labor wants to reduce work interruptions to the last minimum, because a lost pay day is gone forever. Strikes in violation of collective bargaining contracts not only damage labor's pocketbook; what is worse, they damage the dignity and permanence of collective bargaining as an institution. Intelligent labor leaders themselves readily accept this axiom and constantly strive to constrain this hazard. If the Wagner Act can be amended to encourage mutual responsibility and to punish mutual irresponsibility, it will put collective bargaining on yet more solid ground. This can be done without any impairment of labor's right to organize and bargain collectively. I would not consciously impair that right in any degree. Labor is entitled to a constantly broadening share of the fruits of its own production—and my personal conviction is that capitalism ultimately survives only on the basis of direct profit sharing, encouraged by Federal tax rewards for such portions of commercial income as are diverted to this purpose. But it does labor no good to achieve new benefits if a stable and profitable commerce—through which to enjoy the benefits—is destroyed. Certainly there must be law and order to begin with. Certainly there must be no violence or intimidation or coercion by either party to a labor dispute. The right to strike must be protected. But so, too, must the right to work. Fair play must be established as between rival unions. The Government has no business playing favorites. But so, too, there must be fair play for the employer who wants to be honest with the collective-bargaining law. The crux of the Wagner Act is "free elections" to determine industrial majorities. The process of "free elections" should be facilitated, so that strikes do not needlessly precede them. In a word, the legitimate spirit of the Wagner Act should be accepted by employers, and then the legitimate and essential mutuality of responsibility under it should be accepted by employees. There is too much doubt and too much duress in today's process. It is one of the factors which make for fateful uncertainty in long-range industrial planning to produce more and better jobs.

Sixth. At a time of admitted industrial uncertainty I frankly doubt the wisdom of tossing new Federal hour and wage regulation, no matter how nobly mediated, into the industrial equation. The bill which passed the Senate virtually confessed that Congress couldn't solve the riddle, because it essentially proposed only to set up five national autocrats to settle it as they might ultimately decide. Any such bill would multiply confusion and intensify the national dilemma. The truth of the matter is that we have not yet sufficiently explored this subject as to know how to apply the laudable ideal of uniform maximum hours and minimum wages in a country so big and so complex as ours. Proponents of the ideal insist that it would force greater "sharing of work" and thus reduce unemployment. But the probabilities are that it would force greater confusion and thus actually reduce the sum total of employment available. On the other hand, there is no reason why we should not make immediate progress in these humane directions by taking available steps which are free from the larger hazard. I refer to Federal law to protect each State against interstate commerce in commodities created under working conditions less advantageous than the State itself prescribes. I refer to the Wheeler-Johnson bill, which would apply this principle to child labor. I particularly refer to the new child-labor amendment to the Constitution, which I have had the honor to prepare and present. It is now on the Senate calendar with a unanimous report from the Judiciary Committee. It can stop the commercial exploitation of children in industry without using ambiguous language inviting a multitude of other implications, and it has the promise of support from most of those forces that have prevented the ratification of the old child-labor amendment for the past 13 years.

Seventh. There is another service which this Congress could render if it wants a private enterprise to accept the assignment to save a new emergency. If the old emergency is over—and it probably was 6 months ago—Congress should repeal many of the emergency powers that were granted to the President in the name of emergency. Their retention is calculated chiefly to create another emergency. Why? Because private enterprise cannot make essential long-range plans when, in respect to essential factors, it is wholly at the mercy of transient political judgments. The President has frankly stated that he runs the country on a 24-hour basis, calling each new play—to borrow his football analogy—to fit whatever circumstances result from the last play. Private enterprise cannot be so facile. It has to be consecutive in its plans. But how can it be anything but punch drunk and hanging on the ropes, when it does not know the value of the money in which its commitments will come due, because the President can change the value overnight; when it can make no rational guess as to the price index, because the President can artificially shift prices as he pleases with his inflationary and deflationary powers; when it cannot tell what moment its Government will enter into fatal competition with it, because the President can launch any kind of a collectivist scheme out of his blanket authority over relief projects; when, if it depends upon protective tariffs, it cannot know what moment it will lose its indispensable protection, because the President can manipulate tariffs without regard to differences in costs of production at home and abroad. It is simply impossible to maintain all these floating executive powers and expect that private enterprise and private initiative will forge ahead. Business, however essential, is not entitled to rule the roost. Indeed, business which builds itself into monopoly must yield definitely to the public interest in the maintenance of the competitive system. But legitimate business must have its legitimate chance to succeed. It must be freed from executive despotism, which is at war with every tenet of the American system. It must be emancipated from the reckless interference of meddlesome bureaucracy. It must be rescued from the seas of uncertainty in which it fears to sink. Congress can reorganize the Government in this direction more helpfully than in any other.

Eighth. Congress can pass a reasonable and practical farm relief bill without arbitrary, compulsory, bureaucratic controls which reduce every American farmer to the status of a regimented peasant, and without a renewed attempt to cheat the Constitution with so-called processing taxes. It can continue reasonable soil-erosion benefit payments where they actually serve to stop soil depletion, because it is a sound investment at any time to preserve this greatest of our natural resources. It can assist in financing and marketing that portion of each basic crop which represents an exportable surplus. It can reclaim the full domestic market for the domestic producer. Most important of all, it can encourage the development of new industrial uses for farm products. But it cannot peg prices without duplicating repeatedly proven tragedy. It cannot rely on the empty wisdom of overlords at Washington. It cannot play politics with the Public Treasury. A sound farm program will tend greatly to stabilize the present situation, because, on the one hand, farm prosperity is at the base of all prosperity, and because, on the other hand, unsound farm programs can be the most futile of all white rabbits-out-of-hats.

Ninth. We can make it clear that our foreign policies shall not involve us in other people's wars; that we shall pursue an insulating neutrality despite the President's refusal thus far to follow the mandate of the last Congress; that our recent flirtations with sanctions, and with the punishment of aggressors, and with international alliances, shall stop short of putting America's feet upon even the first steps that lead to war. The alarms of war are

wracking the nerves of the world. They are not helping our own. An American sedative is clearly prescribed by contemporary necessities. It is prayerfully wished for by 99 Americans out of 100.

Tenth. We need a frank abandonment of all anticonstitutional activities and intrigues which shatter democratic faith. Candid Communists or Fascists in a democracy are bad enough; but wolves in sheep's clothing are worse. There can be no hope for an era of happy confidence in the United States unless, at the base of everything, there is sanctity for the American constitutional system.

My fellow countrymen, I agree with the President that there is no necessary reason why today's recession should not stop and why private business and initiative and investment should not meet the situation. I simply plead that these recuperative forces shall have a reasonably decent chance.

Economic Freedom—The Essential Basis of Prosperity

EXTENSION OF REMARKS

OF

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, November 23 (legislative day of Tuesday, November 16), 1937

RADIO ADDRESS OF HON. JOSEPH C. O'MAHONEY, OF WYOMING, ON NOVEMBER 19, 1937

Mr. NORRIS. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address delivered on November 19, 1937, by the Senator from Wyoming [Mr. O'MAHONEY] on "Economic Freedom—the Essential Basis of Prosperity."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

For more than 4 years now we have been exerting all powers of government to put men back to work. We have spent billions of borrowed money. We have made huge loans for industry and agriculture. We have erected huge public works in every corner of the land. We have aided States, counties, and cities. We have put millions of men to work, at relief wages, in the hope that such an impetus would be given to private industry that every American citizen who wants to work would speedily find a job. But November 1937 finds us still confronted by the old problem of unemployment, and as this session of Congress opens—this special session—no one seems to be quite certain what should be done.

Our dilemma, it seems to me, is the result of our failure, individually and collectively, as citizens and as a government, to recognize the simple fact that we have lost our economic freedom. Isn't it an absurdity that when a few men in the financial circles of New York City get the jitters, hundreds of thousands of men all across the country lose their jobs and the whole economic system threatens to go into a tailspin? Why is it that merchants all across the country are asking themselves, "What is going on in New York?" Why is it that uncertainty in the stock market is almost instantly reflected at every crossroads?

TOO MUCH CONCENTRATION

The answer is simple—economic concentration. Too much power over the economic destinies of the people has been concentrated in too few hands. It takes no prophet to predict that until economic freedom is reestablished there will be no possibility of permanent prosperity. Indeed, we have only to look around us in the world to realize that political liberty itself will be overthrown unless we restore economic freedom. Russia, Germany, Italy, Spain, and now, even in the New World, Brazil, teach us that concentrated political power follows inevitably when economic freedom is lost.

The situation in which we find ourselves is the direct result of our amazing failure to prevent the undue concentration of wealth and economic power. For more than 50 years the problem has been with us. During all that time there has not been a major statesman in America who has not recognized it. Practically every president from Grover Cleveland to Franklin D. Roosevelt has pointed to the necessity for action—yet with the exception of a single act of Congress passed as long ago as 1890, we have taken no effective step to stop the disastrous spread of the economic disease that is destroying us.

There is nothing difficult to understand about that act—the Sherman antitrust law. It is at once, one of the most important and one of the simplest laws Congress has ever enacted. It is a restatement of the common sense of mankind that it is against the public interest to allow any man or group of men to monopolize commerce and industry.

THE ANTITRUST LAW

Let me read the essential provisions of this 47-year-old law. Listen!

"SECTION 1. Every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce, among the several States or with foreign nations is hereby declared to be illegal. • • •

"SEC. 2. Every person who shall monopolize or attempt to monopolize or combine or conspire with any other person or persons to monopolize any part of the trade or commerce among the several States, or with foreign nations, shall be deemed guilty of a misdemeanor."

As explained by William Howard Taft, the only man in the history of our Government who has served both as President and Chief Justice: "It was a step taken by Congress to meet what the public had found to be a growing and intolerable evil in combinations between many who had capital employed in a branch of trade, industry, or transportation, to obtain control of it, regulate prices, and make unlimited profit."

The evil was clear. The law was plain. Its objective was publicly supported by every political party and every political leader. There never was greater unity of opinion on any public question than that monopoly should be suppressed, but there never has been a failure in public law greater than the failure of the antitrust law.

This failure cannot be ascribed to any lack of good faith on the part of the Government or of the men who administer it. The failure has been due almost solely to the fact that neither as a people nor as a government have we made any attempt to control the nature of the artificial agency—the private corporation—by which national commerce is carried on. It has been by the artful use of the corporation that monopolists have defeated the antitrust law, and we may be sure that as long as we permit the creation of corporations with unlimited powers the antitrust law will remain a dead letter.

CORPORATIONS HAVE ONLY PRIVILEGES

Let us get one point clear—a point on which neither judges nor legislators disagree: A corporation has no rights; it has only privileges. A corporation exists only by virtue of a grant from some government, and it has only those powers and functions which the people, through their government, give it.

To put it in another way, a corporation comes into existence only by means of a contract, which we call a charter, between the people, through their government, and the natural persons who want to engage in business as a corporation.

Our trouble has been that although the Constitution of the United States gives the Federal Government the power to regulate commerce among the States and with foreign nations, Congress has never seen fit to pass a law defining the powers and functions of interstate corporations. As a result corporate charters are issued not by the National Government, which has both the power and the duty to regulate interstate commerce, but by State governments, which are absolutely without authority in that field.

A few States, more interested in collecting the fees which arise from the issuance of corporate charters than they are in national welfare, have adopted such loose corporation laws that financial freebooters have been able, behind the corporate veil, to do exactly as they pleased with the commerce of the Nation, the savings of investors, the labor of their employees, and the rights of consumers.

That is the reason why the antitrust law is not being and cannot be enforced. Combinations and mergers to restrain trade, conspiracies to effect a monopoly, condemned by the letter and the spirit of the Sherman Act, can always be effected by the simple expedient of taking out a new charter from some complaisant State.

The small business on which the prosperity of this Nation depends cannot develop its possibilities, cannot compete with the concentrated power of monopoly so long as the National Government continues stupidly to neglect the corporate loophole through which the violators of the antitrust laws escape.

Let me not be misunderstood. The corporation laws of most of the States are satisfactory enough and the charters of most corporations are unobjectionable—but monopolists do not patronize such States nor use such unobjectionable charters. They get their charters in the States that let them write their own ticket.

NATIONAL CORPORATION LAW NECESSARY

To me it seems perfectly clear that so long as the Federal Government fails to exert its constitutional power to regulate interstate commerce by depriving every corporation engaged in such commerce of the corporate power to exploit the public through the dishonest corporate devices permitted by a few States, we cannot hope for permanent recovery.

Every observer agrees that the trade and commerce which must be restored if we are to have prosperity is that which is carried on among the States and with foreign nations.

Every observer agrees that the problem of restoring it requires national action and that the States as States are powerless.

Every observer agrees that the bulk of this commerce is carried on by corporations.

Since the problem is national and the authority is national, does it not follow with inescapable logic that national law, not State law, should define the powers and functions of the corporations through which our national economic life is carried on?

The suggestion was made many times before I introduced the bill now pending before the Judiciary Committee of the Senate,

but was not adopted, largely because of the fear that it would mean too great a concentration of government and too much regulation of business.

That fear was altogether unfounded. Indeed, the absence of a national incorporation law has been the principal cause of the expansion of the Federal Government. Because the antitrust laws could be easily evaded through the use of State charters, corporations became bigger and bigger, concentration of wealth became greater and greater. There was no agency big enough to protect the public except the Federal Government, and, in response to a steady public demand, the Federal establishment began to grow. In other words, big business has produced big government and we have achieved exactly the result it was sought to avoid.

We don't need more regulation of business. We need only to prevent abuses which everyone recognizes and everyone condemns by a Federal law depriving corporations of the charter power to commit them. Such a law would not require an army of agents to enforce it. On the contrary, it would be almost self-enforcing. The unlimited corporate power allowed by a few States is the central evil. If corporate power were sanely limited as it ought to be, no discretionary authority would have to be conferred on any official and thus, instead of more regulation, we should have less. Above all, monopolistic practices would be ended by the withdrawal from monopolists of the corporate power to engage in them.

A CHARTER IS A CONTRACT

Bearing in mind the simple fact already stated, that a corporation charter is a contract between the people's Government and those who wish to incorporate, I would have Congress write the contract by which corporations are authorized to carry on interstate and foreign commerce, I would not give Government a single new or unusual power, but I would go to the source of the evils from which we suffer and prevent the creation of the kind of corporation which causes our troubles.

No honest business would be impeded by such a law. On the contrary, every honest business would be aided by it, because it would remove the greatest handicap under which honest business operates—the necessity of competing with concentrated wealth. This is the only way in which we can set business free. It is the essential first step to complete recovery.

We must have a system of national charters for national corporations.

National Wheat Program

EXTENSION OF REMARKS

OF

HON. GEORGE McGILL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, November 23 (legislative day of Tuesday, November 16), 1937

ADDRESS OF HENRY A. WALLACE, SECRETARY OF AGRICULTURE, BEFORE A WHEAT MEETING AT WICHITA, KANS., NOVEMBER 23, 1937, BROADCAST TO THE NATION OVER FARM AND HOME HOUR

Mr. McGILL. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered today by Hon. Henry A. Wallace, Secretary of Agriculture, at Wichita, Kans., on the subject A National Program for Wheat. The address was broadcast in a Nation-wide hookup.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

You and I have come here to Wichita to talk about wheat. This is the very heart of the winter wheat belt, and one of the best places to talk about a national policy for wheat. Today we want to consider the elements of a sound long-time wheat policy.

Throughout the centuries wheat has meant bread and bread has meant life. Wheat production and wheat marketing stand out among the most dramatic phases of our national activity. Wheat is produced in 2,600 of the 3,000 counties in the United States. From the Atlantic to the Pacific, from the Canadian border to Texas, wheat fields ripple in the winds of early summer. While the crop is grown in widely scattered parts of the country, it is almost the all-in-all of large areas in the West. On the rolling uplands of the Columbia River Basin, on the broad prairies of the Dakotas and Montana, and on the sweeping plains of Kansas and the Southwest, wheat fields are spread in vast expanse. These great producing areas of the West are the bread basket of the Nation.

The story of wheat extends to the wheat milling centers, the Chicago wheat pit, the kitchens and dining rooms of our homes, and out over the world. It is a dramatic story all the way. In the United States, the wheat industry is one of the main cogs in our economic machine. Go back and read the story of the Nation-wide depression of 1931 and 1932 and of the recovery that began in 1933. You will find plainly written there the story of the fall and rise of wheat prices and wheat income. The latest news about the production and price of wheat headlines the market pages. It is scanned carefully by businessmen, investors, and farmers. Today, when American businessmen are wondering about the future, they are asking themselves: What about wheat in the years just ahead? Wheat is a barometer of business.

It is so everywhere. Each month wheat is being harvested somewhere in the world. Wheat is the commodity most widely produced and consumed. One might say that wheat, more than any other commodity, binds the economic system of our world together.

Nevertheless, the wheat industry has had many ups and downs. From the early days of the Colonies to the settling of this vast western country, the fortunes of the wheat industry were mostly up. New and adapted varieties were brought in from far countries; railroads for transporting the wheat were built. Reapers, binders, and combines were introduced, one after the other, to make the American wheat grower the envy of the world. But for all the tremendous volume of wheat that we grew, there was a market—either in this country or overseas. We were in debt to Europe for much of the capital that had built the railroads and developed the mills and the mines. The wheat sold to Europe helped to pay that debt.

After the grain areas of Canada and Argentina had been opened up, our exports fell from around 200,000,000 bushels in the 1890's to less than 100,000,000 bushels by 1910.

Then came the World War. Bread was the first need of all the armies. Our slogan was "Food will win the war." Wheat growing expanded beyond anything this country had yet seen. Section after section of prairie sod, that had been in grass since long before the days of Coronado, was broken for wheat.

But after the war things were different. We had changed from a debtor to a creditor nation. Europe had acquired a war fear that drove her peoples to raise much of their own wheat. Our growers were left with an overexpended plant, which could be used to the full only while American loans kept a prop under foreign buying. I well remember how in Kansas in the early summer of 1920, when wheat was $2.50 a bushel, a movement was started to hold for $3. And you perhaps remember even more vividly that the farm price by August 1923 had fallen to 86 cents.

For 10 years the problem of wheat bedeviled growers and men in public life. Producers first tried to solve it by cooperative marketing through farmers' elevators, terminal sales agencies, and wheat pools. Many important benefits came from cooperative marketing, but farmers decided the problem was too big to be solved without Government help. They worked out the McNary-Haugen plan, which received its first big push from western wheat growers and in its first draft was designed to help wheat more than any other crop. This plan was to make the tariff effective on wheat by segregating exports from the domestically consumed portion of the crop. After the McNary-Haugen bill had twice met with Presidential veto, wheat farmers had to be content with the Farm Board, set up under the Agricultural Marketing Act of 1929. You remember how the Farm Board's attempts to support prices of wheat failed as production and supplies mounted year by year, how the price of wheat in 1932 fell to the lowest level since the time of Queen Elizabeth. Wheat producers were almost completely out of the market for industrial goods. Thousands of wheat growers lost their farms. Some people said that we would have to forget about the world market for our wheat. They said that enough wheat producers would have to be starved out to shrink the industry back to a domestic basis.

This heartless doctrine was rejected by the overwhelming mass of farmers. They did not believe and I do not believe there is the slightest excuse in this day of social progress to subject any great group of our people to such barbarism. Yet the same heartless doctrine is being advocated today by some who would deny to farmers the same chance they accord to other groups to shield themselves against the worst effects of competition unrestrained. The Nation rejected that doctrine 5 years ago and the Nation will reject it now.

Out of the suffering of the depression years, the Agricultural Adjustment Act of 1933 was born. I do not need to recall to you the programs under that act affecting wheat—the county associations and committees of wheat producers, the processing tax on wheat, and the benefit payments made to those growers taking part in the acreage-adjustment program. I do not need to recall how the wheat program in the United States was linked up with the world wheat agreement, signed by 9 producing and 17 consuming countries. These measures gave promise, for the first time since the war, of dealing with the chronic problem of the wheat surplus.

But about the time that they were adopted, the wheat picture changed once more. During the 15 years ending in 1932 the production of wheat in the United States had fallen below 800,000,000 bushels only three times. It had gone above 900,000,000 bushels four times. But beginning with 1933, there were 4 successive years of short crops. Drought and rust did their work. If the yields and abandonment on the planted acreage had been normal, these four crops would have averaged 889,000,000 bushels. Actually they averaged 582,000,000 bushels, or 300,000,000 bushels less each year than we might have expected from the acreage planted. For the first time since 1837 and for the second time since the signing of the Constitution, the United States became a net importer of wheat. World wheat supplies gradually grew smaller and world prices improved. With small supplies in this country, Chicago prices rose

above Liverpool. Devaluation of the dollar also played a part. As a result of all these things the price of No. 2 Hard Winter wheat at Chicago advanced from an average of 47 cents in November 1932 to $1.46 in April 1937.

With nature, temporarily at least, doing away with the surplus, the situation of wheat producers was much different. Instead of having a lot of wheat to sell at a low price, farmers in the drought and rust areas had little or no wheat to sell and could not take advantage of the greatly improved price.

Also, with the advent of drought, wheat farmers in the Great Plains found they had a terrible new problem to contend with—dust storms. Suddenly, there was crying need not only to stabilize the production of wheat and incomes of growers, but to stabilize the soil itself. There was need to keep it from blowing away, across the Mississippi River and on to the Atlantic Ocean. The mistake of overplowing the plains country had brought a disastrous result.

The short crops and scant supplies of wheat prevented wheat producers from feeling the full effects of the Hoosac Mills decision of the Supreme Court when it came in January 1936. And the Soil Conservation and Domestic Allotment Act, quickly passed by Congress to replace the broken parts of the old Triple A, helped wheat farmers to adopt farming methods that would hold their soil in place.

The season of 1937 was the first in 5 years with wheat weather even moderately favorable. Wheat yields per acre came up to somewhere near average. That yield on a record-breaking acreage brought a big crop of wheat—nearly 900,000,000 bushels. The big crop started to market at high prices because of unusual situations outside of the United States. From January to April of this year the farm price of wheat was above $1.20 a bushel or slightly above parity.

But no sooner had you reached this point than you began to find yourselves slipping down again. This year's big crop was 250,000,000 bushels more than we need for domestic consumption. That put American growers back on the export market. The Chicago December future, which had been quoted at $1.31 last July 16, was down to 84 cents on November 8.

Now, as you wheat growers look ahead, you are wondering what is going to happen to you. During the next few years, which end of the seesaw of weather and price are you going to find yourselves on?

In 1932, judging by the experience of the preceding 100 years, no one would have dreamed that there would be four short wheat crops in a row, averaging less than 600,000,000 bushels. The four short crops in a row did happen and therefore some day might happen again. But, since the present year has brought us back nearly to the 900,000,000-bushel level, we have strong reason to think that perhaps the surplus wheat problem of the twenties and early thirties will return in full force.

As I have said, the ups and downs of the wheat industry have been dramatic. But they have been painful for the growers of wheat. They have been painful, too, for the millers and handlers of wheat, for the businessmen and workers depending on wheat growers' purchasing power, and for the consumers buying wheat flour and bread.

This variable character of the wheat industry can be put down as No. 1 in listing the main aspects of the wheat problem.

There are others.

No. 2 is the fact that human stomachs don't change in size. When people have more money to spend, most of them buy less wheat rather than more. They spend a bigger part of their money for livestock products, fruits, and vegetables. This is why economists say the demand for wheat is inelastic. For some years the per capita consumption of wheat has been slowly decreasing, as people's food habits have changed, though at the same time the increase in the population has partly offset the decline in per capita consumption. The point I am making is that we cannot assume that no matter how much wheat is grown, it will all get eaten by the American people if the price is only low enough. Experience has shown that, instead, an excess supply simply piles up and demoralizes the price. That low price for wheat doesn't help either the producer or the middleman or the consumer of bread. Actually it harms them all.

Factor No. 3 in the wheat problem is that present export markets will not take all the surplus wheat our farmers can produce in years of ordinary weather.

Our export markets dwindled after 1929 as our foreign loans ceased. Only one thing could have saved our export trade, once we had stopped lending other countries the money to buy our wheat, and that was a change to a more liberal tariff policy. But instead of lower tariffs to encourage world trade, we were given higher tariffs that strangled world trade. The Smoot-Hawley Tariff Act of 1930 was the worst blow ever struck at the wheat farmers of the United States.

During the last 4 years, of course, weather has reduced our supply available for export. This year, with an exportable surplus on hand and with the Canadian and Argentine crops heavily damaged, we are again shipping wheat abroad. From the first of July up to November 6, we have exported about 22,000,000 bushels. At this rate exports for the year would total about 60,000,000 bushels. But it is possible that exports from this year's crop may total as much as 100,000,000 bushels.

Remember that wheat exports this year are based on shortage in Canada and Argentina and on increased world demand resulting from the race to prepare for war. These conditions are abnormal and cannot be expected to continue long. If the United States is to have a dependable foreign outlet for wheat, this outlet must be assured through a revival of international trade that flows both ways. A start in this direction has been made through the reciprocal trade agreement program. If that program can be expanded, a part of our former markets abroad may be regained.

No. 4 in the list of things we must think about is the need to avoid soil destruction. If growers fail to balance up the wheat acres with acres of cover crops, and fail to follow proper conservation practices, the soil will be permanently damaged.

No. 5 is the fact that considerable areas now planted to wheat are really submarginal, and should be retired from cultivation altogether. The Government has already acquired some of this submarginal wheat land, but much still is being used.

No. 6 is the fact that five different kinds of wheat are grown in different areas of the United States. These are hard red winter wheat, grown in Kansas, Nebraska, Texas, Oklahoma, and Colorado; hard red spring wheat and durum wheat grown in the Dakotas, Minnesota, and Montana; white wheat, grown chiefly in the Pacific Northwest; and soft red winter wheat, grown throughout the areas east of the hard wheat belts. The regions producing these five kinds of wheat have some problems in common, but there are important differences between them which must be recognized in mapping out a national policy for wheat.

No. 7 on the list of things we must face is the great expansion in wheat acreage that has taken place. In 1937 the farmers seeded 81,000,000 acres, whereas with average yields only about 60,000,000 acres would be needed to fill our domestic requirements and present export outlets. The prospect now is that, including the wheat already in the ground, the acreage to be seeded to wheat for harvest in 1938 will be as great as it was in 1937. With average yields this would mean a crop of close to a billion bushels, or 350,000,000 bushels more than enough to fill our domestic needs.

The agricultural conservation program of the last 2 years has included wheat among the list of 15 soil-depleting crops from which acreage might be diverted for payment. But no special base or goal has been included for wheat, and none is included in the 1938 program.

The current wheat acreage—the largest in the history of the country—seems to be a response to the favorable wheat price. Further recession in the price might be expected to cause the wheat acreage to shrink somewhat. But experience during the depression showed that even 30-cent wheat did not squeeze out very many of the marginal producers. Lacking other opportunities, they kept on producing wheat and the wheat situation steadily got worse. There is no reason to believe that, if those conditions were repeated in the future, anything different would happen.

The important point is that wheat acreage is at a level that with ordinary weather will give us crops far above what we need for use at home and what we have been selling abroad.

That completes my brief summary of the wheat problem. We have seen how the problems of soil depletion and submarginal land farming are linked to wheat, how wheat production varies although the demand is uniform, and how our export markets have dwindled while acreage has grown. Now what should be our aims in working out a future policy for wheat? I think everyone will agree that our main objectives ought to be, first, to conserve the soil; second, to maintain growers' income; and third, to assure adequate supplies for consumers.

It is easy to agree on those fundamental aims. But there may be difference of opinion as to the path to be followed to reach them.

As with cotton, there are two schools of thought about wheat. They stand at opposite extremes. One school of thought would lay emphasis on price regardless of how small production would have to be to get that price. People holding this view would say goodbye to exports and definitely aim to produce only enough wheat for the domestic market. Following such a course would involve severe acreage adjustment and perhaps high loans. Drastic marketing quotas universally applied in the main wheat-growing areas would be necessary year after year.

Another school of thought, at the opposite extreme, would encourage unlimited production of wheat, through an export bounty or through unconditional payments to producers.

On a purely theoretical basis, a plausible case for either one of these extreme courses might be made. Going to an extreme nationalistic basis might, on paper, seem to yield as much gross income for wheat as could be realized in any other way. So far, the wheat growers have not shown any inclination to do this. Regardless of the theoretical advantages of reducing wheat production to domestic needs, the wheat growers this year by planting 80,000,000 acres to wheat have in actual fact put their industry on an export basis with a vengeance.

I recognize that hard red spring wheat usually is nearly all milled in this country. But if wheat went on a domestic basis, farmers in that region would be affected, too. The two hard-wheat regions are closely related. Hard winter wheat is the kind that is usually exported, it is true. But the export of hard winter wheat affects the price of spring wheat as well. The producers of hard spring wheat cannot expand their production without increasing the pressure from all the western wheat regions for larger outlets abroad. Wheat is wheat, and the fortunes of the different groups of wheat farmers rise and fall together. No region can hope to share in the benefits of any wheat program without sharing its burdens, too.

The control that would be needed to cut acreage from 80,000,000 down to 55,000,000 acres or less would be far more rigid than anything wheat producers have ever thought about. Unless wheat

growers should drastically change their whole point of view, I doubt if such control as that could be made to work.

The case for the subsidy of unlimited production is also superficially plausible. But, with world trade conditions what they are, if American wheat were dumped on the world market other countries would simply raise trade barriers to the point where we could not scale them. It is true that in 1933 the Triple A made an exception of Northwest Pacific wheat and used an export subsidy to take care of the very large part of that wheat that needed export markets. But if put into general use for all wheats, the export subsidy plan would prove in the end to be a severe handicap to our efforts to reopen this country's foreign markets for wheat. Supplies in this country would pile up and prices would collapse. Under such circumstances prices might even go lower than they did in 1932.

I do not believe that the majority of wheat producers want to choose either one of these extremes. As they think things through, I believe they will choose a middle course somewhat similar to the one I have already recommended for the Nation's other great export crop—cotton.

The middle-course program I have in mind for wheat would consist of six main parts:

First. Planning for that share in the world wheat market which will bring wheat farmers their maximum prosperity.

Second. The setting of acreage goals in line with needs of the soil and of the market here and abroad.

Third. Protection against drought through an ever-normal granary, with reserve supplies of wheat stored on the farm or in elevators.

Fourth. Crop insurance.

Fifth. Retirement of submarginal land.

Sixth. Price-adjustment payments, to be financed from tariff-equalizing taxes.

Let me discuss each of these briefly.

As to the first point—keeping our share of the world trade in wheat—I would like to remind all farmers once more that if the producers of the great export crops, especially wheat and cotton, lose their remaining markets abroad, agriculture will have to prepare itself for a degree of control and adjustment far greater than farmers have thought about thus far.

As this country prepares to ask for its share of the world wheat trade, so it is willing to share with other countries the burden of any necessary adjustment of production. The United States alone cannot and should not bear the entire burden of readjusting world wheat production to world wheat demands. When the Triple A wheat program was first started, all the other important wheat-producing and wheat-consuming countries agreed to work with us, through the world wheat agreement, to adjust world acreage and exports to the needs of the market. The succession of disastrously short crops after 1932 made such action unnecessary for the time being. While the principal wheat nations have continued to talk over the wheat situation from time to time at meetings of the International Wheat Advisory Committee, the action phases of the agreement were not continued. Now we seem to be moving into a period when, with normal weather and yields, world wheat supplies may again become excessive. Should such conditions develop, other wheat-growing nations will, I believe, again recognize the need for concerted action to deal with the problem. Meanwhile, with our present acreage and normal weather, the United States will very definitely be a substantial exporter of wheat.

The second part of the program, acreage goals for wheat, could be carried out under the present Soil Conservation Act, but additional legislation is needed to make them fully effective.

The goals probably should be varied in the different wheat regions, according to the needs of the soil and of the market. Fairness would require that amounts paid to farmers would vary according to the extent of the sacrifice involved.

We should, if possible, continue the provisions included in the 1938 conservation program for assistance to farmers of the Great Plains in diverting wheat acres to uses which prevent the soil from blowing.

Any adjustments in wheat acreage beyond the needs of soil conservation should not be construed as an effort to control the world price of wheat. The United States production of wheat is only one-fourth of that of the world, and naturally we cannot hope to control the world price. But, since the price of wheat in the United States is responsive not only to the world market but to conditions at home, it is important to guard against the piling up of supplies so great as to cause a price collapse. Hence the provision for wheat acreage goals.

The third part of the program would be the creation of an ever-normal granary for at least the hard wheats. Such a granary would not be needed for the white wheat of the Northwest, of which there is practically always an exportable surplus, or for the soft red winter wheat, which is always available in plentiful quantities.

But a granary for the hard wheats of the Great Plains would be very useful. The hard red wheats are in demand by the mills of this and foreign countries for mixing with the soft red wheat. But the hard red wheats are raised in areas where the weather is most uncertain and the crop is subject to damage from drought and rust. For this reason the supplies and prices of these wheats fluctuate widely. In years of short crops, our customers abroad have had to turn elsewhere.

From every point of view, it would seem to be wise national policy, therefore, to plan on having an average carry-over of these wheats perhaps twice as great as the 90-million-bushel carry-over of these wheats that we have averaged over the last 3 years.

One possible way of building up the ever-normal granary for wheat would be through commodity loans, as I have recommended for corn. But a serious draw-back to reliance on this method of building up the granary would be the fact that any loan above the market price might interfere with the free flow of wheat into export. Furthermore, loans made on one or two kinds of wheat would naturally result in demands for loans on other wheat, and the total effect of wheat loans at high rates might easily be disastrous.

For wheat as for cotton, we want to be able to offer stop-loss loans which would not seriously interfere with exports, but which would prevent utter demoralization of the market.

Probably a sounder and better way to build up the granary would be through the proposed plan for crop insurance, which I am suggesting as the fourth part of a wheat program. Such a plan is embodied in the Pope bill, which passed the Senate last spring and is now pending before the House. Under this plan, farmers taking out the insurance would pay their premiums and collect their indemnities in wheat or its cash equivalent. Whenever a farmer's yield fell below some specified percentage of his normal yield—say 75 percent—he would be paid an amount of wheat or its cash equivalent that would equal the difference between his actual yield and the 75 percent.

Since the wheat representing the total of premiums paid in would be stored, it would be kept off the market in years of good crops and would be made available in the form of indemnities in years when crops were short.

If enough farmers took part to make such a crop-insurance plan work satisfactorily, it would be enormously useful to the wheat farmers themselves. But it would be of great value also to the millers of wheat and their employees and to the consuming public. It would keep a more uniform supply available for export. It would help to level off some of the peaks and valleys in wheat supplies and prices resulting from weather changes from year to year. Like the proposed ever-normal granary for corn, it would help to stabilize the Nation's business.

The fifth part of the wheat plan would be to continue and expand the present program of retiring submarginal land, especially in the Great Plains area. Lands that Nature intended never to be plowed should be taken out of wheat and returned to grass. Families that have been engaged in a bitter struggle to earn a living from such land ought to be, and are being, assisted to find a better opportunity. This program is bound to move slowly, but it will yield big dividends in human values.

The sixth part of the program, the price-adjustment payments, would be needed to offset the effects of price declines which are already felt and help wheat farmers to share in the progressive rise of the American standard of living. Where would these funds come from? Over a period of years, neither wheat farmers nor cotton farmers could depend upon subsidies from the General Treasury—subsidies which might be cut off any time Congress failed to appropriate the money. Therefore it would seem that with both cotton and wheat, the sensible thing would be to let the commodities themselves bear the load in the form of tariff-equalizing taxes levied at the point of first processing. As under the old Triple A, these taxes would be levied only on that portion of the commodity consumed in the United States, while the portion of the crop going into export would be sold at the world price.

Any such tax would, of course, have to be surrounded with consumer safeguards. We would want to be sure that the sum of the market price for wheat plus the tax would not cause any greater portion of the consumer's dollar to be paid out for wheat than was the case before the war. As long as safeguards like this are in force, consumers would have nothing to fear from such a tariff-equalizing tax.

To a consumer, what difference does it make whether he buys his bread on the basis of wheat in the market place, or on the basis of 80 cents a bushel plus 20 cents tax? And right here I would like to call attention to the fact that, with wheat at $1 a bushel, the cost of the amount of wheat needed for a pound loaf of bread is less than 2 cents. A 20-cent tax means only a third of a cent on the consumer's loaf of bread. And yet, to the wheat grower, receiving a corresponding amount may make the difference between bankruptcy and at least a minimum chance to make a living. Which would the consumer choose—to pay a third of a cent more on a loaf of bread and a few cents more on shirts and sheets, or to run the risk of the loss of employment and property values that eventually might flow out again from unstable farm income and farm purchasing power?

As I have recommended for cotton, the price-adjustment payments might well be made on an allotted production goal and should be conditioned upon participation in the conservation program.

If payments were large enough, the incentive for cooperation in the program would be very strong. Marketing quotas for wheat probably would not be necessary unless through a series of years of good weather, supplies piled up to an unmanageable level. But in such an emergency the use of quotas might prove very useful.

This six-part plan for wheat, if carried into effect, would not take the wheat growers of the Nation to some golden El Dorado. Even with its help, I believe their future is not too rosy. But at least it would help them make an orderly retreat to an acreage in line with the needs of available markets.

Lacking such a plan, the only thing I can see ahead for the wheat industry in case we have a series of years of ordinary weather, is a disorderly retreat through the harsh application of "natural economic law." This would mean that thousands of farmers would have to be starved off from their farms. It would mean hundreds of farming communities would be ruined. It would mean another cycle of closed country banks, diminished farm buying, and loss of jobs for city workers. The Nation cannot afford to ask the wheat farmers, wheat consumers, and industries dependent on wheat to pay such a price.

Now, as I see it, the key to the plan I have outlined would be the tariff-equalizing tax to provide the needed revenue. President Roosevelt, in his message to Congress a week ago, emphasized the need for a balanced Budget, and insisted that any expenditures for the farm program over those provided in the regular Budget should be balanced by an equal amount of new tax income. In other words, the farm program should be self-financing so far as possible. I am confident that the farmers appreciate the necessity of keeping the Nation's money affairs well ordered.

But let no one think that such a tax can be enacted into law without a fight. The tax would be ultimately paid by consumers, but some of the big processors from whom it would be collected will do all they can to block it. Already they are organizing.

I have here a yellow circular and a pink handbill put out by the Miller's National Federation of Chicago. Both urge millers to arouse consumers against the tax. The circular says: "Processing taxes can be stopped cold if the various interests adversely affected will do their part. By this we mean arousing consumers to the fact that they will carry the burden of any processing taxes levied and then for consumers to protest to Washington. Petitions are of absolutely no value in carrying this sentiment to Washington and the time and energy they require should be spent usefully. Practically the only thing that will count are individual letters from consumers—and these letters in great numbers."

The Miller's Federation states that it is prepared to supply members with "dodgers" in any quantity, the only condition being that these "dodgers" be put to use immediately.

Now what are the facts? A year ago consumers were paying farmers $1.06 for each bushel of wheat that was milled. Today, the farm price of wheat averages about 80 cents. If a processing tax of say 20 cents a bushel were added, the combined cost of wheat and tax would be $1 a bushel—or 6 cents less than the farm price a year ago. These facts are completely missing from both the handbill and the circular.

It is a splendid thing for flour millers like all other free and independent citizens to express their convictions. But as a matter of fact the legitimate interests of flour millers are promoted by stability of price for both farmers and consumers. It is high time for the processors to join together with the farmers and the consumers in fighting for stability instead of following the short-sighted policy of fighting against the best interests of all three groups.

I hope the millers, along with all other businessmen, will come to see that a long-range farm plan that will keep agriculture on an even keel will help them to stay on an even keel, too.

The all-weather-wheat program here proposed is designed above everything else to serve the interests of wheat producers and wheat consumers. To my mind, the ups and downs of wheat lie very close to current problems which are giving the whole Nation concern. How can the people hope to make a successful attack upon the business cycle unless they have a chance to iron out the extreme swings in prices of basic farm commodities?

As I said a few days ago at Indianapolis, if we can stabilize farm prices and farm income, we will go a long way toward giving the Nation the economic-balance wheel that it so greatly needs.

From the standpoint of the vital interests of the consumer, the wheat program must not be considered by itself. It should be considered along with the ever-normal-granary plan to build up storage reserves of corn, and sound plans for the cotton growers, dairy and livestock producers, and other farmers. These plans are interdependent and the success of any one would contribute to the success of the others. An essential purpose of these plans must be to iron out extreme fluctuations in farm price and in farm income. If that purpose can be accomplished, it will have benefits for the consumer which will far offset any disadvantages. It will launch an attack on the cycles of boom and collapse that again and again threaten our civilization. It will help make our American system work.

But there are those who want no attempt like this made. Every farmer knows that a few powerful financial interests are and always have been opposed to any real farm program. These interests are active now. They want to go back to the do-nothing farm policy of the twenties.

Opponents of the tariff-equalizing tax have already claimed that it is unconstitutional. But, as President Roosevelt pointed out last week in his message to Congress, "the courts themselves are coming to have increasing regard for the true nature of the Constitution as a broad charter of democratic government which can function under the conditions of today." Since the Triple A decision of the Supreme Court nearly 2 years ago, acts of Congress to improve labor relations and assure workers' security have been upheld.

"In these later decisions," the President said, "the powers of the Federal Government to regulate commerce between the States and to tax and to spend for the general welfare have been clearly recognized."

The President expressed his confidence that Congress can "constitutionally write an adequate farm act that will be well within the broad meaning and purpose of the Constitution."

And he said, "I hope and believe that the Supreme Court will not again deny to farmers the protection which it now accords to others."

I agree with President Roosevelt. Farmers and those who would serve the farmers' welfare should go ahead and work out plans that are, first of all, equitable and sound. In the long run, public opinion will prevail and it will support good laws, not half-baked measures written with one eye on the processors and the other eye on what the courts did before they saw the light.

From the standpoint of the farmer, the battle that is now opening is really the old battle of "equality for agriculture." I do not know how long it will last. But I do know that if farmers cannot win back to "equal justice under law," then the future of our Nation is indeed dark.

This is the real issue: Is agriculture to have a fair chance, or is it to become once more the Nation's forgotten industry?

Temporarily, perhaps, the Nation can get along with farmers like serfs or peons supplying cheap food and cheap fiber for cheaply paid labor in the cities. But such a policy never has led and in the end never will lead to anything except disaster.

To adopt such a policy now would be to invite another smashup.

I am not a defeatist. I do not believe that such a smashup is inevitable. I am confident that the more farsighted men and women of this Nation will prevail and that agriculture, along with labor and business, will get fair play.

But there is no question in my mind that farmers face a crisis. Either the gains of the last few years will be consolidated as enduring progress, or else agriculture will go down hill.

Farmers will not attain to "equal justice under law" unless they fight for it.

There is only one way to win and that is to keep an unbroken front in the fight. The wheat farmers of the West can never get a good wheat program, backed by the tax needed to make it a success, unless and until they have the wholehearted support of the southern cotton farmers.

The cotton farmers can never get the kind of cotton program they want without the loyal help of the wheat farmers. And if the new farm bill should fail to give the protection of income that is so vital to farmers of the West and South, then the increased pressure upon available funds will surely weaken the program for the corn farmers, the dairy farmers, and other producers. So today with renewed earnestness I urge the wheat growers, cotton growers, corn growers, dairy farmers, tobacco farmers, rice growers, and all the other great producing groups to forget their minor differences and to unite in a solid farm front.

From the standpoint of both consumer and farmer, the stake in this fight neither begins nor ends with the farm. All of society stands to lose if the farm program fails, and to gain if it succeeds. The grain gambler alone profits when wheat prices soar and crash, and then soar and crash again. No one profits when the wheat farmers and consumers are made the victims of scarcity due to drought. No one profits when a tremendous surplus wrecks wheat prices. It is true that shocks like these fall upon the farmer first. But ultimately they hurt everyone. The housewife wants a steady supply of food at fair prices. The business man, the manufacturer, the city worker depend on farm buying power for trade, for customers, for employment. Their interests and the farmers' interests are really one. The farmer must never forget his duty to the consumer, just as the consumer must always remember his debt to the farmer. The life of our democracy depends upon the unity of the groups in service of the general welfare. That unity and that service must be the foundation for the farm program of the future.

Reciprocal Trade Agreement

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Tuesday, November 23 (legislative day of Tuesday, November 16), 1937

ARTICLE BY FRANKLYN WALTMAN

Mr. HATCH. Mr. President, we are about to proceed to the consideration of the agricultural or farm bill. Frequently throughout the country there has been discussion of the administration program concerning reciprocal trade agreements, especially with reference to imports from foreign countries. In the Washington Post of this morning appears an article written by Mr. Franklyn Waltman discussing the question, which I believe Senators will find of

interest. I ask permission to have the article printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of November 23, 1937]

POLITICS AND PEOPLE—REPUBLICANS STILL REFUSE TO TAKE A LESSON FROM THEIR ILL-ADVISED 1936 ATTACK ON TARIFF POLICY

(By Franklyn Waltman)

Few people, perhaps, will find any news in the statement that the Republicans never seem to learn. Yet their adherence to shibboleths and false issues is truly amazing. Because many years ago the Republicans managed to remain in power for a long period by thumping the full dinner pail, they apparently feel that they can make a winning issue of the present Democratic tariff policies.

After the country's reaction in last year's Presidential campaign to Governor Landon's babassu nuts and Cheddar cheese speech, one would imagine that Capitol Republicans would shoot on sight anyone who suggested raising again the question of the New Deal's reciprocal-tariff program. Instead, however, they rush in where the economists fear to tread—and they rush into a buzz saw in the person of Secretary of State Cordell Hull.

Since memories are short, it might be well to recall what happened in the 1936 campaign regarding the Hull reciprocal tariff program. Governor Landon at heart was favorably inclined toward the program. It was one of the New Deal measures of which he could approve, because it fitted into his philosophy of keeping America a competitive society for free enterprise. But the old-line, standpat Republicans overwhelmed him.

Former Senator George H. Moses went among Republican groups contending the reciprocal trade agreement with Canada, if properly exploited, would be the undoing of President Roosevelt. Governor Landon's efforts to strike a liberal tone gave George Moses a big pain. He contended repeatedly that Governor Landon only need swing into the Canadian pact with both fists to get the vote of every cowman in an area 100 miles south from the Canadian border and from coast to coast.

The pressure on Governor Landon became so great that he weakened and welcomed into his camp the disgruntled George N. Peek, who tried for months to sabotage the reciprocal trade program from the inside. It was thought he might be able to do in a frontal attack what was an ignominious failure when he was in the administration.

The remainder of the story is fairly well known. Governor Landon, coached by Mr. Peek, made his attack on the trade program. Immediately, it was shown that the statistics he quoted to prove that the tariff cut on Cheddar cheese was ruining the country were incomplete and gave only half the picture. His contention about babassu nuts served chiefly to provide an amusing caption for editorials.

Some of Governor Landon's strongest well-wishers shuddered, especially since his speech indicated a confusion of thought on his part regarding competitive free enterprise. The cowmen voted for President Roosevelt—or at least most of them did, as the election returns along the Canadian border indicated.

But the Republicans seemingly never learn. They are quietly organizing a new campaign on Capitol Hill against the reciprocal trade program. They plan to lay down their attack on the pending negotiations with Czechoslovakia, Great Britain, and Canada. Although the country's foreign trade has doubled from the days of the Hawley-Smoot Act in 1932, they profess to see the country headed for ruin because a few high tariffs have been reduced.

The New England Republicans—really inspired by fears of the owners of shoe and textile factories—contend that the workingman is being hurt, that they suspect foreign entanglements and other bogeys as a result of pending trade agreements. The Corn Belt Republicans reverse the argument. They contend the administration has sold out the farmer for the benefit of eastern manufacturers. With their allies in the National Grange they scream that the American market is being taken away from the American farmer. They pass over in silence the fact that farm income this year will be about twice what it was in 1932 under the protective Hawley-Smoot Act.

The falsity of this argument about the reciprocal trade agreements hurting the American farmer is obvious to anyone who takes the time to skim through the agreements already concluded. Reductions in the American tariff on farm products are few and have been made with the greatest caution. Except on commodities of which this country does not produce a sufficiency, they affect only a fraction of the domestic consumption. On the other hand, substantial tariff concessions on farm products have been made by other nations in these agreements.

It is said that in the year ended last June 30 agricultural imports had a value $699,000,000 greater than in the corresponding 1933–34 period. This is true. But it does not follow that this has resulted from the trade agreements. Indeed, of this increase $252,000,000 is accounted for by increased imports of totally noncompetitive commodities, such as coffee, tea, cocoa beans, rubber, silk, bananas, and spices.

A further $141,000,000 comprised items affected by the droughts of 1934 and 1936. Their importation does not depress prices, since they come in only when prices here are high. Another $45,000,000 of the increase was in sugar—subject to quotas which protect local producers. A large part of the remainder of the increase results from increased purchasing power and higher prices in this country.

When the Republicans start talking about the American farmer being ruined, why do they not squarely face the issue of what is being done to him by crop-control schemes and by industrial monopoly, in which tariffs play an important part? Why do they not admit that, though farm imports in the last fiscal year had a value of $1,539,000,000, such imports had a value in excess of $2,000,000,000 annually in the years from 1925 to 1929 (years without serious droughts), when Republican high protection was the order of the day?

Politics and Agriculture

EXTENSION OF REMARKS

OF

HON. CLYDE L. HERRING

OF IOWA

IN THE SENATE OF THE UNITED STATES

Tuesday, November 23 (legislative day of Tuesday, November 16), 1937

ADDRESS OF HON. JAMES A. FARLEY, CHAIRMAN OF THE DEMOCRATIC NATIONAL COMMITTEE, AT A MEETING OF THE DEMOCRATIC STATE CENTRAL COMMITTEE OF IOWA, IN DES MOINES ON SEPTEMBER 9, 1937

Mr. HERRING. Mr. President, I ask unanimous consent to have printed in the RECORD an address on the subject of Politics and Agriculture, delivered by Hon. James A. Farley, chairman of the Democratic National Committee, at a meeting of the Democratic State Central Committee of Iowa in Des Moines, Iowa, September 9, 1937.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Almost all of you have a deep interest in two subjects—politics and agriculture. The two are often looked upon as unrelated. I think to most people the word politics suggests lively rallies and stirring conventions, fervid oratory, and the exciting feel of important events about to happen. On the other hand, agriculture brings to mind the soothing picture of broad fields, growing crops, and full bins—all the associations of the farm and farming. Yet, politics and agriculture are closely related and will continue to be more closely related in the future than in the past.

So long as there was ample room for expansion in the United States, a good many citizens could afford the luxury of indifference toward politics. Virgin land remained to be occupied; nations abroad were eager for the wheat they grew, or the pork produced from their corn. Virgin forests remained to be exploited; all the resources of an expanding industry were needed to supply the wants of a rapidly growing nation. We were like children, greedy and thoughtless, gay and impulsive. I do not need to tell you that conditions have changed. A grim realist, the depression, taught us that and taught many of us the importance of politics, the right kind of politics.

Politics and government are synonymous. Good politics is good government. Bad politics is bad government, and bad government destroys parties and administrations. After the war, Republican leaders failed to recognize the fundamental changes in our economic structure. They did not see or did not heed our transformation from a debtor to a creditor nation. This failure was a political mistake more costly than any series of inept speeches or ill-advised appointments possibly could be. The Republican Party allowed itself to be dominated by a few powerful corporate groups. This constituted another major political blunder. Lacking responsibility, the individuals dominating these corporations followed a short-sighted and selfish course, a course that culminated in the depression of 1932.

Had the Republican Party made the adjustment necessary after the World War it might have remained indefinitely in power. Had it recognized the needs of agriculture, the farmers and businessmen of this area would have supported it just as loyally as they did in the years following the Civil War. The Republicans of the Middle West did not desert the Republican Party. The Republican Party deserted them.

All of you are more familiar than I am with the decline of agriculture during the 1920's and the conditions which followed the crash in 1932. Wheat was lower than it had been in the country's history. Corn was cheap enough to burn for fuel; pigs would not pay the cost of raising. You are familiar also with the change since 1933. A good many factors have combined to bring about a better situation. But I believe we will all agree that foremost among them have been farm programs that were designed to give agriculture some of the governmental aid and cooperation that had been so freely extended to other and more privileged groups. Instead of a farm board, foredoomed to certain failure, this administration offered the farmers a mechanism through which they might

cooperate to control burdensome surpluses and assure a measure of economic equality.

The western farmers were patient with the Republican Party until the depression itself but when they did break away they made a thorough job of it. The Republicans had an efficient party organization in every one of the Farm Belt States; the Democrats only an occasional official in a county courthouse. That did not prevent the upheaval which elected Franklin D. Roosevelt in 1932.

All of us know the value of organization. It is as necessary in politics as it is in war. But party organization is only a means to an end and not an end in itself. In the long run, the most mechanically efficient party organization will fail if it attempts to execute policies that are harmful to the welfare of the people.

A party organization has come to mean much more than a machine manned by obedient subordinates. A really efficient party organization is composed of men and women who will see to it that the party policies are sound and progressive; that they represent the needs of their section and of the Nation. It is composed of men and women who believe in the democratic ideal of direct participation by the people in the affairs of government. It is composed of men and women who realize the necessity of hard work and vigilance if the people themselves are to determine the course of local, State, or National Government.

The Democratic Party did not win the victories of the past 5 years because of its name or history, however inspiring they might be. The Democratic Party was successful because it offered the American people something other than reaction and outmoded policies. It won again in 1936 because, under the leadership of Franklin D. Roosevelt, it had courageously and successfully attempted to carry out policies that were designed to benefit the people as a whole and not a powerful few. The Democratic Party, as I see it, has an opportunity to continue in power for years to come. That continuance, however, depends upon the continuance of good politics and that means the continuance of good government.

I have said that good politics and good government are one and the same thing. Let me repeat and emphasize that statement. It is never good politics to allow something which represents bad government, whatever the cause. Inefficient administration can, under some circumstances, cause as much havoc as poor policy. The appointment of unqualified people to public office, whether in a county or in Washington, is bad politics. It is bad politics to hand over the privileges of government to the wealthy few. It is bad politics not to face economic facts and not to take into account the economic interdependence of our Nation and, in turn, our interdependence upon the world. Good politics means more than sincerity of purpose and honesty, essential as these are. Our economic life, as the President once stated it, is a seamless web. Our major political problems always have been economic problems and nowadays the two are one and the same.

In these times the political party that remains in office is the party that faces economic facts squarely and honestly. Let us all bear that in mind if we want to be successful politicians.

Not all the failure of the Republican Party leadership in the years following the World War can be attributed to greed or indifference. A large part of that failure can be traced back to dense ignorance. Many of our financiers and industrialists listened indulgently to the assertion that national prosperity depended upon the prosperity of agriculture. Frankly, they did not believe it. Even the depression failed to teach some of them the lesson. Many do not believe it even now.

But Franklin Delano Roosevelt realized it and did something about it. He made, in the face of powerful forces that megaphoned their opposition, some of the adjustments which had to be made if we were to continue under our present form of government. One example of change to meet change was the farm programs that were inaugurated in 1933.

The World War left this country with 40,000,000 acres added to the plow. The cessation of foreign lending and the Smoot-Hawley tariff of 1930 combined to close the foreign market for most of those 40,000,000 acres. As a result, we had to do things we did not like to do. None of us want production control for the sake of production control. All of us would prefer to grow all the food and feed that we can without impairing our soil fertility. But the surpluses of 1932 and 1933 were as real as mortgages and the breadlines which accompanied them were real, too. Anyone who favors cheap prices for farm products should recall the misery and suffering that went hand in hand with the greatest stores of food and feed this country had ever accumulated. I am not a farmer or an economist, but the action taken to adjust supplies to the demand for farm commodities seemed and still seems a common-sense approach to the problem.

I think industrialists might as well recognize this fact. They cannot habitually practice production control and at the same time expect the farmer to run his plant at full speed year in and year out. Furthermore, cheap farm products cost the manufacturers dearly in the long run. Low prices for farm products mean reduced farm purchasing power. Farmers cannot buy the things city workers make.

As a result, factories close down and employees are thrown out of work. A vicious cycle begins which mothers all depression's brood: bankruptcies, unemployment, and widespread misery and suffering. The business of farming touches your own lives so intimately that there is no occasion for me to discuss at length the steps which must be taken to ensure a continuance of fair prices and orderly marketing conditions for growers and producers. I will leave that task to men like your own Henry A. Wallace, whose achievements as Secretary of Agriculture constitute a bright page in the history of New Deal accomplishments. There is no man better fitted than he is to advise the farming population of America on needed legislation, and there is no one who brings to the problem a greater fund of sympathy and understanding.

But in passing, there is one observation that I wish to make crystal clear to this audience. It is this: The events of the past few years have changed the attitude and changed the thinking of the American Nation regarding the desirability of Federal aid for agriculture. Never again will the farmers of this country be permitted to suffer under the weight of glutted markets and depressed prices while other branches of industry and commerce are treated with tender solicitude by those who control the country's political destinies. The old doctrine of conservative Republicanism that everyone is happy if the stock ticker is registering boom-time prices is a thing of the past.

There has been written deep into the consciousness of the American people the blunt fact that the United States simply cannot be prosperous if agriculture is neglected or depressed. It is safe to say that the farmer will never again become Uncle Sam's political orphan, and the one man above all others who is responsible for changing the national outlook in this respect is President Franklin D. Roosevelt. Through his untiring efforts it has been brought home to the manufacturing areas and the urban centers that when the farmer lacks money to buy, then the Nation is badly off indeed.

It is fashionable in some quarters to criticize and to belittle the efforts put forth by the Chief Executive to solve the problems of the country's basic industry, but I make the prediction here and now that no political party will ever dare seek to undo what he has accomplished.

The Republican spokesmen in the last campaign did a lot of talking about aiding the growers of wheat and corn, and the raisers of hogs and cattle, but it is safe to say we never would have heard such glib promises if the successful program of the Roosevelt administration had not been staring them in the face.

We are living today in a period as significant politically in the life of this Republic as the time of Jefferson or the time of Lincoln. What we are witnessing is a rebirth of genuine democracy. The program which is gradually being written into law under the persistent and determined leadership of President Roosevelt is not intended to benefit one class, one group, or one element of the population. The program consists of a well-rounded series of policies designed to correct those social and economic abuses which were choking the lifeblood of the Nation under previous do-nothing administrations.

The administration at Washington is proceeding on the theory that through the wise use of governmental powers, it is possible for a free people to secure a reasonable degree of economic security for the great mass of its citizens. This administration rejects the theory that in order to be free, the American people must allow themselves to remain at the mercy of the speculators, the exploiters, the chiselers, and the practitioners of frenzied finance. On the contrary, this administration adopts the belief that no nation is free if it permits its economic destiny to be controlled by a small and selfish minority.

The reforms undertaken by the Roosevelt administration are generally understood by this time and generally approved. If nothing else had been accomplished but the reform of the banking system, the administration would be entitled to the lasting gratitude of the American people. The conditions which existed only a few short years ago are well known to you all. Even in the so-called boom days of 1927 and 1928, banks and other financial institutions in the grain-growing States were toppling at a rate which should have alarmed the short-sighted group of men who were then in power. If I remember correctly, the rate of failures was nowhere higher than it was among the conservative, hard-working, and thrifty communities in the State of Iowa.

Fortunately for the country, the banking mess was not only cleaned up, but ways and means were provided to guard against a repetition of such intolerable conditions. The law providing for insurance of bank deposits under the Federal Government has proved a tremendous boon to every city, town, and village from the Atlantic to the Pacific, and the successful manner in which it is being administered is an outstanding example of what can be done by an efficient and honest government to promote the public welfare. It is safe to predict that no political party will ever seriously suggest repeal of the deposit insurance law.

Another great reform is the encouragement which the Federal Government is giving to the home-building industry. We have always prided ourselves on being a Nation of home owners but unfortunately, because of the depression, too many family residences were either heavily burdened with mortgage or so dilapidated as to constitute a liability to the community in which they existed. Although the Federal housing program has had comparatively little publicity, the results accomplished have more than justified the establishment of the agencies in charge. Already more than 220,000 families have been aided in purchasing their own homes in addition to the sums made available for badly needed repairs. This work is in addition to that of the Home Owners' Loan Corporation which enabled approximately 1,000,000 American families to retain their residences at a time when the depression had cut off income and put them in danger of foreclosure. The way in which the Federal Government has encouraged the construction of new family dwellings has been a major factor in the revival of the construction industry, which,

like farming, is one of the major barometers of American economic conditions.

It is not my purpose to review in detail the entire range of worthwhile enactments which have been written into the law of the land under the statesmanlike leadership of President Roosevelt. You are familiar with the heroic measures undertaken on those occasions when drought was burning its way across thousands of acres of once fertile farmlands. You know of the sympathetic efforts made by the administration at Washington to ease the hazards of the Dust Bowl area. You know about the humane relief program which kept millions of worthwhile citizens from starving when the country was caught in the grip of economic paralysis. You know about the social-security law which constitutes a landmark in the efforts of the human race to protect the aged and infirm against the cruel hardships of loss of income and dependence upon charity. You know about the establishment of the Securities and Exchange Commission which has done such a remarkable job in curbing the activities of greedy speculators and fly-by-night promoters. These accomplishments, and many others, constitute the record of the Roosevelt administration.

Taken as a well-rounded whole, it is safe to say that no administration in the history of this Republic has accomplished more for the general welfare than the administration now in power. The record achieved under the skillful leadership of President Roosevelt demonstrates not only that democracy can work in a crisis but that it has worked efficiently and well. And let me emphasize that this remarkable record was accomplished without impairing or injuring one basic fundamental right of the American people.

It has been frequently said that politics is the national pastime. There is always something new on the political horizon and eager partisans are always willing to believe that events and forces are shaping things their way. An effort is currently under way to revive the shattered remnants of the Republican Party on the plea that the prestige of the Roosevelt administration is waning. It is not my purpose to discourage those earnest partisans who see things that way because I am a firm believer in the two-party system of government. However, they must learn that the sound and the fury created by an articulate minority is seldom a good indication of public opinion. The proof of that fact was shown conclusively in last fall's election.

Permit me to say here and now that the Republican Party will never slip back into power as a result of divided counsels in Democratic ranks. The Republican Party will never regain its former position of power and influence until it formulates a program which appeals to the horse sense of the American people and then finds a leader who has the courage and ability to put that program into operation. To date, there is not a shred of evidence that the G. O. P. has taken even the first step toward that goal.

This is a big country and it needs a big leader with which to work out its destiny. The Democratic Party is in power today because it was able to give the Nation, in a time of crisis, a statesman whose political stature was equal to the tremendous duties and obligations which were thrust upon him. Despite the petty criticisms of those who dislike what he has done, the name of Franklin D. Roosevelt will stand alone when the history of this era is written. His fame will not rest upon idle words or empty promises, but on the substantial basis of worth-while accomplishments.

Dedication of Cantigny Monument, France

EXTENSION OF REMARKS

OF

HON. MORRIS SHEPPARD

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, November 23 (legislative day of Tuesday, November 16), 1937

ADDRESS BY AMBASSADOR JOSEPHUS DANIELS AT THE DEDICATION OF THE CANTIGNY MONUMENT, SOMME, FRANCE, AUGUST 9, 1937

Mr. SHEPPARD. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered on August 9, 1937, by Ambassador Josephus Daniels at the dedication of the Cantigny Monument, Somme, France.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In the history of the World War, Cantigny spells victory for American soldiers and vindication of the organization of the separate American Expeditionary Force. The victory was far more significant than a local attack in which a small piece of ground was taken. The success more than proved that General Pershing, supported by Secretary Baker and President Wilson, was right when, while respecting the views of the Allies who advised the absorption of American soldiers in their large units, afforded American officers the opportunity in the supreme test to give signal proof of their ability to handle large bodies of men. It silenced all who had questioned the superb fighting qualities of Americans who were rushed into the battle lines after brief training. Cantigny taught the Germans the error of believing that in a war of the character of the World War long practice of the goose step was essential to the making of a soldier. They had seized upon Cantigny in March 1918 as the place where they could slow up the formation of the American Army and destroy its morale. A month later the Americans captured it. In the fighting here for the possession of Cantigny, German attack was violent in the extreme. The Americans withstood the heaviest German assault and held Cantigny with a knowledge that they might report in historic words: "We have met the enemy and they are ours." As showing the intensity of the German attack, twice during the engagement the officer in command sent word to General Pershing that his troops would be compelled to withdraw; and twice General Pershing sent reinforcements with the word that it must be held no matter what the cost.

The capture of Cantigny by the First Division, which went into line in April 1918 and about a month later undertook the first offensive action by an American division, was considered a brilliant exploit, the division suffering 5,000 casualties in this area. It was particularly gratifying to the Allies, as it furnished a concrete example of the fighting qualities of the newly arrived American troops, who were by that time crossing the ocean in large numbers. As the engagement occurred 6 days after the great German offensive of May 28, when they broke through the lines at Chemin des Dames, it brought cheer and confidence in one of the dark hours.

Early in May it was decided to dislodge the Germans from Cantigny in order to reduce the difficulties of holding the front line in this vicinity. The most prominent point in the German lines facing the First Division was the high ground on which Cantigny is located. Not only did it furnish excellent positions from which the Germans could observe the American sector, but it also served as a screen for hostile actions in the rear. When the decision was reached the Twenty-eighth Infantry was selected to carry out the attack. After rehearsing the plans over similar terrain, the attack was launched. The regiment was expanded by American and French artillery, machine gun, Stokes mortar, 37 mm gun, tank, flame-throwing and engineer units, and two companies of the Eighteenth Infantry. The German reaction was immediate and violent in the extreme. Counterattack after counterattack was launched against the newly won positions during the next 2 days. Starting about noon on May 28 the American lines around Cantigny were subjected to an intense 72-hour bombardment from hostile guns of all calibers. At the end of that time the Germans were compelled to accept defeat. During the defense against the German counterattacks the two companies of the Eighteenth Infantry in reserve and one company of the Twenty-sixth Infantry entered the front line. That is in brief the story of an engagement that tested and proved the stuff of which American soldiers are made. Never afterward did the Germans doubt the effectiveness of American troops.

We have not come to this sacred place to glorify war, but to consecrate this earth to the memory of heroic men who fought to free this world from the tragedy of war. Nature and the skill of man have been proven great restorers. Few reminders of death and destruction meet the eye of the visitor. It was otherwise when I visited the battlefields in the early days of 1919 when the scarred earth and the crumbling walls told the tragic story of the destruction which is inseparable from war. It is to be regretted that the youth of tomorrow could not visualize the rents in the land and the gaping buildings, as they existed in 1919, mute reminders of the horrors of conflict, so they might swear on the altars of their country undying hostility to war.

"The sight of a battlefield," said Napoleon, "after the fight is enough to inspire princes with a love of peace and a horror of war." In like detestation of war Wellington said, "Take my word for it, if you had seen but one day of war you would pray to Almighty God that you might never see such a thing again."

It is significant of the growing passion for peace in the hearts of soldiers as well as civilians that, in his address dedicating the stately monument at Montfaucon, General Pershing, America's hero of the World War, beloved in France as in his native land, raised his influential voice against the madness of war and denounced the stupidity that would invoke arms as the arbiter of differences between nations. "The last great conflict," said General Pershing, who is high authority, "brought no profit to anyone." He declared that questions left unsettled "cannot be settled by war."

Here is a great general of our day calling upon his countrymen and mankind to evaluate the futility of war. It is well to recall what another illustrious American successful military chieftain, Gen. U. S. Grant, after a tour of the world and observing the dangers of militarism, expressed the belief that civilized men should end the arbitrament of the sword. General Grant said, "Though I have been trained as a soldier and have participated in many battles, there never was a time when in my opinion, some way could not have been found of preventing the drawing of the sword. I look forward to an epoch when a court, recognized by all nations, will settle international differences, instead of keeping large standing armies as they do in Europe."

If the men buried in this and all other cemeteries, who "poured out the red sweet wine of youth and gave up the years to be" at the call of their country could speak to us today they would cry out with the voice of command, "We gave our lives to end the tragedy of war. We charge you to keep faith with us that our sacrifice may save our unborn brothers from our fate."

It is a proud privilege to be a member of the delegation of Americans commissioned by our Government to come here at this time on the holy mission of dedicating memorials to the invincible American soldiers who won everlasting honor by their deathless courage, a courage and sacrifice they shared with their French and other comrades united in a common cause. Thirty thousand of our heroes are buried in the sweet earth of France, the lasting sepulchre of patriotic men who made the supreme sacrifice. We have come in the name of all countrymen to keep green their memory and stir emulation of their devotion. As they were laid to rest they were fairer than Adonis over whom the Goddess of Beauty wept. They closed their eyes, with the roar of shells about them, in the supreme confidence that they had given all they were and all they hoped to be to save future generations from the tragedy of war, and in the holy faith of a glorious immortality held in reserve for those who count not their lives dear unto themselves. Their country's flag was their winding sheet and its crimson stripes mingled with their generous hearts' blood as its gentle folds rested upon their breasts.

Commissioned by our country formally to set apart these memorials, these chosen for that sacred duty and privilege recognize that "we cannot dedicate—we cannot hallow this ground. The brave men, living and dead, who struggled here, have consecrated it, far above our poor power to add or detract. It is for us the living, rather to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion—that we here highly resolve that these dead shall not have died in vain."

The goal of the men who fought in France was world peace which held them courageous in battle and gave rapt vision of a warless world as their eyes closed to this earthly sphere.

Though white crosses of pure marble mark the resting place of their mortal bodies, there is a real sense in which we must never speak of our comrades and shipmates as dead. They live in our grateful remembrance. As we have stood beside the graves of 30,000 of our countrymen whose bodies are buried in France, we have, as we bowed our heads reverently in every cemetery, recalled the scene in Maeterlinck's Blue Bird, in which the grandmother in the Land of Memory tells her grandchildren that it has been months and months since she saw them, not since Hallowe'en when the church bells were ringing. The children ask how they could see her when she was dead. The answer was that we are not dead as long as we live in the hearts of those who love us.

By that test, seeing in what loving remembrance the men buried here are held, we can truly say they are not dead, because they are not forgotten.

Speaking for our President, who rendered distinguished service in 1917–18, before called to his present exalted station, the Congress of the United States which made the war declaration and furnished both inspiration to the fighting men and the sinews of war, and the hundred and thirty million Americans who were fully mobilized in the high days of 1917–18, and as one privileged to be comrade in devotion and consecration to the cause which nerved their arms, I hereby dedicate this memorial as a lasting tribute to men who won immortality in patriotic sacrifice.

Armistice Day

EXTENSION OF REMARKS

OF

HON. J. BUELL SNYDER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 23, 1937

RADIO ADDRESS DELIVERED BY HON. J. BUELL SNYDER, OF PENNSYLVANIA, AT UNIONTOWN, PA., ON NOVEMBER 11, 1937

Mr. SNYDER of Pennsylvania. Mr. Speaker, under permission to extend my remarks, I include the address I delivered on Armistice Day, 1937, over radio station WMBS, at 11 o'clock that morning, as follows:

It was in the year of Our Lord 1918, at the eleventh hour, on the eleventh day, of the eleventh month, that the buglers on the war-torn battle front in eastern France—on the Marne—in the Argonne Forest, in Flanders Field, burst forth in tones of cheer that echoed around the world and called the boys from the battlefield.

It was the hope and the prayers of all the serious people of all the civilized nations of the earth that those buglers called from the battlefield the last soldiers of the last great war. It was the belief of the masses and the serious God-loving people of all the earth that that war was the war to end all wars.

However, greed for power, greed for territory, greed for possession still rules the powers in some of the so-called civilized nations of the world, and today in some half dozen countries of the so-called civilized world we find the ruthless war lords slaying tens of thousands—yes, hundreds of thousands—of men, women, and children in order that they (the war lords) may realize their ambitions, whether these ambitions be for more power or more possessions, or both.

Happy are we, the people of the United States; fortunate are we, the people of the United States, that our lot falls to live under the Stars and Stripes, a government of the people, by the people, and for the people.

Nevertheless, my friends, we must always keep in mind that it is with nations as with individuals. Nations that forget God and ignore his commandments cannot long endure. So let it be the serious task of all the people of the United States, regardless of race, creed, or color, to earnestly support our schools, our churches, our homes, and all our governmental institutions.

It is my high honor and privilege to represent a fine and patriotic district in the lower House of the United States Congress. It is my honor to be the chairman of the Army and National Defense Committee on Appropriations, and may I say to you as long as some of the other world powers tear up treaties and peace pacts as scraps of paper, so long will I advocate and support an adequate appropriation for our national defense.

We join with the mothers of the Nation in their plea to keep our boys on our own shores, but we also join with them in the Nation maintaining a small, well-equipped Army and Navy and Air Corps. Such preparation is the cheapest insurance the Nation can carry. It is a safeguard of our liberties and our free institutions.

Tax Revision

EXTENSION OF REMARKS

OF

HON. ALBERT G. RUTHERFORD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 23, 1937

Mr. RUTHERFORD. Mr. Speaker, the financial news in last evening's papers is anything but encouraging. According to the news, stocks were off from one to six points, and steel reached its lowest in 2 years. Curtailment in steel production has continued during the past few weeks, until it has now reached its lowest since December 1934. The Roosevelt depression still continues, and it no doubt will continue until the President takes a positive stand on the question of the repeal or revision of the undistributed-surplus and capital-gains tax. For almost 5 years this administration has bedeviled business and businessmen. The New Dealers gave the country to understand that businessmen were "economic royalists," "princes of privilege," "oppressors of the poor," and "racketeers," and that the country could well get along without them. But something very strange has happened. Things have not gone along as they planned. With all their great knowledge of economics and their great knowledge of how to run business and their great skill in spending other people's money, they have been unable to make their plans work, and a real slump in business is here to such an extent that it can be ignored no longer. Now, when they do not know which way to turn, they have sent out an S O S to the businessmen of the country to come to their assistance.

Some months ago the President said that the recovery in business during his first administration was not the result of mere chance. It was planned that way. Was this depression also planned? If his plans had something to do with recovery, he and his administration having been in full control of all branches of the Government since that time, his plans and decisions must have caused this present depression. Whatever has been done to business has been done. It is water over the dam. What the businessmen of the country want now is action. They want some evidence that the President has had a change of heart and is willing to cooperate with them to pull the country out of its present condition. The best way to show the sincerity of such proposal is to start immediately in removing the "unjust

provisions" of our tax system. The Members of Congress appear ready and willing to do the trick now if the President will only say "go." The President said early in his administration that if he ever made a mistake that he would be the first to acknowledge it. It is quite evident to most people of the country that the capital-gains tax and the undistributed-surplus tax were a great mistake and have done business a tremendous injury which will require some time to recover from. The President, now knowing that he made a great mistake in advocating them and in demanding their enactment into law, should swallow his pride and suggest to Congress that it immediately revise or repeal these obnoxious taxes. His 5-point plan can wait. There is no pressing need of a farm bill or of a wage and hour bill at this special session of Congress. They can wait until January. Let Congress tackle this tax question now and give to the businessmen of the country a real Christmas present. If that is done this special session will have accomplished a real job and the people of the country will feel that we were not called back in vain.

What Kind of Dollars?

EXTENSION OF REMARKS

OF

HON. H. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 23, 1937

Mr. VOORHIS. Mr. Speaker, as time goes on we all become more and more aware of the importance of monetary practices in the social economy. From acquaintance with automobiles and other mechanisms we understand how a defect in some small part may make the entire apparatus of no use until it is corrected. And we begin to credit the assertion that at least one of the defects from which spring unbalance, unemployment, and war, is a monetary defect. There are none of us who can afford to lose an opportunity to study this question, and I know few men who have dealt with it more fundamentally or in more scholarly fashion than has Mr. Thorwald Siegfried, of Los Angeles. On pages 2326–2328 of the Appendix of the CONGRESSIONAL RECORD, Seventy-fifth Congress, first session, I inserted the text of an analysis of the monetary problem by Mr. Siegfried which he had sent to all Members of both Houses in 1935, and again in 1937. He summarized the issues in a covering statement that read:

> The main question about money is: For what shall banks allow their customers to issue checks on credit? For costs (pay rolls, production), or for prices (including mark-up, expectations, and speculation), as in 1904–29?

Before that, in 1931–32 Mr. Siegfried supplied to many Members of both Houses, and to the two Banking and Currency Committees, copies of a book still to be found in various book-shelves in the Capitol, entitled "The Siegfried Plan for an Honest Exchange of Values by the Issue of a Sound Money." He has referred to it as "a plan to end planning," for the elements of control on which he relies are internal, rather than external, scientific rather than human, mathematical rather than political, mechanical rather than moral.

I hope that Members will consult anew Mr. Siegfried's analysis, both in the text in the Appendix of the RECORD, and in the book just mentioned. In view of the admitted importance of the problem of farmer income, I wish to direct particular attention to "Appendix A" in the book (pp. 114, 115, 116, and 117) entitled "What Ruins the Farmer?" It is a reprint of a 4-page leaflet sent to all Members of Congress by Mr. Siegfried in 1926, then entitled "The Farmers' Dollars." It exposes the monetary method by which farmers in particular, and other producers in general, are short-changed, and by which vast quantities of goods are left without capable buyers. The text of this leaflet is as follows:

THE FARMERS' DOLLARS

(By Thorwald Siegfried, Los Angeles, Calif., 1926)

Consider the dollar of the farmer—and its purchasing power.

The farmer is producing goods in which the human-labor content is high, and in which that content cannot be reduced, by better machinery and power, as rapidly as in factory-made goods from cities.

And that is what is the matter with the farmers' dollars.

Our Federal Reserve note currency has value because it represents the goods which human work produced, but the human-labor content of the money is the same as that of the goods is represents. This content varies with each commodity, and therefore varies in the currency representing various commodities, however much alike the bank bills may look.

Accordingly, although we have a uniform currency its effects are diverse.

When farmers had little, if any, money—raised their meat, victuals, wool, and timber—their days were their dollars, and no others bought more of comfort and independence. If there was hardship, it was a general hardship, and it bore more severely on the city worker because of his uncertain means of acquiring farm products.

The situation is reversed now, and it is beyond remedy by better farm machinery, better land or bigger crops; the farmers' greatest foe is often a bumper crop, smashing prices.

One change in the situation which is not a cause of the difficulty but which does determine where the remedy must be applied, is the change from general to specialized farming. The farmer raises corn only, and exchanges money for even his corn meal. He raises sugar beets and buys sugar. He raises what he does not use, and exchanges that for his necessities. There are minor exceptions, of course.

Why should the exchange, through the medium of money, make the formerly independent farmer the slave of the city worker?

Consider how far the human-labor content of farm products differs from that of city-made factory products.

How much more can a farmer raise because of better machinery and power? Fivefold? Tenfold? Fiftyfold? A hundredfold? We grant you all that and more. But how far has the city worker's product been multiplied by better machinery and power? Five thousandfold, a hundred thousandfold, and more, and ever more.

The Ford plant (in 1926) turns out a complete car for every 10 men employed 1 day. Write off the raw materials in the car against the farmer's land and seed; balance automobile-plant equipment against cultivating and harvesting machinery employed; and you come to the naked problem of balance between the farmer's indispensable labor and the city worker's labor, partly indispensable and partly wasteful.

Pricing the automobiles at $400 each and the corn at $1 a bushel, the automobile workers (or their employers) can buy corn at the rate of 40 bushels per day apiece, while each farm worker (or his boss) assuredly cannot buy an automobile or its equivalent each 10 days.

It is impossible, in the nature of things, that machinery can ever speed up the production of farm goods in the same degree that it has already speeded up factory production.

Apportioning the weight of a 150-pound worker among the products of his day's work, the articles that come from factories contain, as it were, each but 1 ounce of the human being that watched a machine make them; while farm products, exchanged on the basis of piece for piece of factory goods, contain, say, 20, or 50, or 70 pounds of the farmer.

Consider two shipments of equal monetary value—one of farm products going to the city; the other of automobiles, or clothes, or fence wire, or radios, or other factory goods going to the farms. Both shipments are transferred in ownership through banks, by bills of lading representing the goods, accompanied by drafts on the consignees for the sale price of the goods. Assume that both sets of drafts are drawn for 90 days, cashed by local banks when accepted by the consignees, and discounted at the Federal Reserve bank. Then the corn, in the one case, and the automobiles, in the other, are each represented by Federal Reserve notes, circulating as money and indistinguishable from one another.

It may be that the shipper of the corn will use some of his Federal Reserve notes to buy an automobile out of the shipment financed along with his own. In doing so he may be trading on the basis of exchanging 50 pounds of himself for 2.7 ounces of some turret-lathe operator without knowing it. And the same is true however far separated in time or place are the origins of the exchanges merged in the form of currency.

Currency has value because it represents the fruits of labor. The relative amount of labor stored up in the currency is the same as in the goods which the currency represents. This is not constant or uniform, even in an apparently uniform currency.

As various quantities of labor are required to produce various commodities, as commodities underlie the currency, and as the labor content of factory goods decreases, through better machinery, faster than that of farm goods, it must follow that the farm dollar will buy less city goods than the city dollar will buy of farm goods.

The situation may be likened to two line shafts in a factory. On one is a small pulley wheel, on the other a large one. If we join them by a belt which, like the currency, is uniform and strong, the smaller one must revolve faster than the big one; and if we increase the economic size of the big one faster than that of the small one, the speed of the smaller must constantly increase unless the belt slips.

No farmer needs to be told that the smaller pulley represents him.

Thanksgiving

EXTENSION OF REMARKS

OF

HON. THEODORE F. GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, November 23 (legislative day of Tuesday, November 16), 1937

ARTICLE BY GEORGE E. SOKOLSKY

Mr. GREEN. Mr. President, I ask permission to have printed in the Appendix of the RECORD an interesting article entitled "Thanksgiving," written by George E. Sokolsky and published in the Washington Star of November 21, 1937.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Star of November 21, 1937]

THANKSGIVING

(By George E. Sokolsky)

What have we to be thankful for?

Rich and poor, young and old, we who live in this land should answer this question honestly and loyally; we who have so much to be thankful for, more than any other people on the face of the earth.

First of all, we should be thankful that we live in a land of liberty. Slowly the wheels of reaction are grinding away nearly everywhere the hard-won human liberties for which men fought and died during 10 centuries of history. In most of Europe, in all of Asia, liberty has already disappeared and man has been thrown back into medieval slavery—political and economic and social slavery. But we remain free. For that we are thankful.

Secondly, we are at peace with all the world. In Europe, it is nip and tuck whether there will be a war or not. All the agencies of peace have failed, and each country is impoverishing itself and its citizens in a vast armament race.

In Asia, China and Japan are already at war, and thousands have already lost their lives. And it is feared that when the ground is frozen in Siberia and Manchuria this winter, Russia may join in this horrible holocaust. But we are at peace with all the world. For that we are thankful.

Thirdly, we have not been visited by revolution—that childish, futile method of trying to remake the world overnight. We have witnessed the spectacle of brother slaughtering brother in Spain for no good cause. We see in Poland, Rumania, north China, and many other countries, innocent men and women suffering the terrors of present or prospective civil war and revolution. We do not solve our problems that way. No matter how we differ, we adhere to the ballot as a sounder weapon than the machine gun or poison gas. And for that we are thankful.

Fourthly, we have come through a great economic catastrophe with less suffering than might have been anticipated. Somehow, we have found a way to increased production and increased work and better pay. Somehow we are again becoming a prosperous and cheerful people. For that we are thankful.

Fifthly, we are passing through a period in our national history when there are great and emphatic differences of opinion. Men no longer are willing to abide by traditional conceptions of government which not so long ago no one even questioned. Yet, in all this quarrel over form and procedure, our Constitution survives, democratic institutions remain intact, and our flag flies over a land of freedom. For that we are thankful.

Only those who never loved this land can see its future through gloomy spectacles. Much that happens here—our increase in crime, for instance, or our increase in labor strife—is discouraging. But when one stands as on a mountain top, and looks down upon all the world, this still remains the most comfortable, the most pleasant land in which a man and his family can live.

It is no Utopia. Its imperfections are glaringly real. But there is no better.

And yet, knowing our imperfections, we do not rest content that with us life is more free, more comfortable than with other men. We envisage a life better and nobler, a life of decreased physical and spiritual pain, a life in which justice will triumph over greed and in which the spirit of God will free all men from the poisons of vicious and vacuous living. For that vision, O Lord, we are thankful.

A Radio Address in Oklahoma

EXTENSION OF REMARKS

OF

HON. WILL ROGERS

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 23, 1937

SPEECH OF HON. WILL ROGERS, OF OKLAHOMA, DELIVERED THROUGH THE FACILITIES OF RADIO STATION KTOK, OKLAHOMA CITY, AND SEVEN OTHER MEMBER STATIONS OF THE OKLAHOMA NETWORK, NOVEMBER 4, 1937

Mr. ROGERS of Oklahoma. Mr. Speaker. Under leave granted me for extension of remarks, I wish to present the text of an address I recently made through the facilities of radio station KTOK, Oklahoma City, and seven member stations of the Oklahoma network. The other member stations which carried my address are: KGFF, Shawnee; KADA, Ada; KVSO, Ardmore; KBIX, Muskogee; KCRC, Enid; WBBZ, Ponca City; and KASA, Elk City. I also desire to include the introductory remarks of the station announcer and my Secretary.

Announcer CUNNINGHAM for radio station KTOK. The Oklahoma network presents to you this evening an outstanding man of public affairs in Oklahoma in the person of Congressman WILL ROGERS. And now at the microphone comes Secretary William Howard Payne who will introduce the speaker of the evening:

Mr. PAYNE. Congressman WILL ROGERS received a letter in the mail the other day which read in part as follows: "If you were an older man or a professional politician I would not be writing to you. We are facing conditions entirely new and which cannot be remedied by the application of old methods. Congressman ROGERS, you are still comparatively young and I have high hopes for you. I believe you would go just as far forward as you thought your constituents wanted you to go, once you learned their views." From the implications of these remarks Congressman ROGERS has drawn much inspiration for his address to you this evening.

Congressman ROGERS is 38 years of age. He is serving his third term and is now in his fifth year as Oklahoma's Congressman at Large. In a moment before his address begins let us consider some of his outstanding achievements and let us talk of some of the little-known factors that have made Congressman ROGERS, as most of us agree, a successful Representative in the Congress. He is young and energetic, old enough to be seasoned and level-headed and young enough to give him the vitality to carry out his ideals and the desires of the people.

Those who write to Congressman ROGERS for the first time, requesting special service for their State, their community, or for themselves, are usually agreeably surprised to learn that he performs those duties with speed and efficiency. The Congressman at Large has the enviable reputation of being able to do the job and do it quickly.

Congressman ROGERS spent the first 15 years of his life on a farm in western Oklahoma. He attended his first school in the rural sections of Washita County. He taught his first school at age 18. He attended college at Southwestern, Central, and the University of Oklahoma. He earned three college degrees. He made a special study of government and utilized his spare moments in winning contests of debating and oratory. This background has served him well in Congress.

WILL ROGERS spent the second 15 years of his life as a teacher and as a superintendent in various Oklahoma public-school systems. When he was criticized during his first campaign for Congressman at Large apparently the worst argument that could be brought to bear against him was that he was only a "country school teacher." Apparently, the people of Oklahoma have greater confidence in this former "country school teacher" than they did in the fulminations of some of our big-town newspapers.

Let us see what this "country school teacher" has done since he has been in Congress. He must be doing something, or the people of Oklahoma would not continue to return him to office with ever-increasing record-breaking majorities.

Congressman WILL ROGERS is the chairman of the House Indian Committee. Oklahoma has a population of 130,000 Indians. The House Indian Committee meets every Wednesday to discuss pending legislation. Congressman ROGERS is always there helping, studying, and planning for the common welfare of our Indians. He is the House author of the Oklahoma Indian Welfare Act which is bringing several million dollars to Oklahoma for the benefit of the Indian.

Congressman ROGERS has had a hand in all of the New Deal measures which have helped to return a measure of prosperity and well-being to this country. He has been a vigorous champion of progressive farm legislation, old-age security, unemployment insurance, Federal aid to education, and other broad programs made effective by the New Deal Congress. In this respect, a re-

cent issue of a national magazine listed Congressman WILL ROGERS as being 100 percent for the common welfare of the people. This conclusion was reached only after it had made an exhaustive survey and found that Congressman ROGERS worked and voted only for those bills in Congress which were beneficial to the common welfare. Ladies and gentlemen, I present to you now the only native Oklahoman who has served this State in Congress, the Honorable WILL ROGERS, our Congressman at Large.

RADIO ADDRESS OF THE HONORABLE WILL ROGERS

Mr. ROGERS. Good evening, my fellow Oklahomans. This is your Congressman at Large, WILL ROGERS, addressing you over the Oklahoma network. I am speaking to you from the studios of KTOK, the key station of the Oklahoma network. As you know, Joseph W. Lee is the manager of this station. I want to thank him for the opportunity to address you this evening.

As you were told by Mr. Payne, I am serving my third term as your Congressman at Large. It has been a pleasure to cooperate with the people of Oklahoma for our mutual good. You, my constituents, have been good to me, and I want to repay you in services. I want especially to invite you people of the Fifth Congressional District to bring your problems to me. We all mourn the passing of your Congressman, my colleague, the Honorable R. P. Hill. Until his position has been filled, it will be my purpose to make a special effort to be of service to the people of the Fifth Congressional District.

When this broadcast was arranged, many of my friends were anxious to know the subject I would discuss in my remarks to you this evening. We are all familiar with what has been done during the past few years to relieve this country of the greatest depression known in the history of mankind. Every citizen who has had a part in that great fight is to be commended. We know what has been done, we know what is being done now, and we are vitally interested in what is to be done in the immediate future. I have therefore decided to ask this simple question—What now? I want it distinctly understood that I am not attempting to make an accurate prophecy as to what may be experienced during the next few months. We can, however, by reviewing some of the past events, by examining present activities, and by looking into the future, determine some of the things which can be expected. Friends, a depression can be overcome only by making war upon the causes which have created the economic conditions. There are economic wars, religious wars, labor wars, and political wars. With evidence of such impending struggles, I want to ask you—What now?

We know war at its worst when one nation launches the flower of its manpower and the strength of its resources against another nation where competition is keen and devastation is rampant; where by the use of destructive gases, scientific ordnance of war, fast airplanes, and dreadnaughts of the seas, vicious-minded, power-drunk men make dictators of themselves and human life becomes worthless. We have been reading lately about an undeclared war in China. Japan's bloody onslaughts into China could not be more horrible nor more gruesome were that nation to declare an official state of war. Both nations are energetically engaged in the orthodox activity of terrible warfare. War hysteria is running high. Liberty-loan drives are under way in both nations. Sniping soldiers tear at each other's throats like hungry wolves. China, however, is defending itself nobly in this undeclared war. What formerly appeared to be an invincible militarized Japan now appears to be an overconfident and an overzealous Japan. We reach this conclusion when we read of the terrible losses inflicted on the ranks of the Japanese Army. We arrive at this conclusion when we find that Japan is not only unable to march onward but that she is actually losing ground along several fronts.

Turning now for a moment to the affairs of our own State in which we are all interested, we conclude by the events of the past several weeks that there is an undeclared war in Oklahoma; an undeclared political war. We know political wars at their worst when men zealous of their exalted positions and crazed with personal ambition turn their every resource and direct their maximum energy toward the destruction and annihilation of any man or any movement that might show a popularity with a people and an adaptation to the times transcending theirs. We have witnessed in Oklahoma during the past few weeks the follies of men who are mad. We have seen statecraft diverted and detoured in this undeclared political war. We have seen statesmanship bow to political expediency and impudent demagogery. We have seen men rush homeward for the first time in many years to embrace the citizenship of Oklahoma, vow undying love and profess passionate devotion. We have heard men proclaim great personal achievement in what we had previously accepted as the high accomplishments of President Roosevelt and his New Deal administration. We have heard rumors of private "liberty loan" drives in the form of campaign chests for the hungry maws of the coming political warfare. We have heard threats of vast fortunes to be raised by tapping incomes of those who administer for our welfare, and we have been told that those fortunes will be expended to create sympathy and momentum which is planned to carry its protégés to great heights of personal and political victory.

But while this thing is under way, what of Mr. Average Citizen of Oklahoma? Well, if these rumors and threats hold true and if "coming events cast their shadows," we can all look forward to a great and prosperous Oklahoma during the next few months. Apparently there will be plenty of money in circulation. Money in circulation should move the wheels of our State commerce. Many weeds can be cut between now and next summer. Much grass can grow under the feet of those who would dwell at length in one place to pontificate lordly of their importance and to reassure us of the grandeur of their dignity. Of course, you and I understand human nature sufficiently to know that the only way we can gain entree to some of our public officials is to tell them forthwith what great statesmen they are. In order to talk with them we must admit that they are the very greatest of their kind. We must assure them that the States would have harvested insufferable losses should the voters have elected any other. We must caress them with honeyed compliments and insist that the people of Oklahoma could never dismantle them from their "impregnable" positions. But when we go home to Mary and our firesides, when we rejoin our little circle of friends, we wink knowingly and wonder how many millionaires are made through the sale of the virus of egotism and egoism. We wonder, if these great, important "self-sacrificing" servants of ours are not, like the Japanese, losing ground in this current undeclared political war. We wonder if it is not true that overconfidence begets complacency. With this undeclared struggle facing the people of Oklahoma I inquire of you, my friends—what now?

But let us turn now to our problems that are real. I have been in Oklahoma since the adjournment of the last session of Congress. It has been a pleasure to visit with you in every section of our State. I have talked with groups of people who represent almost every element in Oklahoma. I have sought and have been given the benefit of your views and suggestions. It is obvious that any man desiring to sincerely represent you in the Congress or in any public capacity must have first-hand knowledge of the problems confronting his constituency. In my capacity as your Congressman at Large I must know first hand conditions as they exist in the whole State. I can obtain this knowledge only by calling on you, by talking with you, and by reading your personal letters. I have enjoyed the happy experience of coming home and mingling and "rubbing elbows," renewing old acquaintances, and making new friends. Since my return to Oklahoma, immediately following the close of the session of Congress last August, I have been encouraged in noting a new cheerfulness, a glorious hopefulness, and an abiding sincerity in the things that the national administration is seeking to accomplish. Activity in every community denotes progress and economic uplift. More of our people are employed now than at any time since the depression began. More of our people are receiving steady incomes, more are enjoying vacation opportunities, and more are building and becoming interested in building homes.

Almost every town and city in the State has its own building program. Newer and better homes are apparent everywhere. Likewise, the rural sections show improvement. Rural electrification in our own Oklahoma is becoming more widespread as the days go by. Yet, with all this advancement and with all this encouragement, we know that there still remains much to be achieved. There will always be opportunities for improvement. Our country is inevitably and eternally engaged in social unrest and economic readjustment. A friend living at Shawnee wrote me a few days ago saying: "Under our present economy half of our people get a living without work while the other half works without getting a living." He cited his reasons for our difficulties. He wrote further: "Workers are not paid enough in wages to buy back what they produce." That is the obvious condition confronting our country today. Our national life is so complex that some phase of our system or some element of our population is continually facing a crisis. Today in Oklahoma we have the cotton crisis. Tomorrow it might be wheat, livestock, oil, or coal mining. Over the entire Nation people are watching developments on the labor front. We know that neither the A. F. of L. leadership nor the C. I. O. leadership is responsible for the social unrest. That leadership is merely an expression of unrest which already exists. Farm prices are not steady. Cotton has become almost worthless. Our farmers have become panicky. Something must be done. What now? Congress must convene. An effort must be made to stop our labor troubles. We must do something for Agriculture. We must continue our war against the depression.

When President Roosevelt issued his call for a special session of Congress to meet November 15, 1937, he proposed an agricultural program. He said, "We intend this winter to find a way to prevent 4½-cent cotton, 9-cent corn, and 30-cent wheat—with all the disaster these prices mean for all of us—from ever coming back again. To do that the farmers themselves want to cooperate to build an all-weather farm program so that in the long run prices will be more stable."

The farming industry is the backbone of America. Permanent prosperity will never come until our farmers receive a fair price for the commodities they produce. You and I know that, regardless of the method used, any program to be successful must guarantee our farmers cost of production plus a reasonable profit on all farm commodities produced. In my opinion, this can best be accomplished by guaranteeing prices for farm commodities consumed at home. There are some who advocate control of production as a means to insure adequate prices for farm commodities. A program of this kind might prove successful under normal conditions, but I fear that a scarcity program might produce disastrous results when a flood, a drought, or any other pestilence destroys crops in various sections of our country. A scarcity program is based upon the assumption that there is now, or might be in the future, too much food, too much clothing, and too much of other necessities of life. If too much might exist at one time, too little might exist at another. Low prices do not prove that we have too much food, too much clothing, and too much of other necessities of life as long as men, women, and little children are

hungry, as long as they need clothing, and as long as they do not have a roof over their heads.

This Government is great enough and is strong enough to provide a program which will take care of surplus production and lay in store for the lean years. In addition to guaranteeing cost of production for farm products we should inaugurate a program which would make possible as one Oklahoman said, "a farm for every farmer." Fair prices for farm products will help make this possible. Low rates of interest on long-time loans would enable farmers to repossess farms lost during the past few years. With fair prices for farm products and Government loans at low rates of interest, tenant farmers could soon buy their own farms. It is my hope that in the special session of Congress we can enact legislation which will make it possible for every farmer to own his own farm. In no other way will we insure a permanent and lasting prosperity for the American people.

President Roosevelt said in his fireside chat dealing with his proclamation for an extra session of Congress, "I recommended to the last session of Congress the creation of seven planning regions, in which local people will originate and coordinate recommendations as to work of this kind to be done in their particular regions. The Congress will, of course, determine the projects to be selected within the Budget limits." A recent issue of a prominent national magazine places the remarks of the President which I have just read to you under the heading of "Little Tennessee Valley Authorities; Little T. V. A.'s." The Grand River dam project is a reminder to us in Oklahoma of the President's intentions and actions. All of us in Oklahoma have at some time or another witnessed the devastating effects of floods. We have seen our rivers overflow into oceans of relentless, uncontrollable force eating at the very heart of our fertile river-bottom farms. We have seen fields laid waste from the cutting of heavy rains.

The Louisiana Delta is built from soil from the fields of Oklahoma. Experts have proven that much of our topsoil has been carried down the Mississippi. Chemical tests prove that portions of the Louisiana Delta soil properties are identical to that in the fields of Oklahoma. We are all in favor of flood and erosion control. The Roosevelt administration, with the help of Congress, has carried forward a conservation program incomparable in its wholesome effect to that of any other national administration. We need more flood-control projects in Oklahoma. We insist on greater activity in the field of soil conservation. Erosion experts estimate that 3,000,000,000 tons of topsoil are washed into the oceans every year. The Soil Conservation Service in Washington recently announced that more than 100,000,000 acres of tillable land have been ruined. It is said that more than that amount has lost most of the fertility of its topsoil. A similar number of acres are alarmingly depleted. We have our share of this problem here in Oklahoma and more. We also have a serious problem in wind erosion. No man can estimate the damage and ravages of dust storms. Our living comes from the soil. We must use every resource at our command to preserve it. This does not mean, however, that we can afford to throw vast sums of our money into a multiplicity of propositions heretofore deemed economically unfeasible by private enterprise. We need flood-control measures in the Great Salt Plains area. We need flood control and soil-conservation measures at Optima and Fort Supply. We need to give greater attention to irrigation proposals in the arid sections of southwestern Oklahoma. We need a program for the impounding of waters in the Jackson County area. We must think seriously of the flood problems in the Red River Valley. We must denounce those who suggest that the great projects at Murray Lake remain uncompleted. We can and must move forward with President Roosevelt in a great development program for the State of Oklahoma.

Let us turn now to another proposal. In his recent special-session proclamation, the President said, "To carry out any twentieth-century program we must give the executive branch of the Government twentieth-century machinery to work with. For many years we have all known that the executive and administrative departments are a higgledy-piggledy patchwork of duplicate responsibilities and overlapping powers." At some time or another, in fact, almost each time we have specific dealings with the Federal Government, we become discouraged and disheartened over the so-called Government "red tape." Thousands of our cotton farmers, our wheat growers, and our hog raisers who have had contracts with the Government and who have had to wait month after month before receiving pay under the terms of their contracts know what is meant by Government "red tape." Thousands of our businessmen who have sold materials to the Government and who have unpaid accounts against the Government know what is meant by duplicating Federal bureaus. Countless citizens of Oklahoma who have claims against the Government know what we mean by bureaucratic dictatorship and overlapping powers. Yes, we are living in the twentieth century but we still have the slow processes of our executive departments which had their origination in the "horse and buggy" days. We do need twentieth-century machinery in our Federal Government. If private enterprise failed to adopt modern methods, business would soon be bankrupt. If private citizens of our country lived in halcyon "horse and buggy" days and governed themselves today by the methods of that half-forgotten era, they would find themselves swept aside and exploited by their more progressive neighbors. They would find that they were back numbers, unable to derive even the average good from their environment.

What I have been picturing to you for the individual has already happened to the Federal Government. How can we expect half-forgotten eighteenth-century methods to obtain the full measure of benefit for our twentieth century people? In advocating Federal departmental reorganization, I want it clearly understood that we do not propose to overthrow the Constitution of the United States. Farmers, businessmen, laborers, all of us who have had dealings with the Federal bureaucratic system know that we can make these progressive changes under the Constitution. We know that the framers of the Constitution did not anticipate the maze and multiplicity of present-day bureaus. There are approximately 100 of these bureaus, each a virtual dynasty, each independent and each absolute in its decisions, its policies, and its functions. In each of these bureaus there have grown up cliques and clans of employees reaching dictatorial proportions. These clannish departmental "royalists" can do anything they want to do. They juggle regulations, propose new ones, and circumvent the laws of the land. If an act of Congress does not please them, they find the means with which to except themselves from its provisions and its limitations. These vast, powerful, and entrenched Departments are increasingly and alarmingly assuming legislative functions and law-making responsibilities. A Congressman may introduce a bill, but if that bill does not have the approval of the Department which it affects, it has little more than a "Chinaman's chance" of becoming a law. These powerful bureaus have exceeded the functions for which they were created and are overreaching themselves to the point of recommending to the Congress whether it should or should not enact pending legislation. The President has asked Congress to pass an Executive reorganization bill. I believe that the people of Oklahoma will uphold President Roosevelt in his efforts to set up twentieth-century machinery in the Federal Departments. I am willing and ready to support his plans for abolishing the "red tape," buck passing, dictatorial, clannish operations of the Federal agencies. I am anxious to give President Roosevelt authority to abolish, consolidate, revamp various Federal agencies and reorganize the Government on a more efficient basis.

President Roosevelt discussed wage and hour legislation in his recent fireside chat. This subject will undoubtedly confront the special session of Congress which will convene on November 15. I quote an excerpt from the President's remarks on this subject:

"A few more dollars a week in wages, a better distribution of jobs with a shorter working day will almost overnight make millions of our lowest-paid workers actual buyers of billions of dollars of industrial and farm products. That increased volume of sales ought to lessen other costs of production so much that even a considerable increase in labor costs can be absorbed without imposing higher prices on the consumer."

Let us consider the labor situation for a moment. The Bureau of Labor Statistics advises it costs $10,000 to rear and equip a laborer for his life's work. This sum is the estimated expense to the Government, its political subdivisions, and the laborer's family. That laborer is equivalent to a $10,000 piece of machinery. He is, in fact, human machinery. Who is there who would say that an employer should not take more interest in the $10,000 human machine than he does in his $10,000 mechanical machine? However, when we ask this question we are faced with the fact that our present labor difficulties result from a situation where the employer thinks more of property values than he does of human values. The current labor conflict in our country today is not a new situation. It represents a stupendous struggle for democracy on the part of the masses. We have had this same battle for democracy in religion, politics, education, and relation of the sexes. We have fought wars with other nations and with our own people over our ideals of democracy. It is gratifying to look back over the events of the past and learn that our people have always won their fights for democracy. It is highly significant that the leaders of these democratic movements have always been labeled as dangerous radicals. Big businessmen, monopolistic industrialists have not gone far out of their way to be fair and honest in their dealings with employees. For many years they have had the upper hand. They have exploited the laborer and the consumer as far as possible. They have been interested in profits, huge profits. These fabulous profits could not be made without a system of low wages and long hours for the laborer and exorbitant prices to the consumer.

Social well-being has not been considered. Big business went too far. The laborer and the consumer could suffer their methods and practices only so long. Labor is striking back. It is gaining major objectives. Industrialism is on the defensive. There have been many occasions where both have gone too far. There have been instances of bloodshed and murder when striker and strike-breaker clashed. This expresison of social unrest is one of which we are not so proud. Until confidence is reborn there is no authority except the Federal Government that is great enough and powerful enough to cope with the labor crisis. The Congress must enact laws to encourage cooperation between employer and employee. It must create a Federal program to instill confidence. It must suggest that both labor and industry be big enough to admit their mistakes when they are wrong. Mistakes have been made by both. Congress must pave the way for a new social and economic justice. Real leadership must be established for labor and industry so that their differences can be harmonized.

You have been listening to me for the last half hour. Before I can benefit from your reactions I will have returned to Washington to participate in the problems confronting the special session of Congress. It is necessary, yea, it is imperative, that I have an answer to the question I have propounded—What now? We must refrain from engaging in international war, we must

continue the war against depression, we must settle our labor wars, we must make it impossible for our people to engage in wars of intolerance, we must make war on conditions which impede agricultural progress, we must make war on both private and public bad business, and we must face the undeclared political war in Oklahoma. Of this undeclared political war in our State you will hear much more in the near future. The battle is raging. "We won't give up the ship." "We'll fight it out on this line if it takes all summer." I am your servant. It is yours to command.

The Fair Labor Standards Bill

EXTENSION OF REMARKS
OF
HON. CLAUDE A. FULLER
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 23, 1937

LETTER FROM WILLIAM GREEN, PRESIDENT OF THE AMERICAN FEDERATION OF LABOR

Mr. FULLER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following letter written by William Green, president of the American Federation of Labor, to the chairman of the Committee on Labor of the House:

AMERICAN FEDERATION OF LABOR,
Washington, D. C., November 22, 1937.

Hon. MARY T. NORTON,
Chairman, Committee on Labor,
House of Representatives, Washington, D. C.

DEAR MRS. NORTON: You have asked me to state the present attitude of the American Federation of Labor toward the fair labor standards bill (S. 2475), as amended by the House Committee on Labor and now pending before the House Rules Committee.

Your inquiry is also bound up with the present attitude of the American Federation of Labor toward the petition now pending in the House for required signatures to discharge the House Rules Committee so as to bring the fair labor standards bill on the floor of the House for action.

The position of the American Federation of Labor on these inquiries is:

I

The American Federation of Labor "is in accord with the purpose of establishing a point below which wages could not be paid and hours of labor beyond which wage earners could not be employed." This quotation is from the declaration of the last convention of the American Federation of Labor on wages and hours legislation.

On August 9, 1937, the American Federation of Labor stated as its position on the fair labor standards bill, as approved by the House Labor Committee, that the bill "was reasonably acceptable and fairly satisfactory to labor." This position must now be qualified to give effect to two new factors not then existent: (a) the recent experience since that date of labor, of governmental agencies, and of the public in the administration of the National Labor Relations Act, and (b) the serious and adverse changes in the economic and industrial life of labor and of the Nation, to which the President of the United States directed attention of the Congress in his special message of November 15, 1937.

With trial and error as teacher, the Department of Labor, many Members of Congress, and the public generally have come to agree with labor that the administration of the National Labor Relations Act or other labor legislation by the National Labor Relations Board or similar independent governmental agencies is fatally defective. In the light of recent experiences, every effort should be made to protect the purposes of the fair labor standards bill from being thwarted by an administrative board of this kind.

It is now apparent that such administration by the National Labor Relations Board has repudiated generally accepted concepts and disrupted tried and tested principles of collective bargaining between capital and labor. It has impaired and destroyed rights of contract and of property upon which labor has hitherto predicated its very existence and continued progress. Such administration has brought turmoil into industrial relations, has usurped the prerogatives of the courts essential to the preservation of our democratic form of government, and has jeopardized industrial freedom and initiative—all contrary to the clear intent of the Congress to create unrestricted opportunities for labor to organize, to strengthen bargaining agencies, to promote their practices, and to foster the objective of a more harmonious and stabilized relationship between labor and capital as part of the national policy for the general good.

It is therefore generally recognized, and the American Federation of Labor insists, that it is no longer safe to permit a Government board of that kind to make the many determinations necessary in the administration of the fair labor standards bill as now written; whether, for instance, collective bargaining is effective in a particular industry, or whether collective-bargaining machinery is adequate in a particular case when predicated upon open, voluntary, and harmonious cooperation between employers and independent collective-bargaining agencies; to determine the proper units for classification of labor generally recognized as craft labor for purposes of collective bargaining; or to make the other numerous determinations permitted under the fair labor standards bill upon the precedents established by the National Labor Relations Board on the basis of interpretations of corresponding language in the National Labor Relations Act.

To prevent a repetition of the confusion resulting from the Nation's experience under the National Labor Relations Act, many suggestions have been offered for changes in the wage and hour bill. The Department of Labor is now suggesting that the administrative machinery under the fair labor standards bill be radically changed from that which it approved at the last session of the Congress, as embodied in the present draft. It now suggests that the administration of the proposed act be taken away from the proposed governmental board. Instead, it proposes that it be placed in the hands of a single administrator, who would be bound by the recommendation of committees composed of representatives of capital, labor, and the public.

Former proponents of the bill in the Senate and Members in the House have suggested that the act should establish specified minimum wages and maximum hours with enforcement thereof by the Department of Justice or by the Federal Trade Commission.

The American Federation of Labor can no longer endorse the draft of the fair labor standards bill now before the Rules Committee. It will not do so until the same has been revised, whether through the above-suggested amendments or methods, or through others to be submitted by the American Federation of Labor, to preserve it beyond doubt and without possibility of distortion as the constructive force contemplated by the President's message of May 24, 1937, pursuant to which enactment is contemplated.

Elaboration need not be made of the serious recession of business since the President's message of May 24, 1937, and the formulation of the fair labor standards bill now being considered. For labor this recession already has assumed the proportions of a serious depression. Unless prompt cooperative action is taken by the Congress we are threatened with a duplication of the distress of the depression years following the collapse of 1929. The fair labor standards bill, as drafted, was not intended to and does not give effect to possible remedial steps to cope with the unemployment problem now upon us in aggravated form as a result of the present recession in business, and which it was assumed had been substantially met under the industrial improvement which took place during the spring and summer of 1937. For this special reason, the American Federation of Labor believes that the fair labor standards bill should be amended by incorporation of provisions therein for a shorter workday and a shorter workweek.

II

Whether the petition now pending before the House for discharge of the Rules Committee to bring the fair labor standards bill before the House should be acted upon, and how, is a matter of procedure for each Member to determine as he sees fit.

The American Federation of Labor feels, however, that the character of the changes to the present draft of the fair labor standards bill now before the House Rules Committee is such that proper consideration thereof can only be had before the House Labor Committee, where it was originally considered, rather than on the floor of the House. It feels, therefore, that the draft should be referred back to that committee for amendments or that a new bill be substituted. But whatever the procedure followed, and whatever is done, the present position of the American Federation of Labor with respect to the present draft and its future course of action remains as stated above.

Very truly yours,

WILLIAM GREEN,
President, American Federation of Labor.

The Job Ahead in Flood Control

EXTENSION OF REMARKS
OF
HON. WILL M. WHITTINGTON
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 23, 1937

ADDRESS OF HON. WILL M. WHITTINGTON, OF MISSISSIPPI, AT ST. LOUIS, MO., ON NOVEMBER 22, 1937

Mr. WHITTINGTON. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD, I include

the following address which I delivered on Monday, November 22, 1937, at the Nineteenth Annual Convention of the Mississippi Valley Association, St. Louis, Mo., to wit:

There is a charm about rivers; there is a fascination about lakes; there is an attraction about harbors. Lands appeal to me. Men, waters, and lands must dwell together.

Public attention has been focused upon flood control as a national issue by the disastrous floods of recent years. It is asserted that the floods of great rivers have increased in frequency, duration, and magnitude as a result of the activities of man. I know of no statistics to support this erroneous assertion. The processes of nature do not change. Snows and rains have been similar through the centuries. There is system and regularity in the processes of nature. Floods may be no more frequent now, but because of the development of the country, floods are of longer duration and of greater magnitude. The works of man have contributed to the perils of floods. Floods have been accentuated by the clearing of hills and mountains; the velocity of streams has been increased by the building of ditches and the construction of canals.

Civilization has detroyed the forests that covered the hills and has turned under the grass that sodded the plains. Wheat and corn have replaced the soil-building top of the earth and cotton has succeeded the matted grasses that held the soil in place. The soil has been robbed of its roots and of its grasses. The crust of the earth has lost much of its topsoil. The sod has been plowed; the timber has been cut; the streams have been drained and the rivers have been straightened. Floods come down on homes, farms, factories, and cities in ever-increasing volume.

HAZARDS

The hazards of floods are more numerous and the destruction greater than formerly. The population of the United States has increased from 3,000,000 to 130,000,000. The fields and factories of America surpass those of any other nation. Floods are, therefore, more destructive. Often the loss of life is less but the damages are far greater than formerly. In the Johnstown flood of 1889, 2,209 lives were lost. The damages amounted to $10,000,000. There were no warnings. In 1936 there were warnings; weather forecasts were accurate; the telephone, the telegraph, and the radio enabled people to escape. Moreover, the citizens of the Johnstown area had made the reservoirs more secure; they had built their homes higher up on the hillsides, but business and commerce obtained along the river and in the valley. The damages of the flood in 1936 amounted to $30,000,000, while less than a dozen lives in Johnstown were lost.

It is the poor who suffer most in great floods. The rich are able to build their homes farther up the hillsides, but it is the poor who dwell in the valleys and along the rivers, close to industries where they earn their daily bread by the sweat of their brow, who suffer most. Proximity to water is essential to improvements that provide for labor and the means of earning a living. There is a reason for settlement along rivers. Throughout the centuries man has dwelt in the valleys and settled along the gulfs and oceans. Great rivers have added billions to the wealth of the land and have provided a livelihood for millions of people.

FEDERAL INTEREST

The Government is not an insurer of its citizens against the hazards of the elements. We shall always have heat and cold, lightning and tidal wave, earthquake and tornado, flood and drought. It is not the province of the Government to undertake to reimburse its citizens for the losses incurred as a result of the acts of God.

The annual losses of both life and property caused by destructive floods are enormous. The losses are widespread; every State is affected. Floods know no State lines; they respect no States' rights. Sooner or later the losses from floods must be absorbed by the Nation. The Federal interest arises from the responsibility of rebuilding public works that are damaged or destroyed, to protect interstate commerce, and to promote the general welfare. There is a humanitarian responsibility to prevent destructions of life and property. It is generally conceded that both flood control and navigation constitute national responsibilities.

There is no occasion for further discussion of constitutional authority. Congress has assumed jurisdiction for the control of floods. Congress has declared that flood control along the lower Mississippi River is a national problem and that the problem should be solved at the expense of the Nation. Flood-control works have been constructed along the Tennessee, the Columbia, the Colorado, the Missouri, the Ohio, and the Monongahela Rivers. Congress has contributed to flood-control works along the Sacramento River, and on Lake Okeechobee in the State of Florida.

HASTY LEGISLATION

As a result of recent floods, much ill-advised and hasty legislation has been proposed; inadequate and unworthy flood-control projects have been promoted.

The best way to promote national flood control is to advocate policies that are sound and projects that are adequate.

Again, selfish interests with proposals that are unworthy and unsound, with projects that are unable to stand on their merits, insist that they advance the only solution. Designing agencies, under the guise of further thinking and investigations but in reality to perpetuate bureaucracy, have heretofore advocated delay.

All of the visionary schemes, all of the hasty legislation, all of the ill-advised legislation have one thing in common: they show that the authors utterly fail to comprehend the real problem of flood control; that they have, for instance, no conception of the flood-control problem along the Ohio and the Mississippi Rivers. The great problem there is to carry in the lower Mississippi River two and a quarter million cubic feet per second, representing the combined maximum flows of the Mississippi and Ohio Rivers, and representing more than 20 times all of the water flowing over Niagara Falls, from Cairo to the Gulf of Mexico.

In 1937, at the crest of the great flood at Cairo, 1,900,000 cubic feet of water per second went by along the Ohio. During the 50 days that the river was above flood stage there were 80,000,000 acre-feet of water in excess of the below-flood flow of the river. This amount staggers the imagination. If poured into an inland depression with an average depth of 20 feet, it would make a lake two-thirds the area of Lake Erie.

NO SINGLE SOLUTION

There are those who say that reservoirs are the only remedy. Reservoirs are to keep the water away. Levees and floodwalls are to keep it out. It is manifest that reservoirs alone will not do the job.

Enthusiastic advocates of power development insist that all dams should provide for the generation of power. I must not be misunderstood. Let me say once and for all that I believe in the preservation and utilization of the natural resources of the Nation for the benefit of the people. I believe that dams constructed by the Federal Government for flood control, or for navigation, or for reclamation should provide for the generation of hydro-electric power wherever it is practicable and feasible. I further believe that such power should be disposed of for the benefit of the people rather than for the benefit of private monopolies.

Arthur E. Morgan, chairman of the Tennessee Valley Authority, and author of the Miami Conservancy District, recently said:

"There is an over-expectation as to the possibilities of power development associated with flood control in the eastern United States. Few eastern rivers are so favorable in that respect as the Tennessee, and the possibilities of that river fall far short of those on the Pacific coast. Moreover, flood control and power in some cases are mutually exclusive."

Again, in the same article in the Engineering News Record of March 18, 1937, Mr. Morgan stated:

"In my opinion there has recently been exaggeration of the possibilities of flood control by soil management, forestry, and the construction of reservoirs on very small headwater streams."

In my judgment, the two outstanding flood-control projects in the United States are the Miami conservancy project in Dayton, Ohio, and the Muskingum project along the tributaries of the Muskingum River in Ohio.

There are five detention reservoirs in the Miami project. There is no provision for hydroelectric power. On a plain tablet over one of the conduits in one of the five dams there is this inscription:

"The dams of the Miami Conservancy District are for flood-control purposes. Their use for power development or storage would be a menace to the cities below."

There are 14 dams in the Muskingum Conservancy District; they provide for conservation; they provide for flood control. There is no immediate provision for the generation of hydroelectric power. In my judgment the 14 dams in the Muskingum project are the most efficient flood-control dams ever constructed to prevent floods. They embrace the very last word in dams for flood prevention.

Reservoirs are often accompanied by both levees and channel control; projects involve both. While the detention reservoirs are the outstanding features of the Miami conservancy project, yet a considerable part of the project is composed of levees and channel improvement. Flood control does not mean levees alone, or channel improvement alone, or reservoirs alone.

Flood control must not be confused with conservation works. The growing of grasses and the management of land and soil erosion will retard floods; they will supplement flood-control works. The planting of trees and the maintenance of forests will help to keep back the waters; they will aid flood-control works; each has its own proper place. I know of no single remedy. All possible solutions must be explored. Power, navigation, and water storage have their place. Forestry and conservation cannot be ignored.

FLOOD-CONTROL INVESTIGATIONS

In 1927 and again in 1928 Congress made provision for thorough investigations for flood control, navigation, power, and reclamation. The Corps of Engineers were directed to report on the principal streams of the country. In 10 years the Corps of Engineers have made the most comprehensive surveys of the water resources of the country ever undertaken. At a cost of $12,000,000 more than 200 streams have been investigated for flood control, irrigation, navigation, and power. The Corps of Engineers were thus prepared to recommend projects to prevent a recurrence of floods along the Connecticut, the Merrimac, the Susquehanna, the Monongahela, and the Allegheny Rivers, after the floods of 1935 and 1936.

The Corps of Engineers, after the great flood of 1937, submitted a comprehensive plan for flood control for the Ohio and Mississippi Rivers and their tributaries. It contemplates a long-range program; it contemplates reasonable appropriations over a period of from 10 to 20 years; it provides for the construction of 45 flood-control reservoirs along the tributaries of the Ohio River. It provides for the building of 24 reservoirs along the tributaries of the Mississippi River; it provides for the construction of levees and flood walls to protect the cities and towns in the Ohio Valley;

it provides for conservation works; it contemplates that reservoirs should be under the supervision and direction of the United States and that all hydroelectric power should be utilized for the benefit of the public. A bill to carry out the recommendations of the report should be passed by the next session of Congress.

CORPS OF ENGINEERS FOR RESERVOIRS

It has been erroneously stated that the Corps of Engineers oppose reservoirs for flood control. Antagonistic interests have repeated the statements. Reservoirs have not been opposed, but they have been given their rightful place; they have been recommended where they would promote flood control; they have not been recommended where they would not afford protection.

The 14 reservoirs in the Muskingum Valley are being constructed by the Corps of Engineers. The Fort Peck Dam, the Bonneville Dam, and the Tygart Dam have been constructed by the Corps of Engineers.

The Army engineers have given the facts. An empty reservoir is essential for flood control. A full reservoir is necessary for a constant head for the development of power. Where power can be developed in reservoirs the Corps of Engineers recommend that provision be made for power. Probably the largest power development in recent years is the Bonneville Dam on the Columbia River, constructed by the Corps of Engineers.

NATIONAL POLICY

After years of bitter experience and after a long and difficult campaign, in 1936 Congress adopted and declared for the first time a national flood-control policy. Existing Federal agencies were utilized. The oldest Federal bureau dealing with the improvement of rivers is the Corps of Engineers of the United States Army. National forestry has been administered by the Forest Service of the Department of Agriculture; the Soil Conservation Service has been administered by the Soil Conservation Service of the Department of Agriculture. Under the policy laid down, Congress placed flood control and allied works under the supervision of the Corps of Engineers, and it placed such related works as run-off and water-flow retardation under the Forest Service and under the Soil Conservation Service.

It has been but little more than a year since the national policy was adopted, but the agencies vested with the execution of the policy have been tested; they are not experiments. Some 270 projects in two-thirds of the States of the Union, with an authorization of $300,000,000, were embraced in the act of 1936, but we have done no more than scratch the surface in the execution of the national flood-control policy.

In the act of 1936 there is a place for the prevention of soil erosion, for stream flow, land management, water-and-land conservation. We have made a proper beginning. The Flood Control Act of August 28, 1937, expands and enlarges the policy first adopted in the act of 1936. There is no conflict between the War Department and the Department of Agriculture. There is no conflict between downstream works and upstream land management—the one reenforces the other; they are integrated and they cooperate and coordinate. The agencies that plan land management should execute the plans and the agencies that plan flood-control works should build them.

EMERGENCY PROJECTS

The Flood Control Act of 1937 provided for emergency construction in the lower Ohio River Basin. The comprehensive program was continued until the next session of the Congress. Twenty-five million dollars was authorized to be expended in the lower Ohio Basin in the fiscal years 1938 and 1939. The authorization is inadequate. The comprehensive plans submitted by the Corps of Engineers contemplate the expenditure of $800,000,000 over a series of years. The direct and the indirect losses of the flood of 1937 alone will exceed the total authorization. The act of 1937 provided for soil-erosion-prevention studies and investigations along the streams where flood-control works had been previously authorized. Upstream planning is to supplement downstream works and the act of 1937 is a progressive step in the right direction. The act contemplates the allocation of some $12,000,000 for projects for river walls and levees but no projects have been released by the President. The local people have voted bond issues. Works should be begun at once.

TITLE OF RESERVOIRS

There has been misunderstanding and misinterpretation of the act of 1936 respecting the title of reservoirs. There should be a clarification of the act and a definite statement of the policy of the Federal Government. If the title to reservoirs for flood control is to be vested in the Government of the United States the United States should pay for the lands and for the flowage rights and should provide for the maintenance of the reservoirs. Moreover, other clarifying amendments to the Mississippi Flood Control Act of 1936, as well as to the Omnibus Flood Control Act of 1936, are imperative. The President of the United States, in transmitting the report of the Chief of Engineers on the Ohio and Mississippi Rivers to me as chairman of the Flood Control Committee on April 28, 1937, stated that the title to lands and flowage rights in diversions and floodways should be in the Government of the United States.

The $25,000,000 authorized for emergency projects in the lower Ohio Basin is utterly inadequate for flood-control measures in the Ohio Basin. The country expects the administration at the next session of Congress to pass a national flood-control act to provide for adequate flood control not only along the Ohio River, not only along the lower Mississippi River, but along the other principal rivers of the United States. Flood control is not static; the problem is continuous; it is progressive. Changes are constantly occurring along rivers. Bars are forming at the mouths of harbors. Flood control and navigation works will ever be among the outstanding internal improvements of the United States.

NAVIGATION

The Mississippi Flood Control Act of May 15, 1928, authorized appropriations aggregating $325,000,000, approximately $100,000,000 of which was in aid of navigation. The act of June 15, 1936, amending the act of May 15, 1928, authorized an appropriation of $272,000,000, of which $72,000,000 was for navigation works.

The Mississippi River is the longest navigable river in the world. Some $200,000,000 have been expended by the Government in making the Ohio and its tributaries navigable. The Missouri is being made navigable. The upper Mississippi River is being improved. The Mississippi River is not only the longest navigable river in the world, but it is the most important navigable river in the country. For 300 miles above its mouth it has a channel of 30 feet. Ocean-going vessels are accommodated all the year around. Flood control works promote navigation—they go hand in hand.

It is interesting to recall that the total tonnage along the Mississippi River in the very heyday of steamboat activities and prior to the advent of railway competition, in 1889 was around 6,000,000 tons. The annual tonnage is now some three times that amount. The tonnage along the Monongahela River in 1936 was 25,354,000 short tons, while the tonnage that passed through the Panama Canal was but 30,645,000 short tons.

Flood-control works are not only continuous; they are not only progressive but they should be flexible. The authority to improve navigation has been of great aid in the execution of the adopted projects, especially along the lower Mississippi River.

PLANNING AND REGIONAL AGENCIES

New proposals for flood control have been made. New agencies are being advocated; a new policy has been proposed. A type of regional administration patterned after the Tennessee Valley Authority is being advocated. Eight administrative authorities are suggested. Each would be an independent branch of the Federal Government; each is intended to function as an operating and administrative agency. Lump-sum appropriations would be made by Congress to each regional authority. Under the new proposal flood control would not continue as a national policy; navigation would not continue as a national policy; forestry would not continue as a national policy; soil conservation would not continue as a national policy. Each would be delegated to a regional board. The new proposals would scrap the Flood Control Acts of 1936 and 1937 before they had been really tried. The gains in the campaign for flood control would be thus sacrificed. All of the regions that suffered from floods supported the policy of the act of 1936. Instead of attempting a new policy involving new governmental agencies, relationships, and varied objectives, I believe that the wiser course is a united and concerted attack on the flood problem by established, existing, and experienced agencies.

NATIONAL ADVISORY BOARD

I can understand the position of the President of the United States when he sought the aid of planning agencies for public works during the emergency. The idea of the President for advisory or planning agencies in normal times at the time proposals are under consideration has apparently been appropriated by designing agencies who would convert the planning agencies desired by the President into administrative authorities, which I understand he opposes. I always oppose the compromise of principle, but there may be a compromise of policy. It is fundamental that the Congress of the United States should approve projects. Both the Executive and the Congress are entitled to full advice; adequate planning is essential. The representatives of the people who levy taxes should have a voice in the allocation and location of projects. The advisory or planning agencies can best be utilized in the consideration of authorization measures. Congress will not consent to lump-sum appropriations, nor to the abject surrender of its power to approve and adopt projects.

The first national flood-control act was passed during the administration of President Franklin D. Roosevelt. No President has ever been more sympathetic with better land uses and improved land management. No President has ever been more cooperative in soil-conservation practices and in the expansion of the Forest Service. It would be most unfortunate if the gains of flood control during the present administration were sacrificed by a program that would hinder and delay, if not prevent, flood-control works.

Flood control is national, conservation is national, navigation is national; they are not regional. It would therefore, in my judgment, be unwise to establish seven or eight regional administrative boards, where seven or eight policies might obtain respecting flood control and navigation in the United States. There might be one policy of local contribution in one region and another policy in another region. I favor adequate planning; I advocate full reports. I believe that better coordination can be obtained by the establishment of a National Advisory Board. Such a board could be established by Executive order or by statute. Integration and

coordination should result from a combined report of plans and works.

Plans are made by existing governmental agencies. Plans for flood control and navigation have been made by the Corps of Engineers. Planning is in response to legislation passed by Congress. Congress directs that rivers be studied and that reports for improvements be submitted. If the work of the Corps of Engineers is satisfactory, their work should be enlarged and expanded. If the planning of the Corps of Engineers is unsatisfactory, the flood-control plans should be transferred to other agencies. But the remedy is not to duplicate. Moreover, if the Corps of Engineers make the plans, they are best qualified to execute them. A new agency would create confusion in both planning and execution.

Planning for reforestation and planning soil conservation are done by the Department of Agriculture. Again the remedy is not to duplicate but to strengthen and enlarge existing agencies.

The Treasury Department supervises generally the public-building program of the Nation. Another agency not only would result in inefficiency but in waste and extravagance.

The Bureau of Public Health Service is under the supervision of the Treasury Department. Plans respecting public health by a new agency would be worse than duplication.

The Federal Power Commission should enforce the power policy of the Government. The Commission can supervise the disposition of all power generated at any dam. The consumer and the public will be protected. Additional power agencies are unnecessary.

Reclamation work is now done by the Department of the Interior. If the Bureau of Reclamation has failed, it should be abolished. On the other hand, if the Bureau has succeeded no new agency for reclamation is necessary. An additional agency would be both unnecessary and expensive.

The retention of existing agencies and the establishing of additional agencies would result in conflict. Existing agencies should be coordinated. Under the Flood Control Acts of 1936 and 1937 the work of the War Department and the Department of Agriculture are coordinated. They are integrated. There is no conflict. There might properly be closer relations between the two Departments and the other departments engaged in public works. The plans of each Department for public works could be better integrated. In lieu of the proposed regional planning agencies and in lieu of the proposed power authorities, I propose a National Advisory Board, composed of the Secretaries of the Treasury Department, the War Department, the Interior Department, the Department of Agriculture, and the Chairman, Federal Power Commission.

There would be no large outlays of public funds. There would be no increased cost of government. The heads of the existing agencies could be utilized. All of the eight regions of the United States would be considered. All would be given similar treatment and receive the same consideration. The public work would be coordinated.

Reports by the proposed National Advisory Board covering plans and improvements for flood control, reclamation, navigation, public health, and public building would be submitted to the President and to the Congress. There would thus be a complete picture of the internal improvements of the country.

ADVISORY INTERDEPARTMENTAL AGENCY

The advocates of flood control, navigation, reclamation, power, and public health submit their requests and make their demands for appropriations. The Director of the Budget, as the representative of the Chief Executive, is entitled to full information not only respecting the plans but also the estimated expenses of the plans for all internal improvements. There might properly be utilized and set up in the office of the Director of the Budget an advisory board consisting of specialists on flood control, on rivers and harbors, on public buildings, on forestry, on soil conservation, on reclamation, on public health, and on Federal power. This board would be composed of experts in their line. They could weigh the requests made by the public and by the executive departments. These experts should be experienced in planning and execution. They would be familiar with the problems; they would represent the taxpayers and the departments.

The Director of the Budget could utilize their services in submitting his recommendations to Congress. He could reconcile conflicting demands and thus protect the public interests. The internal improvements of the country would be promoted without the establishing of new independent agencies.

PUBLIC BUDGET

The country is face to face with a crisis. The balancing of the public Budget is being advocated by the President of the United States. I will gladly continue to support the policy. The establishment of seven or eight regional or planning advisory boards with lump sum appropriations and with no reports or supervision by existing executive departments, in my judgment, is not only a sorry way to balance the Budget, but an unnecessary public expenditure. If advice and planning are needed, there is a better way. I believe the course which I have proposed of establishing a national planning board is a reasonable compromise of the conflicting interests. One mistake does not justify another. The utility companies in some cases robbed and plundered the American people. I gladly supported the program of the administration for the regulation of utility companies. It is my view, however, that their regulation has had much more to do with the reduction of power rates to the consumers of the Nation than the yardstick established by the Tennessee Valley Authority, which I have also gladly supported as a great social experiment.

CORPS OF ENGINEERS

The President of the United States in the relief and emergency appropriations has utilized the Army Engineers. They have constructed the principal reservoirs for flood control and for navigation. The reports and the recommendations of the Corps of Engineers have been followed by the Mississippi Valley Committee and the National Resources Committee in reports submitted by them. The difficulty with too much planning is that it is theory. The Corps of Engineers are practical; they have had experience. I believe that flood-control work and river and harbor work should remain under the supervision of the Corps of Engineers and that the Corps of Engineers should remain under the direction of the War Department and the War Department alone, subject to the direction of the President of the United States.

The Corps of Engineers have an organization in all of the 48 States. The district engineer plans and also constructs. His report is submitted to the division engineer. The division engineer forwards the report with his recommendation to the Board of Engineers for Rivers and Harbors. The Chief of Engineers makes the final decision. In public works, as in government, there must be an executive with the final say.

The work of the Army engineers is their monument; they are efficient; they are honest; they are patriotic. They represent no group or section. They serve the country and the people. Whatever may be said of other departments at a time when publicity and publicity agents abound in the Capital of the Nation, it must be said that the Corps of Engineers have no publicity agents. The taxpayer gets a dollar of service for every dollar spent by the Corps of Engineers. I believe that I speak the sentiment of the Congress when I say that they will refuse to strip the Army engineers of the functions now exercised by them. Congress will insist upon flood-control and navigation works being planned and executed by the Corps of Engineers.

FLOOD-CONTROL BILL IN 1938

As I have indicated, the next Congress should provide a comprehensive flood-control program; existing legislation should be enlarged and expanded. It is imperative that provision be made for the protection of the Ohio Basin. From the earliest days of the Republic it has been regarded as a great empire. Its forests, its fields, and its unlimited mineral resources afford opportunities for marvelous development. The industries along the Ohio and its tributaries exceed those of any other river in this or any other country. That development must not be retarded or destroyed by floods. Protection should and will be given to the other great valleys of the Nation, as recommended by the Chief of Engineers.

There were floods along the Ohio River when Columbus discovered America, when Yorktown fell, and there were destructive floods in 1937. There were floods along the lower Mississippi River when De Soto was buried in its bosom in 1543. There were great floods in 1927 and in 1937.

A great flood can only be compared to the advance of a mighty army. Hundreds of thousands in the Ohio Valley were driven from their homes and their farms by the onward sweep of the yellow waters in 1937. We sent the flower of American manhood across the Atlantic in 1917 to make the world safe for democracy. We expended billions of treasure. What has the United States of America done about making the Ohio Valley safe for American citizens? What will the Congress of the United States do about making the Ohio, the Mississippi, and the other valleys of our great country safe for American citizens?

The Ohio River is practically without flood-control works along the main stream and along its chief tributaries. There are no flood-control improvements today along the Monongahela River except on the Tygart River, and none along the Allegheny River, nor are there any flood-control works along the Connecticut and the Merrimack Rivers in New England.

The public knows the loss of life and the staggering havoc wrought by recent floods. The story of devastation and destruction should appeal to Congress as it has appealed to the country.

I know of no more satisfactory way to spend public funds than to provide for protection from floods. In addition to providing for protection flood control works, and especially reservoirs, provide for conservation, reclamation, and where practicable, the development of hydroelectric power, which should be disposed of for the benefit of the public. I believe that the Federal Government should pay the costs of reservoirs especially where two or more States are affected or where the benefited areas are contributing at present to flood control protection.

I like to think of America not so much as a land of banks and factories; not so much as a country of great cities and magnificent buildings, but as the home of the greatest and best people in all the world. The first duty of the Government is to protect the lives and property of its citizens. I believe in public works. They obtain in all progressive countries. I sympathize with the problem of unemployment in the great cities and populous communities. If the problem is to be solved, many workmen must leave their present places of abode. The Panama Canal was not constructed by those who lived in the vicinity of that monumental improvement. Laborers were transported for the work. The transcontinental railways in the United States were not built by those who lived on the plains and in the mountains. Here again labor was transported. Unemployment in the congested

centers was relieved. Permanent public works will provide for unemployment. Public funds will not be dissipated or wasted. Permanent improvement will result.

The rivers and the lands are the principal material foundations of our civilization. Our rivers are larger and our floods are more destructive than in other countries. The mastery of the problem will, therefore, be without a precedent in human history. The costs will be great, but the savings will be greater. Policies of national flood control, as well as policies of forestry and conservation have just been begun. These policies should be tried before they are abandoned; they were not established without opposition; they cannot be maintained, nor can they be advanced without successful leadership. Progress usually springs from necessity rather than from wisdom. It took the War of Independence to establish the Republic; it took the War between the States to provide for the abolition of slavery; it took the great flood of 1927 in the lower Mississippi Valley to provide a national flood-control program along the lower Mississippi River.

The people of the United States will not have suffered in vain if an adequate flood-control program is adopted to prevent a recurrence of the deaths and destruction of the great floods of 1935, 1936, and 1937.

Bonneville and the Northwest

EXTENSION OF REMARKS

OF

HON. NAN WOOD HONEYMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 23, 1937

ADDRESS BY J. D. ROSS, ADMINISTRATOR OF BONNEVILLE PROJECT

Mrs. HONEYMAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by J. D. Ross, administrator of Bonneville project, before a Portland mass meeting November 12, 1937:

(1) BONNEVILLE FOR ALL

Let us all adopt as our first principle that Bonneville power is for everyone who is logically within its proper radius of service.

Every great financial venture must be humanitarian in the last analysis, or else it is not worth building. If it is worth building, it will be able to pay back all indebtedness.

The building of Bonneville is a humanitarian act. I believe I voice the opinion of everyone who studies the matter when I say that we all want to see all the indebtedness of Bonneville paid back.

The question then becomes twofold: How can we satisfy the ideals of the humanitarian work, and how can we best pay our interest and redemption costs?

It so happens that the answer to one is the answer to the other; namely, the widest use of electricity. This reaches the greatest number of people, and at the same time it loads the plant most quickly and makes it self-supporting. Then as it pays back its indebtedness, rates will continually drop.

(2) CONSTRUCTION COSTS

Bonneville's power cost is not yet known.

The locks are for navigation altogether and will be borne by navigation.

The power house and generators are strictly for power purposes and will be borne as the costs of power.

This leaves the cost of the dam itself to be divided partly for navigation and partly for power. This allocation under the Bonneville bill is left to the Federal Power Commission.

The total cost of the construction at Bonneville so far is given at about $50,000,000, including two units at present installed in the power house, each having a capacity of 43,200 kilowatts, and it is planned to add eight more of the same size, making a total of 10 generators with a capacity of 432,800 kilowatts. The cost of that part of the construction for purely power purposes, for the 10 units, is estimated to be about $32,000,000.

To get the total cost allocated to power, there must be added to this amount that portion of the dam and fish ways allocated for that purpose by the Federal Power Commission.

(3) FIXED CHARGES

As soon as the Federal Power Commission makes this decision, the Administrator will take their figure and on it take a rate of 3½-percent interest charge. To this will be added 1.183 percent to cover amortization of the capital cost in 40 years.

The life of the plant, on account of its heavy construction, reaches very far into the future, so the amortization of the capital cost in 40 years is a much better figure than the depreciation charge so often marked on the books but never applied for the purpose for which it is intended.

The total of the fixed charges, equalized over the 40 years, will then be 4.683 percent of the capital cost.

(4) OPERATING COST

The operation of the Bonneville generating plant is given to the Army Engineers, under the Bonneville Act. Their estimate of the operation cost for renewals, operation, maintenance, and management for each year totals, for the present plant of two machines, $279,200. When six generators are in operation later, this figure will be $533,500, and when all 10 machines are in operation, will be $771,500.

This will be added to the fixed charges to give the total annual cost of operation.

(5) RATES

It is desirable that the schedule of rates for light and power will be so simple that everyone can understand it. These rates will be at the gates of the cities, power districts, and power companies, as the case may be. They will be wholesale rates. It is not intended in the act that current will be sold to individuals in a city or district.

It is intended that the people shall distribute their own current, either directly through district and municipal plants or through their private companies, as they determine.

In this distribution I am speaking of the retail distribution to the inhabitants after the Federal Government has transmitted the current to your gates.

This will leave the question of taxation in the hands of the people themselves.

I believe that the tax which any district may impose should be limited to a fixed percent of its gross revenue and that this stipulation should be embodied in every contract.

The object of the Bonneville plant is to bring cheap power to those who pay for it and thereby make Bonneville possible.

The object is not to make tax free cities or districts.

The whole question of rates and a proper tax that would be allowable will be the subject of careful thought by the Administrator and will be decided only after consultation with others here and with the Federal authorities in Washington. After the schedule of rates is made up by the administrator, the Federal Power Commission has the right to accept or reject the schedule.

Your administrator invites your opinions and suggestions on anything that you consider for the good of Bonneville and your service.

(6) RADIUS OF SERVICE

The question is often asked, how far can you transmit power? The answer, contrary to the general opinion, is not one of engineering but is one of finances.

You can transmit power economically to a point where you meet other power at an equal or a lower price. It goes without saying that the closer the market is to the power plant the more logical it is to load up on the close-by market as far as possible. If this does not take more than a part of the plant output, the lines must reach out further until the plant is loaded.

We must keep in mind that the final goal is the lowest possible rate, and that can only be produced when the plant is as fully loaded as possible.

There are other factors which enter the question of Bonneville power. The cities along the Columbia, such as Portland and Vancouver, have a very considerable obligation to the people along the upper Columbia, for the farm produce naturally comes down along the Columbia and is a tremendous asset to these cities.

These great power plants and the development of the Columbia are making this the natural outlet to the sea. These cities, therefore, must not be provincial and want to see the Bonneville power distributed only locally, but they should help in every way possible the valley people, for the two reasons mentioned, namely, to load the plant and get lowest rates for themselves and also to help the prosperity of their hinterland.

To accomplish both of these objects, an inter-tie transmission line should be built as soon as possible between Bonneville and Coulee.

Bonneville in the intervening years could reap a tremendous harvest from the Coulee area, and by the time Coulee comes in, the demand in Portland and southern cities and districts, and throughout the whole of Oregon, will have increased so far that practically all of Bonneville power will be used in southern Washington and Idaho, and throughout Oregon.

There is no conflict between Coulee and Bonneville. They both belong to the Federal Government. It would be absurd that two Federal projects would have transmission lines passing each other, to serve in the other's territory. The day is rapidly coming when these two great plants, and others to be added later, will make up the Columbia system, and power will be sold from it as a system and not as a power plant.

(7) MARKET

Much propaganda has been put out to the effect that there is no market. Here are the facts, and they should convince anyone.

The demand for power in western Washington has doubled every 5½ years, except during the last depression, and now the coming years must make up for that depression.

There is at present a combined demand in Washington of a million kilowatts from existing plants, and in Oregon 368,000, and in Idaho 250,000, or a combined demand of 1,616,000 kilowatts in the three States tributary to Bonneville.

Where is all of this power to come from? If we put in the whole 10 machines at Bonneville, it would be less than one-third of what will be needed in the next 5 years.

Let us hope for the earlier coming of Coulee.

The answer is, the full demand will probably be far from available.

The fact is that we are entering the electrical era, and the expansion is so rapid that even those familiar with electrical work are astonished at the growth. We must think in terms of the future, as shown by the extension of what the past has accomplished.

(8) PUBLIC DISTRICTS

Sixteen counties of Washington State have already formed into public districts. These alone, in the next few years, will require one-quarter million kilowatts of the machinery at Bonneville.

The Bonneville law requires that half the power be set aside for a reasonable time for public power districts. This quarter million kilowatts is more than half of the Bonneville plant with all 10 units installed.

(9) PRIVATE POWER COMPANIES

The private companies will, under the act, get the same price as the districts or cities, but their contracts will be drawn for only 5 years. However, it is reasonable to assume that rates will not be raised, but instead, will be continually lowered, and it will be very much better business to install more power than to stop any contract.

The administrator will bring the power to your gates. But your administrator will not distribute the current from your gates to your homes and business places. That must be done by you, through your public districts or municipal plants, or through your private power company, as you desire.

As to the rates that the private power companies will charge, it is sufficient to say that their destiny is in their own hands. Their success will depend on the rates they give, as compared with those of the public districts and cities.

(10) THE FARM

Electricity is a slave that never tires. It brings the lowest cost of farming, and the farm and home are the backbone of the Nation.

The rates must be so formed as to stimulate, as far as it is possible to do so, irrigation by pumping, either direct to each farm or by pumping into reservoirs and supplying small areas by gravity from such reservoirs.

In the home, the slave that never tires is again ready to make life more livable.

(11) MINING

Particularly in the Northeast, mining can be made a wonderful asset to the Northwest, and rates should be such as to stimulate it. This in turn will later bring smelters and refineries of various kinds, close to the mine.

(12) PULP AND PAPER

On the coast the pulp and paper industries are rising to considerable proportions. The fact that the raw materials can be grown in time makes this an inexhaustible industry.

The rates must assist in this long-hour load, and in all such loads where industry is found. And while we are talking of industry, let us keep in mind first those people who have put in our present industries and help their prosperity as far as possible.

(13) INDUSTRY AT TIDEWATER

This is a phrase that someone has coined in speaking of such industries as might cluster around the Bonneville Dam.

There are certain industries, such as the making of aluminum, which use comparatively little labor, but use great amounts of electricity. It is evident that the most ideal of these industries would be those that use considerable labor.

The plants were paid for by all the people of America, so the returns should be distributed as widely as possible. To put the entire Bonneville production into two or three such plants, as some advocated, does not fulfill any humanitarian ideal or any national service. It would not reduce unemployment, and it would not upbuild the Northwest, which is our great desire.

However, in making a balanced use, it is reasonable that 15 or 20 percent of the output of the plant can be put into such work, especially if the industries sought give a fair amount of employment. To this end I have already found industries up to 5,000 kilowatts ready to come, and I think probably 10,000 kilowatts more can be had.

In locating such plants near the dam, due regard should be paid to the preservation of the beauty of the Columbia Gorge. The beauty of the Columbia Highway is an asset that should be preserved in every way.

(14) THE YARDSTICK

To give you current wholesale at your gates for a few mills will not of itself bring down your rates to what they should be. Here is where your own part of the work begins.

You will see that the price at your gates is only a few mills, but the price in your home is several cents per kilowatt-hour—8 or 10 times more than you pay for the electricity at your gates. The reason is that retailing from house to house means small quantities at higher expense. The system of rates given you finally will be such as to help you reduce the distribution costs as far as possible.

(15) LONG-RANGE PLAN

In order that there be no lost money through temporary work we should develop a long-range plan in which all is coordinated and in which each step now taken would be a proper step in the whole plan.

This plan can be simple and effective. Bonneville and Coulee should be intertied as part of the Columbia system. The other plants on the Columbia River, to be built later, would normally fit into this system.

There should be a switching station, probably at Umatilla or Pasco, approximately halfway between the two plants. From this switching station a line would reach to Boise. From the Coulee a line would go over to Missoula. From Bonneville a line would go through Portland down as far as Eugene. This line would join other lines to be built when necessary, several years later.

That would tie in the municipal plants of Seattle and Tacoma, and would go southward into California to tie later with the plants all down the coast to Los Angeles.

This network at the present time should be built to operate at about 287,000 volts. As transmission distances increase, due to further developments of the art, the great plants of the Federal Government will be much more easily tied over long distances.

The Northwest would then have centers of distribution at Eugene, Bonneville, Umatilla or Pasco, Boise, Coulee, and Missoula. These points are, roughly, about 125 miles apart. From them would radiate lines at 110,000 volts and 60,000 volts, according to the necessity of the districts served. This would make the radius of transmission from these centers about 65 miles.

This 65 miles of the lower voltage lines is at present the subject of a good deal of discussion as to whether rates should be the same over these areas or whether they should be zoned and prices be higher 65 miles away than they would be closer in. This is a matter for careful study. There are arguments on both sides.

The arguments against zoning, giving a variation in prices, are:

First. The rate, until the plant is fully loaded, must be purely arbitrary, based on the assumption that at least a very large part of the plant is fully loaded.

Second. Both step-up transformers and step-down transformers are common to all districts and lines as a necessary part of transmission. The cost of the lines and the line loss will therefore be the only factors that could enter into zoning. This refers only to the towers and wires and right-of-way.

Third. Any attempt to zone into the Coulee district would only be met in a few years by a zoning against the Bonneville district, since Coulee is a much larger plant than Bonneville and will supply much of the southern districts after Bonneville is fully loaded.

Fourth. If zoning is used, it must be zoned only by the addition of actual cost, which would be comparatively small.

Fifth. Those closest to the plant claim that their rates should be lower on account of their natural advantages. Against this it must be remembered that the wholesale cost at the gates will be only one-eighth or one-tenth of what it will be in the home. The real work is not worrying about what the Government price will be, but rather, worrying about the seven-eighths or nine-tenths in the retail distribution that the people themselves must reduce as far as possible.

The question of a mill or a fraction of a mill cannot make a large difference in the home. The only place where a mill's difference would count is in large industry, and whatever industry comes, and depends on the lowest of rates, will be close to the plant anyway. The reasons given for zoning are:

First. That any added costs due to greater distance of transmission should be borne by the ones served with the longer line.

Second. It has always been the custom to zone, and the human race sticks to custom.

There is no big city of which I know that considers the distance of distribution a reason for higher price. For instance, in Seattle, a point 20 miles from the substation and on the other side of the city gets the same rate as one living in the shadow of the substation.

There are other considerations that enter into the question.

For instance, suppose a very large load and a small load situated the same distance from Bonneville. A large customer usually expects a big discount, and rightly so in most businesses, but in the case of electricity, the kilowatt-hours are all made in the same machine and transmitted over the same wire, and in this case, for the same distance.

If the hours of use per day are the same, the large and small consumer should get the same price, on the high-tension line.

If, however, the current is furnished on the low-tension side, there will be a difference in the price of the smaller transformer per kilowatt of capacity, and the larger transformers for the large load, the price being greater per kilowatt of the small transformer, probably about a dollar per kilowatt.

If, however, the current is used half the time, that is, a 50-percent load factor, each kilowatt will produce 4,380 kilowatt-hours a year. The carrying charge on the dollar difference at 5 percent will be 5 cents. If we divide 4,380 hours of use into the 5 cents, the result is practically negligible.

This points toward a much more uniform rate than is usually given, and will give the small communities a chance to develop.

(16) PERSONNEL

Every mail brings me a stack of applications for positions on the Bonneville staff; in fact, so great and so sudden has been the deluge that it has been impossible to answer them until the office was set up, and they are being answered at the present time.

There is a very great misunderstanding in connection with the personnel required. It will be comparatively very small. The rank and file, under the law, must be taken from the United States Civil Service, and these must be drawn from existing lists.

The powerhouse, under the Bonneville Act, is to be operated by the Army engineers.

The next month or two must be largely spent in searching out the power market. Some of the power market comes to me, but I do not intend to wait for it. Quick action will bring us our low rates soonest.

The object of the Bonneville system is to give low rates to all the people, and every position in the personnel of the office or field will be what is absolutely necessary for the work. While this may not give as much employment as some might desire, it will in the end bring the greatest success and benefit all around.

The Government is trying an experiment this time, in the handling of these large plants, by appointing one administrator with sole responsibility. It therefore puts me up against the guns to decide yes or no. The administrator cannot "pass the buck", and all the mistakes made are his.

For this reason, the few men close to me in this work cannot be strangers, but must be those on whom I can rely as never having been found wanting.

I like the idea of a single administrator instead of a board. In centralizing authority, you centralize responsibility, and you get maximum speed on the work.

It is proper that legislative work be the meeting of many minds to pass the proper laws, but on administrative work, only one architect can design a building, and only one builder can manage its construction. You might as well manage every private business with a board, as to manage an electric system with a board. We might as well have a board at the head of every administrative department of the Government. You might as well have half a dozen mayors, police chiefs, or fire chiefs, in every city.

The sooner we come to a one-man administration in every municipal plant, the sooner they will reach success.

Fix responsibility on one man, and remove him if he does not keep faith, and help him if he does.

I appreciate your meeting me at this mass meeting as you have, and I appreciate your making the first meeting nonpolitical and nonfactional.

I will always be pleased to speak to the different clubs, granges, and associations, as far as possible. I sincerely hope you will pardon my inability to accept the large number of invitations that have been extended to me. The reason for this is because I wanted to get the work started. I will appreciate very much a second invitation later.

My great effort at the present time is to find all the available markets, and correlate them so as to know where the first transmission lines can be projected. To this end I invite your support and cooperation, and would like to confer with the power committees from the various clubs and organizations to get your wishes regarding power supply.

I would also appreciate any such information sent me individually.

The Roosevelt Depression

EXTENSION OF REMARKS
OF
HON. J. PARNELL THOMAS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 23, 1937

Mr. THOMAS of New Jersey. Mr. Speaker, in a rapid uninterrupted decline—piously called a recession—the New York Times weekly business index figure for the week ended November 13, which was reported on Sunday, was 90.6—against 93.7 a week earlier. This is also against a 1937 high of 111.2 on August 14.

Although the record of this index does not extend to 1920–21, it is certain that nowhere in our business history back to 1920–21 was there ever so precipitant a business decline recorded in a 3-month period as in that just completed. While this same index fell 48 points from the 1929 top to the 1932 bottom, it took 3 years to accomplish, or at the rate of 16 points annually.

In 1937 this business index has disintegrated over 20 points in exactly 3 months. In the decline which started in 1929 it took 14 months to lop off the first 20 points in the business index. In the last 20-point drop from August 1931 to August 1932 it took 12 months.

Causes of and Remedies for the Business Recession

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 23, 1937

RADIO ADDRESS BY HON. DEWEY SHORT, OF MISSOURI, ON NOVEMBER 22, 1937

Mr. SHORT. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include my radio address over Columbia Broadcasting System network from Washington on November 22, 1937, as follows:

Today America is in the grip of another depression—a Roosevelt depression. During the past 2 months investment losses aggregating more than $30,000,000,000 have occurred. This approaches in magnitude the stock-market crash of 1929. Let no one think for a moment that only the rich have suffered during the past few weeks. Most of the losses affected endowments of schools, churches, hospitals, and other charitable institutions, the savings of the great middle class of Americans invested in life-insurance companies, and other similar associations.

The causes of the present downward trend of business, however, are quite different from those of the crash of 1929. The first depression was due primarily to the actions of the people themselves. Great building and real-estate booms, such as the one in Florida, inordinate gambling, and an orgy of speculative investment in stocks and securities, excessive installment financing, led up to the crash of 1929. But the present crash is due primarily to the action of Government in sponsoring unsound, uneconomic, and unconstitutional legislation, designed to help the "forgotten man," but inevitably leading to his destruction.

The loss of confidence in this administration is due to the Government's borrowing, spending, and taxing program, coupled with its unholy alliance with unlawful labor racketeering that has promoted class warfare and resulted in the closing of factories and the addition of more men to the ranks of the unemployed. This confidence will not and cannot be restored until we cease Government dictation, regulation, and competition with private enterprise.

Even the President of the United States now realizes the precarious predicament we are in, for in his message to the special session of Congress which convened last Monday he frankly admitted: "Since your adjournment in August there has been a marked recession in industrial production and industrial purchases." Perhaps "we planned it that way." And while he went on to say, "The present decline has not reached serious proportions," he continued, "but it has the effect of decreasing the national income, and that is a matter of definite concern."

Due to the excessive spending of the present administration and the incompetency and inefficiency of many of its agencies, this Nation is now bogged down in the quagmire of deficits and debts; and after this administration has done everything to destroy private business a wailing cry goes up for business to come to the rescue of Government. "Obviously," says the President, "an immediate task is to try to increase the use of private capital to create employment." Many of us rejoice that at last, after a 4-year attempt on the part of the New Deal to kill private enterprise, the chief New Dealer has discovered that business must support government and that government cannot support business. We agree with the President that "the ultimate answer to the conditions of today is a cordial and confident cooperation not only between government and every kind of citizen, but also between every kind of citizen and his Government." This, however, is just the thing we have not had, because when government destroys the profit motive it kills private initiative and cuts the nerve of progress. It "kills the goose that lays the golden eggs." What incentive is there to work and save when one knows that his earnings will be confiscated in taxes? Why build a business when forced to take orders from some distant bureaucrat that will destroy it? When will this government by remote control cease?

Right now the President is asking Congress to pass a wage and hour bill which will concentrate more power in a Federal board set up by him in Washington to dictate hours and wages; this never has and never can work in a free democracy. Because a board appointed by the President would have the power of life and death over both labor and industry; capital is not going to make investments or expand existing plants when Government regulations amount to strangulation. The administration also wants a farm bill that will impose compulsory control upon the American farmer, robbing him of his freedom of action and stifling his enterprise. This farm bill will only farm the farmer.

Again, Mr. Roosevelt wants to set up six more regional T. V. A.'s before the legality of the first is decided by our courts. It is reported that the President will soon confer with public-utilities executives, seeking an agreement on the fair valuation of utility investments, in order to get the public utilities of our country to expand their business. But how has the present administration cooperated with the utilities of our country? First, they established a T. V. A. to construct dams in the Tennessee Valley which have destroyed private utilities in that region—and the construction will cost the taxpayers of this Nation more than $600,000,000. Later, Secretary Ickes made grants and gifts to towns up to 45 percent of the cost of municipal steam-generating plants, loaning the remainder of the money to the municipalities at 4-percent interest to cripple the efficiency, the growth, the credit, and in the end to destroy existing privately owned utilities. Later the holding company bill with its "death sentence" further crippled and embarrassed this great private industry. Now, the fourth and final blow is being struck; Congress is asked to pass a bill blanketing this Nation with public power companies under Government regulation, managed by politicians who are willing and anxious to destroy the private utilities of this country.

This industry, long under-equipped, hesitates to make further investments when they know in advance that they will be destroyed by competing companies subsidized by the Government. In 1923 to 1930 the private utilities of this Nation averaged $800,000,000 per annum on new construction; in 1936 only $275,000,000. If the private utilities are thus destroyed, many of their 250,000 employees will be thrown out of work, $250,000,000 in annual revenue will be lost to the Government, and the $12,000,000,000 invested by more than 4,000,000 average Americans will be largely destroyed. The sad experience of this one industry shows how private enterprise has been seriously crippled and is threatened with destruction by Government competition, which taxes it to the point of confiscation in order to support government itself.

Residential construction is another important industry which has ceased to expand because it can no longer rest assured of reasonable profits. In 1925 to 1928 residential construction in 37 States averaged $225,000,000 per month, while in August 1937 the figure was only $73,000,000, due, no doubt, to the Greenbelts, Tugwelltowns, and other experiment stations financed by the Federal Government. This competition is serious enough, but the punitive National Labor Relations Board has added to the problems and worries of private employers. Established in order to settle industrial disputes, we have had many more strikes and labor troubles than we had before the passage of the Wagner Act.

Added to Government regulation, dictation, competition, and labor disputes is the awful burden of taxation now resting upon corporations in the form of the capital-gains and undistributed-profits tax. More than a mass of new legislation, we need to repeal some of the ill-considered, ill-advised legislation that has been passed by a spineless Congress under the whiplash of the administration during the past few years. The undistributed-profits-tax feature of the Revenue Act of 1936 is a perfect example of such legislation. Before its passage ample warning was given that it would work out just as disastrously and uneconomically as it has; but it was rushed through by administration stalwarts. Some of my listeners may recall that the Republican members of the conference committee which actually wrote the bill as passed were excluded from some of the executive sessions of the committee, and they refused to sign the conference report, stating on the floor of the House that neither they nor the Members of Congress, except a few majority leaders, knew what provisions the bill contained prior to the time they were obliged to vote on it. Today the bulk of mail received by every Senator and Congressman consists of letters from corporations and businessmen evidencing the complete failure of this principle of taxation.

Even the prompt repeal of the undistributed-profits tax would not immediately give confidence to business; it would be but the first step in the right direction. We can judge the future only by the past, and most businessmen are wary of the President's avowed desire for cooperation, because of the open hostility of the administration during the past 5 years. No one believes that he and his leftist advisers have changed in their objectives; all surmise that if any measure of recovery is brought about, the ax will immediately fall upon those who have helped to bring it about and we shall have another dose of "reform."

The greatest demand and the most important thing that this special session of Congress can do would be to forget the four pieces of legislation which the President demands that we pass, each one of which would concentrate more power in the hands of a single individual; recall our roving ambassador, Mr. Davis, from abroad; give Americans absolute assurance that we refuse to become embroiled in any foreign war; and then immediately repeal the tax on capital gains and undistributed profits. This would free business from the shackles that now enslave it, and allow corporations, both large and small, to make additional investments in plant improvement and expansion, increase the demand for capital goods, build up reserves for a rainy day, assure the employer a reasonable profit on his investment, and afford work for the unemployed.

It is now evident that the present administration's hostility to business has utterly failed of its purpose, that what prosperity we have enjoyed has been due to pump-priming and the spending of borrowed money that has placed a mortgage upon our future. The day of reckoning at last has arrived, and we might ask the President if he "planned it this way."

The Wage-Hour Bill

EXTENSION OF REMARKS

OF

HON. E. E. COX

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 23, 1937

RESOLUTIONS BY THE EXECUTIVE COMMITTEE OF THE NATIONAL COOPERATIVE COUNCIL, BY NATIONAL COOPERATIVE MILK PRODUCERS' FEDERATION, AND BY THE NATIONAL GRANGE

Mr. COX. Mr. Speaker, under the leave to extend my remarks in the RECORD I include the following:

Resolution on the labor-standards bill adopted by the executive committee of the National Cooperative Council, November 8, 1937

While we agree with those farsighted labor leaders who believe that the Black-Connery wage-hour bill will harm and not help wage earners, we oppose it for two other reasons.

We oppose it because of the large increase in farmers' production and distribution costs that must inevitably result if it becomes law. We protest against having these additional burdens placed upon farmers.

We also oppose it for the reason that if enacted into law it will be a long step away from a government by law and toward a government by men.

Stating the subject broadly, governments of the world are today divided into two classes: one class being those governed by law, the other that of those governed by men.

Of those governed by men, Russia, Germany, and Italy are outstanding examples. Of those governed by law, the United States and the British Commonwealth of Nations are outstanding examples.

The bill creates a board of five humans, as yet unnamed, who are vested with despotic power over all commerce and industry, and the millions of citizens engaged therein.

By the provisions of this bill the board is authorized to throw into the discard rules of evidence that have been evolved from experience during the ages while the door to relief by the courts is closed and locked. The board can prefer one commercial or industrial concern to another and can prefer one locality to another, the final result being to make commercial and industrial concerns subservient to a Government bureau in Washington.

This spells a government by men and not a government by law. It violates the spirit of democracy, and the spirit is its life.

We urge defeat of the bill.

Resolution adopted by National Cooperative Milk Producers' Federation, November 3, 1937

The proposed wage and hour bill, now pending in the House of Representatives, is, in the opinion of our federation, detrimental to the welfare of agriculture and labor. The bill proposes to set up a Federal board of five men with the power of life and death over agriculture, labor, and industry. The delegation of such autocratic powers to any group of men in America is contrary to the concept of democratic government.

We therefore urge the House of Representatives to defeat this proposed legislation.

Resolution unanimously adopted at the Seventy-first Annual Convention of the National Grange, held at Harrisburg, Pa., November 10–18, 1937

Whereas the Black-Connery bill passed by the Senate at the last session of Congress, and now pending in the House, is objectionable for the following reasons:

1. Because it would increase the price of commodities that farmers must buy without containing any provision for placing farm commodities on the same price level, thereby destroying any possibility of achieving price parity as between agriculture and industry;

2. Because its enactment would make it virtually impossible for the farmer to secure hired help at wages within his reach;

3. Because it would encourage employers to install more labor-saving machinery in their efforts to keep down costs of production, thereby throwing more people out of employment;

4. Because it would manifestly be useless for us to fix a minimum wage of 40 cents an hour, with a maximum of 40 hours a week, while permitting imports from countries where, in some instances, the going wage is as low as from 3 to 5 cents an hour;

5. Because those who would be thrown out of employment when any particular industry could not meet the requirements imposed by the proposed Labor Standards Board would become a burden upon the public relief rolls; and

6. Because it would be unwise to give an appointive board of five men such power over all the industries affecting interstate commerce: Therefore be it

Resolved, That the National Grange urges Congress to defeat this proposed legislation or any similar substitute that may be offered.

Stock Exchanges and Their Operations

EXTENSION OF REMARKS

OF

HON. FRANCIS T. MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, November 24 (legislative day of Tuesday, November 16), 1937

STATEMENT BY CHAIRMAN WILLIAM O. DOUGLAS, SECURITIES AND EXCHANGE COMMISSION, NOVEMBER 23, 1937

Mr. MALONEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD an interesting statement issued yesterday by Chairman William O. Douglas, of the Securities and Exchange Commission, making a reference to stock exchanges and stock-exchange operations.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

This Commission has reached a point in its administrative development where it has become imperative that an early decision upon the future course of our relations with national securities exchanges be reached. That decision, of course, rests between either a continuation (perhaps even an extension) of the past policy of leaving to the exchanges much of the regulation of their own business, or an immediate and more pervasive administration directly by the Commission of all phases of exchange business coming within the purview of the Securities Exchange Act of 1934.

Ideally, of course, it would be desirable to have all national securities exchanges so organized and so imbued with the public interest that it would be possible and even desirable to entrust to them a great deal of the actual regulation and enforcement within their own field, leaving the Government free to perform a supervisory or residual role. It is my belief that local self-government in the light of local conditions should be possible and could be highly efficacious within the meaning of the letter and the spirit of the act.

At the present time, however, I have doubts as to the desirability, from the standpoint of the public interest, of assigning to exchanges such a vital role in the Nation's economic affairs, before they adopt programs of action designed to justify their existence solely upon their value as public market places. I have always regarded the exchanges as the scales upon which that great national resource, invested capital, is weighed and evalued. Scales of such importance must be tamperproof, with no concealed springs—and there must be no laying on of hands. Such scales must not be utilized by the inside few to the detriment of the outside many. The importance of keeping them free from those elements which have in the past tended to distort their balance seems obvious. Furthermore, they frequently become generators of storms on the one hand or of intoxicating overconfidence on the other, which cause grave dislocations in unrelated parts of our economy. Such an important instrument in our economic welfare, affected as it is with so vital a public interest, must be surrounded by adequate safeguards. Yet it is also obvious that such restrictions must be consistent with the profit motive, which in final analysis is and must remain the driving force in our economy.

For these reasons it seems imperative at this time to reappraise the traditional methods of exchange administration. The evolution of exchanges has been from small groups of traders and brokers, to small private membership associations, to great public market places. Their public aspects have come more and more into the ascendency. It is essential that their organization keep pace with that evolution. This is especially true of the New York Stock Exchange.

Operating as private-membership associations, exchanges have always administered their affairs in much the same manner as private clubs. For a business so vested with the public interest, this traditional method has become archaic. The task of conducting the affairs of large exchanges (especially the New York Stock Exchange) has become too engrossing for those who must also run their own businesses. And it may also be that there would be greater public confidence in exchanges (and the prices made thereon) which recognized that their management should not be in the hands of professional traders but in fact, as well as nominally, in charge of those who have a clearer public responsibility.

As is well known, the Commission has in the past made a practice of permitting the exchanges to adopt as their own the rules governing the trading practices of their members. This method appeared to have two distinct advantages: First, it would permit the necessary elasticity required because of varying conditions on the various exchanges; and, second, it was thought that it would add the weight of the exchange itself as an enforcement agency having jurisdiction over its own members. It was thought that government might avail itself of this already established enforcement machinery. We were encouraged in this belief by the exchanges, and consequently not only invited exchange representatives to the drafting table, in these particular matters, but forewent entirely the adoption of any rules of our own in governing such practices. The net result is that of all the rules now in force governing the trading activities and practices of members of the New York Stock Exchange, in accordance with the requirements of the law, not one was formally adopted by this Commission. True, this adoption by the exchange was at the suggestion of the Commission but only after full consultation with the exchange. And in no case where the exchange refused to act did the Commission promulgate its own rule. In short, all of them are the exchange's rules, enforceable primarily by it.

That raises the question, which I have previously indicated, as to whether the exchanges have equipped themselves to continue in this important role and to be entrusted with even greater responsibilities in this direction. A vigilant, vigorous, and full-time enforcement of existing regulatory obligations is essential; but even more important is a progressive assault upon the roots of practices which make many of these rules necessary. That assault can be a joint venture of the Commission and the exchanges—and it is my hope that it will be exactly that.

Any realistic approach to the problems confronting exchanges must soon meet the question as to whether the exchanges should attempt to provide a livelihood for their present huge memberships. In short, are the exchanges attempting to feed too many mouths? The prolonged periods of great activity in the late twenties provided an income sufficient perhaps to justify a 25-percent increase in the membership of the New York Stock Exchange. But the vast changes which have occurred are well known. Not only was there a normal shrinkage in volume as the national speculative fever died down; but a very substantial portion of trading activity (the kind that bred more activity) was wiped away forever, we hope, when manipulation was outlawed. But the principal overhead of the exchanges—their membership—has never been reduced. It may be that, until such a deflation occurs, there will always be a substantial obstacle in the way of any attempt to reconstitute the exchanges as public market places. Certainly that kind of economic pressure is a great deterrent to the growth of realism in facing squarely the advent of governmental regulation.

The problem of the permissible field of operation of the professional trading member on the floor of the exchange for his own account is one which has long pressed for solution. The exact point at which the interests of the floor trader become inimical to that of the general public is the subject of widely divergent points of view, but there is substantial agreement that over a long period of exchange history these interests have not been coextensive. Any study of our markets over the past 25 years will reveal that there has always been present a tendency upon the part of the professional trader to accentuate a declining market by selling short for speculative profit at a time when public distress adds a factor of demoralization. That such activity has not died out with the advent of the act is evident from a consideration of the figures lately assembled by the New York Stock Exchange concerning trading in five leading stocks during a recent period of abnormal activity.

Those statistics show us that during the period under study members effected for their own accounts about 30 percent of all transactions in these stocks on the exchange. This figure, when compared with that of 21 percent for similar trading by members in all stocks during the period, indicates a further problem—the apparent excess of professional attention to the active stocks with a corresponding neglect of the inactive issues. Furthermore, in spite of the recent adoption by the two leading exchanges of rules covering member trading, the proportionate position of the professional in the market has remained more or less constant for more than a year and a half.

The proper readjustment of exchange trading practices in the interest of the public cannot overlook the problem of the specialist. To point to only two or three significant instances in our market studies which are by no means exceptional—on September 7 and 10 of this year, 2 days of spectacular price losses, members of the New York Stock Exchange in general, and more particularly the specialists, were heavy sellers on the decline. On September 7, when the industrial average declined 8.14, and the total volume of trading was 1,870,000 shares, the record of the members was as follows:

	Specialists	Other members on the floor	Members off the floor
Bought	176,300	95,600	67,105
Sold	219,500	129,300	107,775
Balance	−43,200	−33,700	−40,670

On September 10, when the same average declined 8.32 points and the turn-over was 2,320,000 shares, the record was:

	Specialists	Other members on the floor	Members off the floor
Bought	205,420	129,700	83,170
Sold	272,630	170,620	92,000
Balance	−67,210	−40,920	−8,830

In the same period, in contrast to those 2 days, on September 11, when prices recovered slightly, each of these member groups, particularly the specialists, bought heavily on balance.

Another period of widely fluctuating markets tells the same story. On October 18, when the largest decline of the year occurred in a 3,230,000-share market, we see the floor groups, particularly the specialist playing a vital role:

	Specialist	Other members on the floor
Bought	250,600	168,500
Sold	320,400	230,000
Balance	−69,800	−61,500

And with the volume at 7,290,000 shares on October 19, when the pronounced weakness continued until about 11 a. m., followed by a very sharp rally wiping out a great part of the previous day's losses, we see the following:

	Specialist	Other members on the floor
Bought	935,900	329,200
Sold	749,100	267,300
Balance	+186,800	+61,900

These figures serve only to fortify further the conclusion indicated repeatedly in our studies that members of the exchange trading for their own account—particularly the specialists—either create the daily price fluctuations or else contribute materially to their severity.

The force of this trading by members of the New York Stock Exchange for their own accounts is even more clearly indicated in another study now in process by the Commission. In 35 trading days between August 16 and September 25 this year 20 members alone accounted for 16 percent of the total trading in United States Steel common and 12 members accounted for 13 percent in General Motors common. Here we see how extensively the members tend to concentrate their activities in the stocks which are so-called market leaders—stocks the price movements in which undoubtedly have a tremendous effect upon the general trend of prices.

The most arresting data compiled in the recent New York Stock Exchange study, however, concern short selling. It is revealed that short selling represented as much as 31 percent of the total trading in one of these market leaders and constituted almost a quarter of the trading in all five stocks. Of this amount, 46 percent, or almost half of the entire volume of short sales, was that done by members for their own account. This striking fact constitutes an excellent example of the nature of some of the particular problems with which the New York Stock Exchange is presently faced. In fact, these figures as a group are a challenge to the validity of the common assertion that the existence of the specialist and the floor trader is justified on the basis of their stabilizing influence on the market, and their resultant benefits to the members of the public who enter the market. In a market in which there is such an enormous public interest—in which not only 300,000 small traders but 10,000,000 investors have a stake—it is essential that no element of the casino be allowed to intrude and that all such elements be obliterated.

One of the most important public considerations at the present time grows out of the great increase, in recent years, in odd-lot buying and selling. This type of trading, generally considered to represent the activity of the little investor, has reached a point where it now averages up to 21 percent of the total reported volume of transactions on the New York Stock Exchange. The problem is how to transmit accurately the net effects of this activity to a market in which the unit of trading—the only thing that appears on the ticker—is 100-share or round lots.

For the past year or so the actual purchases and sales by odd-lot customers have averaged from 16 to 21 percent of the total volume on the New York Stock Exchange. The record of these transactions shows that odd-lot customers were selling during almost the whole of 1935 and have been buying heavily on the balance in the recent decline. Yet, it rests almost entirely with the odd-lot dealer as to whether or not these important balances of purchases or sales are passed on the market. The odd-lot dealer may, if he wishes, fill the order from his own inventories. He does not always have to go into the market to buy or sell, and there are times when he does not and when, if he had, there might have been a beneficial effect on the market

There were crucial points in the movement of prices recently where odd-lot dealers failed to pass on to the round-lot market a substantial part of the support which their customers' purchases might have afforded. For example, on September 13, 14, and 15, when odd-lot customers' purchases exceeded their sales by 316,000 shares, odd-lot dealers in turn bought only 216,000 shares in the round-lot market, and supplied some 100,000 shares from their own positions. Again, on October 20, when odd-lot customers bought 570,000 shares more than they sold, odd-lot dealers in their turn bought only 328,000 shares on balance in the round-lot market, supplying 242,000 shares from their own positions. While some part of this balance undoubtedly was necessarily supplied from dealers' positions because positions in individual issues failed to total a full lot, nevertheless, the extent to which offsetting purchases were withheld from the round-lot market seems clearly to indicate that dealers in part were taking advantage of their odd-lot customers' buying to reduce their own long positions or increase their short positions in some stocks.

It may be argued that these are exceptional cases, but the fact remains that on the 3 days cited in September the odd-lot customer was disfranchised to the extent of nearly one-third of the net balance of his buying over his selling—the only part which could have contributed to the trend of prices—and that on October 20 over 42 percent of the net balance of his votes were not counted. And even under normal circumstances, day in and day out, the dealer holds hundreds and sometimes thousands of shares of public orders in individual issues wholly outside of the main current of prices.

This condition emphasizes the acuteness of the problem of how the buying and selling of this important group of small investors and small traders is to be given its proper influence in the creation of prices in a great public market place.

Of course, it is the province neither of the exchanges nor of the Commission to interfere with the basic trends of security prices, though it may be that we jointly have some responsibility to insulate the economic life and business morale—confidence—of the Nation against the severity of the shocks which have in the past been the unfailing accompaniment of violent shifts in the trends of security prices, so that the seismograph does not itself create the earthquake. Prices of securities should at all times freely reflect the ups and downs not only of the enterprise against which they are issued but of basic economic conditions. However that may be, certainly the entry of artificial forces, stimulating or accentuating a trend in one direction or the other, is of constant concern to the Commission, and it should become equally the concern of the exchanges.

These problems constitute a challenge to the exchanges and their members as well as to the Commission. It is a challenge which can only be met with progressive action, just as any public institution must meet the challenge of time and altered conditions. Such challenges must usually be met with change. In this case the changes called for should be a constitutional revision of the administrative and functional techniques of the exchanges. Perhaps this is the only way in which the exchanges may gain the public confidence necessary for them to be effective in performing important supporting roles in the administration of the Securities Exchange Act of 1934. For that reason it transcends mere matters of internal management.

From conversations I have had with many exchange leaders recently, I have gathered that certain technical administrative changes are being contemplated within the New York Stock Exchange. Such changes, involving as they well might, the introduction of a greater degree of public responsibility and independence from the many private and personal interests which are exclusively those of the membership, could indeed clear the decks for an approach to the more fundamental problems I have described. It should not be thought, however, that whatever changes may be made, either by the exchanges or by the Government itself, can possibly insure against the risks of loss which are an inevitable ingredient of any kind of human dealings in any kind of public market place. The insurance which we must seek can only be against unfair dealings and inequitable opportunity between public and member. To the degree that the changes I have heard discussed are in that direction, I wish to state emphatically that any such action will have the wholehearted and active support of this Commission; and I feel certain that it will also have the heartiest support of the investing public.

The Literary Digest

EXTENSION OF REMARKS

OF

HON. EDWARD A. KENNEY

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, November 15, 1937

Mr. KENNEY. Mr. Speaker, the Literary Digest is by friend and foe widely read in every State from Maine to

California. A weekly magazine, its issue of November 27, 1937, will today find its way to a host of subscribers and be available on the news stands of practically every hamlet of the country.

An outstanding characteristic of the Literary Digest is its timely devotion to matters of impending importance. Significantly, the current edition has chosen a propitious moment to present facts and circumstances of history which lead inescapably to the conclusion that if we are to aid business by lightening the tax load, and at the same time fulfill our obligations to humanity, Congress must forthwith revert to history and the efficacy of the things which history records.

Everybody should read the article by Samuel Taylor Moore appearing in this week's issue of the Literary Digest, the economist, banker, businessman, employer and employee, the aged, the unemployed, the indigent, the veteran, Federal, State, county, and city legislators, all should read the article dealing with the history of lotteries.

And then—and then, right away—everybody should do something about establishing a national lottery out of which would arise a fund of a billion dollars. A billion-dollar tax load would be lifted from the backs of the businessmen of the country. And yet—and yet there would be in the Federal Treasury each year for allocation to the States for their disbursement a billion dollars for any one or more of these purposes:

1. Relief of indigent.
2. Work projects for unemployed.
3. Old-age pensions.
4. Assistance to blind.
5. Veterans' homes and orphanages.
6. Crippled children.
7. Hospitals and medical care of poor.

What will you do, Mr. and Mrs. Reader?

Will it occur to you that if Congress stands idly by, a State lottery may quickly arise to become an illicit national lottery with money flowing into the State treasury from all over the country, with only that State reaping benefits to the exclusion of your State? And if you do nothing about it now, what will you do then?

Already Kentucky is threatening a sweepstakes law that will make the State a seat of a Nation-wide demand for participation in this lottery which will benefit only Kentucky. Will you or will you not impress upon the members of the Ways and Means Committee the necessity for national action to prevent such inequality?

The Ways and Means Committee of the House of Representatives is now engaged in the consideration of tax revision and simultaneously is figuring the way to a balanced Budget. A tax revision downward will mean a loss of revenue, and any revised tax budget to be balanced will in and of itself ignore the unemployed and the poor, aged, blind, and other unemployables.

Can your State, you of Pennsylvania, by State tax, handle the problem of the unemployed and unemployables? Then what are you going to do about it? Will you have your Representatives in Congress do anything about it?

Will you, Mr. and Mrs. New Yorker, want your State to be excluded from the benefits to be derived from a lottery conducted on a national scale by another State? You have the largest delegation in Congress, and what will you have your State's 45 Members do? Through a national lottery conducted by the Federal Government all States can share in the benefits. Will you have your legislators stand by with legislators from other States to mourn losses later?

What will you of New England do, and what will you have your Representatives in the United States Congress do, you who have benefited in the past and whose history is the history of lotteries?

You of Virginia who read the Literary Digest will recall the recent book, Twelve Virginia Counties Where the Western Migration Began, by John H. Gwathney. You know Essex County, where Capt. John Smith was perhaps the first to tread its soil. Historically, too, it is recorded that on May 4, 1792, the Established Church of St. Anne's Parish was preserved by repairs made from the proceeds of a lottery which was always fostered in Virginia during his lifetime by George Washington. What will you Virginians do and what will you have your redoubtable Congressmen do at your behest?

What will you of Oklahoma do, you whose land was opened up and settled by your forefathers by lottery? What will you of all the States of the Union do, including you of the great Northwest Territory where the first settlers, men of high moral character, religiously inclined and adhering closely to the tenets of the Ordinance of 1787, employed the lottery for necessities where funds were lacking from ordinary sources?

Remember, the President has steadfastly left to Congress, in the last analysis, the ways and means of raising funds for meeting Federal expenditures, ordinary and extraordinary.

What will you do, Mr. and Mrs. Reader, everywhere, and what will you have your Members of the United States Congress do for you and for our people?

International Peace

EXTENSION OF REMARKS

OF

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Wednesday, November 24 (legislative day of Tuesday, November 16), 1937

EDITORIAL FROM WASHINGTON POST OF NOVEMBER 24, 1937

Mr. TRUMAN. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Washington Post of this morning on the subject of peace.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post of November 24, 1937]

NO PEACE THROUGH PASSIVITY

There is much superficial appeal in the proposal that, except in the event of an actual invasion of American territory, the authority of Congress to declare war should be subject to the confirmation of the voters as expressed in a Nation-wide referendum.

The plan reflects the intense peacemindedness of the American people and their growing anxiety over present trends. The overwhelming majority of Americans oppose with might and main any participation on our part in military adventures abroad, now or in the future. Whatever jingoism there may have been in the United States in the past has long since disappeared in the growing revulsion against war. Indeed, it is safe to say that if all the peoples and governments of the world were as peaceful as our own, the threat of war would disappear like dew in the morning sun.

Unfortunately that is anything but the case. There are governments which still look to war as a most effective instrument of national policy and there are peoples who, reluctantly or not, can be regimented into war at the bidding of some dictator or military oligarchy.

There is abundant evidence of this. During the past 6 years the aggressors have been on the march. Manchuria, Ethiopia, Spain, China—the list of victims grows long. And there is no certainty that the tidal wave of international anarchy has run its course.

Quite the contrary. The timorousness shown by the European democracies in the face of the bluster and bullying of the dictators, the isolationism of the United States, have only increased the mounting danger of another world cataclysm. And in that cataclysm it will take more than an act of will by the American people, more than a misnamed neutrality law, more than a well-intentioned referendum against war to avert our participation therein.

This point was eloquently and effectively made by Congressman LEWIS, of Maryland, in his plea to cease giving aid to Japan, who without that aid, and the aid of other signatories of the Nine Power Treaty, could not continue its present aggressions in China.

But the Ludlow proposal is naive for reasons other than our inevitable entanglement in world destiny. It is based on the strange proposition that the representative form of government is inadequate in coping with the problem of war and it does so by raising the hypothetical bogey of a war-mongering President, determined, despite popular opposition, to plunge the Nation into foreign adventures.

If the United States should ever be so unfortunate as to have that kind of a Chief Executive he will be as little deterred by constitutional provisions as by the wishes of the people. In the meantime the fact remains that the men who wrote the Constitution saw to it that the conduct of foreign policy should be placed in the hands of an elected President.

Given his present powers to commit the Nation to a course of policy, it makes little difference whether any declarations of war are issued. And in any case these declarations are to an increasing degree being dispensed with by the aggressor nations. They strike first and declare war, if they do so at all, afterward.

It is not enough to love peace, nor even to legislate for it. Peace, in the modern world, cannot be the product of passivity. It can only be the result of active striving by all the peace-loving nations acting in concert. And of these the greatest and most powerful is the United States. As long as this Nation contents itself with the tactics of the ostrich the cause of peace will be more rather than less uncertain.

The Widest Use of Electric Power

EXTENSION OF REMARKS

OF

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, November 24 (legislative day of Tuesday, November 16), 1937

ARTICLE BY CLARK FOREMAN

Mr. NORRIS. Mr. President, I ask to have published in the RECORD an article by Clark Foreman, Chief of the Power Division of the P. W. A., on the Widest Use of Electric Power.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Democratic Digest for November 1937]

THE WIDEST USE OF ELECTRIC POWER

(By Clark Foreman, P. W. A. Power Division)

On his recent trip to the West President Roosevelt, speaking at Bonneville Dam, declared for a "policy of the widest use" in developing electricity. It was in Portland, Oreg., in 1932 that President Roosevelt made his famous Portland speech on power, and this speech he recalled at Bonneville, pointing out that the views which he expressed in the 1932 speech have "through the action of Congress become a recorded part of American national policy." The President has made it clear that he is determined that the policy of the widest use should become a part of the national policy. What, then, are the implications of such a policy as it will affect us in the future?

The problem of electric power falls naturally into three main divisions. First, generation of electric energy; second, transmission of the electric energy from the power plant to the distribution systems; and third, distribution systems, including not only those of the city but also the lines which take the energy to the farmers. As to the Government's part in the generation of electric energy, it is fair to assume that in the future it will be an extension of the same ideas which have been so successful already in the Tennessee Valley area. The regional planning bill will be considered during the special session of Congress beginning November 15. Although there are two different bills before Congress on this subject, they both provide for regionalizing the whole country so that we may have a planned development of our water resources. Planned locally in the regions by experts, the projects will then be submitted to the President for his approval and transmission to Congress. Only if Congress approves of the President's recommendations and allots the money will the developments take place. This is the best possible method of planning in a democratic country.

The dams which Congress will provide for in the future will no doubt be of a similar nature to those which have been provided for in the past. That is to say, they will have to be justified in terms of flood control as at Fort Peck, or navigation as at Bonneville, or through some other Federal power such as the necessity for military purposes, as was the case of the Wilson Dam on the Tennessee River. In most cases the dams will serve for both flood control and navigation, as do Grand Coulee, Bonneville, Norris, Wheeler, and many others.

The only controversial feature involved in this part of the problem is whether or not power should be generated from the falling water, which is an incidental part of most dams built for any of the other reasons. It is hard to see how anyone can seriously contest the wisdom of using this water, as the only other possibility would be to allow it to go to waste; and certainly we can ill afford that. Most of the problems arise after the energy is generated at the foot of the dam. The problem immediately becomes one of the disposal of this energy.

In some cases there are advocates of using all the energy at the site of the dam, which, if it is near a large city, would mean that that city would get an advantageous rate over the rest of the surrounding territory; or if, as in most cases, the dam is not near a city, it would mean the construction of large industries, and maybe a city itself, around the dam. This was the idea of some people in connection with the proposed harnessing of the St. Lawrence River. But, as President Roosevelt mentioned in his Bonneville speech, the State of New York was unwilling to allow this. A policy of the widest use has been established, providing for a fair distribution of this energy to the largest territory to which it could be economically transmitted.

Another controversy is caused by the desire on the part of many power companies to purchase all of the power generated at the dam and to eliminate Government-built transmission lines entirely. This has been a source of dissension with regard to almost all of the big dams, particularly those which have been built by non-Federal districts or authorities, such as those in Nebraska and Texas; but in most cases the decision has been that a wider public could be served by the erection of public transmission lines which would make energy available not only to the power companies but also to municipalities which wish to purchase it direct.

The Tennessee Valley Authority has constructed hundreds of miles of transmission lines for carrying energy generated at these dams. In Nevada the people of Lincoln County have organized the Lincoln District, which has borrowed money from the Public Works Administration for the purpose of building transmission lines which carry the energy from Boulder Dam into southern Nevada, making it available for mining and industrial purposes as well as for homes and farms which had hitherto been without benefit of electricity.

The opposition of the power companies to Government transmission lines has manifested itself most vigorously in the suit to enjoin the Tennessee Valley Authority, by 19 power companies. That suit will soon be decided by a special court of three Federal judges in Chattanooga. But the power companies have also sought to prevent the direct sale of publicly generated energy to municipal plants by asking the courts to enjoin P. W. A. from lending money to cities for the purpose of building municipal plants. At the present time there are 50 injunctions in the Federal courts, completely or partially preventing P. W. A. from assisting municipalities or other public bodies. The allotments which are thus being delayed in whole or in part amount to $57,305,817. These suits have been before the courts now for 3 years, and five different circuit courts of appeals have held in favor of the Government's position. The Supreme Court of the United States will consider cases involving several of these cities this December.

Twenty-two of the cities which are unable to receive money from the Federal Government because of these injunctions expect to purchase energy directly from the Tennessee Valley Authority. The position which these cities take is that the policy of widest use requires that the rates be as low as possible, and that the best way to get low rates is for the cities to eliminate all middleman profits, purchasing directly from the Government transmission lines. The effort of the power companies to prevent this and force the cities to continue to buy from them is the heart of the great fights which are now playing such an important part in the whole power question.

The great interest on the part of municipalities and other local public bodies in public power is clearly shown by the applications which have been submitted to the Public Works Administration. In the 4 years during which P. W. A. received applications 1,031 requested money for the construction of public power facilities. Some of these were for generating plants, some for transmission lines, and others for distribution systems or a combination of all three. The total requested from P. W. A. for these purposes was approximately $1,250,000,000. Of course, all of these applications could not be approved. Up to this time 282 electric projects have received allotments amounting to an aggregate of $124,281,556. One hundred and sixty-three have already been completed, but many of the others have been, and are still being, delayed by litigation.

The problem of distribution also involves the furnishing of electric energy throughout the countryside. The Rural Electrification Administration makes loans to public bodies and also to private power companies for the purpose of getting electricity to the farmers. It has already achieved striking results not only directly but through the stimulation which it has given to the power companies which were heretofore reluctant to go into a field where the profits are less glamorous than in industrial areas. The rate of extensions for farm lines is now about twice what it was in the so-called boom years of the twenties. The Rural Electrification Administration alone has contracted for $51,000,000 worth of rural line construction which will bring, for the first time, electric energy to serve some 150,000 rural families.

We have already had a taste of what the policy of the widest use may mean to this country. When all the sites for the economic generation of electricity are developed and this energy is made available to the entire surrounding countryside through transmission lines, to the public plants as well as to the private companies, and to the farmers through rural lines, we shall indeed have the widest use of electricity. And this will mean that electricity will be cheaper for all, as we have learned that the more electricity that is used, the cheaper it will be. Those who use electricity now will be able to enjoy many more of its benefits when all the people use it. The policy of the widest use calls, therefore, for the best and greatest use of electricity at the cheapest economic cost.

Vice President Garner

EXTENSION OF REMARKS

OF

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Wednesday, November 24 (legislative day of Tuesday, November 16), 1937

EDITORIAL FROM THE NEW YORK TIMES

Mr. TRUMAN. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the New York Times headed "Mr. Garner."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times]

MR. GARNER

John Nance Garner was born on November 22, as near Thanksgiving as so modest and wise a person would choose to be. His countrymen can't help numbering him among their blessings this week. He holds playfully that the books have got the year of his birth wrong. They say it was 1868. He prefers '69. For us it is '69 until he selects some other date. Commemoration of his birthday should be a movable feast. Early to bed and early to rise has had its proverbial effects. On his anniversary Monday he was out of bed at 7:45 a. m.; into it again at 9 p. m.

He has been at Washington for nearly 35 years. There he is an institution. Young folks a little careless with their geography, yet with an instinctive sense of the higher proprieties, are apt to think of Uvalde as the capital of Texas. He has minded his own business perfectly. He has minded the Nation's affairs carefully and competently. The most correct of Vice Presidents, he never goes outside his province till he is asked. His steadfastness, his loyalty, and his sagacity have often been drawn upon to persuade and to reconcile. His hand in the councils of the administration and his party has often been powerful and always steady. As Speaker and as President of the Senate he has survived interminable talk. Silence is grateful to him and he loves it.

He can be patient with policies that he disapproves. A sort of Ben Franklin, he has no cobwebs in his brain. He can be exposed freely to fantasts and fanatics and keep the peace. It is lucky for his own that he is a philosopher. The felicitations of his colleagues drove him from the chamber. Politicians who habitually spread their ears upon the ground can admire a man given to forming his own opinions. Takers of the stage and posers to the gallery may wonder at a man who mutes himself and never goes on parade. Mr. Garner's countrymen outside the temple of the august have a real regard and fondness for him. American "sages" have been rather numerous, and some of them full of sawdust. Mr. Garner is the real thing.

He is wise by nature and long experience, without pretense, pedantry, or solemnity. He is a good man, an able man, full of humor, and a good fellow. If he doesn't make his years a round hundred, that will be the first time that he has disappointed the public hope.

Conservation Phases of the Government's Power Program

EXTENSION OF REMARKS

OF

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, November 24 (legislative day of Tuesday, November 16), 1937

ARTICLE BY HON. HAROLD L. ICKES, SECRETARY OF THE INTERIOR

Mr. NORRIS. Mr. President, I ask to have printed in the RECORD an article by the Honorable Harold L. Ickes, Secretary of the Interior, Federal Administrator of Public Works, and Chairman of the National Power Policy Committee, published in the New York Times on Sunday, November 7, 1937, dealing with the conservation phases of the Government's power program.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times of November 7, 1937]

To the extent that the Federal Government is generating electric power, it is doing so as an integral part of its program to develop and conserve our natural resources for the benefit of all the people. This larger job had to be undertaken by the Government because private industry, and this means the private power companies, is unable to do it. Navigation and flood control are not the concern of private enterprise. They are not, and in this country never have been, activities carried on for private profit. Making our great rivers productive routes of commerce and keeping them from destroying persons and property by flood, are peculiarly governmental functions. They require the resources of the Nation for their fulfillment and entitle the people of the Nation to their full benefits.

We have come to recognize that our great river systems may serve many different purposes if controlled and, if left uncontrolled, that they may become a continuing and increasing hazard to our national welfare. We have learned from experience that the exploitation of these rivers for private gain has not produced either the benefits or the protection which the people have the right to expect. Electric energy, though necessarily subsidiary to the large conservation program, is an important and economically inseparable part of it. No undertaking which fails to make the full use of the water properly deserves to be called conservation.

As far back as 1926, Mr. Owen D. Young, chairman of the board of the General Electric Co., spoke as follows before the annual convention of the National Electric Light Association:

"There is a class of water powers which, in my judgment, must be separately considered. No suggestion has yet been made which adequately meets their needs. Where vast rivers, either on international boundaries or within the United States, require development for several purposes, such as navigation, irrigation, and flood control, as well as for power, there arises a new kind of question which is wholly unrelated to the old controversy of Government versus private ownership.

"The discussion of this question has been clouded by the old animosities. The private-ownership people feel that if the Government has anything to do with the development of power in these composite situations it will be merely the starting point from which the advocates of public ownership will advance their operations. On the other hand, the public-ownership people feel that the privately owned companies which seek to throw dams in these great rivers and, incidentally perforce, take over the effective navigation, irrigation, and flood control, are so entrenching themselves in purely public operations as not only to make all thought of public ownership impossible but to create instruments of oppression rather than of service. While this debate goes on vast rivers go unharnessed for power, waterways are undeveloped, floods drown us, and droughts devour us.

"May I not call for a broader view in the public interest from the representatives of both the utilities and the public? Can we not find a way by which the sovereign powers of States may be recognized in the location, construction, and ownership of these tremendous structures in great rivers supplying governmental services as well as power?

"Perhaps the key to it is the control of water. After all, it is the water which is the agency of all. It is the water which must be stored to prevent floods. It is the water which must be drawn down to facilitate navigation and irrigation. It is the water which must be drawn down to create power. In my judgment, the sovereign power of the State should determine which of these needs is most important in the public interest from time to time. If the Government prefers to use water for navigation or irrigation rather than for power, I think it should have the right to do so without protest, much less opposition, from any private power company. But the water must be used.

"If power can be incidentally generated from the stored water, there can be no reason why that power should not go into and become a part of the power supply of the contiguous district within reach of economical transmission. Some plan will have to be devised by which the amount and continuity of the supply of water, at least as to minimums, can be determined in advance as the basis for payment. The absolute essential of an electricity supply is that it be permanent and continuous. Interruptions make it almost valueless. The practical engineering problem, in my judgment, is not difficult once we remove from the question the heated controversies, the prejudices, and the suspicions of an earlier day.

"Much has been made of the question as to whether these dams should be built and owned by the Government. If the dams really serve the great purposes of navigation and flood control, which are clearly governmental activities, then it seems to me public ownership of them cannot be objected to * * *."

Neither the speaker nor the audience that he addressed can be accused of any radical tendencies. Mr. Young's remarks were accepted not as a declaration of some dark conspiracy against the power companies, but as a statement of inescapable fact. The situation outlined by Mr. Young soon bore fruit in the movement in Congress for the erection of Boulder Dam, and even the conservative President could not withstand the popular demand that the waters of the Colorado be harnessed for the public benefit.

Although the power generated at Boulder Dam is immensely valuable, the water for irrigation and domestic use which the dam now makes available to southern California is also of great importance. Without Boulder Dam, the growth and well-being

of the cities of southern California would be seriously threatened for want of an adequate water supply. Likewise, valuable as is the power development at Grand Coulee, of even greater worth is the irrigation development in that region which the availability of power for pumping will make possible.

Some critics of this administration, in an attempt to make the public believe that there is something sinister behind the efforts of the Government to develop our water resources, concentrate all possible attention on the power aspects. They cannot refute the truth of Mr. Young's statement and they put themselves in the position of attempting to deny to the country the benefits from irrigation, flood control, inland navigation, and other related benefits, in their jealous attempt to retain their own monopoly.

Since the attack is largely on the basis of the power generated by these multiple-purpose dams, I shall deal with that first, although from the point of view of the Government, power is a byproduct of dams constructed for the regulation of streams and the improvement of navigation under the authority of the commerce clause of the Constitution.

The opposition to the generation of power as a byproduct of these dams seems ridiculous. Would any intelligent citizen, except for a selfish personal reason, wish to leave unused the great energy of falling water when such energy can be transformed through electricity into the myriads of conveniences which a great part of our people need and are at present unable to have? The opposition of the power companies is really not to the generation of this power. They are too practical to wish to see this water go to waste. Their opposition grows out of the fear that somebody other than themselves may get the benefits of this Government activity. They claim a monopoly in the power field and go so far as to demand that the Federal Government refuse to sell power generated at these dams even to the publicly owned municipal plants in the vicinity.

It is clear that the private power interests would offer no objection to this program if the Federal Government would sell the power to the private companies and let the private companies, in turn, retail it to the cities and other customers at a profit to themselves. They saw no harm in the Government spending money for the generation of electricity so long as the profits went to the private power companies. But if the people of a city or county for some reason feel it wise to distribute their own electric energy and come to the Federal Government with an offer to buy—an offer equally as proper as that of the power companies—immediately a great hue and cry is raised of conspiracy, of an attack on the private companies; and with all the tricks at their command they seek to conceal from the public the real issues involved.

The Federal Government is not in a position either of developing or discouraging municipal ownership. Repeatedly it has been said that this is something for the people of the local communities to decide. But the right to municipal ownership and operation has been consistently upheld by the Supreme Court, and it can hardly be contended by anyone that the people have no such right. It may be that the power companies have been led to believe by their friends in previous administrations that the Federal Government would make available to them its facilities while denying them to the organized public. If this be so, their violent anger at this administration for not carrying out such an unfair and discriminatory policy can be understood. But it would be a winking justice, indeed, which would withhold electric energy from the people organized into municipalities and at the same time subsidize the private exploitation of the same people.

The attempted leniency of the late Secretary Ballinger with respect to the coal on Government land in Alaska and the accommodating "cooperation" of former Secretary Fall in disposing of Government oil lands in Wyoming and California may conceivably have led some business interests to give a peculiar meaning to the word "conservation." Their indignation is very like that of the boy who finds that his mother has locked the door to the jam cupboard.

This administration, however, is one dedicated to conservation for all our citizens, and, regardless of misrepresentations and loud outcries from rugged individualists who would continue to exploit the people, it has no intention of lining the private pockets of the few with the money which properly belongs to all.

Water to drink, water for the household, the farm and industry, water for recreation, power, and navigation, can best be secured to the American people by a control which bears all these needs in mind in their proper relation to each other, and, in addition, prevents the loss and disaster which, with alarming regularity, has been the result of our floods. In the past most of our water-control projects have been constructed to serve a single need, and quite naturally the structure provided has been adapted to the particular purpose in mind. As a result some people have concluded that the multiple use of water, even if feasible, is not proper because the different demands are so divergent. Such a conclusion, however, has no justification and is completely disproved by the magnificent development of the Tennessee River Basin.

It would, of course, be unfair to expect private power interests to build dams for other purposes than the generation of power. Dam sites useful for rural irrigation, urban water supply, flood control, navigation, and other purposes might well be uneconomical and unprofitable for development by private power interests, which would be unable to recover their investment from the sale of power alone. But likewise, it would be uneconomical for the Government to develop sites for other purposes and fail to utilize the power resources of the stream as an incident or byproduct of other uses.

While some streams are not suitable for power development, it is certainly not possible to say that there is any necessary contradiction between the need for flood control and the need for power. Both should go forward together when possible. It is true that some 20 years ago Dr. Arthur E. Morgan, who directed the flood-control work of the Miami Conservancy District, concluded that it would not be economically practical to use those dams for power; but the Tennessee Valley Authority, of which Dr. Morgan is chairman, in dealing with the larger problems of the Tennessee River, has admirably contrived to get the greatest total benefit to the public, including both power and flood control, through treating the drainage basin as a whole, with coordinated operation of strategically placed plants.

To create a navigable channel, comparable to that of the Ohio River, between Paducah, Ky., and Knoxville, Tenn., would have required 32 low-lift dams in addition to the two existing dams; but the Tennessee Valley Authority has produced the same navigation benefits, as well as flood control and water power, by building seven high dams instead.

Conservation of our water resources is well illustrated by the work which the Tennessee Valley Authority has already accomplished. Not confining itself to any single interest or going ahead with any piece-meal development, it has reckoned the total amount of water which it has to control, identified the possible dam sites, and proceeded to their integrated development. With strategically placed storage dams on the tributaries to regulate the flow of the main stream, seasonal fluctuations are controlled. The crests are taken from the floods by the storage dams and no longer is navigation confronted with the two specters of flood and drought which have retarded inland navigation in this country from the beginning.

At the same time the regulated flow of the river which makes possible the navigation also furnishes useful energy for the generation of power. The unified development of the drainage basin transforms the system into an immense interconnected reservoir with the power generating units placed at the points where they will do the most good. Transmission lines connect each plant, thus coordinating production and maintaining the maximum output of firm power of which the river system is capable. During the period of winter rains, when tributary dams are storing water and their plants are idle, power demands are filled by energy coming over the lines from the main river plants. In summer, releases from the storage reservoirs for the purpose of maintaining navigable depths in the main river pools pass through the storage-dam power plants on the way and make their contribution to the general pool of power.

It is, of course, true that the various purposes of the development present peculiar problems that must be coordinated by the engineers in charge of the conservation program. All solutions will have to be worked out in terms of the amounts of water available and, besides, the amount of flood protection necessary will be a governing condition. Power installation will naturally depend upon the potential power capacity, and this likewise plays its part in determining the height of the dam. Proper conservation also takes into consideration possible interconnections with other similar projects in the same drainage basin.

The requirements for these various uses are not, of course, in perfect harmony, although a large degree of integration is possible. A high dam provides storage capacity for flood control and an adequate head for the generation of power. The operation of a plant determines the degree in which the multiple utility will be achieved.

Take as an example Norris Dam, which lies about 25 miles northwest of Knoxville, Tenn., in the Clinch River. This can be visualized as a solid wall across a river valley, rising 243 feet from the valley floor. On top of the dam is a 22-foot roadway and under the roadway are three rectangular "holes" or spillways, each 100 feet wide and about 40 feet high. The reservoir is considered normally full when the water level back of the dam is even with the crest of the spillways. These spillways normally keep Norris Lake 202 feet deep at the dam.

Water stored during the rainy winter months is released during the drier seasons to accomplish three purposes: First, a steady flow of water aids in making the Tennessee River navigable; second, as the level of the reservoir is gradually lowered during the dry seasons, flood-storage capacity is at the same time created; and, third, the water released for navigation purposes turns the water turbines and generates electrical power.

Economic production of power is feasible until the reservoir is reduced to a depth of 137 feet. Now, suppose that by December 1, the end of the dry season, the level of the reservoir stands at 137 feet. The Norris reservoir is then ready for seasonal rains. The amount of water capable of being stored from the 137-foot level to the normal 202-foot level, at the crest of the spillways, amounts to approximately 1,500,000 acre-feet. This is enough water to cover the city of Washington, D. C., to a depth of about 34 feet.

However, even this amount of storage may be insufficient to take care of heavy flood rains. To control a deluge, drum gates in the spillway can be raised 14 feet, impounding an additional 520,000 acre-feet of water. And even this protection is not the ultimate possible, for above the drum gates is the roadway, up an additional 17 feet. It is true that, should such excessive rain fall as to cause the reservoir to rise above the drum gates, it would flow out continuously, but only at the rate permitted by the three 100-foot-wide spillways. Thus, the flow of excessive flood waters would be restricted.

When the flood was raging on the Ohio and Mississippi Rivers in January of this year, heavy rains fell also in the Tennessee River Valley. This water, if it had been allowed to flow unimpeded to the Ohio River, would have added to the damage from water in the Ohio and Mississippi Valleys. Norris reservoir, however, stored 1,250,000 acre-feet of flood waters, its level rising from a depth of about 172 feet on January 1, 1937, to about 213 feet on February 1. Immediately after the crisis passed, the level of the reservoir was drawn down as fast as was reasonably possible in order to provide storage for spring rains. By March 17 the depth of the lake was 192 feet, or about 10 feet below the crest of the spillways.

The success already attained in the Tennessee Valley by this thoroughgoing conservation program has quite naturally created an insistent demand throughout the country for a similar conservation program on the rest of our rivers. The varied conditions in different parts of the United States will of course require specific solutions for each river basin, but certainly the time should be not far off when all of our water resources will be properly conserved.

Two bills are now pending before the Congress, each of which would provide the beginning of a Nation-wide program of water conservation by setting up seven different conservancy authorities in addition to the Mississippi River Planning Commission. These conservation authorities, if created, will be the most significant step yet made by this country toward a proper conservation program which will add incalculable benefits to the people throughout the country by improving the national economy as a whole. The very interests which are loud in their indignation because the private power companies were not allowed a cut from the Tennessee Valley Authority benefits are now leading the attack against this beneficent national conservation program. Although power is only one item in the complete development of the proposed dams, they nevertheless are seeking to overemphasize this feature in the hope of arousing conservatives against any comprehensive conservation program.

The use of red bogies as red herrings by vested interests has become so commonplace that it will not fool any intelligent person. The work of conserving the Nation's waters, including their power possibilities, must go on regardless of the selfish opposition of special interests. Electric energy is also a great national resource and if the Government can make it available where otherwise it would not be, then it seems to me that it is the duty of the Government to do so.

President Roosevelt, in proposing to the Congress the creation of regional authorities or agencies in order to provide for regional conservation and development of our national resources, said:

"Nature has given recurrent and poignant warnings through dust storms, floods, and droughts that we must act while there is yet time if we would preserve for ourselves and our posterity the natural sources of a virile national life.

"Experience has taught us that the prudent husbandry of our national estate requires farsighted management. Floods, droughts, and dust storms are in a very real sense manifestations of nature's refusal to tolerate continued abuse of her bounties. Prudent management demands not merely works which will guard against these calamities but carefully formulated plans to prevent their occurrence. Such plans require coordination of many related activities.

"For instance, our recent experiences of floods have made clear that the problem must be approached a one involving more than great works on main streams at the places where major disasters threaten to occur. There must also be measures of prevention and control among tributaries and throughout the entire headwaters areas. A comprehensive plan of flood control must embrace not only downstream levees and floodways and retarding dams and reservoirs on major tributaries but also smaller dams and reservoirs on the lesser tributaries, and measures of applied conservation throughout an entire drainage area, such as restoration of forests and grasses on inferior lands, and encouragement of farm practices which diminish run-off and prevent erosion on arable lands.

"Taking care of our natural estate, together with the stopping of existing waste and building it back to a higher productivity, is a national problem. At last we have undertaken a national policy * * *."

If these regional authorities are established, they will provide an excellent means for a study of our conservation possibilities throughout the country on the basis of local and regional needs. It is contemplated that annual reports will be made to the President who, in turn, will check them with the budgetary agencies in order to determine how far the Nation can afford to go in the proposed program at any particular time. After the President has made his determination he will forward his recommendations to Congress, and only if Congress should allot money for the proposed conservation work would actual construction be undertaken.

Here, it seems to me, is an admirable way for democracy to function and at the same time meet the demands of our modern conditions. Select boards of experts will, after careful survey, make their reports to the President. After reviewing them the President will present them to the elected representatives of the people for decision. This democratic method disposes of the claims of the opposition that this is a proposal to put something over on the people. It is exactly what the President says it is—a proposal "in the interest of economy and the prevention of overlapping or one-sided developments. It leaves the Congress wholly free to determine what shall be undertaken and provides the Congress with a complete picture not only of the needs of each one of the regions but of the relationship of each of the regions to the whole of the Nation."

The attempt on the part of the private power companies to withhold these great advantages from the American people is short-sighted as well as selfish. They would have us sacrifice all of the great advantages that would result from this enterprise merely because they feel that such a development would jeopardize their monopoly. The solution of the power problem must fit in with broader questions of national economy. We cannot allow any group or selfish clique to halt the President's plan to build wisely and to conserve our natural resources in the interest of the people.

Reciprocal-Trade Agreements

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 24, 1937

Mr. CARLSON. Mr. Speaker, last week every Member of Congress received from the Secretary of State, the Honorable Cordell Hull, an announcement regarding a proposed reciprocal-trade agreement between the United States and Great Britain. It was also announced that a reopening and rewriting of our present reciprocal-trade agreement with Canada was in prospect. The announcement we received carried with it the information that the State Department would be glad for any suggestions Members of Congress might have to offer. Therefore, I felt it my duty as a Representative of one of the agricultural districts of the Middle West to inform the State Department of the need of securing an outlet for a large amount of farm products, especially wheat.

At the suggestion of the Secretary of State, I have today written the following letter:

CHAIRMAN OF THE COMMITTEE FOR RECIPROCITY INFORMATION,
Seventh and F Streets NW., Washington, D. C.

DEAR MR. CHAIRMAN: As a Representative of an agricultural district in the Middle West, I am accepting the Secretary of State's invitation to write you in regard to the contemplated trade treaty to be negotiated with the United Kingdom. In the release issued by the Department of State on November 17, 1937, I note that the object of the preliminary announcement is to give interested parties an opportunity to suggest import or export products. The announcement of the proposed trade agreement between the United States and Great Britain will be of special concern and eagerly watched in the Middle West, in view of the fact that Great Britain is our largest foreign customer.

We in the Middle West feel that we have a special stake in this particular enterprise. It has been called to my attention that the 16 pacts already concluded by the State Department under the authority conferred upon the President by the Trade Agreements Act have been chiefly with agricultural countries. I appreciate that this was a matter of necessity as agreements could be more quickly reached with these nations. The American farmer feels that because these treaties were drawn largely with agricultural countries that the concessions so far obtained have tended to expose American agriculture to increased competition from agricultural imports. I realize that this has no doubt been intensified by the drought of 1936. Regardless of this, the fact remains that agriculture has not met the maximum benefits to which it is entitled. Every effort should be made to keep in mind in this treaty such export crops as wheat and meat products. As I represent one of the large wheat-growing districts of Kansas, I want to make a special plea for wheat. On November 22 I received information from the Bureau of Agricultural Economics, Washington, D. C., that the reports on the export of wheat from July 1 to September 30 show that all wheat exports, including flour, are equivalent for that period to 10,200,000 bushels. I notice that the distribution of these exports showed that 2,840,000 bushels went to Belgium, 200,000 bushels to France, 40,000 bushels to Germany, about 3,000,000 bushels to Canada, 330,000 bushels to the Irish Free State, 2,500,000 bushels to the Netherlands, and 758,000 bushels to the United Kingdom. In view of the small amount exported to Great Britain from July to October of this year, at which time we had a very favorable price differential between Liverpool and Chicago, this becomes a serious problem. During this period there were times when there was a price difference between these points of from 35 to 38 cents per bushel, which should have been very helpful in moving wheat to Great Britain.

The exports to Great Britain are so small for the harvesting and marketing period in the United States that farmers are wondering if England is not trying to force an early consummation of a trade treaty, and therefore has purposely kept out of the American wheat market.

Further information from the Bureau of Agricultural Economics informs me that from July 1 up to and including November 13 American exports of wheat totaled 18,695,000 bushels. While I realize many factors have entered into the exporting of farm commodities during the past 5 years, we must not lose sight of the fact that in the 10-year period from 1922 to 1932 the United States exported in excess of 100,000,000 bushels of wheat, with the single exception of 1925, when we nearly reached that figure.

Your serious consideration of this letter will be appreciated by farmers and wheat producers in every section of the United States.

Sincerely yours,

FRANK CARLSON,
Sixth District, Kansas.

Mr. Speaker, it is not my intention at this time to enter into a discussion of the merits or demerits of the reciprocal trade treaties which have been consummated, but with competitive agricultural imports exceeding our agricultural exports last year for the first time in our history by 18 percent, certainly one cannot be accused of treason for viewing the program in its reality. It has been my observation that immediately when we enter into a discussion of imports that the smoke screen of noncompetitive crops, such as coffee, tea, rubber, silk, bananas, and so forth, is immediately raised.

I shall confine my remarks entirely to competitive farm commodities. The farmers of the United States are not asking for embargoes or prohibitive duties, but they do believe that the American farmer is entitled to the American market. In fact, they believe they are entitled to the same assistance that is being given industry, finance, or labor. The farmers of America are interested in securing every dollar's worth of foreign trade possible, but at the same time they believe that the American market is the greatest market for their products. Our agricultural imports have reached staggering figures and our exports have diminished to a most alarming extent.

Importation of cattle for the first 9 months of 1937 was valued at $14,647,000. This is more than the entire importation for the year 1936, during which year we imported 399,113 head of cattle, valued at $10,708,230. During the first 9 months of this year we imported 437,941 head, valued at the figure previously given. In 1933 this country imported 65,000 head of cattle, valued at $572,000. Our exports of cattle are too small for serious consideration. In 1933 we exported 2,912 head, valued at $192,000. These cattle were largely for breeding purposes.

In the first 9 months of 1937 we exported 2,943 head of cattle, valued at $336,512, as compared to the imports of $14,647,244 in 1937.

Imports of live hogs go from 29,000 in 1932 to 17,446,457 pounds in 1936 and to 15,763,411 pounds in the first 9 months of 1937. The value of live-hog imports in 1932 was $2,000, and for the year 1936 the value of live hogs imported was $1,453,841, and for the first 9 months of 1937 the importation of live hogs was $1,463,097. Using an average weight of 200 pounds per head, it would mean that we imported 87,232 head of hogs in 1936, and should they average 60 head to a carload, it would mean 1,454 carloads, or 200 trainloads of 70 cars each. Using the same basis for the first 9 months of 1937, we have imported 1,314 carloads of hogs.

With recent serious declines in hog prices, the farmers are seriously wondering if this large importation of hogs has not had a detrimental effect on local prices.

It is not my intention to enter into a discussion of the increased importation of corn, wheat, hay, and dairy products, but figures indicate that the importation of these commodities has increased to an alarming extent.

When Congress delegated its authority to the President to negotiate, through the Secretary of State, reciprocal trade agreements, we gave him practically unlimited authority, and under the most-favored-nation clause there is placed in operation a principle which works to the great disadvantage of the United States in the reciprocal trade agreements. Under this provision, which is included in all of the trade agreements, all of the nations of the world, except Germany and Australia, receive the benefit of the same tariff reductions as are made to any one country.

For instance, in the reciprocal trade agreements with Canada the United States made extensive tariff reductions on agricultural products. All of the other nations in the world, except the two mentioned, received the advantage of these same reductions, although they make no reductions whatever in articles going from this country to the several nations.

The tariff on Canadian cattle coming into the United States weighing more than 700 pounds was reduced from 3 cents to 2 cents a pound. The tariff on dairy cattle coming into this country from Canada was reduced from 3 cents to 1½ cents a pound with quota restrictions. The tariff on calves weighing less than 175 pounds was reduced from 2½ cents a pound to 1½ cents a pound. These reductions, in accordance with the most-favored-nation clause, apply not only to Canada but to all the other countries of the world except Germany and Australia.

Canada made some concessions in tariffs to the United States in the trade agreements, mostly on automobiles and machinery, but the other nations of the world receiving the benefits of our reductions made no concessions to this country at all. In my opinion, this is not reciprocity. The theory of reciprocity is that we reduce the tariff on certain articles produced in a foreign country coming into the United States which are not produced to any great extent in this country and the other countries reduce the tariff on their articles bought in the United States and going to foreign countries.

In conclusion, let me state that in my opinion farmers who produce commodities for export have not received fair treatment from the Government, and I sincerely hope that those charged with making the reciprocal trade treaties will give serious consideration to this problem, which means so much to agriculture.

The Negro and Unionism

EXTENSION OF REMARKS

OF

HON. JOSEPH B. SHANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 24, 1937

ADDRESS BY HON. JOSEPH B. SHANNON AT A MEETING OF THE NATIONAL ALLIANCE OF POSTAL EMPLOYEES HELD AT KANSAS CITY, MO., ON OCTOBER 10, 1937

Mr. SHANNON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address delivered by me on October 10, 1937:

My subject today will be The Negro and Unionism.

From the time of the entrance of the Negro into the free-labor market the colored race has played a progressively important part in the general labor movement.

INTERRACIAL COOPERATION URGED

One of the early white friends of the Negro laboring class was Mr. A. C. Cameron, of the Chicago Trades' Assembly. In 1866 Mr. Cameron made an address on behalf of the National Labor Union, organized in that year, in which he called attention to the position of Negro labor.

He said:

"The systematic organization and consolidation of labor must henceforth become the watchword of the true reformer. To accomplish this the cooperation of the African race in America must be secured. What is wanted, then, is for every union to help inculcate the grand, ennobling idea that the interests of labor are one; that there is but one dividing line, that which separates mankind into two great classes, the class that labors and the class that lives by others' labors."

Mr. Cameron also called attention to the fact that capitalists of that period were making every effort to "foment discord between the whites and blacks, and hurl the one against the other" in order "to maintain their ascendancy and continue the reign of oppression." He concluded his address by requesting the cooperation of the colored race in the labor movement.

THE FIRST NATIONAL CONVENTION

The first national convention of Negro labor in this country met in Washington, D. C., on January 13, 1869, with 161 accredited delegates in attendance. Isaac Myers was the presiding officer. Several resolutions were introduced, but none acted upon. The question was raised as to the relationship that should be maintained between the races, and G. T. Downing, of Rhode Island, warned the colored workingmen that they should not disconnect them-

selves from white workingmen and white labor organizations; that to do so would be detrimental to the Negro.

The following July (1869) another Negro labor convention was held in Baltimore. At that convention delegates were elected to the National Labor Union Congress to be held in Philadelphia the following month, and a call was issued for the next meeting of the Negro Labor Association to be held in Washington in December 1869.

PARTICIPATION IN THE 1869 NATIONAL LABOR CONGRESS

When the Philadelphia congress of the National Labor Union convened, the Negro delegates elected at Baltimore, led by Robert H. Butler, of Maryland, were present. A resolution was passed stating that "the National Labor Union knows no North, no South, no East, no West, neither color nor sex, on the question of rights of labor," and urging "our colored fellow members to form organizations and send their delegates from every State in the Union to the next congress."

Mr. Butler, speaking on behalf of the colored delegation, said that they "did not come seeking parlor sociabilities but for the rights of manhood." Butler and four white delegates were appointed as a committee to organize the colored workingmen of Pennsylvania.

Thus we see that as early as 1869 the National Labor Union welcomed the Negro into its ranks and sought to create a single labor union representing both white and black labor. Negro workingmen, however, while willing to cooperate with their white brethren by sending delegates to their labor conventions, desired to maintain their separate organization.

Pursuant to the call theretofore issued, the Negro labor convention met again the following December (1869) and continued in existence until 1872. The political disagreements of that organization were largely responsible for its collapse.

EARLY LABOR LEADERS

Among the real Negro labor leaders of the early period were George Downing, Sella Martin, and Wesley Howard. At the 1870 Paris World's Labor Congress the National Negro Labor Congress was represented by the Reverend Sella Martin. Martin was selected because of his broad views on labor questions and also because he knew the French language. He proved to be an able representative at that congress.

THE KNIGHTS OF LABOR

The rise of the noble order of the Knights of Labor was the next significant step toward the creation of solidarity between Negro and white workingmen. In 1886 it was estimated that there were approximately 60,000 Negroes in the Knights of Labor.

When the general assembly of the Knights of Labor met at Richmond, Va., in 1886, that great labor leader and humanitarian Terence V. Powderly, the general master workman of the order, was introduced by a Negro delegate, Frank J. Ferrell.

When trade unionism came into ascendancy through the American Federation of Labor, the Knights of Labor went out of existence.

BOOKER T. WASHINGTON

In 1895 Booker T. Washington made his appearance as the economic and industrial emancipator of the Negro. In his noted address at the Atlanta Exposition in that year he said:

"Ignorant and inexperienced, it is not strange that in the first years of our new life we began at the top instead of at the bottom; that a seat in Congress or the State legislature was more sought than real estate or industrial skill; that the political convention or stump speaking had more attractions than starting a dairy farm or truck garden."

He advised the Negro to—

"Cast down your bucket where you are—cast it down in making friends in every manly way of the people of all races by whom we are surrounded. Cast it down in agriculture, mechanics, in commerce, in domestic service, and in the professions."

Booker T. Washington's speech won him the confidence of all good citizens. He encouraged Negro workers to become efficient workers through education in such schools as Hampton and Tuskegee. In 1900 he founded the Negro Business League, which was described as being based upon the belief that—

"If you can make a better article than anybody else and sell it cheaper than anybody else, you can command the markets of the world. Produce something that somebody else wants, and the purchaser will not trouble himself to ask who the seller is. Recognize this fundamental law of trade; add to it tact, good manners, a resolute will, a tireless capacity for hard work, and you will succeed in business."

Booker T. Washington's theories widely influenced the Negro world.

THE RISE AND FALL OF INDEPENDENT UNIONS

In 1919 there came into existence a Negro organization known as the National Brotherhood Workers of America, under the leadership of T. J. Pree and R. T. Sims. The aim of this organization was to federate all the Negro unions and serve as an agency for organizing those Negroes who did not belong to a union. The brotherhood went out of existence in 1921. Thereafter Negro unions continued to rise and fall. Among the successful Negro labor organizations have been the Longshoremen's Union Protective Association, Colored Electricians' Union, the Railway Men's International Benevolent Industrial Association, Brotherhood of Dining Car Employees, and the Brotherhood of Sleeping Car Porters and Maids.

UNIONIZATION IN THE POSTAL SERVICE

Independent Negro organizations in the Government service, where racial discrimination is unknown, have played an important role. And in no branch of the Government service is the Negro a more important factor than in the Postal Service.

While I have no definite figures as to the number of your race in the Service at this time, due to the fact that the records kept have no racial divisions, a survey of the United States Department of Labor, made in 1928, revealed that the entire Postal Service at that time employed 25,390 Negroes, constituting about 9 percent of the total force. Other independent surveys showed that in 1926 about 16.4 percent of the postal staff in Detroit were Negroes; that in 1928, Negroes constituted 31 percent of the postal staff in Chicago; and that in 1930, in New York City, they constituted 16 percent of the postal staff.

Many cities have colored postal employees' benefit societies, local in scope, which supplement the work of the regular postal unions.

The regular unions of postal workers, such as the National Association of Letter Carriers and the National Federation of Post Office Clerks, have large colored memberships. The National Federation of Post Office Clerks has locals composed entirely of members of your race. One of the many Negro officers to whom the federation points with pride is Dave Johnson, who has for years been a distinguished member and is now president of Local No. 1 in the city of Chicago. Another is Robert Evans, of Jersey City, N. J.

BIRTH AND GROWTH OF THE NATIONAL ALLIANCE

Your organization, the National Alliance of Postal Employees, was formed by a group of railway postal clerks at Chattanooga, Tenn., October 6, 1913. Soon thereafter it extended its jurisdiction to colored employees in every branch of the Postal Service. According to the Postal Alliance of March 1929, its membership at that time was 2,453. I am told that its present membership is between 7,000 and 8,000.

The policy of your Alliance in providing indemnities for life, accident, and health is most beneficial. My information is that the Alliance has approximately $50,000 in cash and in Government bonds for this purpose.

TRIBUTE TO S. M. JACKSON

Your association is credited with having brought about the appointment of a Negro official, assigned to the Postmaster General's office, to handle matters affecting the colored employees of the Post Office Department. The man holding that position at this time is S. M. Jackson, who was appointed on July 3, 1936. Former incumbents were John D. Gainey and Emory A. Bryant. This is a most important place, and Mr. Jackson is eminently qualified to discharge its numerous duties. Before his appointment, he was for 29 years a railway postal clerk. He served as national secretary of your Alliance from 1925 to 1937. During all of his service in the Post Office Department, Mr. Jackson emphasizes the fact that the departmental officials have been "fair, considerate, and consistently sympathetic."

IMPORTANCE OF ORGANIZATION

Only the other day I heard a story told by a former resident of the State of South Carolina.

He said there was a man in that State who had a great stable in the early days, and who took considerable pains to beautify the grounds about the stable with flowers and shrubbery. As one of his caretakers he had a boy of your race, about 19 years of age, who became a very proficient whipcracker.

On one occasion when the stablekeeper had visitors from the North he called upon the boy to give an exhibition of his whipcracking ability.

First he asked the boy to crack a rose growing nearby. The boy promptly did so; and he was then told to direct his aim at a fly on the wall. Without any difficulty the boy cracked the fly. Then, pointing to a hornets' nest, the boy's employer said, "Crack that."

The boy hesitated a moment, then said, "Now, boss, a rose am a rose and a fly am a fly, but a hornets' nest am an organization, and I am always afraid to try to destroy a whole organization."

And so it is with your group. As individuals, if you have grievances it is difficult to obtain a responsive audience. But as an organization, when your grievances are presented they receive consideration not given to individual complaints. The importance of concerted action in matters involving the rights of labor cannot be overemphasized.

Significant Editorials by Conservative Papers Urge Freedom for Tom Mooney

EXTENSION OF REMARKS

OF

HON. JERRY J. O'CONNELL

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 24, 1937

EDITORIALS FROM THE BALTIMORE SUN AND THE PORTLAND OREGONIAN

Mr. O'CONNELL of Montana. Mr. Speaker, under leave to extend my remarks I wish to include two editorials of great

importance on the Mooney case, one from the Baltimore Sun, the other from the Portland Oregonian. Both of these papers take the Supreme Court of California to task for its recent unjustifiable decision in denying Tom Mooney's petition for a writ of habeas corpus.

These editorials are doubly significant in view of the fact that neither of these papers is prolabor, but rather they are fairly conservative. However, even fair-minded conservatives are aroused at the constant refusal of the California court to correct what is universally admitted to be a judicial scandal unrivaled since the Dreyfus case rocked France. In everybody's mind who knows the story of the Mooney case is the inescapable conclusion that justice has been so perverted that the ordinary citizen's faith in the integrity of the judiciary is severely shaken.

[From the Portland Oregonian of November 2, 1937]

NONE SO BLIND—

It seems to be as true as ever that there are none so blind as those who will not see. The California Supreme Court declines to free Tom Mooney. To bolster its own impossible position it declares "incredible" the evidence showing that Mooney's conviction was erroneous. This includes as "incredible," presumably, the proved fact that Mooney was on top of a distant building at the time when perjured witnesses swore they saw him plant the preparedness-day bomb. It declares "incredible" the proved fact that Frank Oxman was not even in San Francisco at the time when he swore he saw the bomb planted. It declares "incredible" the repudiation by perjured witnesses of their testimony which was so large a factor in Mooney's conviction.

Incredible? Such self-excusing by the highest court of a sovereign State would itself be incredible were it not before our eyes. These things that the court calls incredible are not mere allegations but established facts. By calling them incredible the Supreme Court of California puts itself in the position of the yokel at the circus, looking his first time upon a double-humped camel and declaring: "There ain't no such animal."

Upon prior appeal of the Mooney case to the Supreme Court of the United States, that tribunal declined to take jurisdiction on the ground that Mooney had not exhausted his plea before the California courts. He has exhausted it now. It will be interesting to see, when appeal to it is taken again, what the highest court in the land will do with a cause celebre which has become a shame to the State of California.

[From the Baltimore Sun, November 1, 1937]

NEW AND ORIGINAL

In its latest homily on the Mooney case the California Supreme Court denounces the appellant as "outspokenly hostile to our system of government." This, of course, has nothing to do with Tom Mooney's guilt or innocence on the charge of dynamiting San Francisco's preparedness parade on July 4, 1916, but, in view of the widespread belief that Mooney is still in prison on account of his political beliefs rather than because of the dynamiting, it was considerate of the court to mention it. However, this charge of hostility against our system of government would have been more effective if the California Supreme Court had stopped right there and said nothing more about the case, for in its discussion of the evidence upon which Mooney was convicted the court reveals an attitude which is certainly hostile to one feature of our system of government, namely, the presumption of innocence supposed to be enjoyed by a man accused of crime.

In his appeal to the California court, which Mooney's lawyers describe as a mere prelude to a new appeal to the United States Supreme Court, Mooney brought forward voluminous evidence to show that vital testimony was admitted to be perjury; that more of it was inconsistent with other testimony and circumstantial evidence in the case, and that the famous picture of Mooney on the roof of a building when a clock in the street below showed the time as only a few minutes before the explosion established a conclusive alibi. But the California Supreme Court, in its denial of the appeal, does not meet the issue presented by these statements. In spite of confessions of perjury, it denies that perjury has been proved and declares that Mooney has not shown that the prosecutor, who is now dead, knew that the testimony was perjured! In other words, it is not enough to prove that witnesses perjured themselves and that testimony was inconsistent with facts; the defendant must also prove that the prosecutor knew it—plainly an impossible task.

As to the damning "clock" pictures, the court dismisses them as "incredible" on the ground that they are confuted by the testimony of other witnesses in the record who place Mooney on the roof much later than the clock shows. Nevertheless, there were numerous witnesses who placed the Mooneys on the roof at substantially the time shown by the clock in the picture. And how long has the unreliable memory of witnesses as to the precise moment of an occurrence been deemed more nearly conclusive than a photograph clearly establishing the time? Since there has never been any official effort to establish the photographs as fakes, the California Supreme Court's decision that the time sense of individuals is more worthy of belief than a clock must rank with the great original treatises on evidence.

Tom Mooney is still in the San Quentin Prison, and may stay there for the rest of his natural life. But in keeping him there California has done no great service to her judiciary, which has had to invent new feats in casuistic acrobatics every time the Mooney case comes before it. One would think California by this time would prefer Mooney free to a State supreme court shackled by ever heavier chains of rationalization.

The Workingman's Tax Bill

EXTENSION OF REMARKS

OF

HON. WARREN R. AUSTIN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Wednesday, November 24 (legislative day of Tuesday, November 16), 1937

ABSTRACTS FROM ARTICLES FROM THE PROVIDENCE (R. I.) JOURNAL AND EVENING BULLETIN

Mr. AUSTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD abstracts from a series of articles in the Providence Journal and Evening Bulletin, of Providence, R. I., regarding a research study into the actual expenditures of three thrifty New England families, developing the subject of the workingman's tax bill.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

THE WORKINGMAN'S TAX BILL—A RESEARCH STUDY OF THE ACTUAL EXPENDITURES OF THREE THRIFTY NEW ENGLAND FAMILIES

FOREWORD

This is the first attempt, so far as we know, to uncover the hidden tax bill of typical American wage earners who are entirely exempt from the income tax and largely free from direct taxation.

All indirect taxes paid by consumers cannot be traced. For example, the tax burden hidden within a householder's payment of interest on a mortgage cannot be stated. It cannot be accurately stated on the payments on principal on a mortgage.

This study, therefore, does not purport to show all taxes or the entire tax burden. What the percentage of the whole tax bill to total income or expenditure is, will remain forever, in all probability, for the controversy of politicians. Obviously it is much higher than with the three families here concerned and obviously it is still increasing for them and for everybody.

But this study does purport to state what taxes were traced and it sets forth the record to support the finding that an average of 12.18 cents of every dollar spent by these frugal New England working families was actually traced to taxes. That is the percentage of the tax bill to their total family expenditures for a year. As the story explains in detail, that percentage can be stated at the higher figure of 14.74 percent if we deduct from the total family expenditures the amounts on which we could not trace taxes and figure the percentage of the total tax only to those expenditures on which taxes could be traced.

But our desire has been to state the proposition conservatively enough to withstand controversy. We offer this, therefore, as a conservative statement of the tax bill of conservative families. That might be expected from New England.

SEVELLON BROWN,
Managing Editor.

THREE FAMILIES KEEP RECORDS TO DISCLOSE HIDDEN TAXES

Account for every cent spent over 52 weeks—Detailed budgets submitted monthly for tax computation by Journal Bureau

For 52 weeks, three Rhode Island housewives kept an unprecedented check on every cent spent by themselves or other members of their families.

Armed with pencil and paper, they jotted down at all hours of the day and night every expenditure made, from a suit of clothes to a pair of shoe laces, from a cut of meat to an ice-cream cone, from a package of cigarettes to a bar of soap, from new tires for the family automobile to tickets to the movies.

Every time each of the three housewives went shopping she recorded not only the total amount of money she had spent but also how much each particular article had cost.

This was essential because the detailed budgets of each of the three families were turned over monthly from September 1, 1935, to September 1, 1936, to the research department of the Providence Journal for determination of the accumulated taxes imposed on every commodity at each stage of production and marketing and passed on to the consumer.

Because the amount of indirect taxes paid by the consumer on each article of food, clothing, and other household use varies and had to be established separately by the Journal research worker, the exact quantity and cost of every commodity bought on each occasion had to be recorded by the housewife. At the end of each week she then lumped together the various items of the same kind.

Although all three families have long been firm believers in budgeting, they had never kept such strict accounts before. They

soon caught on, however, to the spirit of the thing and at the end of each week noted with pride that accounts balanced, with expenditures and savings equaling income.

While the burden of keeping the accounts naturally fell on the housewives, who do most of the spending, every other member of the family did his share, and at the end of the day or week submitted his report to the chief household accountant.

In the home of Frank A. Bateman, of 103 Calaman Road, Cranston, Friday night was usually accounting night.

On that night Mr. Bateman, who is office manager for a Providence concern and himself a public accountant, handed in his report for the week detailing how much he had spent for lunch, cigarettes, cigars, pipe tobacco, and other items.

Similar accounts were rendered by the three Bateman children, each reporting how much they had spent during the day or the week.

For the first 19 weeks of the period covered by the Journal study Miss Alice J. Bateman was a student at the Rhode Island State College. During that period she spent $240.60 and submitted weekly to her mother a completely itemized break-down of her expenditures. One of the Bateman boys graduated from Cranston High School this summer and the other is still a student at the same high school. Daily they reported to their mother how they had disposed of whatever spending money was given them.

The same procedure was followed in the families of Fred Green, 94 Chandler Avenue, Pawtucket, and Charles Allsup, 378 Vine Street, that city. In these two families both husband and wife work in mills and in each case a young daughter, the only child, goes to school.

Every month the accounts of the three families were turned over to the Journal research department, where they were carefully studied to determine what every commodity had cost each family in indirect taxes.

TAXES ON GOODS PILE UP LIKE ROLLING SNOWBALLS

Middleman's mark-up makes consumer pay more than United States gets, but this price increase is not figured in tax study

Consumer's goods collect taxes in every stage of production, just as a snowball rolling down hill collects snow.

Thus a loaf of bread has at least 53 different kinds of taxes tucked in it from the time the wheat starts to grow in the field until the bread reaches your table.

In producing and distributing petroleum products the petroleum industry pays 201 taxes, which must be passed on to the consumer along with other overhead expenses. The tax you pay on every gallon of gasoline and every quart of oil you buy is merely the final levy in this long chain of imposts.

Every package of 20 cigarettes means a payment of 6 cents to the Federal Government.

Your share of real-estate taxes does not necessarily end when you pay your property tax if you own a house, or your rent if you don't own one. When a housewife goes to the butcher and buys hamburg steak and to the grocer for onions to cook with it, a part of the money she pays them not only goes into taxes on these foods but also into their rent. Just as the housewife's dollar has to be divided by the butcher with the tax collector, so must that part which the butcher hands over to the packer be shared. That's how taxes go all the way from the farthest producer to the ultimate consumer.

Federal revenue largely hidden taxes

These indirect taxes, about which most of us know nothing at the time of payment, make up a considerable share of the total tax bill, amounting to about $8,767,000,000, collected annually by our Federal, State, and local governments. In 1934 these hidden taxes made up 59 percent of the total Federal tax revenue.

Just how you yourself pay these concealed taxes on everything you buy is shown in the detailed analysis made by the Providence Journal research department of a year's expenditures by the families of Fred Green, 94 Chandler Avenue, Pawtucket; Frank A. Bateman, 103 Calaman Road, Cranston; and Charles Allsup, 378 Vine Street, Pawtucket. These families kept daily accounts of every cent spent during the 12-month period and turned them over each month to the Journal.

No general attempt has ever been made before to compute the total tax cost on each article from the time it leaves the field or the mine until it reaches the consumer. In trying to ascertain the accumulated taxes on each article purchased by the three families the Journal research department was, therefore, treading on virgin ground.

Because it was a new departure in the field of tax research and entirely new questions were raised, it was found impossible to obtain dependable figures on taxes on certain commodities. In such cases the taxes were omitted altogether in the interest of scientific accuracy. The figures given in this study are, therefore, invariably conservative.

Taxes added at each stage of production

Accumulated taxes on at least 200 articles of food, clothing, household use, and other goods which these families used in the course of the year had to be figured. The various taxes which each article picked up in the process of production had to be checked and added up and then computed on the basis of the small quantity which Mrs. Allsup, Mrs. Green, or Mrs. Bateman purchased. Computations often had to be made in tenths of mills. Farmers, miners, industrialists, wholesalers, and retailers in all parts of the country had to be contacted for information.

In order to get an idea of the amount of work involved in this tax study you need only picture in your own mind the numerous processes which most of the articles you buy each week or month go through before they can be used.

At each stage of production or marketing a new tax is slammed on. This tax is immediately incorporated in the price of the article. When you go to the store and buy the article, you are thus not only paying the cost of production and marketing but also settling with the tax collector. You may not suspect it at the time—you certainly don't think of it every time you buy a loaf of bread, a quart of milk, a gallon of gasoline, a hat, a coat, or shoes—but you are paying your indirect tax bill in each instance as if the tax collector were right there.

This invisible tax collector—invisible as far as these families were concerned—had to be followed step by step by the research worker who made the Journal study. Complicated as the process was, the worker at times found it more entertaining than a cross-word puzzle or detective story. He ran up against more complications and unexpected developments than are encountered in the best of movie thrillers.

Levies on bread alone are numerous

The tax collector is sometimes an elusive fellow, and our economic Sherlock Holmes frequently had quite a job tracking him down in the most unexpected places.

Take the case of the loaf of bread, for instance.

Among the taxes paid by the various processers but eventually borne by these families as consumers were the following:

Real-estate tax, machinery tax, personal-property tax, truck-license tax, and Federal and State income taxes paid by the farmer; capital-stock tax, real-estate tax, State-franchise tax, and Federal and State income taxes paid by the grain elevator company; city and State real-estate and personal-property taxes, State-franchise tax, and Federal and State income taxes paid by the railroad which transported the wheat to the flour mill and then the flour to the baker; real-estate tax, personal-property tax, and income tax paid by the manufacturers of bread wrappers; real-estate tax, electricity tax, gas tax, personal-property tax, income tax paid by the bakers.

Multiply this process by 200—the minimum number of articles involved in the budgets of the Green, Bateman, and Allsup families—and you will begin to realize the extent of the detective work and figuring which had to be done.

As most of the food we eat and the raw-material base of many of the things we wear and use come from the farm, the original tax paid by the farmer and passed on to the consumer in the cost of farm goods is the first item we must take into account.

Farmer receives large share of consumer's dollar

Slightly more than 9.3 percent of the total farm income is paid out in real estate, personal property, and gasoline taxes and in automobile license fees. Many other shiftable taxes paid by the farmers, such as levies on electricity, telephone, farm machinery, feed, and fertilizers, have not been included in this 9.3 percent figure. These taxes undoubtedly raise the farmer's total tax burden to a considerably higher figure, but as no accurate figures pertaining to them are available it has been decided in the interest of exactitude to make no estimates.

Not only that, but the 9.3 percent figure has been arrived at after making adjustments for tax delinquency and for taxation on land itself. In the case of tax delinquency, that portion of the tax which the farmer failed to pay cannot, of course, be passed on to the consumer. Nor were taxes on land counted, in keeping with orthodox economic theory that since such taxes can in no way affect the supply of land, the price of the goods produced by such land likewise is unaffected by them.

According to Federal Government figures, the farmer receives 45 percent of the consumer's dollar spent for food. If 9.3 percent of the farmer's income goes into shiftable taxes, then 4.185 cents of every dollar spent by the housewife for food is a charge directly traceable back to taxes on the farmer.

In other words, when you go into your neighborhood store and buy $2 worth of meat, vegetables, and fruit, you pay out about 8⅓ cents just in taxes on the farmer alone. But these goods passed through many hands before they reached the retailer. At every stage a new tax was added to the cost of the article. By the time the article was ready for consumption, the accumulated tax cost was far greater than the original 4.185 cents on the dollar which pays for farmers' taxes. What each commodity cost these three families in accumulated taxes will be shown in ensuing articles of this series.

A. A. A. processing taxes add much to expenses

During the first 19 weeks of this study, which was begun on September 1, 1935, the A. A. A. processing taxes were in effect. These levies, which for the most part were shifted on to the consumer, added the following amounts to the cost of a few consumer commodities: One-half cent on a pound of sugar, one-half cent on a pound loaf of bread, 4.29 cents on a pound of bacon, 5.67 cents on a pound of Scotch ham, 3.81 cents on a dollar shirt, 10.15 cents on a bed sheet, and 5.10 cents on a chambray work shirt.

But these figures show only the amounts of the original processing. By the time they were pyramided through the wholesaler and retailer to the consumer, they were increased by anywhere from 25 to 100 percent.

When we talk of pyramiding we run into one of the most extraordinary things about this whole matter of taxation, namely,

the fact that the taxpayer pays out a good deal more because of taxes than the Government receives in taxes.

It works this way. When a tax is levied upon an article at any time during its production, that tax is passed on by the person who pays it as a part of the cost of the article. When the article then passes on to the wholesaler or retailer and he adds his profit mark-up to the price of the article, he also adds the mark-up to that part of the price which is tax.

This may be illustrated through the processing tax. The packer formerly paid a processing tax of 4.29 cents per pound of bacon. The mark-up on a pound of bacon from the packer to the consumer is about 25 percent. Thus, by the time this tax had reached the consumer it was 5.36 cents, although only 4.29 cents actually went back to the Government.

This pyramiding takes place on all taxes which are levied anywhere along the line of production, except, of course, those levied directly upon the ultimate consumer.

Since the object of the Journal study was to ascertain what part of the consumer's dollar actually goes back to the Federal, State, and local governments in taxes, the results of pyramiding do not appear in our final figures. It must be remembered, however, that when we figure a farmer's tax of 20.93 cents on $5 worth of vegetables the consumer is actually paying 32.43 cents after the various profit mark-ups. Of this, 20.93 cents goes to the Government, and the rest has been added on along the line of marketing.

As we said above, the farmer's tax is only the beginning. More taxes become involved as the wheat is made into flour, the leather into shoes, or the cotton or wool into cloth and then into clothes.

In each industry the amount which the industry must add to the price of goods to cover taxes paid on the business varies. There is even considerable variation among concerns involved in the same type of production. It was therefore necessary to obtain figures from a number of concerns in each type of business showing the ratio between total sales billed and total taxes paid or accrued during 1935. The figures for the various concerns within each industry were then averaged, giving a figure for the industry as a whole.

In this way it was found that 4.94 percent of the manufacturer's cost of producing cotton textiles is traceable to taxes on the industry, exclusive of the processing tax. More than 6 cents of every dollar that the manufacturers of rubber goods receive for their product is paid out in taxes. The manufacturers of electrical appliances must add 4½ cents on the dollar to cover taxes on their business. Shoe manufacturers must add 2 percent.

As the goods pass through the wholesaler he must add 1.35 cents on the dollar to cover the taxes on his business. The mercantile store must mark up goods about 1.75 percent to cover taxes on the business. The grocery store must include a mark-up of 1.80 percent for the same purpose.

Transportation taxes must be figured on all articles. As these taxes are practically the same whether transport is by railroad or truck, they have been figured on the basis of railroad transport. Seven percent of every charge levied by railroads for passenger or freight traffic goes for taxes to various governmental units. By dividing the total cost of carrying a given commodity in the country in 1935 by the total tonnage carried, the average cost of carrying a ton, regardless of the distance covered by any specific article, was established. By applying the 7-percent tax cost to that average carrying charge, the tax cost on the transportation of each article was determined.

A man who lives in a rented house does not, of course, pay directly any property taxes on the house. But if he believes that he does not pay any indirectly, he is fooling no one but himself. A private Nation-wide survey made in January 1936 showed that 24.7 percent of the rental payments in that month went for taxes and insurance.

Taxes on gasoline hit autoist hardest

The Bateman and Green families own automobiles. They paid property taxes on their cars, driver's license fees, and registration fees. There is an excise tax of 2¼ cents per pound on new tires and 4 cents per pound on new tubes, in addition to the taxes on the manufacture of the tires and tubes. There is also a 2-percent Federal excise tax on parts, in addition to the manufacturing tax.

The taxes on gasoline are, however, more onerous than all of these other taxes put together.

In Rhode Island there is a 2-cent State tax and a 1-cent Federal tax. In addition to this, the producing and distributing companies incur taxes amounting to 1.3 cents per gallon. This 1.3 cents per gallon figure is a bit too high, for the taxes applicable to a barrel of crude have been apportioned to the gasoline and oil derived to the exclusion of other derivatives. For this reason no producing or distributing taxes will be shown in this study against any petroleum products other than gas or oil. The 4.3 cents per gallon tax figure in Rhode Island is considerably lower, however, than the average excise and sales tax of 5.29 cents per gallon for the country as a whole.

Then there is also a Federal excise tax of 1 cent per quart on oil. Production and distribution account for another 1.2 cents per quart in taxes.

Tobacco is another very heavily excised article. The Federal excise tax amounts to 6 cents on a package of cigarettes, one-half cent on the ordinary cigar, and 1.12 cents per ounce on manufactured tobacco. In each of the three families covered by the Journal study there is only one smoker and none is a heavy smoker. Because of this tobacco taxes do not bulk so large in their expenditures as they would in many other families.

The heavy taxation of spirits and malt liquors does not show up in this study to any great extent, because almost none was consumed in any of the three families.

Public-service corporations pay out a very large percentage of their gross income in taxes. Six cents of every dollar paid for bus or trolley transportation is attributable to taxes, 7 cents of every dollar for railway transport, 10.26 cents of every dollar on your telephone bill, 12.50 cents of every dollar on your electric-light bill, and 14.70 cents of every dollar on your gas bill. As you can readily see, such taxes as these mount up to a considerable figure in the course of a year.

Taxes on insurance companies also run high. Those on life insurance run from 1 to 2 percent and on fire insurance from 3 to 5 percent on gross premiums.

Expenditures for outside meals bulk quite large in two of the three families. This was especially true in the Bateman family, where $5 was spent by the daughter in college on this item each week from September 1935 to February 1, 1936.

Taxes on outside meals were computed in the following manner: A well-known, well-managed, moderate-price restaurant submitted figures giving total receipts from the business and total purchases subdivided as to food, rent, salaries, gas, electricity, ice, water, telephone, laundry, insurance and other expenses. Applicable taxes were figured on some of the items. The ratio was thus found between total taxes and total receipts, and this percentage figure shows the number of cents in every dollar spent for outside meals that is attributable to taxes.

Many taxes hidden in price of article

In addition to all of the direct and indirect taxes mentioned above, there are many other excise taxes that we know nothing about unless we are told of them, because they are hidden in the price of the article.

These include an amusement admission tax when the charge exceeds 40 cents; a 2-percent tax on sale price of chewing gum; taxes ranging from one-half of 1 cent to 5 cents per thousand on matches; a 10-percent tax on the manufacturer's sale price of sporting goods; a 10-percent tax on the sale price of perfumes, toilet waters, cosmetics, and powders; a 5-percent tax on the sale price of dentifrices, toilet soaps, and tooth and mouth washes; a tax of 10 cents per pack of playing cards; a tax of 5 percent on each charge for telegrams.

WORKED 7 DAYS TO FEED INVISIBLE GUEST AT TABLE

Hidden tax collector consumed $57.87 worth of food on family in 1 year although no plate was set for him

In a year's time Frank A. Bateman, of 103 Calaman Road, Cranston, worked nearly 7 days to feed an invisible guest at his table.

That unbidden and relentless guest—the hidden-tax collector who has levied imposts on everything any of us eat or drink—consumed 57.87^{87}/_{100}$ worth of food in the Bateman family during the period from September 1, 1935, to September 1, 1936.

Although no plate was set for him, he, in effect, ate more than one and two-thirds eggs out of every dozen eggs purchased by the Batemans and more than two and two-thirds slices out of every loaf of bread on their table. In a year's period he might just as well have eaten 578 loaves of bread or 165 pounds of butter or 144 dozen eggs or 156 pounds of bacon. In other words, if it had not been for the taxes he had levied and which had been passed on to the consumer, Mr. and Mrs. Bateman and their three children could have eaten that additional amount of bread, butter, eggs, or bacon, or spent the money for something else.

Mr. Bateman, who earns $2,600 a year as office manager for a Providence concern, had to work 97½ days to pay his family's annual food bill of $827.19. Of this amount, 57.87^{87}/_{100}$, or 6.997 percent, went for indirect taxes imposed on the various articles of food consumed by the Batemans.

Other families also entertain "guest"

In addition to the more than a week which Mr. Bateman had to work to pay this tax bill on food, he worked an even longer period to pay the indirect taxes levied on every other commodity purchased by his family during the year. Just what he paid in taxes on clothing and various other expenditures will be shown in detail in ensuing articles of this series.

The same ubiquitous unbidden guest also was entertained by the families of Fred Green, 94 Chandler Avenue, Pawtucket, and Charles Allsup, 378 Vine Street, that city.

The Greens, who have only one child, spent $502.86 on food in the year's time. Of this amount, 37.07^{1}/_{100}$, or 7.37 percent, went for taxes.

Both Mr. and Mrs. Green work in a silk mill. The rent which they collect from a tenement in their house swells their annual income to $2,764.95. On the basis of this income they worked 55 days to pay their food bill. They both worked slightly more than 4 days to pay for the indirect taxes on their food. This means the income of 8¼ work days was necessary to pay their food tax bill.

The Allsups, who also have one child, likewise had to work 5 days each to foot the food bill of their invisible guest.

Both Mr. and Mrs. Allsup work in mills, and together they earn $1,877 a year. They spent $442.04 on food during the year. Of this amount, 30.75^{5}/_{100}$, or 6.96 percent, went for taxes.

The extent to which taxes imposed at every stage of production and marketing of various articles of food were passed on to the three families and incorporated in the prices they paid is shown in the tables appearing below covering their annual food bills.

These tables are based on the detailed accounts of expenditures submitted by the Batemans, Greens, and Allsups monthly to the re-

search department of the Providence Journal. They show the total amount spent by each family on every item of food it purchased during the year, to total tax incurred on that item of food, and the break-down of that total tax. The break-down shows in which stage of production and marketing each portion of the total tax on every item of food was incurred.

In reading the tables you must bear in mind that the figures given as tax payments on the food items show only the amount which went to governmental units.

Actually a far larger part of what each family spent for food was paid out because of the process known as pyramiding on taxes. Under this process, when a tax is levied on an article at any stage of production, the tax is passed on by the person who pays it as part of the cost of the article. When the article then passes on to the wholesaler or retailer and he adds his profit mark-up to the price he also adds the mark-up to that part of the price which is tax. Thus the consumer pays not only the tax but a considerable additional amount because of pyramiding prices on taxes.

If pyramiding were taken into consideration, the Bateman family total tax for milk and cream, for instance, would read approximately $8.09^{91}/_{100}$ instead of $5.88^{60}/_{100}$.

In the break-down of the total tax figure for each commodity, 4.185 percent of the cost to the consumer of agricultural products is representative of taxes paid by the farmer. In the case of milk, the distributor has to add 2.26 cents on the dollar to his selling price to cover the taxes on his business.

If the commodity passes through the hands of a packing company, as do meats, butter, cheese, lard, and eggs, the packing company has to add 0.579 cent on the dollar to cover taxes.

In the case of bread, pastry, and flour, 0.0073 cent per dollar is added by the miller to his selling price to cover taxes on his business. Bakers' taxes then must be figured on bread and pastry. For bread it equals 0.004 cent per loaf. On pastry it comes to 1.20 cents on the dollar.

The goods which pass through a wholesaler undergo a mark-up of 1.35 cents on the dollar to cover taxes on the wholesale business. The grocer must in turn add 1.80 cents per dollar to cover his taxes.

On outside meals the tax on the food consumed was figured as well as the tax on the restaurant business. The former amounted to 2.06 percent of the cost of the meal to the consumer, while the latter amounted to 3.28 percent of the cost, making a total tax on outside meals of 5.34 percent.

TAXES ON CLOTHING MEANT CURTAILMENT OF WARDROBE

Journal survey shows family could have bought with hidden levies another suit for son or year's supply of stockings for daughter

The indirect taxes which three Rhode Island families of moderate circumstances paid on the clothing they purchased in a year's time made an appreciable difference in their wardrobes.

Here is what these hidden taxes, on the item of clothing alone, meant to the three families whose detailed accounts for the period between September 1, 1935, and September 1, 1936, were analyzed by the research department of the Providence Journal:

In the family of Frank A. Bateman, of 103 Calaman Road, Cranston, which lives on an annual income of $2,600, the year's clothing bill amounted to $286.39. Of this expenditure, $18.51^{23}/_{100}$, or 6.46 percent, was representative of taxes imposed on the garments at various stages of production and marketing and passed on to the Batemans as the consumers.

Mr. Bateman worked 34 days to pay the year's clothing bill for his family of five. Two and one-fifth days of this time he spent in earning the money involved in the tax bill on this clothing item. That tax bill would have bought another suit for one of his two sons or a year's supply of stockings for his 20-year-old daughter.

It took almost 22 days' income from the joint labor of Mr. and Mrs. Fred Green, of 94 Chandler Avenue, Pawtucket, and the $7.50 weekly rental payments they collect for a tenement in their house to pay their year's clothing bill of $193.92. This clothing bill cost them $11.71^{30}/_{100}$ in taxes, or 6.04 percent of the total expenditure.

Clothing taxes eat up 1⅓ working days

This hidden tax bill on clothing ate up the income of 1⅓ working days by both Mr. and Mrs. Green. It was an amount sufficient to buy a winter coat for their young daughter, an only child, nine shirts for Mr. Green, or 19 pairs of stockings for Mrs. Green.

Mr. and Mrs. Charles Allsup, who are both employed in mills and together earn $1,877 a year, had to work 25 days to earn the money to pay their clothing bill of $153.33 during the year's time. Of this expenditure, $10.35^{1}/_{100}$, or 6.75 percent, was representative of taxes.

Mr. and Mrs. Allsup had to work 1⅑ days each to pay the tax bill on the clothing they bought during the year. With this money spent for taxes they could have bought 12 dresses or 4 pairs of shoes for their young daughter, also an only child.

When you bear in mind that none of these three families can afford to buy much more than the bare necessities of life, you can readily see what a difference it would have made to them if they could have used the money which went into taxes to buy dresses, suits, coats, shoes, or stockings.

But the tax figures on clothing given above by no means tell the whole story.

For instance, we show that the Allsups paid 83.63 cents processing tax on cotton goods. This amount was collected by the Government. If pyramiding were to be taken into consideration, this figure would be more than twice as large.

Pyramiding holds true in varying degree for all tax figures presented in this article on clothing, with the exception of retail tax figures, involving the final marketing stage. The extent to which pyramiding affects the ultimate amount of any tax figure varies directly with the number of production and marketing steps through which the commodity has to pass before it reaches the consumer.

Thus, when on cotton goods for the Bateman family we show a tax of 18.34 cents levied on the manufacturer of the gray goods, the first process of manufacturing cloth, it means that by the time the goods had reached the Batemans and the system of pyramiding had taken its toll, whereby each subsequent handler had considered the 18-cent tax a part of the cost and taken his profit on it, the figure was approximately $1.07, an increase of nearly 600 percent. On the other hand, pyramiding would only increase the wholesale tax figure of 80.23 cents to $1.06, a 32-percent increase.

For cotton and wool the portion of the tax levied against the farmer was ascertained by finding the amount of raw material in each garment and the price which was paid the farmer for this raw material. Then 9.3 percent of this raw-material cost was figured as the tax levied against the farmer and shiftable to the consumer. This 9.3 percent represents the ratio between the total farm income and the total amount paid by the farmer in shiftable taxes.

Dependable figures only are included

No satisfactory figure could be found in regard to rayon, and there is, of course, no farmer's tax to be figured on silk goods.

In this connection it might be reiterated that whenever it was impossible to obtain dependable figures on taxes on certain commodities, such taxes were omitted altogether by the Journal research worker in the interest of scientific accuracy. The figures given in this study therefore err on the side of understatement, not overstatement, of taxes.

After the farmer's tax had been figured on the various garments, the goods were carried through each step of production and the taxes on each step were figured on the basis of actual tax figures collected from many processing establishments.

The tax on shoes and shoe repairing was figured in the same manner. The only satisfactory figures that could be obtained in regard to the taxes on hats were the levies on the manufacturer, wholesaler, and retailer.

The 3-percent tax on laundry and pressing establishments includes Federal, State, and local taxes on the business and the indirect taxes paid by these establishments for electric power and for gasoline used in the delivery service.

The laundry business is a good example of what the Social Security Act taxes will amount to on concerns where wages are a relatively large item of cost.

Considering industry as a whole, it is estimated that the first-year tax of 1 percent now in effect under the unemployment insurance law will be equivalent to a one-sixth of 1 percent retail sales tax when it reaches the consumer. But it will mean a much heavier burden in industries with proportionately large pay rolls. One of the largest laundries in Providence estimates that the social-security tax will amount to $3.50 on every $100 of gross business. This is 50 cents per $100 gross business more than the present tax of $3 per $100. The total tax will thus be increased from $3 to $6.50 per $100, a jump of 116 percent, which will have to be passed on to the consumer.

TENANT PAYS REAL-ESTATE TAXES AS PART OF RENTAL

Would have paid $8 per month less rent but for hidden levies, survey reveals—Indirect property tax meant nearly 11 days' work

Frank A. Batman, of 103 Calaman Road, Cranston, does not own the house in which he lives but he pays taxes on it just the same. The only difference between him and the man who is a property owner is that while the latter pays his tax directly at city hall, Mr. Bateman pays his real-estate taxes to the landlord as a part of the rent.

In the period between September 1, 1935, and September 1, 1936, during which the accounts of the Batemans and of two other families were analyzed by the research department of the Providence Journal, Mr. Bateman spent $447.50 for house rent.

Of this rental, $92.42, or 20.65 percent, went for property taxes. To pay this indirect property tax bill, Mr. Bateman had to work 10.91 days. If it had not been for this tax, his rent would have been nearly $8 a month less.

In the year's time covered by the Journal study the Bateman family lived for 33 weeks in a house at 60 Blaisdell Street, Cranston, and for 19 weeks in the eight-room cottage which they now rent on Calaman Road. The proportion of the tax expenditure on the Bateman rental would have been considerably larger were it not for the fact that the owner of the Calaman Road cottage is a war veteran and therefore receives a $1,000 tax exemption. Largely due to this fact, the proportion of the Bateman rental which went for taxes is considerably lower than the national tax average of 24.7 percent for rent payments shown by a Nation-wide study conducted in January of this year.

Daughter's room rent also adds to tax

The $447.50 item is not the only rental expenditure made by the Bateman family during the year covered by the Journal study. During the first 19 weeks of that period Mr. Bateman's 20-year-old daughter spent $76 for room rent at Kingston, where she was a student at the Rhode Island State College. Of this amount $20.52 was representative of taxes. The Batemans also rented a summer cottage for a month for $35. Of this amount $8.64½ went for

taxes. That raises the Bateman indirect real-estate tax bill to $121.68½.

The two other families included in the Journal study—those of Fred Green, of 94 Chandler Avenue, Pawtucket, and Charles Allsup, of 378 Vine Street, that city—own the homes in which they live and pay direct real-estate taxes. The amount of real-estate and other direct taxes paid by these families will be shown in the next and final article of this series, in which the findings of the whole study will be summarized.

In a year's time the Batemans spent a total of $1,204.39 for a miscellaneous group of goods and services, including rent but exclusive of food and clothing. Expenditures for food and clothing were listed in previous articles of the series. This $1,204.39 expenditure cost Mr. Bateman, who earns $2,600 a year, $190.66⅕, or 15.83 percent, in taxes. To pay this tax bill Mr. Bateman had to work more than 22½ days.

In addition to food and clothing, the Greens, whose annual income is $2,764.95, spent $918.88 during the year on miscellaneous items. Their direct real-estate taxes are not included in this amount. The Greens' tax bill on the $918.88 was $116.72, or 12.70 percent of the total. They had to work 13 days to pay this tax bill. In view of the fact that both Mr. and Mrs. Green work, it means that the wages of 26 working days were required to pay this hidden tax burden.

In August the Greens bought a new car, for which they paid $225 in cash and received a trade-in value of $550 on their old car. If this $550 is considered as an expenditure, the Green total for miscellaneous items rises to $1,468.88. The tax bill on this expenditure remains at $116.72, or 7.94 percent of the total.

Wages of several days needed for tax

The Allsups, whose annual income is $1,877, spent a total of $614.42 during the year for goods and services, exclusive of food, clothing, and direct real-estate taxes. Of this amount, 36.88^{55}/_{100}$, or 6 percent, went for taxes. To pay these taxes the Allsups worked more than 6 days. As in the case of the Greens, both Mr. and Mrs. Allsup work. They therefore found it necessary to use the wages of more than 12 working days in paying this tax bill.

Six cents of every dollar spent for carfare is a tax charge. Out of every dollar paid for telephone service the telephone company passes 10.26 cents along to the Government in payment of taxes.

Out of every dollar paid to the electric light company, the Government takes 12.5 cents in taxes. Every time a dollar is spent for illuminating gas 85.3 cents goes to the gas company and 14.7 cents is divided up among the various governmental units, Federal, State, and local, taxing the company.

The tables show how the three families paid manufacturer's excise taxes, hidden in the price of the article, on matches, perfumes, dentifrices, toilet soaps, tobacco, cigars, cigarettes, playing cards, automobile parts, tires, radio tubes, refrigerators, and malt and spirituous liquors. Also shown are excise taxes on entertainments where the charge is more than 40 cents, on gasoline, and on oil.

But heavy as the indirect tax burden borne by the three families on their miscellaneous expenditures has been shown to be, the figures given above are decidedly conservative.

This is true for two reasons. First, because no account is taken here of the cost to the consumer of pyramiding, the process resulting from the repeated profit mark-up in the various stages of production on the part of an article's price, which is tax. Second, because, due to lack of accurate information, no figures are given for the manufacturer's tax on many items in the tables below and for a number of items it was impossible to figure out any taxes at all for the same reason.

MAN AND WIFE WORK 77.72 DAYS IN YEAR TO PAY TAXES

Family spent at least 14.39 cents of every dollar in levies on everything they ate, drank, wore, used, and enjoyed

If Fred Green, of 94 Chandler Avenue, Pawtucket, had been the only wage earner in his family of three, he would have had to work 77.72 days to pay his tax bill on a year's expenses of $2,430.99.

But Mr. Green himself does not earn enough to support his wife and 13-year-old daughter, and Mrs. Green, like her husband, works in a silk mill to supplement the family budget. Together they had to work 38.86 days in a year's time to earn the money which went into taxes on their extremely modest expenditures for the elementary necessities of life.

The Greens do not make enough money to pay income tax, but at least 14.39 cents of every dollar they spent went into taxes, a good deal of them hidden taxes passed on in the prices of everything they ate, drank, wore, used, and enjoyed. Their tax bill totaled 349.81^{1}/_{100}$. Their tax would be only 11.73 cents on the dollar if the $550 trade-in value of their automobile is considered as an expenditure.

Because the Greens own their home, 53 percent of their tax bill was paid out in direct taxes and less than one-half in indirect levies on food, clothing, and other necessities.

A sharply different proportion between direct and indirect taxes is shown in the case of the family of Frank A. Bateman, of 103 Calaman Road, Cranston, which lives in a rented house.

Pays $290.65 in taxes, spends $2,561.63 total

Mr. Bateman, who is the only wage earner in his family of five, paid a total of 290.65^{29}/_{100}$ in taxes on a year's expenses of $2,561.63. But because he did not pay directly any real-estate taxes, his tax bill consisted of 267.04^{29}/_{100}$ in indirect taxes and only $23.60 in direct taxes. The latter item covered the personal-property tax and the registration and driver's license fees on Mr. Bateman's car and his wife's poll tax.

Thus, only 8.12 percent of Mr. Bateman's total tax bill of 290.65^{29}/_{100}$ was paid out in direct levies. The remaining 267.05^{29}/_{100}$ were incurred as indirect taxes on everything the Batemans bought during the year.

At least 11.35 cents of every dollar spent by the Batemans went into taxes. Mr. Bateman had to work 34.31 days to pay this tax bill.

In the case of the family of Charles Allsup, of 378 Vine Street, Pawtucket, direct taxes also exceeded the indirect levies. This is because the Allsups, like the Greens, own the house in which they live.

The Allsup tax bill amounted to 160.71^{13}/_{100}$, or 10.13 percent, of the family total expenses of $1,584.93. This means that 10.13 cents of every dollar spent by the Allsups went into taxes.

Both Mr. and Mrs. Allsup work in mills. If Mr. Allsup had been the only wage earner in his family of three, he would have had to work 52½ days to pay his tax bill. But since his wife also works, it actually took their combined wages of more than 26 days of labor to pay these taxes.

Smaller tax bill due to thrifty mode of life

That a smaller portion of the Allsup dollar went into taxes than in the cases of the other two families included in the Journal study is primarily due to the fact that the Allsups own no automobile and in many other ways live even more thriftily than the Greens and the Batemans. The size of the indirect tax bill is determined to a large extent by the individual's spending habits, and considerable taxation may thus be avoided by simply abstaining from spending money on those goods and services that are heavily taxed.

If we add up the percentage of taxes paid on every dollar of expenditures by each of the three families, and divide that figure by 3, we get an average tax of 12.18 percent.

This tax percentage is exceedingly conservative for the following three reasons:

1. Pyramiding of profits upon taxes.
2. The failure, due to the lack of accurate information, to include any taxes at all for a certain group of expenditures and a part of the taxes for other purchases.
3. The extremely thrifty mode of life of the families involved.

As has been stated in previous articles of this series, no account was taken in the Journal study of the cost to the consumer of pyramiding, the process resulting from the repeated profit mark-up in the various stages of production on the part of an article's price which is tax. Only the amounts which actually went back as tax payments to the various governmental units have been figured. If the additional cost on each purchase due to pyramiding had been included, the tax figure would have been much higher.

Whenever it was impossible to obtain dependable figures on taxes on certain commodities, such taxes were omitted altogether by the Journal research worker in the interest of scientific accuracy. This further contributed to understatement rather than overstatement.

Tax estimates clearly under actual figures

In the case of the Greens no taxes at all were shown for expenditures totaling $628.50. If this group of expenditures is deducted from the Green family's total expenses of $2,430.99 and the tax bill is applied only to those items on which taxes have been figured, we get a percentage of 19.40 rather than 14.39.

Similarly, if we deduct from the Bateman expenditures of $2,561.63 the $221.51 for which no taxes at all were figured, we get a tax percentage of 12.42 instead of 11.35.

In the case of the Allsups deduction of the $292.68 on which no taxes were shown raises the tax-percentage rate from 10.13 to 12.43.

This would give an average tax of 14.74 cents on the dollar for the three families.

In August the Greens bought a new car. They paid $225 in cash and received a trade-in value of $550 on the old car. If the trade-in value is considered as an expenditure, then only 14.86 cents on the dollar spent by the Greens is traceable to taxes when we deduct the family's expenditures on which no taxes were shown.

An even more important contributing factor toward keeping the tax burden of the Green, Bateman, and Allsup families lower than that of millions of other families below the income-tax level is their extreme frugality. To a great extent all three of these families kept their indirect taxes down through being very sparing with or keeping entirely away from expenditures on heavily taxed goods.

The Allsups have no automobile, do not use gas, and manage without a telephone. The Greens also have no telephone.

During the entire year covered by the Journal study all three families spent a total of $5.69 for spiritous and malt beverages. The Allsups bought one bottle of whisky for 75 cents, the Batemans purchased one bottle of wine for $1, and the Greens bought $3.25 worth of beer and 69 cents worth of gin.

Despite the widespread interest aroused in Rhode Island in the past 2 years by horse and dog racing, neither the Batemans nor the Allsups spent a cent on that item during the year. The Greens made one trip to the race track, buying four $1 tickets. They did no betting.

A man who smokes a package of cigarettes a day pays $21.90 in taxes to the Federal Government in a year's time. But in none of the three families was a package of cigarettes or its equivalent in other tobacco products smoked per day. The Green family comes first with six packages consumed per week. Mr. Bateman smokes three packages of cigarettes, four cigars, and less than 10 cents' worth of pipe tobacco per week. Mr. Allsup smokes two packages of cigarettes per week and 10 cents' worth of pipe tabacco per month.

On no occasion during the year did any of the members of the three families buy a ticket to a moving-picture theater costing over 40 cents. They thus escaped the Federal admissions tax which is operative only on tickets costing more than 40 cents.

Neither were there any large expenditures for perfumes, powders, or face creams in any of the three families.

Mr. Bateman drives his car less than 7,000 miles per year and Mr. Green less than 8,000 miles, this despite the fact that motoring is the principal amusement in both families. By keeping the mileage down they save a great deal on taxes on gasoline and oil consumption and on tire, inner tube, and mechanical parts replacements.

Although the income of each of the three families is moderate, they all managed to show considerable savings at the end of the year.

During that period the Greens, who collect rent from a tenement in their house, had an income of $2,764.95 and spent $2,430.99 plus $144 for mortgage principal, which is not considered as an expenditure but as a shift in assets. They saved $189.96 in cash. If the trade-in value of their automobile should be considered as an expenditure, we find that the expenditures of the Greens exceeded their income by $360.04.

Mr. Bateman earned $2,600 and spent $2,561.63, saving $38.37.

The Allsups earned $1,877 and spent $1,584.93, plus $235.50 for mortgage principal, which is not considered as an expenditure but as a shift in assets. They saved $56.57 in cash.

Works 34.31 days to pay cost of taxes

As may be seen from the frugal mode of life of these families outlined above, the fact that they saved money does not mean that they did not do without a lot of things they could have used to great advantage. It merely means that, in keeping with their thrifty habits, they realize the need of saving as a protection against unemployment, disease, and old age.

A summary of the break-down of the tax bill of each family is enlightening.

Mr. Bateman paid 267.05^{23}/_{100}$ in indirect taxes hidden in the cost of the goods and services his family purchased during the year and only $23.60 in direct taxes on his automobile. It took him 2¾ days to earn the money to pay these direct taxes, but he had to work 31.52 days to pay his indirect tax bill—a tax bill which many people do not even realize is being assessed against them.

In 1934 this type of indirect taxation, which weighs heaviest upon the small-wage earner, made up 59 percent of the Federal tax revenue.

The Batemans spent 57.87^{87}/_{100}$ in hidden taxes on their food, 18.51^{32}/_{100}$ in concealed taxes on their clothing, and 190.66^{2}/_{100}$ in indirect taxes on various other goods and services, including their rent.

Mr. Green paid a property tax of $163.12 on his real estate and $4.18 on his automobile. His registration fee was $12 and his driver's license cost him $2. He also spent $3 on a New Hampshire fishing license. His total direct tax bill thus amounted to $184.30, making up 53 percent of his combined direct and indirect tax bill of 349.80^{1}/_{100}$.

Mr. and Mrs. Green worked 20½ days each to earn the money to pay their direct tax bill. It took their combined wages of 18.4 workdays to pay their indirect tax bill of 165.50^{1}/_{100}$. The latter item consisted of 37.07^{74}/_{100}$ in taxes on their food, 11.71^{30}/_{100}$ in levies on their clothing, and $116.72 in taxes on miscellaneous goods and services.

Mr. Allsup paid a property tax of $82.72 on his home. This was his only direct tax and made up 51 percent of his total tax bill of 160.71^{18}/_{100}$.

Mr. and Mrs. Allsup had to work 13½ days each to earn the money to pay their direct tax bill. It took their combined wages of 12.76 work days to pay their indirect taxes of 77.99^{15}/_{100}$. Indirect taxes on food cost them 30.75^{54}/_{100}$. They paid taxes of 10.35^{41}/_{100}$ on their clothing and 36.88^{50}/_{100}$ on other goods and services.

What did this heay tax burden mean to the three families in terms of human needs, ambitions, and happiness?

It mean that Mr. and Mrs. Bateman, who have always worked hard and lived thriftily, were unable to provide for their children some of the opportunities they had long hoped to give them.

Their 20-year-old daughter left Rhode Island State College at the end of the first semester last February. Although no tuition is charged at Kingston, she spent a total of $240.60 for room and board, fares, books, and laboratory fees during the 19 weeks she was at college. She was forced to discontinue her college education because her father could not afford to keep her there any longer.

The Bateman tax bill would just about have paid her second semester's expenses at college.

Tax bill will prevent son going to college

The Batemans also have two sons. One of them graduated from Cranston High School last summer and the other is now in his second year at the same high school. The older son also would like to go to college this fall but there is no chance of that, his father says, unless he can manage to earn his own way. There might be a chance, Mr. Bateman adds, if it were not for the high cost of living, which to a great extent is due to taxes.

All the efforts and hopes of Mr. and Mrs. Green are centered on their 13-year-old daughter, an only child, whose most cherished ambition is to get an education at the New England Conservatory of Music in Boston when she gets through high school and to become a concert pianist.

The girl is now taking piano lessons, but under present circumstances, despite their efforts to put aside as much as possible for her education, Mr. and Mrs. Green don't know whether they will be able to afford to send their daughter to Boston.

The piano course fee at the New England Conservatory of Music is $30 to $50 a semester for one lesson weekly and $54 to $100 a semester for two lessons weekly. Besides the tuition, other expenditures also are involved, of course, in sending the girl to Boston. But the Greens' annual tax bill of $349.81 would go a long way toward paying the cost of getting their daughter through the conservatory.

Daughter may be forced to forego education as dancer

The same is true in the case of the Allsups.

Their greatest ambition in life is to give their 10-year-old daughter, Kathleen, also an only child, a good education. Kathleen is tall and graceful. She hopes to be a dancer. She wants to take dancing lessons. But her parents don't know whether they will be able to send Kathleen to dancing school.

It usually takes from 2 to 5 years, depending on the pupil's ability, to train a girl for stage dancing, according to information obtained from a leading Providence dance studio. Students take from one to two lessons weekly, and the charge varies from 50 cents a lesson for beginners to $2 an hour for advanced instruction.

The Allsup tax bill of $160.71 a year could easily pay for Kathleen's dancing lessons.

Neither the Greens nor the Batemans or Allsups are very articulate people. They are too busy working and trying to live as decently and thriftily as possible to think at great length about much else than their immediate personal problems. But during the past year, as they accounted for every cent of their expenditures and submitted their budget to the Journal, they have begun to think about this ever-present problem of taxation and what it means to them in their daily lives.

Money spent on taxes surprises consumer

"I never realized we were paying out so much in taxes," Mrs. Green said the other day. "What could I do with the money we spent for taxes? Plenty. If there was nothing to spend it on, we could save it.

"We want to send Leatrice to the Conservatory of Music in Boston. With that money we could save enough to get her started, at least, and maybe see her through without too much trouble.

"It must be harder for lots of people who buy all their clothes. I make almost all our clothes, even underwear, using the goods I get from the mill. That saves a lot."

"Under normal conditions," Mr. Bateman declared, "a man earning $2,600 a year ought to be able to save something for a rainy day. But in view of this heavy tax burden we have found it impossible to save very much. Any surplus which might have been saved up has been eaten up in taxes. It is impossible for my children to go to college unless they can earn their own way.

"I do not believe that the average man or woman who does not pay very much income or property taxes realizes that he does pay as much taxes per dollar purchase for his food and clothing as does the rich man. For this reason, all those who are not fortunate enough to be rich, which of course, is the majority of people, should take as much interest in their Government and the men who represent them in Washington and in the State and city governments as do the rich, for the bulk of the taxes are paid by the average citizen and not the rich."

"Maybe I could do something more than just exist with some of the money I spend in taxes every year," Mr. Allsup said.

"Right now I could spend plenty on the house. There are a lot of things to do. With all the taxes I pay for one thing and another, we haven't all the conveniences we ought to have. We haven't even got city water, and I had to dig a well so I could pump water from the ground. It isn't the best thing in the world, but it has to do.

"It's kind of hard to say right off the bat what we could do with extra money. There is our daughter's education. There are so many other things. We could do more than just get along. It's a struggle to do even that right now, what with the higher cost of everything, taxes and insurance to pay for, and the house to keep up decently."

What taxes meant in days of labor as shown in Journal tax study

Findings of the Providence Journal tax study, showing the break-down of total taxes paid in a year's time by three Rhode Island families and the number of days they worked to earn the money to pay these taxes, are summarized in the following tables:

The Green family

Item	Expenditure	Tax	Workdays to pay the tax
Indirect taxes:			
Food	$502.88	37.07^{74}/_{100}$	4.12
Clothing	193.92	11.71$^{30}/_{100}$	1.30
Miscellaneous	918.88	116.72	12.96
Total	1,615.66	165.51$^{1}/_{100}$	18.38
Direct taxes	184.30	184.30	20.47
Grand total	1,799.96	349.81$^{1}/_{100}$	38.85

In addition to the $7.50 per week which they received in rent from their downstairs tenement Mr. and Mrs. Green together

worked 38.85 days each, or more than 6⅓ weeks each, to earn the money with which to pay their total tax bill. Since Mr. and Mrs. Green both work this means that taxes took the earnings of 77.70 workdays plus $48.72 which was the portion of rent income that went for taxes.

The Bateman family

Item	Expenditure	Tax	Workdays to pay the tax
Indirect taxes:			
Food	$827.19	$57.87⁷⁄₁₀₀	6.83
Clothing	286.39	18.51²³⁄₁₀₀	2.19
Miscellaneous	1,304.39	190.66²⁰⁄₁₀₀	22.61
Total	2,317.97	267.05²⁹⁄₁₀₀	31.63
Direct taxes	23.60	23.60	2.79
Grand total	2,341.57	290.65²⁹⁄₁₀₀	34.42

It took Mr. Bateman 34.42 days, or more than 5⅔ weeks, to earn the money to pay the family's total tax bill.

The Allsup family

Item	Expenditure	Tax	Work days to pay the tax
Indirect taxes:			
Food	$442.04	$30.75⁴⁴⁄₁₀₀	5.03
Clothing	153.33	10.35⁴⁄₁₀₀	1.70
Miscellaneous	614.42	36.88⁴⁵⁄₁₀₀	6.04
Total	1,209.79	77.99¹³⁄₁₀₀	12.77
Direct taxes	82.72	82.72	13.53
Grand total	1,292.51	160.71¹³⁄₁₀₀	26.30

Mr. and Mrs. Allsup together worked 26.30 days each, or more than 4⅓ weeks each, to pay their tax bill. Since Mr. and Mrs. Allsup both work, this means that their taxes took the earnings of 52.60 work days.

The Preservation of Peace

EXTENSION OF REMARKS

OF

HON. HENRY C. LUCKEY

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 24, 1937

RADIO ADDRESS BY HON. HENRY C. LUCKEY, OF NEBRASKA, ON NOVEMBER 23, 1937

Mr. LUCKEY of Nebraska. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert an address delivered by me over the Intercity Network, Washington, D. C., on November 23, 1937, as follows:

Ladies and gentlemen of the radio audience, can we keep our country out of war? This is a question of the most vital importance to us all. Well do we remember the fateful days of 20 years ago. Under a wave of emotionalism and hysterics fanned to a white heat by a most adroit propaganda, we embarked upon a crusade to make the world safe for democracy and to fight a war to end all war. After the armed conflict was over and the facts gradually leaked out, we found that the major propelling force which drew us into that war was to protect our foreign investments and to protect and expand our commerce. That is putting it bluntly. But the facts are that our commercial and foreign policy gradually but inevitably drew us into the world conflict.

Twenty years have passed, and the world is again thinking of war. Nations are preparing for war. Never in all human history has the armament race been carried on on such a gigantic scale as today. All the loss of the millions of young men and all the destruction of billions of dollars of property have seemingly been for naught. Wars have not ceased nor are democracies secure. All this supreme sacrifice has been in vain. Instead, in its wake we have the most unprecedented world depression with its suffering and despair. Friendly trade relations have almost been destroyed. Fear has driven nations to intense nationalism. Huge national debts are breaking the backs of the people and the heels of the dictators are crushing out the last vestige of human rights and liberty. The sum total of that supreme effort has been hate, fear, loss, despair, chaos.

The present evils and national differences cannot be corrected by force. If that were attempted, it would result only in another carnage. Only justice based on due respect for mutual rights can heal the wounds of a bleeding and sick world. Then if more war is not an antidote against future wars, what are we going to do about it?

Let us be realists and look the situation square in the face. If we subject the European situation to an honest and unbiased scrutiny, we find that the present condition is due to the injustices of the Versailles Treaty and the short-sightedness of the so-called statesmen who were in control during the post-war period.

Not force, not war, but justice, will promote peace among nations. Tempted as we may be to use force, we must keep our country from using force and the threat of war in its relations with other nations. We are living on a planet from which we cannot escape. Modern science and technology have made this a small world, where the human family can live in peace only if each respects the rights of the other. Therefore we must adopt a national policy in our foreign relations that will give us the utmost protection.

Our foreign policies are formulated and made in Washington by the President, the Department of State, and the Congress. When these policies are based on the inevitable use of war, they will not save us from that use. But we do not have to make such policies. We can make policies that are based upon the strengthening of peace rather than the strengthening of war methods.

Twenty years ago, early in 1917, a Congress was in session. Policies were made by that Congress and the President and by the preceding Congresses which gradually led us into the World War. Today again Congress is in session, and again the Congress and the President are formulating policies—policies that may keep us out of war or that may lead us into war.

What should some of these policies be if we are to stay out of war?

First. Due respect for the rights of all nations. No controversy is ever settled permanently unless it is settled on the basis of justice. That fact is proven by the present situation in Europe. Fascism in Germany would have been unthinkable if it had not been for the injustices of the Versailles Treaty and post-war mistakes.

Second. A constitutional amendment to give our citizens a right to vote on the declaration of war before we can send our soldiers to fight on foreign soil. This does not apply to an invasion of the United States. In such a case we would need no draft and no forced enlistment. Amendments to the Constitution to effect this are now pending before Congress.

Third. The constitutional right to declare war vested in Congress should not be delegated to the President and the State Department. The delegation of any policy-forming power should be protected with the utmost safeguard. The fact that the present neutrality law is not being invoked indicates a clear contravention of the intention of Congress and of its constitutional rights. The present neutrality law should be invoked or so revised or amended as to meet conditions in the light of the present experience.

Fourth. Promote and stimulate international trade. To ease the tension now existing between nations, it is necessary to divert war activities back into normal peacetime activities. This, of course, will be a slow and tedious process. My observations in traveling abroad recently have been that the greatest factors in the promotion of peace would be the increase of foreign trade and the cultivation of good will between nations.

Fifth. Another peace policy would be the declaration by Congress of the reasons for our national defense. Congress has never declared this. We continue to build battleships and other armaments for what is called adequate defense. In this armament race we are setting the example for war by being in the front rank. A peace policy will ask, "Adequate for what?" The answer should be, "Adequate for the defense of our soil as laid down clearly by Congress." Proposals for such a declaration of policy are before Congress now. I myself have introduced a resolution to this effect.

To summarize: A peace policy is one that reduces strains between nations, a policy that avoids giving offense to other nations, a policy that provides for the use of our armaments only to defend our soil, a policy that strengthens internal democratic processes, a policy that avoids involvement in other wars, a policy that gives the fullest American aid to peaceful adjustments undertaken by other countries, a policy based on justice and good will.

As I have said, Congress is in session. Congress is making policies. These policies must be peace policies in foreign matters or we will inevitably have to use the war method. And if we use the war method, we will forfeit every democratic value which we cherish.

Question by Mr. HARRIS. Congressman LUCKEY, this has been an exceedingly interesting outline of peace policies. I should like to ask two or three questions, if you please. The first one is this: Since many people fear that democracy is endangered by dictatorships, do you think the United States can help save democracy by basing its foreign policy upon a readiness to stand by other democracies if they are at war with dictatorships?

Answer. I think that would be dangerous. It would be using war to make peace. The only result would be that we would lose democracy, not only for the duration of the war, but we would endanger it for many years afterward. Surely one unsuccessful war to save democracy should teach us that another would be a worse failure.

Question by Mr. HARRIS. This is very interesting, Mr. Congressman. Another question has been forced upon me recently. Many people, in fact nearly everybody, wants peace. They earnestly desire it. I wonder if you think that peace will cost us anything or if it can come to us without sacrifice?

Answer: Nothing valuable comes without a price. Peace will cost. It will cost our Nation and it will cost each one of us as citizens. Our Nation will have to withdraw from some positions it now holds, will have to give up certain ideas of prestige and certain of its resources, will have to give up war profits if we are to have a peaceful world. And every citizen will share in that cost. Indeed, there is an immediate cost which every citizen should pay, and it is this: He shoud give time and effort now to work for peace. He cannot bring peace by sitting in an easy chair and hoping it will come.

Question by Mr. Harris: Mr. Congressman, that raises another question. What can the ordinary citizen do to keep our country out of war?

Answer: That is a very pertinent question, Mr. Harris. In the first place, he must have facts. Newspapers and radio addresses are helpful, but they are not enough. There now are well-known and reputable organizations in this country who devote all their time to preparing facts on foreign questions for the ordinary citizens. Reports and books dealing with peace and war should be studied by every citizen who is interested in the promotion of peace. This is the greatest problem before the world today, and therefore each club, labor organization, farm organization, etc., should have leaders who will present peace programs and thus get the facts before the people. An enlightened and peace-conscious citizenry can do much to strengthen the hands of the Congressmen, Senators, and the President when they are working on peace policies. We must know the truth if we expect to collaborate in an intelligent way for world peace.

The Antilynching Bill

EXTENSION OF REMARKS

OF

HON. NAT PATTON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 24, 1937

Mr. PATTON. Mr. Speaker, ladies and gentlemen of the House, I wish to join with other Texas Representatives in paying tribute to our able and distinguished Senator, TOM CONNALLY. Senator CONNALLY is recognized in Washington as an outstanding statesman who is fearless in the expression of his honest convictions. His outstanding ability, deep sincerity, and undaunted courage have made him a national figure that Texas should be justly proud of. Senator CONNALLY has assumed a leadership in the Senate in his advocacy of measures to give the farmers of our country a fair deal and to provide opportunities for tenant farmers to acquire their own farms. He is ever alert to protect the interest of the people of our State. Those of us who realize how vicious and destructive the antilynching bill will be to the best interest of the people of the South and the entire Nation appreciate his leadership in marshaling the forces of the opposition to defeat this iniquitous measure, or, if this cannot be done, to arouse the Nation to a realization of the great danger of measures of this kind. His masterful speech on the antilynching bill should be read by every man and woman who believe in the fundamental principles of American democracy.

Ground-Breaking Exercises of Crooked Creek Flood-Control Dam

EXTENSION OF REMARKS

OF

HON. PETER J. DEMUTH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 24, 1937

Mr. DEMUTH. Mr. Speaker, Pennsylvania is blessed with many valuable resources. We have a climate second to none. We have a most interesting topography—level lands, rolling lands, foothills, and rugged mountains. Our climate is a most valuable resource. Because of the climate the surface of our lands are covered with fertile fields and extensive forests. The beauty of the vegetation and the forests of Pennsylvania are greatly due to our climate. A necessary element of our climate is rain in proper proportion. This rain contributes greatly to Pennsylvania's ability to support its citizens. It is a great and natural resource. Rain results from a condition of the atmosphere when evaporated water becomes distilled and sprinkled like a blessing over our State. It is pure distilled water. We need and have in Pennsylvania an abundance of good pure water. In certain seasons we have an abundance of rain. Some years, because of unusual atmospheric conditions, because of the condition of the surface of the earth, and together with the accumulation of snow in the mountains, these heavy rains have resulted in superfloods. The floodwaters rush down the valleys to reclaim as their own those parts of the valleys that from time to time they have always used. For a number of years much of this land has been occupied by our people. We have built our homes on these lands. Great cities and industries have located on some of these lands. Today men by use of the intelligence and ability with which he has been endowed by God, by the use of the arts and sciences he has developed, has devised methods of controlling these floods. Today, after many years of planning, hoping, and wishing, we are actually starting this program of flood control. Dams at Crooked Creek and Tionesta are being constructed. Channel work at Johnstown and another dam will soon be started.

Pennsylvania has become a great industrial State, Pittsburgh the world's greatest industrial center. Other States now using their natural resources have developed hydroelectric power and are threatening our industrial supremacy. Hydroelectric power is a perfect supplement to steam power plants for peak power. Already great industrial cities are offering cheap peak hydroelectric power to attract new industries. This peak power has also afforded a much lower rate structure for home use. Three hundred and twenty million dollars is already being spent on the Tennessee River.

This dam is a purely flood-control dam, and will be operated as such. We have hydroelectric resources which will probably have to be put to use as supplemental to our steam power plants in order that we maintain our industrial supremacy. Progress is a relative thing. We must not close our eyes to the progress made along these lines in other States. Industries near the Tennessee Valley development are offered cheap peak power through the T. V. A. Later, power and flood-control dams will be built on the Clarion River, for which will find a waiting market for the cheap peak hydroelectric power.

The waters impounded back of this mammoth dam will be released into the streams in a gradual and orderly manner. It will prevent the loss of lives. It will prevent the destruction of homes and other property, and they will prevent the disturbance of orderly routine of life and business. This control of these waters will also aid navigation and result in a reduction in the percentage of stream pollution.

The time is not far distant when we will no longer permit the pure waters of our streams to be contaminated by the dumping into them of raw sewage and industrial waste.

Today we are only beginning the task of controlling the waters to prevent floods. Later, no doubt, we will reclaim for our people from our rivers other natural benefits which are and should be theirs.

An Ominous Railroad and Utility Parallel

EXTENSION OF REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 24, 1937

Mr. PIERCE. Mr. Speaker, the current amazingly active and widespread propaganda campaign of the private utilities is a reminder of the similar campaign through the metropolitan press and certain business groups leading up to the

passage of the Transportation Act of 1920. They are alike in being richly subsidized efforts to change and mold public opinion through the influence of those people and organs which have caught the public attention.

The railroads today are paying dearly for the results of their campaign. The farmers and laborers have, in the intervening years, paid for the stakes of that game and will continue to do so. As the result of this propaganda, about $7,000,000,000 were frozen into the railroad capital structure, or about 33 cents out of every dollar of present book value. Harking back to the railroad construction era and the period of the Credit Mobilier, we find railroad land grants, Government subsidies, bond and stock issues totaling around $2.50 for every dollar of actual bona fide cost. Part of the costs of this fraud were unloaded on the people and then washed out in the 1893 panic, when 192 railroads went through receivership. A good part of this water has always been carried in the railroad rate structure, and the farmer has paid a continuing and burdensome charge on his production to support this frozen rate base. Think of the 158,000,000 acres of railroad land grants, about equal to the combined areas of Oregon, Washington, Illinois, Massachusetts, New Hampshire, and Connecticut! No honest man contends that the spending of this amount of our national resources helped the farmers or the laborers. Commissions and courts, in their efforts to protect solvency, are loathe to disturb rates; hence, it is obvious that the farmers and other shippers will continue to pay toll.

Why is it that propaganda allowing such malpractice can get by practically unnoticed and without public reprimand and revulsion? Is it because the protests of those who must eventually assume the debt payment are of necessity unheard? Spanning the years to unjustly burdened posterity, we are obliged to pay the wages of this debt.

The utility struggle today is nothing more than a repetition of that freeze of railroad capital through the 1920 Transportation Act. From authoritative sources we learn that the total outstanding electric securities amount to about $13,000,000,000. Of this sum, about six and one-half billion dollars represents water, "junk and jokers." To support this excess debt, users of electricity are paying about $1,000,000,000 annually in excess rate charges. This annual excess debt charge would, at 3-percent interest compounded, retire the entire national debt in about 21 years. Think of this, gentlemen.

The real issue in the utility problem today is not the few competitive public power plants upon which business seeks to place some responsibility for the slacking of recovery. The real issue is the danger of freezing of this six and one-half billion dollars in the rate structure. This will reach far into the future.

Regulation by State and Federal agencies has not prevented investors from being victimized, nor consumers from paying practically a 100-percent overcharge. Senator BORAH, as long ago as 1913, at the beginning of the regulation period, predicted in a speech on the floor of the Senate that regulation would not or could not succeed in this country.

These observations need not disturb us if we use the obvious way out and demand that the utility industry start to thaw out the frozen water and capitalize on a fair basis with amortization and redemption, and then start the same amortizing process on the prudent investment base. I have on numerous occasions pointed out to my colleagues the basic economics of this complex problem, namely, debt redemption, and recognition of the relationship between price and volume. Today the market value of the holding company stock control of all the utilities in the country is around $500,000,000. This sum amounts to the total excess charges in the national electric bill over a period of about 6 months.

Heads of private utility companies have not kept their pledges to the American people, made after the Federal Trade Commission's investigation from 1928–33. For our own protection we should provide and hold a few national yardsticks to police the job. Out on the Pacific coast the debt-redeeming, low-rate public electric plants at Seattle, Tacoma, Eugene, Los Angeles, and elsewhere have had a wholesome and beneficial effect on the capital and rate structure of the private utilities, as compared with national averages. These private companies have been forced by public opinion to trim ship and dispose of nonrevenue ballast. Efficient and honest private operators have little to fear from the yardstick. No advocate of the yardstick or of wider public ownership wants to confiscate investment or to destroy values or impair credit. We do want the beneficent educational influence of the yardstick. With this yardstick the people who use electric power can gage the situation and act for themselves.

On August 21 last, I placed before this body a speech on Public Power Projects, Power Costs, and Investments. I therein mentioned the remarkable record of the Eugene, Oreg., municipal plant, which has operated under the two economic principles that I have repeatedly stressed, namely, debt redemption, and the relationship between price and volume. In the speech I pointed out that the Eugene plant's outstanding debt was now only 18 percent of its cash investment, with reserves almost equal to this debt. I also set out in tabular form comparative electric bills of the home owners of Oregon, as of October 1936.

The Federal Power Commission has just released its 1937 Rate Series B for Oregon. To bring my previous presentation to date, I am presenting their latest comparison, which forcibly demonstrates how the violation of these two principles has resulted in upping the customers' bills in an area which is better off than the rest of the country, as far as comparative figures are concerned.

Examples of typical monthly bills and average incremental charges for residential service, Jan. 1, 1937

[Asterisk (*) denotes community served by publicly operated utility; double dagger (‡) denotes bill for 500 kilowatt-hours has been computed under a rate which limits the use of water-heating devices]

[1] Bill for 500 kilowatt-hours has been computed using a rate which limits the sizes of the water-heating elements to less than 100 watts per gallon of tank capacity, thereby necessitating a larger tank or small heating element than required under standard specifications.

To clarify the issues in this complex situation, I am also placing in the RECORD a letter I recently addressed to the columnist Miss Dorothy Thompson. I feel it will be useful at this time because of the unhappy situation in regard to the utilities of Washington, D. C., and the application for permission to issue further bonds for the benefit of the holding company:

I have read with interest your two recent articles on the utility problem in the Washington Star. In last night's issue (Novem-

ber 19), commenting on the spirit of Justice Brandeis, whose "acute sense of equity" all true liberals revere and accept, you make reference to the Boston sliding-scale rate plan. You are, no doubt, familiar with the later failure of this noble initial remedial effort in Massachusetts, partly through holding-company manipulations. The Massachusetts Sliding Scale Act of 1906 was repealed in 1926. The manipulations of the holding company are covered in the report of the board of commissioners appointed by the Governor of Massachusetts in 1916.

I am attaching copy of a speech I delivered in the House July 22 last on The Fallacies of the Washington, D. C., Sliding Scale Rate Plan, which was modeled after the Boston plan. I have shown therein where the people's interests were submerged through legal legerdemain. If you have the time, I would like to have you read it and give me your comments.

The wave of propaganda now being put out is, in my opinion, confusing the real issues. It is an exact parallel of what took place before the passage of the Transportation Act of 1920, and the railroads today are suffering because of this.

The real issue, stripped to the bone, is this: Shall the six and one-half billion of water junk and jokers in the thirteen billion of electric utility securities outstanding be frozen into the rate base for all time, and such method be continued, or shall the debts of these companies be redeemed and amortized over a reasonable period? Tacoma, Wash., has amortized and redeemed to date over 70 percent of the plant investment while giving the lowest electric rates in the country. Their residential average rate is about one-third of the national average.

The private companies generally never redeem or pay their debts, but refund instead, building up the rate base to the detriment of the consuming and investing public. It is not a question of greed or socialism but an honest and reasonable approach by all to a complex problem, so that in the end the public interest will be faithfully served.

The N. L. R. B. and the Senate Civil Liberties Committee

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 24, 1937

COPY OF LETTER AND COMPLAINT

Mr. HOFFMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert herein the following letter received by me on November 20, 1937, from Raymond D. Trautman, editor of the Hosiery Examiner, together with the enclosures to which he refers.

THE HOSIERY EXAMINER,
Reading, Pa., November 19, 1937.

Hon. CLARE HOFFMAN,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN HOFFMAN: I enclose a copy of a complaint of unfair labor practices, which I filed with the N. L. R. B. at both Philadelphia, Pa., and Washington against the American Federation of Hosiery Workers, a C. I. O. affiliate.

The N. L. R. B. at Washington wrote me saying they would turn it over to the La Follette committee. I had a letter from Mr. Robert Wohlforth, secretary to Senator La Follette, asking for more details on this complaint.

I enclose also a letter (copy) which I sent to the La Follette committee. This letter explains the crux of the story. I was subpenaed last summer before this committee. They asked a thousand questions, but shut me up and wouldn't let me talk on what I wanted to tell them about union violence, burning freight cars, forcing workers to pay tribute, beatings, etc.

This American Federation of Hosiery Workers is the C. I. O. outfit that committed the terrible atrocity on the Apex Hosiery Mill, of Philadelphia, last summer. They also treated our community to a reign of terror in which 1 was killed, 125 injured, 442 homes paint bombed, and over 300 cars damaged. They have a record that for violence and illegality is almost unparalleled in labor history.

I am led to believe that the La Follette committee doesn't want me to tell the full story. For that reason I hesitate to cooperate with them, and wrote them accordingly, as per the enclosed copy. Yet I feel that Congress in order to pass fair laws should know the full truth of all this terrible labor-strife business.

I wish you would take time to read both the copy of the complaint which I made against the union and also the copy of the letter which I sent the La Follette committee. After that write me. If they want to hear me at Washington, I shall be glad to oblige and will call upon you. With kindest regards and best wishes, I am,

Yours very truly,

RAYMOND D. TRAUTMAN,
Editor, The Hosiery Examiner.

[Copy of letter to La Follette committee]

THE HOSIERY EXAMINER,
Reading, Pa., November 19, 1937.

Mr. ROBERT WOHLFORTH,
Secretary, the La Follette Committee,
United States Senate Office Building, Washington, D. C.

DEAR MR. WOHLFORTH: I acknowledge your letter of yesterday and thank you for writing.

I'll tell you frankly, I think your committee was unfair to me when you subpenaed me last summer—not in the fact that I was subpenaed but in the fact that I wasn't allowed at that time to present evidence of union violence and many other matters which it would seem to me would be most vital for an impartial committee to obtain a full picture of much of this labor matter.

Mr. Van Arkel shut me up and ordered the secretary to strike from the record all such matters I said and did want to say about the hosiery union. What's more, it appeared to me that your committee was used, either willingly or otherwise, as part of a smear campaign against me and the Hosiery Examiner.

The Hosiery Worker, the union's paper, printed 3 weeks before I was subpenaed that I was a notorious character and that you would call me. Now how did they discover that?

In my case, I stand ready and willing for a complete and thorough investigation at any time the American Federation of Hosiery Workers does likewise.

If you can give me the assurance that you will be fair and impartial and hear what I have to say, I will gladly come to Washington and give you some facts and leads that will enable you to conduct a really worth-while investigation, to get the two sides of this labor-controversy matter. However, if you can't do this, I must work toward the end of placing this material in such congressional hands who will treat it for what it is really worth.

Awaiting your reply, I am,

Yours very truly,

RAYMOND D. TRAUTMAN,
Editor, the Hosiery Examiner.

[This is a copy of a complaint of unfair labor practices, filed with the National Labor Relations Board by Raymond D. Trautman, editor of the Hosiery Examiner, against the American Federation of Hosiery Workers]

NATIONAL LABOR RELATIONS BOARD,
1432 Bankers Security Building, Philadelphia, Pa.
(Attention Maj. Stanley W. Root.)

DEAR SIR: Through the medium of this letter, I am bringing to your attention certain complaints of unfair labor practices, which I, as a citizen and taxpayer, would wish to lodge with your agency against the American Federation of Hosiery Workers, some of its branches, officials, members, and agents.

I trust you will use your good offices to investigate these complaints thoroughly, so that the general public may be fully informed of any possible unfairness in these complaints. Following is a list of complaints, which I wish your Board would investigate.

1. During the past year I have estimated the total loss in wages suffered by hosiery workers as a result of strikes pulled by the hosiery union at $2,700,000. Many of those strikes were illegal strikes—not voted for by the workers, but simply promoted by outside interests. Against those losses I estimate that the hosiery union, through a charge of 2 percent dues and an additional 3-percent assessment, has gathered unto itself somewhere between $800,000 and $1,000,000. I think it is unfair to amass such stupendous sums of money without any accounting to the public. Won't you please investigate the wage losses caused and the amount of money amassed by this organization during the past year?

2. Several workers at the Colonial Mills, Mohnton, Pa., have told me that they were forced, against their wishes, and under penalty of losing their jobs, into the union. In addition, they were fined $50 and $60, respectively, and now have to submit to a system of having a certain percentage checked off from their pay. I charge that it is unfair to coerce, force, and intimidate any worker to join any organization and make him pay tribute for the privilege of working. I specifically call your attention and urge an investigation of the situation at the Colonial Hosiery Mills, Mohnton, Pa., as a case of strong-arm, forceful methods wherein workers against their wishes are forced to join the union and forced to submit to a system of levies on their pay envelopes. In addition, I charge that forceful and illegitimate means were used to destroy the Colonial Employees Association, an independent labor organization, which is contrary to the Wagner Act, which allows any worker to join any organization of his own choosing.

3. I complain against the practice of chiseling in hosiery mills which sign a so-called union check-off agreement. I have heard that several union mills are paying from 10 to 12 to 20 percent under the regular scale of wages. Please try and investigate why it is all right with the union to chisel on wages when the closed shop and the check-off is provided for, but terrible when the unionists don't get their dues.

4. At the 1935 convention of the Hosiery Union, it was reported that $1,500,000 was spent by the union in one strike. This was printed in all Philadelphia newspapers. Please investigate how this money was spent and who got it.

5. At the same convention, newspapers carried reports that the union claimed $285,000 was spent at the Aberle (Philadelphia) strike. Please investigate who got this money and how it was spent.

6. A freight car loaded with knitting machinery was set afire several years ago, following a strike at the Merrill Hosiery Mill, of

Hornell, N. Y. Local newspapers of that section in reporting the case stated that an organizer of the hosiery workers' union and several members plead guilty, and the local prosecutor there, in newspaper accounts, is reported to have said that he understood the hosiery workers' union paid all costs and damages. I complain that burning freight cars loaded with knitting machinery is an unfair labor practice and I urge a full investigation on this matter.

7. I would like to bring to your attention the terroristic tactics and the shameful reign of terror that accompanied the Berkshire Knitting Mills strike during the latter several months of 1936. One person was killed, 124 were injured, 442 homes were damaged, and 356 cars were damaged. This was the most shameful and disgraceful series of events ever perpetrated in Berks County. The records of the Berks County courts will attest to the guilty parties. I urge you to investigate who furnished bail for most of the culprits arrested. I urge you to investigate who instigated and incited this shameful spectacle of affairs.

8. I am informed a veritable reign of terror exists at present as a result of a campaign to force and intimidate Apex (Philadelphia) hosiery workers into the union. I am told more than 130 homes have been attacked by vandals. Won't you please investigate who is responsible for this disgraceful condition in and about Philadelphia?

9. I charge that the Hosiery Worker, official paper of the A. F. H. W. deliberately falsified and brought the name of Mrs. Eleanor Roosevelt, First Lady of the land, into disrepute. This paper reported that Mrs. Roosevelt would speak for the cause of the Berkshire strikers at a meeting in New York City. At that meeting she never in her speech mentioned the word Berkshire. It was a deliberate lie. Mrs. Roosevelt gave a fair, impartial speech, but the union's paper lied and misrepresented. I think they did the First Lady of the land a great injustice by misrepresenting. I suggest an investigation to ascertain how extensively the practice of lying and falsifying is indulged in by the hosiery unionists.

10. I invite your investigation to the actual functioning of union principles. In 1931, 46 full-fashioned hosiery mills signed so-called union agreements. Since that time 18 have either failed or been liquidated and 6 more have moved from their former locations. Now, if 24 out of 46 mills, with contractural union arrangements suffer business fatalities, wouldn't it make an interesting investigation why over 50 percent of the union mills fail? You know bankrupt mills can't offer employment or pay wages. An investigation along this line would really be helpful to the workers of the industry.

11. I should like to have you investigate whatever political contributions, if any, were made by the hosiery union during the past several years.

12. I would like to have you investigate how many workers were forced into the union during the past 2 years, and today unwillingly are paying 2 percent, 3 percent, 5 percent, 7 percent, just for the privilege of working. I believe this practice is a violation of the civil and constitutional rights of citizens. I call your attention to a number of smaller mills in and about Philadelphia and throughout eastern Pennsylvania on this score.

13. I ask that you investigate for any possible cases of dues splitting with managements of mills where the check-off exists, if there be any such. I ask that you investigate for any possible cases of mill foremen getting extra pay to aid the union cause, if there be any such.

I could list a considerable number of additional complaints—matters that I have heard and been told about by hosiery workers—but I feel the 13 points I have raised for an investigation will be sufficient to start this investigation of unfair practices by the union and at a later date I can submit more complaints.

I trust you will use your good offices to start this investigation immediately for the benefit and welfare of all the hosiery employees in the industry.

I am,

Very sincerely yours,

RAYMOND D. TRAUTMAN,
Editor, The Hosiery Examiner.

Let's Bury the Hatchet

EXTENSION OF REMARKS
OF
HON. W. D. McFARLANE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, November 24, 1937

LETTER FROM HON. W. D. McFARLANE, OF TEXAS, TO WILLIAM GREEN AND JOHN L. LEWIS

Mr. McFARLANE. Mr. Speaker, under permission given me I desire to insert in the RECORD a copy of a letter I have written Hon. William Green, President of the American Federation of Labor, and Hon. John L. Lewis, Chairman of the Board, Labor's Non-Partisan League.

WASHINGTON, D. C., *November 23, 1937.*

Hon. WM. GREEN,
President, American Federation of Labor,
and
Hon. JOHN L. LEWIS,
Chairman of the Board, Labor's Non-Partisan League,
Washington, D. C.

GENTLEMEN: I have your letters of November 22 with enclosures regarding petition to discharge the Rules Committee on the fair-labor-standards bill, giving your views regarding same. I signed this petition to discharge the committee last Wednesday. It seems to me that the A. F. of L. and the C. I. O. should get together and bury the hatchet in the ground rather than in each other, so that you can fight the common foe that, right now, seems to have you hopelessly divided, thus destroying the effectiveness of your organizations. Grant's remarks concerning the Democratic Party, I think, are equally applicable to your organizations. Why can't both of you see that capital has and is driving a strong wedge between you and the opportunities you now have of really cooperating and doing something constructive for labor. Besides, you are crucifying the friends of labor in Congress who desire to do something worth while for labor.

Very truly,

W. D. McFARLANE.

The Pathway to Peace

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, November 25, 1937

RADIO ADDRESS BY HON. JENNINGS RANDOLPH, OF WEST VIRGINIA, ON SEPTEMBER 26, 1937

Mr. RANDOLPH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include my radio address delivered during the radio program dedicated to the Gold Star Mothers over the National Broadcasting Company's red network, on Sunday, September 26, 1937, as follows:

It is with a deep sense of personal gratification that I come before you today to join in expressing honor and tribute to the crystallized personification of an American ideal and symbol. In the course of our daily existence, concerned as we are with the many problems which perplex all of us, our perspective unwittingly becomes narrowed, and we are more or less apt to overlook the presence of important, vital realities in our midst. It is wholly fitting, therefore, that the President of our Nation should set aside this day by Executive proclamation, thus giving us opportunity to pause for a moment, and with a humility as great as their devotion, tender deserving tribute to the Gold Star Mothers of the World War.

No organization within the boundaries of our Republic is more worthy of honor, not so much because of whom the group is constituted, but because of what each member of that group has done and for what each mother in it symbolizes. Collectively, these mothers comprise the soul of our country—the spiritual entity whose love is all embracing, whose anguish is borne in silence, and whose measure of sacrifice knows no bounds. Individually, they are women endowed with all the human passions and prejudices—proud of their country, jealous for their loved ones, and hateful to war.

Their passions are motivated by a reason and an understanding which they alone can comprehend. They know by bitter experience the soul-sickening gruesomeness of war. To them the blare of trumpets and the roll of drums sound hollow notes devoid of martial melody and they are reminded of the tolling of a death knell. To them the color and pageantry of war are but the drab trappings of a grim reaper who seeks to rob them of their loved ones. To them war is the melancholy sadness of parting, the gnawing pain of anxiety and fear, and the despair of death. They are unwilling actors in a devastating tragedy whose lines they take no part in writing yet in whose enactment they are assigned the roles most difficult to play and least rewarded in applause.

What then must be the thoughts in the minds of all mothers today? We read in the newspapers that Spain already in the throes of a bloody civil war is threatening to become the powder keg of Europe with any one of a half dozen nations prepared to apply the torch. We find that the Mediterranean loses its attractiveness as a world playground when we read of acts of vicious piracy perpetrated in violation of every tenet of international law. In the Far East, we see China and Japan locked in a death struggle and, as usually is the case, helpless noncombatants paying the

awful price in slaughter and carnage. On all sides of the world, except in our own hemisphere, we can view the frightful realization of every fear which is conjured in the minds of mothers the world over by that brief, horrible word "war."

In each of those countries there are mothers today bearing their burden of grief, and in their agony of suffering they cry out to Heaven and the civilized world for nothing more than the blessings of peace. For the mothers of America we are determined to preserve and guarantee those blessings by a strict policy of nonintervention and neutrality.

That is the course to which the present administration, under our able Chief Executive, has committed America in the field of international affairs. In its own forward-looking policy, the Government has pledged itself to the policy of the good neighbor, and I think I can say without fear of contradiction that practically every citizen in this Nation ardently desires and earnestly favors the absolute independence, the unimpaired sovereignty, the utmost equality, and the political integrity of every nation, and they in like manner wholeheartedly oppose every form of aggression. The United States of America is determined that this policy of enlightened liberalism in international affairs shall be recognized and respected by the entire world. With all the agencies at hand for the peaceful settlement of disputes between nations, war is unnecessary even as a last resort, and any attempt or desire to engage in one is repulsive and odious, and a direct challenge to society and civilization. The useless shedding of blood should have neither place nor countenance in the age in which we live.

The mothers of America remember too well the lessons learned in the last frightful war. This gathering today bears testimony to the impress which those lessons have left upon our national consciousness, and as a result we have become imbued with a passion and zeal for peace that has tinged our entire policy. Our President has defined the good neighbor as one who "resolutely respects himself and, because he does so, respects the rights of others." Our duty is to breathe the broad spirit of this revitalized policy, and to make the present day the beginning of a new era which will witness a glorious revival in American cooperative effort to promote our entire material, mental, and moral welfare, and to erect a solid structure of peace which will endure forever.
